

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. HORACE HART, PRINTER TO THE UNIVERSITY

P R E F A C E.

THE general aims and intentions of the Dictionary of Music and Musicians were stated in the Preface to Volume I., and need not be repeated here. The work now appears before the public in a complete form. The large demand for it, which has gone on steadily increasing, not only in this country and the United States of America, but on the Continent of Europe, shows that on the whole the book has fulfilled the intentions with which it started. Shortcomings there will always be in a work of this description, arising from inexperience, from the progress of the general subject, or from deaths of old musicians and arrivals of new ones; but it is hoped that these have been met by the Appendix promised at the outset. For this very important part of the undertaking the Editor has secured the able co-operation of the gentleman whose name appears on the title-page of Volume IV., and who has been of signal assistance to him in a very trying portion of his work. To Mr. Fuller Maitland, and to all the other contributors to the Dictionary, who have so successfully and so cheerfully laboured throughout the long course of its publication, the Editor here returns his heartfelt thanks for their valuable assistance; and embraces the opportunity to express his pride and pleasure at having had the aid of so distinguished an array of workers. To the publishers he offers his sincere acknowledgements for much patience, and many a friendly act.

It would be invidious to single out special articles in addition to those already mentioned, where all have been written with such devotion and intelligence; but the Editor cannot help mentioning, amongst many others, the long articles on Schumann, Spontini, and Weber, by Dr. Spitta of Berlin; on Sonata, Symphony, and Variations, by Dr. Hubert Parry; on Song, by Mrs. Edmond Wodehouse; on Scottish Music, by Mr. J. Muir Wood; on Wagner, by Mr. Dannreuther; on the Organ, by Mr. E. J. Hopkins; the Piano by Mr. Hipkins; the Violin by Mr. Payne; and those on Schools of Composition, and other historical subjects, by Mr. W. S. Rockstro.

A copious Index of the whole four volumes has been prepared by Mrs. Wodehouse, and will shortly be published in a separate volume.

A

DICTIONARY

OF

MUSIC AND MUSICIANS.

SUMER IS ICUMEN IN (*continued from* vol. iii. p. 768).

While receiving with due respect the judgment of the writers already quoted, we cannot but feel that, in most cases, their authority is weakened, almost to worthlessness, by the certainty that it rests on evidence collected entirely at second-hand. Neither Forkel, de Coussemaker, nor Ambros, ever saw the original document; their statements, therefore, tend rather to confuse than to enlighten the enquirer. Still, great as are the anomalies with which the subject is surrounded, we do not believe them to be irreconcilable. Some critics have trusted to the peculiar counterpoint of the Rota, as the only safe guide to its probable antiquity. Others have laid greater stress upon the freedom of its melody. We believe that the one quality can only be explained by reference to the other, and that the student who considers them separately, and without special reference to the caligraphy of the MS., stands but a slender chance of arriving at the truth. We propose to call attention to each of these three points, beginning with that which seems to us the most important of all—the character and condition of the MS.

1. The style of the handwriting corresponds so closely with that in common use during the earlier half of the 13th century that no one accustomed to the examination of English MSS. of that period can possibly mistake it. So positive are the indications, on this point, that Sir Frederick Madden—one of the most learned palaeographers of the present century—did not hesitate to express his own conviction, in terms which leave no room for argument. 'The whole is of the thirteenth century,' he says, 'except some writing on ff. 15-17.' And, in a later note, comparing this MS. with the 'Cartulary of Reading' (MSS. Cott. Vesp. E. v.), he states his belief that, 'in all probability, the earlier portion of this volume'—i.e. that which contains

the Rota—'was written in the Abbey of Reading, about the year 1240.'¹ The present librarian, Mr. E. Maunde Thompson, unhesitatingly endorses Sir F. Madden's judgment; and the Palaeographical Society has also corroborated it, in connection with an autotype *facsimile*—Part VIII, Plate 125 (Lond. 1878)—referred to the year 1240.

Fortunately the MS. is in such perfect preservation that the corrections made during its preparation can be distinctly traced. In a few places, the ink used for the Antiphon on the preceding page can be seen through the vellum: but, apart from the spots traceable to this cause, there are a considerable number of evident erasures, clearly contemporary with the original handwriting, and corrected by the same hand, and in the same ink. The second note on Stave 1 was originally an F. The first and second notes on Stave 4 were originally two Cs; the fourth note was a D; and the fifth, a C. Between the sixth and seventh notes, in the same Stave, there are traces of a D, and also of an F: the D has certainly been erased to make room for the present notes; the appearance of the F is produced by a note showing through from the opposite side. The eighth note on this Stave was an E. Over the ligature which immediately follows, there are traces of a C; and, towards the end of this Stave, a last erasure has been made, for the insertion of the solitary black square note.² The marks which show through the vellum are to be found near the beginning of Stave 3, and in several other places. Neither these, nor the erasures, are to be seen in our *facsimile*, though traces of both may be found in the autotype of the Palaeographical Society.

2. The mixed character of the Part-Writing has puzzled many an able commentator; for, side by side with passages of rudest Discant, it exhibits

¹ See vol. iii. p. 268 a (note); and 765 b (note).
² Compare with *facsimile*, vol. iii. p. 269.

progressions which might well have passed uncensured in the far later days of Palestrina. The 4th, 6th, 7th, 8th, and 24th bars¹ are in Strict Two-Part Counterpoint of the First and Second Order, of irreproachable purity.² But, in passing from the 9th to the 10th, and from the 13th to the 14th bars, a flagrant violation of the First Cardinal Rule³ results in the formation of Consecutive Fifths between the First and Third Cantus Parts, in the one case, and between the Second and Fourth Cantus, in the other. The same Rule is broken, between Cantus II, and Bassus I, in passing from bar 17 to bar 18; and, in bars 37, 38, 39, a similar infraction of the Rule produces no less than three Consecutive Fifths between Cantus I, and Bassus II. Between bars 29 and 30, Cantus I and II sing Consecutive Unisons; and the error is repeated, between bars 33, 34, by Cantus II and Cantus III, simultaneously with Consecutive Fifths between both these Parts and Cantus I. Similar faults are repeated, as the Rota proceeds, with persistent regularity.

Now, the smooth progressions shown in the 4th, 8th, and 24th bars, are as stringently forbidden in the Diaphonia of the 11th and 12th centuries, as the Consecutive Fifths in bars 37, 38, and 39, are in the Counterpoint of the 15th and 16th, or even in that of the 14th century. To which of these epochs, then, are we to refer the Rota? The peculiarity of the Part-Writing clearly affords us no means whatever of answering the question, but is calculated rather to mislead than to throw new light upon the point at issue.

3. Turning from the Part-Writing to the Melody, we find this pervaded by a freedom of rhythm, a merry graceful swing, immeasurably in advance of any kind of Polyphonic Music of earlier date than the *Fa-las* peculiar to the later decads of the 16th century—to which decads no critic has ever yet had the hardihood to refer the Rota. But, this flowing rhythm is not at all in advance of many a Folk-Song of quite unfathomable antiquity. The merry grace of a popular melody is no proof of its late origin. The dates of such melodies are so uncertain, that the element of Chronology may almost be said to have been eliminated from the history of the earlier forms of National Music. In most cases, the original Poetry and Music owed their origin, in all probability, to the same heart and voice. The melodies were not composed, but inspired. If the verses to which they were indebted for their existence were light and tripping, so were they. If the verses were gloomy, the melodies naturally corresponded with them. And, because their authors, however unskilled they might be in the Theory of Music, were in the constant habit of hearing Church Melodies sung in the Ecclesiastical Modes, they naturally conformed, in most cases, to the tonality of those

venerable scales. We believe the Melody of the Rota to be an inspiration of this kind—a Folk-Song, *pur et simple*, in the Transposed Ionian Mode, owing its origin to the author either of the English or the Latin verses to which it is wedded.

Now, some Folk-Songs of great antiquity possess the rare and very curious peculiarity of falling into Canon of their own accord. An old version of 'Drops of brandy' forms a very fair Canon in the unison for two voices. In the days of Madame Stockhausen, three independent Swiss melodies were accidentally found to fit together in the same way, and were actually published in the form of an English Round, which soon became very popular.

The melody of the Rota—if we are right in believing it to be a genuine Folk-Song—possesses this quality in a very remarkable degree. What more probable, then, than that a light-hearted young Postulant should troll it forth, on some bright May-morning, during the hour of recreation? That a second Novice should chime in, a little later? That the effect of the Canon should be noticed, admired, and experimented upon, until the Brethren found that four of them could sing the tune, one after the other, in very pleasant Harmony? There must have been many a learned Discantor at Reading, capable of modifying a note or two of the melody, here and there, for the purpose of making its phrases fit the more smoothly together. So learned a musician would have found no difficulty whatever in adding the *pes*, as a support to the whole—and the thing was done. The Harmony suggested, in the first instance, by a veritable 'Dutch Concert,' became a Round, or Canon, of the kind proved, by Mr. Chappell's opportune discovery of the Latin pun [see vol. iii. p. 768a], to have been already familiar to English ears; for which very reason it was all the more likely, in a case like the present, to have been indebted for its confection to a happy accident.

The foregoing suggestion is, of course, purely hypothetical. We do not, however, make it with the intention of evading a grave chronological difficulty by a mere idle guess. The influence exercised, by the point we are considering, upon the history of Mediæval Music in general, and that of the Early English School in particular, is of so great importance, that the element of conjecture would be altogether out of place in any chain of reasoning professing to solve the difficulties of an enigma which has puzzled the best Musical Antiquaries of the age. We venture, therefore, to propose no conjectural theory, but simply to epitomise the results of a long course of study which has rendered the Reading MS. as familiar to us as our own handwriting; submitting it to our readers with all possible deliberation, as a means of accounting for certain peculiarities in the Rota which would otherwise remain inexplicable. It accounts for a freedom of melody immeasurably in advance of that attained by the best Polyphonists of the 15th century, whether in the Flemish or

¹ In this, and all other cases, the references apply to our own Score in modern Notation, vol. III. p. 768.

² See STRICT COUNTERPOINT, vol. III. p. 741—742.

³ *Ib.* p. 741 a.

Italian School. It accounts for the transcription, in a handwriting of the 13th century, of progressions which were not sanctioned by scholastic authority until the 15th; and, at the same time, for the admixture, with these, of other progressions, which, in the 15th century, would have been peremptorily forbidden; in other words, it accounts for simultaneous obedience to two distinct Codes of Law diametrically opposed to each other; two systems of Part-Writing which never were, and never could, by any possibility be, simultaneously enforced—viz. the Law of Counterpoint, which, in the 14th and 15th centuries, forbade the approach to a Perfect Concord in Similar Motion; and that of Diaphonia, which, in the 11th and 12th, practically enjoined it, by employing no other Intervals than doubled Fourths, Fifths, and Octaves. It accounts for the erasures to which we have already called attention; placing them in the light of improvements, rather than that of necessary corrections. Moreover, it accounts, with still greater significance, for the otherwise inexplicable absence of a whole army of familiar progressions, conventional forms of ornamentation, Cadences true, false, plain, diminished, modal, or medial, and of Licences innumerable, which, after the substitution of Counterpoint for Discant, never failed to present themselves, at every turn, in Polyphonic compositions of every kind, produced in every School in Europe. These anomalies have not been accounted for by any critic who has hitherto treated the subject. Yet, surely, those who doubt the antiquity of the Rota, on the ground of its advanced construction, owe us some explanation as to the presence of this advanced style in certain passages only. We sorely need some information as to how it came to pass that the piece was written in three distinct styles: two, of part-writing, separated by an interval of two or three centuries, at least; and one, of melody, which, if not the result of an inspired Folk-Song, of remotest antiquity, must bring us down to a period subsequent to the invention of Monodia in the 17th century. Our theory, if admissible at all, explains all these things. A learned Musician, deliberately intending to write a Canon for six voices, would, had he lived in the 12th century, have adopted the style observable in bars 37, 38, and 39, as that of the entire composition. Another, flourishing in the 15th century, would have confined himself to that shown in bars 4, 6, 8, and 24. But, though the later *savant* would never have passed the Fifths and Octaves, the earlier one, had he possessed sufficient natural genius to enable him to rise above the pedantry of the age, would surely have excused a great deal of what he considered, and taught, to be licence. Finding that a Popular Melody of the day fitted together, in certain places, in a—to his ear—delightful succession of similar Perfect Concords, he would surely have forgiven certain other passages which defied his rules, but, judged by his natural instinct, did not 'sound bad.' Whether John of Forneste did really construct the Rota on this principle, or not, we can never know for cer-

tain: but, since the accident we have suggested certainly has happened, and been turned to advantage in other cases, there is nothing improbable in the supposition that it may have happened before, in that which we are now considering.

The fact that no other English Rota of equal antiquity with this has as yet been brought to light, proves nothing. The wonder is, not that we can find no similar examples, but, that even this one should have escaped the wholesale destruction which devastated our Cathedral and Monastic Libraries, first, during the reign of King Henry VIII, and afterwards, during the course of the Great Rebellion. Moreover, we must not forget that the Reading MS., though it contains only one Rota, contains no less than three Latin Antiphons, two for three Voices, and one for 'four; and that the Chaucer MS.,² of very little later date, contains several Compositions for two Voices, all tending to prove the early date at which the Art of Polyphonic Composition was cultivated in England.³

These suggestions are made for the express purpose of inviting discussion; and, should any new light be thrown upon the subject, in the meantime, it will be noticed in a future article on VILLANELLA. [W.S.R.]

SUPERTONIC. The second note of the scale upwards, as D in the key of C. It is brought into much prominence in modern music as the dominant note of the dominant key. The strong tendency to find the chief balance and antithesis in that key, and to introduce the second subject of a movement in it, as well as the tendency to make for that point even in the progress of a period, necessarily throws much stress upon the root-note of the harmony which leads most directly to its tonic harmony, and this is the dominant of the new key or supertonic of the original one. It has consequently become so familiar, that its major chord and the chord of the minor seventh built upon it, although chromatic, are freely used as part of the original key, quite irrespective of the inference of modulation which they originally carried. Some theorists recognise these chords as part of the harmonic complement of the key, and consequently derive several of the most characteristic and familiar chromatic combinations from the supertonic root. [C.H.H.P.]

SUPPE, VON, known as **FRANZ VON SUPPE**, the German Offenbach, of Belgian descent, though his family for two generations had lived at Cremona, was born at Spalato, or on board ship near it, April 18, 1820, and his full baptismal name is **FRANCESCO EZECHIELE ERMENEGILDO CAVALIERE SUPPE DEMELLI**. His taste for music developed early. At 11 he learned the flute, at

¹ See vol. III. p. 270 a.

² Arundel MSS. No. 248. See vol. III. p. 427 b. The Montpellier MS. is certainly no older than this, and probably not so old.

³ Foebroke, in his 'British Monachism' (vol. II. p. 113), tells us that the Song of the Anglo-Saxon Monks consisted of a method of figurate Discant, in which the various Voices, following one another, were perpetually repeating different words, at the same time. Surely, this savours strongly of the 'form of the Round.'

13 harmony, and at 15 produced a mass at the Franciscan church at Zara. His father, however, had other views for him, and sent him to the University of Padua. But music asserted itself; he learned from Cigala and Ferrari, and wrote incessantly. At this moment his father died, the mother settled in Vienna, where Francesco joined her; and after a little hesitation between teaching Italian, practising medicine, and following music, he decided on the last, got lessons from Seyfried, and obtained a gratuitous post as Conductor at the Josephstadt theatre. This was followed by better engagements at Pressburg and Baden, and then at the theatres an-der-Wien, Quai, and Leopoldstadt in Vienna, with the last-named of which he is still connected. His work at these houses, though for long mere patching and adding, was excellent practice, and he gradually rose to more independent things. In 1844 a 'Sommernachts-traum,' founded on Shakspeare, and composed by him, is mentioned in the A.M.Z. 'Der Krämer und sein Commis' followed. In 1847 he was at the Theatre an-der-Wien and (Aug. 7) brought out a piece, 'Das Mädchen vom Lande' (The country girl), which met with wild success. Ten years later (Jan. 8, 1858) a Singspiel, 'Paragraph 3,' spread his fame into North Germany, and from that time a stream of pieces flowed from his pen. His works are said by the careful Wurzbach¹ to reach the astonishing number of 2 grand operas, 165 farces, comediettas, and vaudevilles, etc., as well as a Mass ('Missa dalmatica,' Spina, 1877), a Requiem produced at Zara in 1860 under the title of 'L'estremo Giudizio' etc., etc. A list of 49 of his operatic pieces is given by Wurzbach, but a few only are dated. Another list of 21 is given by Batka in Pougin's supplement to Fétis, but the titles are French, and it is hard to make the dates agree. Some of the pieces are mere parodies, as 'Tannenhäuser,' 'Dinorah, oder die Turnerfahrt nach Hütteldorf.' One, 'Franz Schubert,' is founded on the life of Schubert, and contains five of his songs. The only pieces of Suppe's known out of Germany are 'Fatinitza,' produced at Vienna, Jan. 5, 1876; at the Alhambra, London, June 20, 1878, and at the Nouveautés, Paris, March 1879; and 'Boccaccio,' which was brought out in London, at the Comedy Theatre, April 22, 1882. The overture to 'Dichter und Bauer,' the only one of his overtures known in England, must be his most popular work abroad, since it has been arranged for no less than 59 different combinations of instruments, all published by Aibl of Munich. It is a stock piece in the Crystal Palace repertoire. [G.]

SURIANO. [See SORIANO, vol. iiii. p. 638.]

SURMAN, JOSEPH, born 1803, son of a dissenting minister at Chesham, became a music copyist, tenor chorister, and clerk at a dissenters' chapel. On the establishment of the Sacred Harmonic Society in 1832 he was appointed its conductor. In 1838 he became music pub-

lisher, chiefly of sacred music in separate parts. About the same time he was assistant conductor of the Melophonic Society. In 1842 he was chosen to conduct the Worcester Festival. An inquiry by a special committee into his official conduct as agent for and conductor of the Sacred Harmonic Society having resulted in an unanimously adverse report, he was removed from his office, Feb. 15, 1848. He then attempted the formation of the 'London Sacred Harmonic Society,' but failing to obtain sufficient members carried on concerts in the society's name at his own expense for 7 or 8 years. Surman died Jan. 20, 1871. [W.H.H.]

SUSANNA. An oratorio in three parts, by Handel; the author of the words is not known. The overture was begun on July 11, 1748, a month after the completion of 'Solomon,' and the work was finished on the 24th of the following month. It was produced during the season of 1749. [G.]

SUSATO. [See TYLMAN.]

SUSPENSION is the process of arresting the conjunct motion of one or more parts for a time, while the rest of the components of the chord proceed one step onwards, and thereby come to represent a different root. The part which is stayed in this manner commonly produces dissonance, which is relieved by its then passing on to the position it would have naturally occupied sooner had the motion of the parts been simultaneous. Thus in the progression of the chord of the Dominant seventh to Tonic harmony (a), the part which takes the upper note (or seventh) can be delayed and made to follow into its position after the rest of the chord has moved, as in (b), thereby producing a fourth in place of a third for a time. Similarly the fifth, or the fifth and third, can be suspended, producing a ninth, or a ninth and seventh, against the tonic note; and the dissonant effect is similarly relieved by their passing on to their normal position in the chord afterwards, as in (c). In all such cases the first occurrence of the note in the part whose motion is suspended is called the 'Preparation,' as in

the first chord of (b) and of (c); the moment of dissonance resulting from the motion of the other parts, is called the 'Percussion' of the discord, and the release of the dissonance, when the part proceeds to its natural place in the harmony, is called the 'Resolution.'

Suspension was among the very first methods discovered by the early harmonists for introducing dissonance into their music. In the earliest times composers depended chiefly upon the different degrees and qualities of consonances—sixths, thirds, fifths, and octaves—to obtain the necessary effects of contrast between one musical moment and another. Then, when, in the natural order of things, something stronger was required, it was found in this process of suspension. But for some

¹ Biog. Lexikon des Oesterreich. Part 40: 1880.

SUSPENSION.

time it was used very sparingly, and composers required no more than the least dissonant forms to carry out their purposes. For a long while, moreover, all discords appeared to the early writers as no more than artificial manipulations of the motion of the parts of this kind, and it was only by the use of such means that they even learnt to use some discords, which are at the present day looked upon in a totally different light. About the beginning of the 17th century they began to realise that there was a radical difference in the character and constitution of certain groups of discords, and to use at least one freely as an independent or fundamental combination. From that time discords began to be classified, instinctively, into definite groups. Certain of the less dissonant combinations have in course of time been grouped into a special class, which is freed from the obligation of being prepared, and thereby loses one of the most essential characteristics of suspension. These are the Dominant discords of the minor seventh and major and minor ninths; certain corresponding chromatic chords on Tonic and Supertonic roots, which have been naturally affiliated upon the key; and the chord sometimes known as that of the added sixth. Another class has been created by some theorists, which is much more intimately connected with the class of suspensions; if indeed they are not actually suspensions slightly disguised. These are the discords which are arrived at by the same process of staying or suspending the motion of a part, but which are distinguished by further motion of the other parts simultaneously with the resolution of the discord, thereby condensing two motions into one; as in (d) and (e). When treated in this manner the chords are described by some theorists as 'Prepared discords.' The province of suspensions

appears by this process to have been reduced, but what was lost by the process of classification has been amply made up by the invention of a great variety of new forms.

About the time that composers first began to realise the character of the dominant seventh, they also began to use a greater variety and a harsher description of suspensions. The earliest experiments of note in both directions are commonly ascribed to the same man, namely Monteverde. Since his time the progress has been tolerably constant in one direction; for the tendency to look for fresh and more vivid points of contrast necessarily leads to the use of suspensions of more complicated and harsher character. At the present time the varieties of possible suspensions are so numerous that it would be almost as absurd to endeavour to make a catalogue of them, as it would be to make a list of possible

SUSPENSION.

combinations of sounds. But if the principle be properly understood, it is not necessary to give more than illustrative examples; for the like rules apply to all; and their kinds are only limited by the degree of harshness considered admissible, and by the possibility of adequate and intelligible resolution. Classical authority not only exists for a great variety of chromatic suspensions, often derived from no stronger basis than a combination of chromatic passing or ornamental notes; but also for remarkable degrees of dissonance. Beethoven for instance, in the Bb Quartet, op. 130, used the suspended fourth together with the third on which it is to resolve, and put the latter at the top, and the former at the bottom (*f*); and Bach supplies many examples of similar character. Certain simple rules

are almost invariably observed—such as that the moment of percussion shall fall upon the strong beat of the bar; and that the progression shall not imply a violation of rules against consecutive perfect concords, which would occur if the artificial suspension of the part were removed, as in (g).

Composers early discovered a means of varying the character of the process by interpolating notes between the sounding of the discord and its resolution, as in (h). Instances are also to

be found in which some such forms were used as sufficient to constitute resolution without arriving at the normal note,—habit and familiarity with a particular form of motion leading to the acceptance of a conventional formula in place of the actual solution. The following examples from Corelli's 1st Sonata of opera 2da and 5th of opera 4ta are clear illustrations.

This particular device is characteristic rather of the early period of harmonic music up to Corelli's time than of a later period. The following passage from Schumann's variations for two piano-

fortes is characteristic of modern uses of combined and chromatic suspension, and also of interpolation of notes between percussion and resolution.

(m) 1st Piano.

and Piano.

etc.

Some theorists distinguish the combinations which resolve upwards from those that resolve downwards, styling the former Retardations. [See RETARDATION; HARMONY.] [C.H.H.P.]

SVENDSEN, JOHAN SEVERIN, was born Sept. 30, 1840, at Christiania, where his father was a military band-master. At the age of 11 he wrote his first composition for the violin. When 15 he enlisted in the army, and soon became band-master. Even at that age he played with considerable skill flute, clarinet, and violin. He soon left the army, and worked during the next few years in the orchestra of the Christiania theatre, and at a dancing academy, for which he arranged some études by Paganini and Kreutzer for dancing. A strong desire to travel drove him, at 21, on a roving tour over a great part of Sweden and North Germany. Two years after, being in Lübeck in extremely reduced circumstances, he fortunately met with the Swedish-Norwegian Consul Herr Leche, whose interest he gained, and who shortly after obtained a stipend for him from Charles XV. to enable him to perfect himself as a violinist; but being soon afterwards attacked with paralysis in the hand, he was compelled to give up the bow for composition. He came to Leipzig in 1863, and his works being already known there, he was placed in the finishing class of the Conservatorium, receiving, however, instruction in elementary theory of music, which he had never been taught. His instructors were Hauptmann, David, Richter, and Reinecke, of whom he considers that he owes most to the first. Whilst in Leipzig he wrote a Quartet in A, an Octet and a Quintet, all for strings; Quartets for male voices; and a Symphony in D. The following anecdote of this period is both characteristic and authentic. On hearing that his octet had been played with great success by the students, Reinecke asked to see it; he declined, however, to suggest any improvements in so splendid a work, but remarked somewhat sarcastically, 'The next thing will be a symphony, I suppose.' Barely a week

after Svendsen laid his Symphony in D before his astonished instructor.

On leaving Leipzig in 1867 he received the great honorary medal of the Academy. After travelling in Denmark, Scotland, and Norway, Svendsen went in 1868 to Paris. The French Empire was then at its zenith, and his sojourn in the capital of France influenced the composer to a very great extent. Whilst there, he played in Musard's orchestra, and at the Odéon, and became intimately acquainted with Wilhelmine Szarvady, De Beriot, Vieuxtemps, and Léonard. He arranged the incidental music to Coppée's 'Le passant,' in which both Sarah Bernhardt and Agar performed, but on the whole his Paris productions were few—a Concerto for violin in A, and orchestral arrangements of studies by Liszt and Schubert; he also began 'Sigurd Slembe,' the overture to a Norwegian drama of that name. He left Paris at the beginning of the war in 1870 for Leipzig, where he had been offered the conductorship of the well-known Euterpe concerts, which however were discontinued, owing to the war. At a great musical festival at Weimar, in the same year, he first met Liszt and Tausig, and his octet was played by a party containing David, Helmesberger, Grützmacher, and Hechmann, with great approbation. Early in the following year his Symphony in D was performed at the Gewandhaus, and his fame as a composer established. He composed in that year his Concerto for cello in D. In the autumn he went to America to be married to an American lady, whom he had met in Paris, and returned the same year to Leipzig, where, after the end of the war, he undertook the leadership of the Euterpe concerts for one year. There he finished the overture to 'Sigurd Slembe,' which was played at the Euterpe then, and in the following year at the musical festival at Cassel, where Liszt was present, and both times with great success. This year was one of the most momentous in Svendsen's life, since in it he met Wagner at Bayreuth, and soon became his intimate associate. He took the opportunity of making himself fully acquainted with Wagner's music and ideas. In Wagner's house he met the Countess Nesselrode, who formed a warm friendship for the Norwegian composer, and whose talents and experience became of great benefit to him. In Bayreuth some of his happiest days were spent, and it was during this stay he composed his *Carnaval à Paris*, a charming composition which depicts with great force the varied aspects of the capital of pleasure. The longing to see his country after an interval of so many years made him disregard various tempting offers, and he left Bayreuth for home. For the next five years he was conductor of the Christiania Musical Association and teacher of composition, and composed comparatively few works, which may be explained by the unfortunate want of pecuniary independence. The pieces of this period are:—Funeral march for Charles XV; 'Zorahayde,' a legend for orchestra; Coronation march of Oscar II, and a Polonaise in

E for the same occasion; 'Romeo and Juliet,' a fantasia for orchestra; four Norwegian rhapsodies; arrangements of some Norwegian, Swedish and Icelandic ballads for orchestra; and his *chef-d'œuvre*, a symphony in Bb. In 1874 his labours found some appreciation from his countrymen in the shape of an annuity granted by the Storting, and several decorations conferred on him by the king. After five years of hard work, he was enabled once more to proceed abroad. In 1877 he revisited Leipzig, and conducted a new work at the Gewandhaus; went thence to Munich, and eventually to Rome, where he spent the winter. In 1878 he visited London for the first time, and there met Sarasate, who assisted him in the performance of his quartet, quintet, and octet. From London he went to Paris, where he stayed until 1880, during which time his works were several times performed—as also at Angers, where the post of conductor was offered him by the Musical Association. But Svendsen, true to his resolution to return home, refused this lucrative appointment, and in the autumn of that year we again find him in his old post as conductor of the Musical Association in Christiania, in which capacity he has since acted. During the last few years he has produced only some minor compositions, besides arranging for orchestra several studies by foreign composers.

Svendsen's music is all of very high character, remarkable for strong individuality, conciseness, and the absence of anything national or Scandinavian; as well as for an elaborate finish strictly in harmony with the traditions of the great masters. Of these there is, however, only one whose influence can be traced in his compositions, namely Beethoven. He is one of the most cosmopolitan composers of the age.

His printed works are as follow:—

- | | |
|--|--|
| Op. 1. String quartet, in A minor. | 15. Symphony no. 3 in Eb. |
| 2. Songs for men's voices. | 16. Carnaval des artistes Norvégiens. |
| 3. Octet for strings in A minor. | 17. Rhapsodie Norvégienne no. 1, for orch. |
| 4. Symphony in D. | 18. Overture to Romeo and Juliet. |
| 5. String quintet in C. | 19. Rhapsodie Norvégienne no. 2. |
| 6. Concerto for violin and orch. in A. | 20. Scandinavian airs arranged for string quartet. |
| 7. Do. for cello and orch. in D minor. | 21, 22. Rhapsodies Norvégiennes nos. 3, 4. |
| 8. Overture in C to Bjørnson's drama of 'Sigurd Slemba.' | 23. Five songs, French and German, for voice and PF. |
| 9. Carnaval à Paris, for orch. | 24. Four do., French and Norwegian, do. |
| 10. Funeral march for Charles XV. | 25. Romance by Popper, arranged for cello and PF. |
| 11. Zorahayda, legend for orch. | 26. Romance for violin and orch. in G. |
| 12. Polonaise for orch. | |
| 13. Coronation march for Oscar II. | |
| 14. Marriage Cantata, for chor. and orch. | |

[C.S.]

SVENDSEN, OLUF, a distinguished flute-player, born in Christiania April 19, 1832. He learnt the rudiments of playing from his father, a musician; when 12 years old played the flute in small orchestras; and at 14 was engaged as first flute in the Christiania theatre. In 1851 he went to Copenhagen, and took lessons from Nils Petersen, then a flute-player there. In 1853 he entered the Conservatoire at Brussels, where he studied for two years, after which he was engaged by Jullien for his Concerts in London. In September, 1856, he joined the Band

of the Crystal Palace, Sydenham, where he remained till the end of 1858. In 1861 Svendsen was appointed first flute in the Queen's private band, and the same year joined the Philharmonic orchestra. He was ten years in the orchestra at Her Majesty's Theatre; and since 1867 has been professor of his instrument at the Royal Academy of Music. He is well known as a solo-player throughout Belgium, Norway, Sweden, Denmark, and France. [G.]

SWEELINCK or SWELINCK,¹ JAN PIETRSZON, the greatest of Dutch organists, was born of a Deventer family in the summer of 1562. His father, 'Mr. Pieter,' was organist of the Old Church at Amsterdam, which place disputes with Deventer the honour of having given the son birth.² Of Sweelinck's boyhood we know nothing, except that he was taught by Jacob Buyck (Buchius) the pastor of the Old Church. There is a tradition that he was sent to Venice to study music under Zarlino and Gabrieli; but with this is connected a mistake of old standing, which places his birth in 1540, 22 years too early.³ Now, as we know that he was in Holland from 1577, at latest, onwards, it becomes barely credible that the lad of 15 could have followed the instruction of the Venetian masters to any important extent; and it is likely that the whole story is based upon the close study which his works prove him to have devoted to those of 'the apostle of musical 'science,' whose 'Istituzioni harmoniche' he translated.⁴ Some time between 1577 and 1581 Sweelinck was appointed to the organistship previously held by his father (who died in 1573); and this post he filled until his death, Oct. 16, 1621. For a generation he was the glory of Amsterdam. When he played the organ there, says a contemporary, 'there was a wonderful concourse every day; every one was proud to have known, seen, heard the 'man.' And when he died it was the greatest of Dutch poets, Vondel, who wrote his epitaph, and surnamed him 'Phoenix of Music.' He must also have been a distinguished figure in the society of Amsterdam, then in its

¹ Of the seven or more ways in which the name is spelled, these two have the warrant of the musician's own signature. The Germans of the time seem to have naturalised him as Schweling; in Amsterdam he was known as plain Jan Pieteraz.

² Deventer is consistently mentioned by Sweelinck's later biographers; but the Amsterdam claim has the support of the official entry of his marriage there in 1590, in which his birthplace is not stated. The omission was the rule when the person was a native of the city. Else documentary evidence is equally wanting on both sides.

³ The correction of this and the rest of the mistakes which confuse every single date in Sweelinck's life is due to the essay of F. H. J. Tiedeman, 'J. P. Sweelinck, een bio-bibliografische Schets,' published by the Vereeniging voor Nederlandsche Muziekgeschiedenis (Amsterdam, 1876), which supersedes a shorter sketch published by the same writer as an introduction to the 'Regina Ocell' in 1869. Both are based upon a biography, which remains in MS. in the possession of the Vereeniging, by Robert Eitner, who has done good service by rescuing the works of Sweelinck from the obscurity of the Graue Kloster at Berlin.

⁴ So Zarlino is entitled by his modern biographer, F. Caffi, 'Della Vita e delle Opere del Prete G. Zarlino' (Venice 1838). Neither here nor in the chapters on Zarlino and Andrea Gabrieli contained in his 'Storia della Musica Sacra,' vol. I. p. 129 etc. (Venice 1854), does Caffi take any notice of the Dutch scholar. Nor have I been able to discover any trace of his residence at Venice in the MS. collections of S. Marco.

⁵ MS. at Hamburg, formerly belonging to the great organist Reincke. ⁶ Sweertius, in Tiedeman, p. 16. Sweelinck's portrait at Darmstadt gives his strong irregular features a kindly expression, with a touch of sadness in them. It is reproduced in photograph by Mr. Tiedeman.

greatest brilliancy, not only for his unmatched powers as an organist, but also for his skill, fancy, and charming versatility on the clavicymbel.¹ The town bought him for public service a new 'clavecimpbel' from Antwerp at a cost of 200 gulden; and the instrument seems to have travelled with him all over the country.²

What was published however by Sweelinck in his life-time was entirely vocal music, and includes—besides occasional canons, marriage-songs, etc., his 'Chansons françaises' (3 parts, Antwerp, 1592-4), 'Rimes françaises et italiennes' (Leyden 1612), and the great collections of sacred music on which, with his organ works, his fame chiefly rests. These are the 'Pseaumes mis en musique' for 4-8 voices (published in several editions at Leyden, Amsterdam, and Berlin), and the 'Cantiones Sacre' (Antwerp 1619). A Regina Coeli from the latter, 3 Chansons, and 8 Psalms in 6 parts have been lately reprinted, in organ-score, by the Association for the History of Dutch Music (pts. i, v, vii, and vi; Utrecht and Amsterdam, 1869-1877); which has also published for the first time seven of Sweelinck's organ works³ (pt. iii.) [VEREENIGING.]

The psalms make an interesting link between the tranquillity of the old polyphonists and the rhythm of modern music. Formally they stand nearest to the earlier style, but the strictness of their counterpoint, the abundance of imitation and fugue in them, does not hinder a general freedom of effect, very pure and full of melody, to a greater degree than is common in works of the time. The organ pieces are also historically of signal importance. Though they may not justify the claim made for Sweelinck as 'the founder of instrumental music,'⁴ they at all events present the first known example of an independent use of the pedal (entrusting it with a real part in a fugue), if not with the first example of a completely developed organ-fugue.

It is as an organist and the founder of a school of organists that Sweelinck had most influence, an influence which made itself felt through the whole length of northern Germany.⁵ In the next generation nearly all the leading organists there had been his scholars: his learning and method were carried by them from Hamburg to Danzig. His pupil Scheidemann handed down the tradition to the great Reincke⁶—himself a Dutchman—from whom, if we accept a statement supported alike by unanimous testimony and by exhaustive analysis of their works, it turned to find its consummation in Sebastian Bach.⁷ [R.L.P.]

¹ On this he was the master of Christina van Erp, the famous lutenist, and wife of the more famous poet, Pieter Corneliszoon Hooft. See the 'Bouwsteenen' of the Vereeniging, vol. i. pp. 131.

² See an anecdote in Baudartius, 'Memoryen,' xiii. p. 163; cited by Tiedeman, p. 16.

³ The bibliography of Sweelinck is given at length by Tiedeman, pp. 43-75. To this should be added some supplementary particulars communicated by Dr. J. P. Heijze in the 'Bouwsteenen,' vol. i. pp. 39-45.

⁴ See Eitner's preface to the edition, and Tiedeman, pp. 84 ff.

⁵ The wide distribution of his works is shown by early transcripts existing in the British Museum, and by copies of the extremely rare printed works preserved in the Bibliothèque Nationale. Curiously enough not a single MS. of Sweelinck remains in Holland.

⁶ Often erroneously known as Reincken.

⁷ Spitta, 'J. S. Bach,' i. 96, 192-213.

SWELL (HARPSICHORD). The desire for a power of increase and decrease on keyboard instruments like the harpsichord and organ, so as to emulate the bow instruments, and even the human voice, in that flow and ebb which are at the foundation of form no less than of expression, has led to the contrivance of mechanical swells as the only possible approach to it. A swell was first attempted on the Organ; the harpsichord swell was introduced by Robert Plenius in a sostenente variety of the instrument, named by him 'Lyrichord,' and is described (in 1755) as the raising of a portion of the lid or cover of the instrument by means of a pedal. Kirkman adopted this very simple swell, and we find it also in many small square pianos of the last century. About 1765 Shudi introduced the Venetian swell, and patented it in 1769. This beautiful piece of joinery is a framing of louvres which open or close gradually by means of a pedal (the right foot one) and thus cause a swell, which may be as gradual as the performer pleases. Shudi bequeathed this patent to John Broadwood, who inherited it on the death of Shudi in 1773. When the patent expired, Kirkman and others adopted it, and it was fitted to many old harpsichords, and even to pianos, but was soon proved unnecessary in an instrument where power of *nuance* was the very first principle.

The English organ-builders perceived the great advantage of Shudi's Venetian swell over the rude contrivance they had been using [see ORGAN, vol. ii. p. 596 a], and it became generally adopted for organs, and has since been constantly retained in them as an important means of effect. [A.J.H.]

SWELL-ORGAN. The clavier or manual of an organ which acts upon pipes enclosed in a box, such box having shutters, by the opening of which, by means of a pedal, a crescendo is produced. The shutters are made to fold over each other like the woodwork of a venetian blind, hence the expressions 'Venetian Swell' and 'Venetian Shutters' sometimes found in specifications. To the swell-organ a larger number of reed-stops is assigned than to other manuals.

The first attempt at a 'swelling organ' was made by Jordan in 1712. The crescendo was obtained by raising one large sliding shutter which formed the front of the box. The early swell-organs were of very limited compass, sometimes only from middle C upwards, but more generally taken a fourth lower, namely, to fiddle G. For many years the compass did not extend below Tenor C, and even now attempts are sometimes made to reduce the cost of an organ by limiting the downward compass of the Swell; but in all instruments with any pretension to completeness the Swell manual is made to CC, coextensive with the Great and Choir. [See ORGAN, vol. ii. p. 596, etc.; also 604.] [J.S.]

SWERT, DE, JULES. An eminent violoncellist, born Aug. 16, 1843, at Louvain, where his father was Capellmeister at the Cathedral. He was grounded in the cello and in music by his father, and afterwards took lessons from Servais in preparation for the Brussels Conser-

vatoire. After gaining the first prize there, at 15, he went to Paris, made the acquaintance of Rossini, and was much applauded. He then began a lengthened tour through Belgium, Holland, Denmark, Sweden, South Germany, Switzerland, etc., in which his programmes embraced both classical and modern pieces. Two, on which he gained great fame, were cello arrangements of the violin concertos of Beethoven and Mendelssohn. In 1865 he took a post as leader at Düsseldorf, then in the Court band at Weimar, and next at Berlin. He did not however retain the last of these long, but gave it up for concert tours, which have since occupied him. In the intervals of these he has resided at Wiesbaden and Leipzig. His first opera, 'Die Albigenser,' was produced at Wiesbaden in 1878, with much success. A second, 'Die Grafen von Hammerstein,' is announced for publication. De Swert has a Primer for the Cello in preparation for Messrs. Novello. He visited England in the spring of 1875, and appeared at the Crystal Palace on April 24. [G.]

SWIETEN, GOTTFRIED, BARON VAN. A musical amateur of great importance, who resided at Vienna at the end of last century and beginning of this one. The family was Flemish, and Gottfried's father, Gerhard,¹ returned from Leyden to Vienna in 1745, and became Maria Theresa's favourite physician. Gottfried was born in 1734, and was brought up to diplomacy, but his studies were much disturbed by his love of music, and in 1769 he committed himself so far as to compose several of the songs in Favart's 'Rosière de Salency' for its public production at Paris. In 1771 he was made ambassador to the Court of Prussia, where the music was entirely under the influence of Frederick the Great, conservative and classical. This suited Van Swieten. Handel, the Bachs, and Haydn were his favourite masters; in 1774 he commissioned C. P. E. Bach to write six symphonies for orchestra. He returned to Vienna in 1778; succeeded his father as Prefect of the Public Library, and in 1781 was appointed President of the Education Commission. He became a kind of musical autocrat in Vienna, and in some respects his influence was very good. He encouraged the music which he approved; had regular Sunday-morning meetings for classical music, as well as performances of the great choral works of Bach, Handel, and Hesse, etc.; employed Mozart to add accompaniments to Handel's 'Acis,' 'Messiah,' 'St. Cecilia,' and 'Alexander's Feast,' and Starzer to do the same for 'Judas'; translated the words of the 'Creation' and the 'Seasons' into German for Haydn; and himself arranged Handel's 'Athaliah' and 'Choice of Hercules.' He supplied Haydn now and then with a few ducats, and gave him a travelling-carriage for his second journey to England.² In his relation to these great artists he seems never to have forgotten the superiority of his rank to theirs; but this was the manner of the time. Van Swieten patron-

ised Beethoven also [see vol. i. p. 176a]; but such condescension would not be at all to Beethoven's taste, and it is not surprising that we hear very little of it. His first Symphony is, however, dedicated to Van Swieten. He was the founder of the 'Musikalischen Gesellschaft,' or Musical Society, consisting of 25 members of the highest aristocracy, with the avowed object of creating a taste for good music—a forerunner of the 'Gesellschaft der Musikfreunde,' founded in 1808.

Van Swieten died at Vienna March 29, 1803. His music has not survived him, but it would be interesting to hear one of the six symphonies which, in Haydn's words,³ were 'as stiff as himself.' [G.]

SWINNERTON HEAP, CHARLES, was born at Birmingham in 1847, and educated at the Grammar School of that town. Displaying at a very early age an aptitude for music, on leaving school he was articled to Dr. Monk at York, where he remained for two years. In 1865 he gained the Mendelssohn Scholarship, and was sent to Leipzig for two-and-a-half years, studying under Moscheles and Reinecke. On his return he became a pupil of Mr. Best at Liverpool, and since 1868 has devoted himself to professional duties in Birmingham, at the classical concerts of which town he has constantly appeared as a pianist, and in which district he is widely known as a conductor. In 1870 he wrote an exercise for the Cambridge Degree of Mus. Bac., which produced so favourable an impression upon the Professor of Music (Sir Sterndale Bennett) that he offered to accept the work (the 1st part of an oratorio 'The Captivity') as an exercise for the Mus. Doc. degree. Mr. Swinnerton Heap accordingly set the 3rd Psalm for the Mus. Bac. exercise, and in the following year proceeded to the degree of Mus. Doc. His principal works are a pianoforte trio (performed at Leipzig), a sonata for clarinet and piano, a quintet for pianoforte and wind instruments, two overtures (one produced at the Birmingham Festival of 1879 and afterwards played at the Crystal Palace Concerts), a 'Salvum fac Regem' (performed at Leipzig), a short cantata, 'The Voice of Spring,' and numerous anthems, songs, and organ pieces. [W.B.S.]

SWINY, OWEN, frequently called Mac Swiny, 'a gentleman born in Ireland.' In a letter,⁴ dated Oct. 5, 1706, and addressed to Colley Cibber, whom he calls in turn 'puppy,' 'his Angel' (twice), 'his Dear,' and finally 'Unbeliever,'—this singular person describes how Rich had sent for him from his 'Quarters in the North,' and how 'he was at a great charge in coming to town, and it cost him a great deal of money last winter,' and 'he served him night and day, nay, all night and all day, for nine months.' He had 'quitted his post in the army' on the faith of promises that, in return for managing 'the playhouse in the Haymarket' under Rich,

¹ Evidently not a very wise person. See Carlyle's 'Friedrich,' 2d. xxi. ch. 6.

⁵ Biogr. Dram.

he was to have '100 Guineas per annum Salary, a place at Court, and the Devil and all.' This was the somewhat inauspicious beginning of Swiny's theatrical career. Having come up to London, as described, in 1705, he soon found that Rich intended nothing seriously for his advantage; and he announces (in the same letter) that, in consequence of the general discontent of the actors with Rich, and although Rich might have had the house for £3 or £3 10s. a day, he (Swiny) had taken a lease for seven years at £5 a day, and meant to begin in a few days.

In 1707 we find him in partnership with Wilks, Dogget, and Cibber in the King's Theatre, having taken the lease from Vanbrugh, and very soon quarrelling with them and petitioning the Lord Chamberlain's interference in his favour. He was mixed up in most of the quarrels and intrigues of the time.

In May, 1709, Swiny engaged the famous Nicolini for three years, that great singer having recently made a most successful *début* in London. Before the completion of this term, however, Swiny appears to have 'absented himself from his creditors' and become bankrupt.

After this, he lived for some years in Italy; but, on his return to England, a place in the Custom-house was found for him, and he was appointed Keeper of the King's Mews. While in Italy, with Lord Boyne and Walpole, he wrote to Colman (July 12, 1730) from Bologna, on the subject of engaging singers for the Opera, then in the hands of Handel. Swiny died October 2, 1754, leaving his fortune to Mrs. Woffington. He was the author of several dramatic pieces, viz. 'The Quacks, or Love's the Physician' (1705); 'Camilla' (1706); 'Pyrrhus and Demetrius' (1709); and 'The Quacks, or Love's the Physician,' an altered version of the first piece.

Two years before his death, a fine portrait of Swiny, after Van Loo, was scraped in mezzotint by J. Faber, junr. It represents him, in black velvet, holding in his hand a book, of which the title seems to be 'Don Quixote.' [J.M.]

SYLPHIDE, LA. One of the most famous ballets on record: in 2 acts; libretto by A. Nourrit the singer, music by Schneitzhoffer. Produced at the Grand Opera, Paris, March 12, 1832. The part of La Sylphide was danced by Mdle. Taglioni, and was one of her greatest parts, both in Paris and in London, where the piece was brought out at Covent Garden Theatre, for her benefit, July 26, 1832. Thackeray has embalmed it in 'Pendennis' (chap. xxxviii.) [G.]

SYLVANA, accurately **SILVANA.** Weber's 3rd opera, composed at Stuttgart, 1810, and produced at Frankfort, Sept. 16, 1810. [See **WALDMÄDCHEN.**]

SYLVIA, OU LA NYMPHE DE DIANE. 'Ballet-pantomime' in 2 acts and 3 tableaux; libretto by Barbier, music by Delibes. Produced at the Grand Opéra, Paris, June 14, 1876. [G.]

SYMPHONIKES, ETUDES, i.e. Symphonic Studies. The name of a theme and set of variations in C♯ minor by Robert Schumann, forming

op. 13. The work is dedicated to W. Sterndale Bennett, and Mr. Spitta has pointed out that the theme contains a reference to him, inasmuch as it is identical with a part of the romance in Marschner's 'Templer und Judin,' 'Du stolzes England freue dich,' in which this country is called on to rejoice in her famous men. [See vol. iii. p. 410a.] The first edition was published by Haslinger in 1837, as 'Florestan und Eusebius, zwölf Etuden (Etudes Symphoniques).' Those published after that date are entitled 'Etudes en forme de Variations,' and have been materially altered. [G.]

SYMPHONISCHE DICHTUNGEN—that is, Symphonic Poems. A title employed by Liszt for twelve pieces of orchestral music of characteristic, i.e. descriptive, kind, and of various dates—one feature of which is that the movements are not divided, but lead into each other without interruption.

SYMPHONY (SINFONIA, SINFONIE, SYMPHONIE). The terms used in connection with any branch of art are commonly very vague and indefinite in the early stages of its history, and are applied without much discrimination to different things. In course of time men consequently find themselves in difficulties, and try, as far as their opportunities go, to limit the definition of the terms, and to confine them at least to things which are not obviously antagonistic. In the end, however, the process of sifting is rather guided by chance and external circumstances than determined by the meaning which theorists see to be the proper one; and the result is that the final meaning adopted by the world in general is frequently not only distinct from that which the original employers of the word intended, but also in doubtful conformity with its derivation. In the case of the word 'Symphony,' as with 'Sonata,' the meaning now accepted happens to be in very good accordance with its derivation, but it is considerably removed from the meaning which was originally attached to the word. It seems to have been used at first in a very general and comprehensive way, to express any portions of music or passages whatever which were thrown into relief as purely instrumental

in works in which the chief interest was centred upon the voice or voices. Thus, in the operas, cantatas, and masses of the early part of the 17th century, the voices had the most important part of the work to do, and the instruments' chief business was to supply simple forms of harmony as accompaniment. If there were any little portions which the instruments played without the voices, these were indiscriminately called Symphonies; and under the same head were included such more particular forms as Overtures and Ritornelli. The first experimentalists in harmonic music generally dispensed with such independent instrumental passages altogether. For instance, most if not all of the cantatas of Cesti and Rossi¹ are devoid of either instrumental introduction or ritornel; and the same appears to have been the case with many of the operas of that time. There were however a few independent little instrumental movements even in the earliest operas. Peri's 'Euridice,' which stands almost at the head of the list (having been performed at Florence in 1600, as part of the festival in connection with the marriage of Henry IV of France and Mary de' Medici), contains a 'Sinfonia' for three flutes, which has a definite form of its own and is very characteristic of the time. The use of short instrumental passages, such as dances and introductions and ritornels, when once fairly begun, increased rapidly. Monteverde, who followed close upon Peri, made some use of them, and as the century grew older, they became a more and more important element in dramatic works, especially operas. The indiscriminate use of the word 'symphony,' to denote the passages of introduction to airs and recitatives, etc., lasted for a very long while, and got so far stereotyped in common usage that it was even applied to the instrumental portions of airs, etc., when played by a single performer. As an example may be quoted the following passage from a letter of Mozart's—'Sie (meaning Strinasacchi) spielt keine Note ohne Empfindung; sogar bei den Sinfonien spielte sie alles mit Expression,' etc.² With regard to this use of the term, it is not necessary to do more than point out the natural course by which the meaning began to be restricted. Lulli, Alessandro Scarlatti, and other great composers of operas in the 17th century, extended the appendages of airs to proportions relatively considerable, but there was a limit beyond which such dependent passages could not go. The independent instrumental portions, on the other hand, such as overtures or toccatas, or groups of ballet tunes, were in different circumstances, and could be expanded to a very much greater extent; and as they grew in importance the name 'Symphony' came by degrees to have a more special significance. The small instrumental appendages to the various airs and so forth were still symphonies in a general sense, but the Symphony *par excellence* was the introductory movement; and the more it grew in

importance the more distinctive was this application of the term.

The earliest steps in the development of this portion of the opera are chiefly important as attempts to establish some broad principle of form; which for some time amounted to little more than the balance of short divisions, of slow and quick movement alternately. Lulli is credited with the invention of one form, which came ultimately to be known as the 'Ouverture à la manière Française.' The principles of this form, as generally understood, amounted to no more than the succession of a slow solid movement to begin with, followed by a quicker movement in a lighter style, and another slow movement, not so grave in character as the first, to conclude with. Lulli himself was not rigidly consistent in the adoption of this form. In some cases, as in 'Persée,' 'Thésée,' and 'Bellérophon,' there are two divisions only—the characteristic grave opening movement, and a short free fugal quick movement. 'Proserpine,' 'Phaëton,' 'Alceste,' and the Ballet piece, 'Le Triomphe de l'amour,' are characteristic examples of the complete model. These have a grave opening, which is repeated, and then the livelier central movement, which is followed by a division marked 'lentement'; and the last two divisions are repeated in full together. A few examples are occasionally to be met with by less famous composers than Lulli, which show how far the adoption of this form of overture or symphony became general in a short time. An opera called 'Venus and Adonis,' by Desmarests, of which there is a copy in the Library of the Royal College of Music, has the overture in this form. 'Amadis de Grèce,' by Des Touches, has the same, as far as can be judged from the character of the divisions; 'Albion and Albanus,' by Grabu, which was licensed for publication in England by Roger Lestrangle in 1687, has clearly the same, and looks like an imitation direct from Lulli; and the 'Venus and Adonis' by Dr. John Blow, yet again the same. So the model must have been extensively appreciated. The most important composer, however, who followed Lulli in this matter, was Alessandro Scarlatti, who certainly varied and improved on the model both as regards the style and the form. In his opera of 'Flavio Cuniberto'³ for instance, the 'Sinfonia avanti l'Opera' begins with a division marked *grave*, which is mainly based on simple canonical imitations, but has also broad expanses of contrasting keys. The style, for the time, is noble and rich, and very superior to Lulli's. The second division is a lively allegro, and the last a moderately quick minuet in 6-8 time. The 'Sinfonia' to his serenata 'Venere, Adone, Amore,' similarly has a Largo to begin with, a Presto in the middle, and a movement, not defined by a *tempo*, but clearly of moderate quickness, to end with. This form of 'Sinfonia' survived for a long while, and was expanded at times by a succession of dance movements, for which also Lulli supplied examples, and Handel

² She does not play a note without feeling, and even in the Symphonies played all with expression.

³ MSS. in Christ Church Library.

at a later time more familiar types; but for the history of the modern symphony, a form which was distinguished from the other as the 'Italian Overture,' ultimately became of much greater importance.

This form appears in principle to be the exact opposite of the French Overture: it was similarly divided into three movements, but the first and last were quick and the central one slow. Who the originator of this form was it seems now impossible to decide; it certainly came into vogue very soon after the French Overture, and quickly supplanted it to a great extent. Certain details in its structure were better defined than in the earlier form, and the balance and distribution of characteristic features were alike freer and more comprehensive. The first *allegro* was generally in a square time and of solid character; the central movement aimed at expressiveness, and the last was a quick movement of relatively light character, generally in some combination of three feet. The history of its early development seems to be wrapped in obscurity, but from the moment of its appearance it has the traits of the modern orchestral symphony, and composers very soon obtained a remarkable degree of mastery over the form. It must have first come into definite acceptance about the end of the 17th or the beginning of the 18th century; and by the middle of the latter it had become almost a matter of course. Operas, and similar works by the most conspicuous composers of this time, in very great numbers, have the same form of overture. For instance, the two distinct versions of 'La Clemenza di Tito' by Hasse, 'Catone in Utica' by Leonardo Vinci (1728), the 'Hypermnestra,' 'Artaserse,' and others of Perez, Piccini's 'Didone,' Jomelli's 'Betulia liberata,' Sacchini's 'Oedipus,' Galuppi's 'Il mondo alla rovescia'—produced the year before Haydn wrote his first symphony—and Adam Hiller's 'Lisuart und Dariolette,' 'Die Liebe auf dem Lande,' 'Der Krieg,' etc. And if a more conclusive proof of the general acceptance of the form were required, it would be found in the fact that Mozart adopted it in his boyish operas, 'La finta semplice' and 'Lucio Silla.' With the general adoption of the form came also a careful development of the internal structure of each separate movement, and also a gradual improvement both in the combination and treatment of the instruments employed. Lulli and Alessandro Scarlatti were for the most part satisfied with strings, which the former used crudely enough, but the latter with a good deal of perception of tone and appropriateness of style; sometimes with the addition of wind instruments. Early in the eighteenth century several wind instruments, such as oboes, bassoons, horns, trumpets, and flutes, were added, though not often all together; and they served, for the most part, chiefly to strengthen the strings and give contrasting degrees of full sound rather than contrasts of colour and tone. Equally important was the rapid improvement which took place simultaneously in

internal structure; and in this case the development followed that of certain other departments of musical form. In fact the progress of the 'Sinfonia avanti l'Opera' in this respect was chiefly parallel to the development of the Clavier Sonata, which at this time was beginning to attain to clearness of outline, and a certain maturity of style. It will not be necessary here to repeat what has elsewhere been discussed from different points of view in the articles on FORM, SONATA, and SUITE; but it is important to realise that in point of time the form of this 'Sinfonia avanti l'Opera' did not lag behind in definition of outline and mastery of treatment; and it might be difficult to decide in which form (whether orchestral or clavier) the important detail first presents itself of defining the first and second principal sections by subjects decisively distinct. A marked improvement in various respects appears about the time when the symphony first began to be generally played apart from the opera; and the reasons for this are obvious. In the first place, as long as it was merely the appendage to a drama, less stress was laid upon it; and, what is more to the point, it is recorded that audiences were not by any means particularly attentive to the instrumental portion of the work. The description given of the behaviour of the public at some of the most important theatres in Europe in the middle of the eighteenth century, seems to correspond to the descriptions which are given of the audience at the Italian Operas in England in the latter half of the nineteenth. Burney, in the account of his tour, refers to this more than once. In the first volume he says, 'The music at the theatres in Italy seems but an excuse for people to assemble together, their attention being chiefly placed on play and conversation, even during the performance of a serious opera.' In another place he describes the card tables, and the way in which the 'people of quality' reserved their attention for a favourite air or two, or the performance of a favourite singer. The rest, including the overture, they did not regard as of much consequence, and hence the composers had but little inducement to put out the best of their powers. It may have been partly on this account that they took very little pains to connect these overtures or symphonies with the opera, either by character or feature. They allowed it to become almost a settled principle that they should be independent in matter; and consequently there was very little difficulty in accepting them as independent instrumental pieces. It naturally followed as it did later with another form of overture. The 'Symphonies' which had more attractive qualities were played apart from the operas, in concerts; and the precedent being thereby established, the step to writing independent works on similar lines was but short; and it was natural that, as undivided attention would now be given to them, and they were no more in a secondary position in connection with the opera, composers should

take more pains both in the structure and in the choice of their musical material. The Symphony had however reached a considerable pitch of development before the emancipation took place; and this development was connected with the progress of certain other musical forms besides the Sonata, already referred to.

It will accordingly be convenient, before proceeding further with the direct history of the Symphony, to consider some of the more important of these early branches of Musical Art. In the early harmonic times the relationships of nearly all the different branches of composition were close. The Symphony was related even to the early Madrigals, through the 'Sonate da Chiesa,' which adopted the Canzona or instrumental version of the Madrigal as a second movement. It was also closely related to the early Fantasias, as the earliest experiments in instrumental music, in which some of the technical necessities of that department were grappled with. It was directly connected with the vocal portions of the early operas, such as airs and recitatives, and derived from them many of the mechanical forms of cadence and harmony which for a long time were a necessary part of its form. The solo Clavier Suite had also something to do with it, but not so much as might be expected. As has been pointed out elsewhere, the suite-form, being very simple in its principle, attained to definition very early, while the sonata-form, which characterised the richest period of harmonic music, was still struggling in elementary stages. The ultimate basis of the suite-form is a contrast of dance tunes; but in the typical early symphony the dance-tunes are almost invariably avoided. When the Symphony was expanded by the addition of the Minuet and Trio, a bond of connection seemed to be established; but still this bond was not at all a vital one, for the Minuet is one of the least characteristic elements of the suite-form proper, being clearly of less ancient lineage and type than the Allemande, Courante, Sarabande, or Gigue, or even the Gavotte and Bourrée, which were classed with it, as Intermezzi or Galanterien. The form of the Clavier Suite movements was in fact too inelastic to admit of such expansion and development as was required in the orchestral works, and the type did not supply the characteristic technical qualities which would be of service in their development. The position of Bach's Orchestral Suites was somewhat different; and it appears that he himself called them Overtures. Dehn, in his preface to the first edition printed, says that the separate MS. parts in the Bach archives at Hamburg, from which he took that in C, have the distinctive characteristics of the handwriting of John Sebastian, and have for title 'Ouverture pour 2 Violons,' etc.; and that another MS., probably copied from these, has the title 'Suite pour Orchestre.' This throws a certain light upon Bach's position. It is obvious that in several departments of instrumental music he took the

French for his models rather than the Italians. In the Suite he followed Couperin, and in the Overture he also followed French models. These therefore appear as attempts to develop an independent orchestral work analogous to the Symphony, upon the basis of a form which had the same reason for existence and the same general purpose as the Italian Overture, but a distinctly different general outline. Their chief connection with the actual development of the modern symphony lies in the treatment of the instruments; for all experiments, even on different lines, if they have a common quality or principle, must react upon one another in those respects.

Another branch of art which had close connection with the early symphonies was the Concerto. Works under this name were not by any means invariably meant to be show pieces for solo instruments, as modern concertos are; and sometimes the name was used as almost synonymous with symphony. The earliest concertos seem to have been works in which groups of 'solo' and 'ripieno' instruments were used, chiefly to obtain contrasts of fullness of tone. For instance, a set of six concertos by Alessandro Scarlatti, for two violins and cello, 'soli,' and two violins, tenor, and bass, 'ripieni,' present no distinction of style between one group and the other. The accompanying instruments for the most part merely double the solo parts, and leave off either to lessen the sound here and there, or because the passages happen to go a little higher than usual, or to be a little difficult for the average violin-players of that time. When the intention is to vary the quality of sound as well, the element of what is called instrumentation is introduced, and this is one of the earliest phases of that element which can be traced in music. The order of movements and the style of them are generally after the manner of the Sonate da Chiesa, and therefore do not present any close analogy with the subject of this article. But very soon after the time of Corelli and Alessandro Scarlatti the form of the Italian overture was adopted for concertos, and about the same time they began to show traces of becoming show-pieces for great performers. Allusions to the performance of concertos by great violin-players in the churches form a familiar feature in the musical literature of the 18th century, and the three-movement-form (to all intents exactly like that of the symphonies) seems to have been adopted early. This evidently points to the fact that this form appealed to the instincts of composers generally, as the most promising for free expression of their musical thoughts. It may seem curious that J.S. Bach, who followed French models in some important departments of instrumental music, should exclusively have followed Italian models in this. But in reality it appears to have been a matter of chance with him; he always followed the best models which came to his hand. In this department the Italians excelled; and Bach therefore followed them, and left the most important early

specimens of this kind remaining—almost all in the three movement-form, which was becoming the set order for symphonies. Setting aside those specially imitated from Vivaldi, there are at least twenty concertos by him for all sorts of solo instruments and combinations of solo instruments in this same form. It cannot therefore be doubted that some of the development of the symphony-form took place in this department. But Bach never to any noticeable extent yielded to the tendency to break the movements up into sections with corresponding tunes; and this distinguishes his work in a very marked manner from that of the generation of composers who followed him. His art belongs in reality to a different stratum from that which produced the greater forms of abstract instrumental music. It is probable that his form of art could not without some modification have produced the great orchestral symphonies. In order to get to these, composers had to go to a different, and for some time a decidedly lower, level. It was much the same process as had been gone through before. After Palestrina a backward move was necessary to make it possible to arrive at the art of Bach and Handel. After Bach men had to take up a lower line in order to get to Beethoven. In the latter case it was necessary to go through the elementary stages of defining the various contrasting sections of a movement, and finding that form of harmonic treatment which admitted the great effects of colour or varieties of tone in the mass, as well as in the separate lines of the counterpoint. Bach's position was so immensely high that several generations had to pass before men were able to follow on his lines and adopt his principles in harmonic music. The generation that followed him showed scarcely any trace of his influence. Even before he had passed away the new tendencies of music were strongly apparent, and much of the elementary work of the modern sonata form of art had been done on different lines from his own.

The 'Sinfonia avanti l'Opera' was clearly by this time sufficiently independent and complete to be appreciated without the opera, and without either name or programme to explain its meaning; and within a very short period the demand for these sinfonias became very great. Burney's tours in search of materials for his History, in France, Italy, Holland, and Germany, were made in 1770 and 72, before Haydn had written any of his greater symphonies, and while Mozart was still a boy. His allusions to independent 'symphonies' are very frequent. Among those whose works he mentions with most favour are Stamitz, Emmanuel Bach, Christian Bach, and Abel. Works of the kind by these composers and many others of note are to be seen in great numbers in sets of part-books in the British Museum. These furnish most excellent materials for judging of the status of the Symphony in the early stages of its independent existence. The two most important points which they illustrate are the development of instrumentation, and the definition of form. They appear to

have been generally written in eight parts. Most of them are scored for two violins, viola, and bass; two hautboys, or two flutes, and two 'cors de chasse.' This is the case in the six symphonies of opus 3 of John Christian Bach; the six of Abel's opus 10, the six of Stamitz's opus 9, opus 13, and opus 16; also in a set of 'Overtures in 8 parts' by Arne, which must have been early in the field, as the licence from George II, printed in full at the beginning of the first violin part, is dated January 1744. The same orchestration is found in many symphonies by Galuppi, Ditters, Schwindl, and others. Wagenseil, who must have been the oldest of this group of composers (having been born in the 17th century, within six years after Handel, Scarlatti, and Bach), wrote several quite in the characteristic harmonic style, 'à 4 parties obligées avec Cors de Chasse ad libitum.' The treatment of the instruments in these early examples is rather crude and stiff. The violins are almost always playing, and the hautboys or flutes are only used to reinforce them at times as the 'ripieni' instruments did in the early concertos, while the horns serve to hold on the harmonies. The first stages of improvement are noticeable in such details as the independent treatment of the strings. In the 'symphonies before the opera' the violas were cared for so little that in many cases¹ not more than half-a-dozen bars are written in, all the rest being merely 'col basso.' As examples of this in works of more or less illustrious writers may be mentioned the 'Sinfonias' to Jomelli's 'Passione' and 'Betulia Liberata,' Sacchini's 'Œdipus,' and Sarti's 'Giulio Sabino.' One of the many honours attributed to Stamitz by his admiring contemporaries was that he made the violas independent of the basses. This may seem a trivial detail, but it is only by such details, and the way in which they struck contemporary writers, that the character of the gradual progress in instrumental composition can now be understood.

The general outlines of the form were extremely regular. The three movements as above described were almost invariable, the first being a vigorous broad allegro, the second the sentimental slow movement, and the third the lively vivace. The progress of internal structure is at first chiefly noticeable in the first movement. In the early examples this is always condensed as much as possible, the balance of subjects is not very clearly realisable, and there is hardly ever a double bar or repeat of the first half of the movement. The divisions of key, the short 'working-out' portion, and the recapitulation, are generally present, but not pointedly defined. Examples of this condition of things are supplied by some MS. symphonies by Paradisi in the Fitzwilliam Museum at Cambridge, which in other respects possess excellent and characteristically modern traits. The first thing attained seems to have been the relative definition and balance of the two subjects. In Stamitz, Abel, J. C. Bach, and Wagenseil, this is already commonly met with. The following

¹ It is notorious that Mozart gave fuller parts to the second violin because of the incompetence of the viola-players.

examples from the first movement of the fifth symphony of Stamitz's opus 9 illustrate both the style and the degree of contrast between the two principal subjects.

1st subject.

2nd subject.

The style is a little heavy, and the motion constrained, but the general character is solid and dignified. The last movements of this period are curiously suggestive of some familiar examples of a maturer time; very gay and obvious, and very definite in outline. The following is very characteristic of Abel:—

It is a noticeable fact in connection with the genealogy of these works, that they are almost as frequently entitled 'Overture' as

'Symphony'; sometimes the same work is called by the one name outside and the other in; and this is the case also with some of the earlier and slighter symphonies of Haydn, which must have made their appearance about this period. One further point which it is of importance to note is that in some of Stamitz's symphonies the complete form of the mature period is found. One in D is most complete in every respect. The first movement is Allegro with double bars and repeats in regular binary form; the second is an Andante in G, the third a Minuet and Trio, and the fourth a Presto. Another in E \flat (which is called no. 7 in the part-books) and another in F (not definable) have also the Minuet and Trio. A few others by Schwindl and Ditters have the same, but it is impossible to get even approximately to the date of their production, and therefore little inference can be framed upon the circumstance, beyond the fact that composers were beginning to recognise the fourth movement as a desirable ingredient.

Another composer who precedes Haydn in time as well as in style is Emmanuel Bach. He was his senior in years, and began writing symphonies in 1741, when Haydn was only nine years old. His most important symphonies were produced in 1776; while Haydn's most important examples were not produced till after 1790. In style Emmanuel Bach stands singularly alone, at least in his finest examples. It looks almost as if he purposely avoided the form which by 1776 must have been familiar to the musical world. It has been shown that the binary form was employed by some of his contemporaries in their orchestral works, but he seems determinedly to avoid it in the first movements of the works of that year. His object seems to have been to produce striking and clearly outlined passages, and to balance and contrast them one with another according to his fancy, and with little regard to any systematic distribution of the successions of key. The boldest and most striking subject is the first of the Symphony in D:—

The opening passages of that in E \flat are hardly less emphatic. They have little connection with the tendencies of his contemporaries, but seem in every respect an experiment on independent lines, in which the interest depends upon the vigour of the thoughts and the unexpected turns of the modulations; and the result is certainly rather fragmentary and disconnected. The slow movement is commonly connected with the first and last either by a special transitional passage, or by a turn of modulation and a half close. It is short and dependent in its character, but graceful and melodious. The last is much more systematic in structure than the first; sometimes in definite binary form, as was the case with the early violin sonatas.

In orchestration and general style of expression these works seem immensely superior to the other early symphonies which have been described. They are scored for horns, flutes, oboi, fagotto, strings, with a figured bass for 'cembalo,' which in the symphonies previously noticed does not always appear. There is an abundance of unison and octave passages for the strings, but there is also good free writing, and contrasts between wind and strings; the wind being occasionally left quite alone. All the instruments come in occasionally for special employment, and considering the proportions of the orchestras of the time Bach's effects must have been generally clear and good. The following is a good specimen of his scoring of an ordinary full passage:—

The musical score is arranged in six staves. The top staff is for 'Corni in E \flat '. The second staff is for 'Flauti'. The third staff is for 'Oboi'. The fourth staff is for 'Violini 1 & 2'. The fifth staff is for 'Viola'. The bottom staff is for 'Cello, Fagotto, Bassi e Cembalo'. The score includes various musical notations such as notes, rests, and dynamic markings like 'len.' and 'tr'.

It has sometimes been said that Haydn was chiefly influenced by Emmanuel Bach, and Mozart by John Christian Bach. At the present time, and in relation to symphonies, it is easier to understand the latter case than the former. In both cases the influence is more likely to be traced in clavier works than in those for orchestra. For Haydn's style and treatment of form bear far more resemblance to most of the other composers whose works have been referred to, than to Emmanuel Bach. There are certain kinds of forcible expression and ingenious turns of modulation which Haydn may have learnt from him; but their best orchestral works seem to belong to quite distinct families. Haydn's first symphony was written in 1759 for Count Morzin. Like many other of his early works it does not seem discoverable in print in this country. But it is said by Pohl,¹ who must have seen it somewhere in Germany, to be 'a small work in three movements for 2 violins, viola, bass, 2 oboes, and 2 horns'; from which particulars it would

appear to correspond exactly in externals to the examples above described of Abel's and J. C. Bach's, etc. In the course of the next few years he added many more; most of which appear to have been slight and of no great historical importance, while the few which present peculiarities are so far isolated in those respects that they do not throw much light upon the course of his development, or upon his share in building up the art-form of the Symphony. Of such a kind is the movement (dramatic in character, and including long passages of recitative) in the Symphony in C, which he wrote as early as 1761.² For, though this kind of movement is found in instrumental works of an earlier period, its appearance in such a manner in a symphony is too rare to have any special historical bearings. The course of his development was gradual and regular. He seems to have been content with steadily improving the edifice of his predecessors, and with few exceptions to have followed their lines. A great deal is frequently attributed to his con-

¹ Joseph Haydn, vol. I. 284 (1875).

section with the complete musical establishment which Prince Esterházy set up at his great palace at Esterházy; where Haydn certainly had opportunities which have been the lot of scarcely any other composer who ever lived. He is described as making experiments in orchestration, and ringing the bell for the band to come and try them; and, though this may not be absolutely true in fact, there can scarcely be a doubt that the very great improvements which he effected in every department of orchestration may to a great extent be attributed to the facilities for testing his works which he enjoyed. At the same time the really important portion of his compositions were not produced till his patron, Prince Nicolaus Esterházy, was dead, and the musical establishment broken up; nor, it must be remembered, till after that strange and important episode in Haydn's life, the rapid flitting of Mozart across the scene. When Haydn wrote his first symphony, Mozart was only three years old; and Mozart died in the very year in which the famous Salomon concerts in London, for which Haydn wrote nearly all his finest symphonies, began. Mozart's work therefore comes between Haydn's lighter period and his greatest achievements; and his symphonies are in some respects prior to Haydn's, and certainly had effect upon his later works of all kinds.

According to Köchel, Mozart wrote altogether forty-nine symphonies. The first, in E \flat , was written in London in 1764, when he was eight years old, and only five years after Haydn wrote his first. It was on the same pattern as those which have been fully described above, being in three movements and scored for the usual set of instruments—namely, two violins, viola, bass, two oboes and two horns. Three more followed in close succession, in one of which clarinets are introduced instead of oboes, and a bassoon is added to the usual group of eight instruments. In these works striking originality of purpose or style is hardly to be looked for, and it was not for some time that Mozart's powers in instrumental music reached a pitch of development which is historically important; but it is nevertheless astonishing to see how early he developed a free and even rich style in managing his orchestral resources. With regard to the character of these and all but a few of the rest, it is necessary to keep in mind that a symphony at that time was a very much less important matter than it became fifty years later. The manner in which symphonies were poured out, in sets of six and otherwise, by numerous composers during the latter half of the eighteenth century, puts utterly out of the question the loftiness of aim and purpose which has become a necessity since the early years of the present century. They were all rather slight works on familiar lines, with which for the time being composers and public were alike quite content; and neither Haydn nor Mozart in their early specimens seem to have specially exerted themselves. The general survey of

Mozart's symphonies presents a certain number of facts which are worth noting for their bearing upon the history of this form of art. The second symphony he wrote had a minuet and trio; but it is hardly possible that he can have regarded this as an important point, since he afterwards wrote seventeen others without them; and these spread over the whole period of his activity, for even in that which he wrote at Prague in 1786, and which is last but three in the whole series, the minuet and trio are absent. Besides this fact, which at once connects them with the examples by other composers previously discussed, there is the yet more noticeable one that more than twenty of the series are written for the same peculiar little group of instruments, viz. the four strings, a pair of oboes or flutes, and a pair of horns. Although he used clarinets so early as his third symphony, he never employed them again till his thirty-ninth, which was written for Paris, and is almost more fully scored than any. In the whole forty-nine, in fact, he only used clarinets five times, and in one of these cases (viz. the well-known G minor) they were added after he had finished the score. Even bassoons are not common; the most frequent addition to the little nucleus of oboes or flutes and horns being trumpets and drums. The two which are most fully scored are the Parisian, in D, just alluded to, which was written in 1778, and that in E \flat , which was written in Vienna in 1788, and stands first in the famous triad. These facts explain to a certain extent how it was possible to write such an extraordinary number in so short a space of time. Mozart's most continuously prolific period in this branch of art seems to have been when he had returned to Salzburg in 1771; for between July in that year and the beginning of 1773, it appears to be proved that he produced no less than fourteen. But this feat is fairly surpassed in another sense by the production of the last three in three successive months, June, July, and August, 1788; since the musical calibre of these is so immensely superior to that of the earlier ones.

One detail of comparison between Mozart's ways and Haydn's is curious. Haydn began to use introductory adagios very early, and used them so often that they became quite a characteristic feature in his plan. Mozart, on the other hand, did not use one until his 44th Symphony, written in 1783. What was the origin of Haydn's employment of them is uncertain. The causes that have been suggested are not altogether satisfactory. In the orthodox form of symphony, as written by the numerous composers of his early days, the opening adagio is not found. He may possibly have observed that it was a useful factor in a certain class of overtures, and then have used it as an experiment in symphonies, and finding it answer, may have adopted the expedient generally in succeeding works of the kind. It seems likely that Mozart adopted it from Haydn, as its first appearance (in the symphony which is believed

to have been composed at Linz for Count Thun) coincides with the period in which he is considered to have been first strongly influenced by Haydn.

The influence of these two great composers upon one another is extremely interesting and curious, more especially as it did not take effect till comparatively late in their artistic careers. They both began working in the general direction of their time, under the influences which have been already referred to. In the department of symphony each was considerably influenced after a time by a special circumstance of his life; Haydn by the appointment to Esterházy before alluded to, and the opportunities it afforded him of orchestral experiment; and Mozart by his stay at Mannheim in 1777. For it appears most likely that the superior abilities of the Mannheim orchestra for dealing with purely instrumental music, and the traditions of Stamitz, who had there effected his share in the history of the Symphony, opened Mozart's eyes to the possibilities of orchestral performance, and encouraged him to a freer style of composition and more elaborate treatment of the orchestra than he had up to that time attempted. The Mannheim band had in fact been long considered the finest in Europe; and in certain things, such as attention to *nuances* (which in early orchestral works had been looked upon as either unnecessary or out of place), they and their conductors had been important pioneers; and thus Mozart must certainly have had his ideas on such heads a good deal expanded. The qualities of the symphony produced in Paris early in the next year were probably the firstfruits of these circumstances; and it happens that while this symphony is the first of his which has maintained a definite position among the important landmarks of art, it is also the first in which he uses orchestral forces approaching to those commonly employed for symphonies since the latter part of the last century.

Both Haydn and Mozart, in the course of their respective careers, made decided progress in managing the orchestra, both as regards the treatment of individual instruments, and the distribution of the details of musical interest among them. It has been already pointed out that one of the earliest expedients by which contrast of effect was attempted by writers for combinations of instruments, was the careful distribution of portions for 'solo' and 'ripieno' instruments, as illustrated by Scarlatti's and later concertos. In J. S. Bach's treatment of the orchestra the same characteristic is familiar. The long duets for oboes, flutes, or bassoons, and the solos for horn or violin, or viola da gamba, which continue throughout whole recitatives or arias, all have this same principle at bottom. Composers had still to learn the free and yet well-balanced management of their string forces, and to attain the mean between the use of wind instruments merely to strengthen the strings and their use as solo instruments in long independent passages. In Haydn's early symphonies the old

traditions are most apparent. The balance between the different forces of the orchestra is as yet both crude and obvious. In the symphony called 'Le Matin' for instance, which appears to have been among the earliest, the second violins play with the first, and the violas with the basses to a very marked extent—in the first movement almost throughout. This first movement, again, begins with a solo for flute. The slow movement, which is divided into *adagio* and *andante*, has no wind instruments at all, but there is a violin solo throughout the middle portion. In the minuet a contrast is attained by a long passage for wind band alone (as in J. S. Bach's 2nd Bourrée to the 'Ouverture' in C major); and the trio consists of a long and elaborate solo for bassoon. Haydn early began experiments in various uses of his orchestra, and his ways of grouping his solo instruments for effect are often curious and original. C. F. Pohl, in his life of him, prints from the MS. parts a charming slow movement from a Bb symphony, which was probably written in 1766 or 1767. It illustrates in a singular way how Haydn at first endeavoured to obtain a special effect without ceasing to conform to familiar methods of treating his strings. The movement is scored for first and second violins, violas, *solo violoncello* and bass, all 'con sordini.' The first and second violins play in unison throughout, and the cello plays the tune with them an octave lower, while the violas play in octaves with the bass all but two or three bars of cadence; so that in reality there are scarcely ever more than two parts playing at a time. The following example will show the style:—

The musical score consists of four staves. The top staff is for Violini 1 & 2, marked with a piano (p) dynamic. The second staff is for Viola. The third staff is for Cello Solo. The bottom staff is for Basso. The music is in G major (one sharp) and 3/4 time. The Violini 1 & 2 and Cello Solo parts play in unison throughout. The Viola and Basso parts play in octaves with each other, except for a few bars of cadence.

Towards a really free treatment of his forces he seems, however, to have been led on insensibly and by very slow degrees. For over twenty years of symphony-writing the same limited treatment of strings and the same kind of solo passages are commonly to be met with. But there is a growing tendency to make the wind and the lower and inner strings more and more independent, and to individualise the style of each within proportionate bounds. A fine symphony (in E minor, 'Letter I') which appears to date from 1772, is a good specimen of Haydn's intermediate stage. The strings play almost incessantly throughout, and the wind either doubles

the string parts to enrich and reinforce them, or else has long holding notes while the strings play characteristic figures. The following passage from the last movement will serve to illustrate pretty clearly the stage of orchestral expression to which Haydn had at that time arrived:—

Presto
Coral in E

Coral in G etc.

Oboe

Violini 1 & 2 etc.

Violas & Basses.

In the course of the following ten years the progress was slow but steady. No doubt many other composers were writing symphonies besides Haydn and Mozart, and were, like them, improving that branch of art. Unfortunately the difficulty of fixing the dates of their productions is almost insuperable; and so their greater representatives come to be regarded, not only as giving an epitome of the history of the epoch, but as comprising it in themselves. Mozart's first specially notable symphony falls in 1778. This was the one which he wrote for Paris after his experiences at Mannheim; and some of his Mannheim friends who happened to be in Paris with him assisted at the performance. It is in almost every respect a very great advance upon Haydn's E minor Symphony, just quoted. The treatment of the instruments is very much freer, and more individually characteristic. It marks an important step in the transition from the kind of symphony in which the music appears to have been conceived almost entirely for violins, with wind subordinate, except in special solo passages, to the kind in which the original conception in respect of subjects, episodes and development, embraced all the forces, including the wind instruments. The first eight bars of Mozart's symphony are sufficient to illustrate the nature of the artistic tendency. In the firm and dignified beginning of the principal subject, the strings, with flutes and bassoons, are all in unison for three bars, and a good body of wind instruments gives the full chord. Then the upper strings are left alone for a couple of bars in octaves, and are accompanied in their short closing phrase by an independent full chord of wind instruments, *piano*. This chord is repeated in the same form of rhythm as that which marks the first bars of the principal subject, and has therefore at once musical sense and relevancy, besides supplying

the necessary full harmony. In the subsidiary subject by which the first section is carried on, the quick lively passages of the strings are accompanied by short figures for flute and horns, with their own independent musical significance. In the second subject proper, which is derived from this subsidiary, an excellent balance of colour is obtained by pairs of wind instruments in octaves, answering with an independent and very characteristic phrase of their own the group of strings which give out the first part of the subject. The same well-balanced method is observed throughout. In the working out of this movement almost all the instruments have something special and relevant of their own to do, so that it is made to seem as if the conception were exactly apportioned to the forces which were meant to utter it. The same criticisms apply to all the rest of the symphony. The slow movement has beautiful independent figures and phrases for the wind instruments, so interwoven with the body of the movement that they supply necessary elements of colour and fulness of harmony, without appearing either as definite solos or as meaningless holding notes. The fresh and merry last movement has much the same characteristics as the first in the matter of instrumental utterance, and in its working-out section all the forces have, if anything, even more independent work of their own to do, while still supplying their appropriate ingredients to the sum total of sound.

The succeeding ten years saw all the rest of the work Mozart was destined to do in the department of symphony; much of it showing in turn an advance on the Paris Symphony, inasmuch as the principles there shown were worked out to greater fullness and perfection, while the musical spirit attained a more definite richness, and escaped further from the formalism which characterises the previous generation. Among these symphonies the most important are the following: a considerable one (in E \flat) composed at Salzburg in 1780; the 'Haffner' (in D), which was a modification of a serenade, and had originally more than the usual group of movements; the 'Linz' Symphony (in C; 'No. 6'); and the last four, the crown of the whole series. The first of these (in D major) was written for Prague in 1786, and was received there with immense favour in January 1787. It appears to be far in advance of all its predecessors in freedom and clearness of instrumentation, in the breadth and musical significance of the subjects, and in richness and balance of form. It is one of the few of Mozart's which open with an adagio, and that too of unusual proportions; but it has no minuet and trio. This symphony was in its turn eclipsed by the three great ones in E flat, G minor, and C, which were composed at Vienna in June, July and August, 1788. These symphonies are almost the first in which certain qualities of musical expression and a certain method in their treatment stand prominent in the manner which was destined to become characteristic of the great works of the early part of the nineteenth

century. Mozart having mastered the principle upon which the mature art-form of symphony was to be attacked, had greater freedom for the expression of his intrinsically musical ideas, and could emphasise more freely and consistently the typical characteristics which his inspiration led him to adopt in developing his ideas. It must not, however, be supposed that this principle is to be found for the first time in these works. They find their counterparts in works of Haydn's of a much earlier date; only, inasmuch as the art-form was then less mature, the element of formalism is too strong to admit of the musical or poetical intention being so clearly realised. It is of course impossible to put into words with certainty the inherent characteristics of these or any other later works on the same lines; but that they are felt to have such characteristics is indisputable, and their perfection as works of art, which is so commonly insisted on, could not exist if it were not so. Among the many writers who have tried in some way to describe them, probably the best and most responsible is Otto Jahn. Of the first of the group (that in E♭), he says, 'We find the expression of perfect happiness in the charm of euphony' which is one of the marked external characteristics of the whole work. 'The feeling of pride in the consciousness of power shines through the magnificent introduction, while the Allegro expresses the purest pleasure, now in frolicsome joy, now in active excitement, and now in noble and dignified composure. Some shadows appear, it is true, in the Andante, but they only serve to throw into stronger relief the mild serenity of a mind communing with itself and rejoicing in the peace which fills it. This is the true source of the cheerful transport which rules the last movement, rejoicing in its own strength and in the joy of being.' Whether this is all perfectly true or not is of less consequence than the fact that a consistent and uniform style and object can be discerned through the whole work, and that it admits of an approximate description in words, without either straining or violating familiar impressions.

The second of the great symphonic trilogy—that in G minor—has a still clearer meaning. The contrast with the E♭ is strong, for in no symphony of Mozart's is there so much sadness and regretfulness. This element also accounts for the fact that it is the most modern of his symphonies, and shows most human nature. E. J. A. Hoffmann (writing in a spirit very different from that of Jahn) says of it, 'Love and melancholy breathe forth in purest spirit tones; we feel ourselves drawn with inexpressible longing towards the forms which beckon us to join them in their flight through the clouds to another sphere.' Jahn agrees in attributing to it a character of sorrow and complaining; and there can hardly be a doubt that the tonality as well as the style, and such characteristic features as occur incidentally, would all favour the idea that Mozart's inspiration took a sad cast, and maintained it so far throughout; so

that, notwithstanding the formal passages which occasionally make their appearance at the closes, the whole work may without violation of probability receive a consistent psychological explanation. Even the orchestration seems appropriate from this point of view, since the prevailing effect is far less soft and smooth than that of the previous symphony. A detail of historical interest in connection with this work is the fact that Mozart originally wrote it without clarinets, and added them afterwards for a performance at which it may be presumed they happened to be specially available. He did this by taking a separate piece of paper and rearranging the oboe parts, sometimes combining the instruments and sometimes distributing the parts between the two, with due regard to their characteristic styles of utterance.

The last of Mozart's symphonies has so obvious and distinctive a character throughout, that popular estimation has accepted the definite name 'Jupiter' as conveying the prevalent feeling about it. In this there is far less human sentiment than in the G minor. In fact, Mozart appears to have aimed at something lofty and self-contained, and therefore precluding the shade of sadness which is an element almost indispensable to strong human sympathy. When he descends from this distant height, he assumes a cheerful and sometimes playful vein, as in the second principal subject of the first movement, and in the subsidiary or cadence subject that follows it. This may not be altogether in accordance with what is popularly meant by the name 'Jupiter,' though that deity appears to have been capable of a good deal of levity in his time; but it has the virtue of supplying admirable contrast to the main subjects of the section; and it is so far in consonance with them that there is no actual reversal of feeling in passing from one to the other. The slow movement has an appropriate dignity which keeps it in character, and reaches, in parts, a considerable degree of passion, which brings it nearer to human sympathy than the other movements. The Minuet and the Trio again show cheerful serenity, and the last movement, with its elaborate fugal treatment, has a vigorous austerity, which is an excellent balance to the character of the first movement. The scoring, especially in the first and last movements, is fuller than is usual with Mozart, and produces effects of strong and clear sound; and it is also admirably in character with the spirit of dignity and loftiness which seems to be aimed at in the greater portion of the musical subjects and figures. In these later symphonies Mozart certainly reached a far higher pitch of art in the department of instrumental music than any hitherto arrived at. The characteristics of his attainments may be described as a freedom of style in the ideas, freedom in the treatment of the various parts of the score, and independence and appropriateness of expression in the management of the various groups of instruments employed. In comparison with the works of his predecessors, and with his own and Haydn's

earlier compositions there is throughout a most remarkable advance in vitality. The distribution of certain cadences and passages of *tutti* still appear to modern ears formal; but compared with the immature formalism of expression, even in principal ideas, which was prevalent twenty or even ten years earlier, the improvement is immense. In such structural elements as the development of the ideas, the concise and energetic flow of the music, the distribution and contrast of instrumental tone, and the balance and proportion of sound, these works are generally held to reach a pitch almost unsurpassable from the point of view of technical criticism. Mozart's intelligence and taste, dealing with thoughts as yet undisturbed by strong or passionate emotion, attained a degree of perfection in the sense of pure and directly intelligible art which later times can scarcely hope to see approached.

Haydn's symphonies up to this time cannot be said to equal Mozart's in any respect; though they show a considerable improvement on the style of treatment and expression in the 'Trauer' or the 'Farewell' Symphonies. Of those which are better known of about this date are 'La Poule' and 'Letter V,' which were written (both for Paris) in 1786 and 1787. 'Letter Q,' or the 'Oxford' Symphony, which was performed when Haydn received the degree of Doctor of Music from that university, dates from 1788, the same year as Mozart's great triad. 'Letter V' and 'Letter Q' are in his mature style, and thoroughly characteristic in every respect. The orchestration is clear and fresh, though not so sympathetic nor so elastic in its variety as Mozart's; and the ideas, with all their geniality and directness, are not up to his own highest standard. It is the last twelve, which were written for Salomon after 1790, which have really fixed Haydn's high position as a composer of symphonies; these became so popular as practically to supersede the numerous works of all his predecessors and contemporaries except Mozart, to the extent of causing them to be almost completely forgotten. This is owing partly to the high pitch of technical skill which he attained, partly to the freshness and geniality of his ideas, and partly to the vigour and daring of harmonic progression which he manifested. He and Mozart together enriched this branch of art to an extraordinary degree, and towards the end of their lives began to introduce far deeper feeling and earnestness into the style than had been customary in early works of the class. The average orchestra had increased in size, and at the same time had gained a better balance of its component elements. Instead of the customary little group of strings and four wind instruments, it had come to comprise, besides the strings, 2 flutes, 2 oboes, 2 bassoons, 2 horns, 2 trumpets, and drums. To these were occasionally added 2 clarinets, as in Haydn's three last (the two in D minor and one in Eb), and in one movement of the Military Symphony. Neither Mozart nor Haydn ever used trombones in

symphonies; but uncommon instruments were sometimes employed, as in the 'Military,' in which Haydn used a big drum, a triangle and cymbals. In his latest symphonies Haydn's treatment of his orchestra agrees in general with the description already given of Mozart's. The bass has attained a free motion of its own; the violas rarely cling in a dependent manner to it, but have their own individual work to do, and the same applies to the second violins, which no longer so often appear merely 'col lmo.' The wind instruments fill up and sustain the harmonies as completely as in former days; but they cease merely to hold long notes without characteristic features, or slavishly to follow the string parts whenever something livelier is required. They may still play a great deal that is mere doubling, but there is generally method in it; and the musical ideas they express are in a great measure proportioned to their characters and style of utterance. Haydn was rather fond of long passages for wind alone, as in the slow movement of the Oxford Symphony, the opening passage of the first allegro of the Military Symphony, and the 'working out' of the Symphony in C, no. 1 of the Salomon set. Solos in a tune-form for wind instruments are also rather more common than in Mozart's works, and in many respects the various elements which go to make up the whole are less assimilated than they are by Mozart. The tunes are generally more definite in their outlines, and stand in less close relation with their context. It appears as if Haydn always retained to the last a strong sympathy with simple people's-tunes; the character of his minuets and trios, and especially of his finales, is sometimes strongly defined in this respect; but his way of expressing them within the limits he chose is extraordinarily finished and acute. It is possible that, as before suggested, he got his taste for surprises in harmonic progression from C. P. E. Bach. His instinct for such things, considering the age he lived in, was very remarkable. The passage on the next page, from his Symphony in C, just referred to, illustrates several of the above points at once.

The period of Haydn and Mozart is in every respect the principal crisis in the history of the Symphony. When they came upon the scene, it was not regarded as a very important form of art. In the good musical centres of those times—and there were many—there was a great demand for symphonies; but the bands for which they were written were small, and appear from the most natural inferences not to have been very efficient or well organised. The standard of performance was evidently rough, and composers could neither expect much attention to *pianos* and *fortes*, nor any ability to grapple with technical difficulties among the players of bass instruments or violas. The audiences were critical in the one sense of requiring good healthy workmanship in the writing of the pieces—in fact much better than they would demand in the present day; but with regard to deep meaning, refinement, poetical intention, or originality, they

appear to have cared very little. They wanted to be healthily pleased and entertained, not stirred with deep emotion; and the purposes of composers in those days were consequently not exalted to any high pitch, but were limited to a simple and unpretentious supply, in accordance with demand and opportunity. Haydn was influenced by these considerations till the last. There is always more fun and gaiety in his music than pensiveness or serious reflection. But in developing the technical part of expression, in proportioning the means to the end, and in organising the forces of the orchestra, what he did was of the utmost importance. It is, however, impossible to apportion the value of the work of the two masters. Haydn did a great deal of important and substantial work before Mozart came into prominence in the same field. But after the first great mark had been made by the Paris Symphony, Mozart seemed to rush to his culmination; and in the last four of his works reached a style which appears richer, more sympathetic, and more complete than anything Haydn could attain to. Then, again, when

he had passed away, Haydn produced his greatest works. Each composer had his distinctive characteristics, and each is delightful in his own way; but Haydn would probably not have reached his highest development without the influence of his more richly gifted contemporary; and Mozart for his part was undoubtedly very much under the influence of Haydn at an important part of his career. The best that can be said by way of distinguishing their respective shares in the result is that Mozart's last symphonies introduced an intrinsically musical element which had before been wanting, and showed a supreme perfection of actual art in their structure; while Haydn in the long series of his works cultivated and refined his own powers to such an extent that when his last symphonies had made their appearance, the status of the symphony was raised beyond the possibility of a return to the old level. In fact he gave this branch of art a stability and breadth which served as the basis upon which the art of succeeding generations appears to rest; and the simplicity and clearness of his style

and structural principles supplied an intelligible model for his successors to follow.

One of the most important of the contemporaries of Haydn and Mozart in this department of art was F. J. Gossec. He was born in 1733, one year after Haydn, and lived like him to a good old age. His chief claim to remembrance is the good work which he did in improving the standard of taste for instrumental music in France. According to Fétis such things as instrumental symphonies were absolutely unknown in Paris before 1754, in which year Gossec published his first, five years before Haydn's first attempt. Gossec's work was carried on most effectually by his founding, in 1770, the 'Concert des Amateurs,' for whom he wrote his most important works. He also took the management of the famous Concerts Spirituels, with Gaviniés and Leduc, in 1773, and furthered the cause of good instrumental music there as well. The few symphonies of his to be found in this country are of the same calibre, and for the same groups of instruments as those of J. C. Bach, Abel, etc., already described; but Fétis attributes importance to him chiefly because of the way in which he extended the dimensions and resources of the orchestra. His Symphony in D, no. 21, written soon after the founding of the Concert des Amateurs, was for a full set of strings, flutes, oboes, clarinets, bassoons, horns, trumpets, and drums; and this was doubtless an astonishing force to the Parisians, accustomed as they had been to regard the compositions of Lulli and Rameau as the best specimens of instrumental music. But it is clear from other indications that Gossec had considerable ideas about the ways in which instrumental music might be improved, analogous on a much smaller scale to the aspirations and attempts of Berlioz at a later date. Not only are his works carefully marked with *pianos* and *fortes*, but in some (as the Symphonies of op. xli.) there are elaborate directions as to how the movements are to be played. Some of these are curious. For instance, over the 1st violin part of the slow movement of the second symphony is printed the following: 'La différence du Fort au Doux dans ce morceau doit être excessive, et le mouvement modéré, à l'aise, qu'il semble se jouer avec le plus grand facilité.' Nearly all the separate movements of this set have some such directions, either longer or shorter; the inference from which is that Gossec had a strong idea of expression and style in performance, and did not find his hands very easily led in these respects. The movements themselves are on the same small scale as those of J. C. Bach, Abel, and Stamitz; and very rarely have the double bar and repeat in the first movements, though these often make their appearance in the finales. The style is to a certain extent individual; not so robust or so full as that of Bach or Stamitz, but not without attractiveness. As his works are very difficult to get sight of, the following quotation from the last movement of a symphony in Bb will serve to give some idea of his style and manner of scoring.

The image shows a musical score for a symphony movement. It consists of multiple staves, each representing a different instrument. The instruments listed on the left are: Violoncelles (Cello), Violons (Violin), Flûtes (Flute), Oboes, Clarinettes (Clarinet), Bassons (Bassoon), Cor (Horn), Trompettes (Trumpet), and Timbales (Drum). The score includes various musical notations such as notes, rests, and dynamic markings like 'etc.' and 'etc.'.

Another composer of symphonies, who is often heard of in juxtaposition with Haydn and Mozart, and sometimes as being preferred to them by the audiences of the time, is Gyrowetz. His symphonies appear to be on a larger scale than those of the prior generation of composers of second rank like himself. A few of them are occasionally to be met with in collections of 'Periodical overtures,' 'symphonies,' etc., published in separate orchestral parts. One in C, scored for small orchestra, has an introductory Adagio, an Allegro of about the dimensions of Haydn's earlier first movements, with double bar in the middle; then an Andante con sordina (the latter a favourite device in central slow movements); then a Minuet and Trio, and, to end with, a Rondo in 2-4 time, Allegro non troppo. Others, in Eb and Bb, have much the same distribution of movements, but without the introductory Adagio. The style of them is rather mild and complacent, and not approaching in any way the interest or breadth of the works of his great contemporaries; but the subjects are clear and vivacious, and the movements seem fairly developed. Other symphony writers, who had vogue and even

celebrity about this time and a little later, such as Krommer (beloved by Schubert), the Rombergs, and Eberl (at one time preferred to Beethoven), require no more than passing mention. They certainly furthered the branch of art very little, and were so completely extinguished by the exceptionally great writers who came close upon one another at that time, that it is even difficult to find traces of them.

The greatest of all masters of the Symphony followed so close upon Haydn, that there is less of a gap between the last of Haydn's Symphonies and his first than there was later between some of his own. Haydn's last was probably written in 1795. When Beethoven wrote his first cannot be ascertained; sketches for the Finale are found as early as the year last mentioned; but it was not actually produced in public till April 2, 1800. Like Schumann and Brahms in later days, he did not turn his attention to this branch of composition till comparatively late. The opus-number of his first symphony is 21. It is preceded by eleven pianoforte sonatas, several works for pianoforte combined with other instruments, the well-known Septuor in Eb, and several chamber compositions for strings. So that by the time he came to attacking Symphony he had had considerable practice in dealing with structural matters. The only works in which he had tried his strength with the orchestra were the two concertos—the Bb, op. 19, which was written in or about 1795, and the C major, op. 15, which was written about 1796. He showed himself at once a master of the orchestra; but it is evident that at first he stepped cautiously in expressing himself with such resources. The 1st Symphony is less free and rich in expression, and has more elements of formality, than several works on a smaller scale which preceded it. This is explicable on the general ground that the orchestra, especially in those days, was not a fit exponent of the same kind of things which could be expressed by solo violins, or the pianoforte. The scale must necessarily be larger and broader; the intricate development and delicate or subtle sentiment which is quite appropriate and intelligible in the intimacy of a domestic circle, is out of place in the more public conditions of orchestral performance. This Beethoven must have instinctively felt, and he appears not to have found the style for full expression of his personality in either of the first symphonies. The second is even more curious in that respect than the first, as it comes after one of the richest and most interesting, and another of the most perfectly charming and original of the works of his early period, namely the Sonatas in D minor and Eb of op. 31. However, even in these two symphonies there is a massiveness and breadth and seriousness of purpose, which mark them as products of a different and more powerfully constituted nature than anything of the kind produced before. At the time when the 1st Symphony appeared, the opening with the chord of the minor 7th of C, when the key of the piece was

C major, was looked upon as extremely daring; and the narrow-minded pedants of the day felt their sensitive delicacy so outraged that some of them are said never to have forgiven it. The case is very similar to the famous introduction to Mozart's C major String Quartet, about which the pedants were little less than insulting. Beethoven had to fight for his right to express what he felt to be true; and he did it without flinching; sometimes with an apparent relish. But at the same time, in these early orchestral works he seems to have experimented with caution, and was content to follow his predecessors in a great deal that he put down. There are characteristic things in both symphonies; for instance, in the 1st the transitional passage which begins at the 65th bar of the Allegro, passing from G to G minor and then to Bb and back again, and the corresponding passage in the second half of the movement. The working out of the Andante cantabile and the persistent drum rhythm are also striking points. In the 2nd Symphony the dimensions of the Introduction are unusual, and the character of all the latter part and the freedom of the transitions in it are decisive marks of his tendencies. The Slow movement has also a warmth and sense of genuine sympathy which is new; the Scherzo, though as yet short, has a totally new character about it, and the abrupt sforzandos and short striking figures and still more the coda, of the Finale, are quite his own. In the orchestra it is worth noting that he adopted clarinets from the first, apparently as a matter of course; in the first two symphonies he continued to use only the one pair of horns, as his predecessors had done; in the third he expanded the group to three. In the 4th he went back to two, and did not use four till the 9th. The disposition of his forces even in the first two is more independent and varied than his predecessors. The treatment of the several groups of instruments tends to be more distinct and appropriate, and at the same time more perfectly assimilated in the total effect of the music. The step to the 3rd Symphony is however immense, and at last shows this branch of composition on a level with his other works of the same period. It is surrounded on both sides by some of his noblest achievements. Opus 47 was the Sonata in A for violin and pianoforte, known as the 'Kreutzer.' Opus 53 is the Sonata in C major, dedicated to Count Waldstein. Opus 54 is the admirable little Sonata in F major. Opus 55 is the Symphony, and opus 57 the Sonata known as the 'Appassionata.' It appears that Beethoven had the idea of writing this symphony as early as 1798, but the actual work was probably done in the summer and autumn of 1803. There seems to be no doubt that it was written under the influence of his admiration for Napoleon. His own title-page had on it 'Sinfonia grande, Napoleon Bonaparte,' and, as is well known, the name 'Eroica' was not added till Napoleon became Emperor; after which event Beethoven's feelings about him naturally underwent a change. To call a great

work by the name of a great man was quite a different thing from calling it by the name of a crowned ruler. However, the point remains the same, that the work was written with a definite purpose and under the inspiration of a special subject, and one upon which Beethoven himself assuredly had a very decided opinion. The result was the richest and noblest and by far the biggest symphony that had ever yet appeared in the world. It is very possible that Beethoven meant it to be so; but the fact does not make the step from the previous symphonies any the less remarkable. The scoring throughout is most freely distributed. In the first movement especially there is hardly any one of the numerous subjects and characteristic figures which has not properties demanding different departments of the orchestra to express them. They are obviously conceived with reference to the whole forces at command, not to a predominant central force and appendages. The strings must necessarily have the greater part of the work to do, but the symphony is not written for them with wind as a species of afterthought. But it is still to be noticed that the balance is obtained chiefly by definite propositions and answers between one group and another, and though the effect is delightful, the principle is rendered a little obvious from the regularity of its occurrence. The second movement is specially noticeable as reaching the strongest pitch of sentiment as yet shown in an orchestral slow movement. In the earliest symphonies these movements were nearly always remarkably short, and scored for fewer instruments than the first and last. Frequently they were little better than 'intermezzi,' attached on both sides to the more important allegros. Even Mozart's and Haydn's latest examples had more grace and sweetness than deep feeling, and frequently showed a tendency to formalism in the expression of the ideas and in the ways in which the ornamental *floriture* were introduced. In the *Eroica* the name 'Marcia funebre' at once defines the object; and though the form of a march is to a certain extent maintained, it is obvious that it is of secondary importance, since the attention is more drawn to the rich and noble expression of the finest feelings of humanity over the poetically imagined death of one of the world's heroes, than to the traditional march form. The music seems in fact to take almost the definiteness of speech of the highest order; or rather, to express the emotions which belong to the imagined situation with more fulness and comprehensiveness, but with scarcely less definiteness, than speech could achieve. In the third movement appears the first of Beethoven's large orchestral scherzos. Any connection between it and the typical Minuet and Trio it is hard to see. The time is quicker and more bustling; and the character utterly distinct from the suave grace and somewhat measured paces of most of the previous third movements. The main points of connection with them are firstly the general outlines of form (that is, the principal portion of the Scherzo corresponding to the Minuet comes first

and last, and the Trio in the middle) and secondly the humorous element. In this latter particular there is very great difference between the naïf and spontaneous fun of Haydn and the grim humour of Beethoven, sometimes verging upon irony, and sometimes, with evident purpose, upon the grotesque. The scherzo of the *Eroica* is not alloyed with so much grimness as some later ones, but it has traits of melancholy and seriousness here and there. The effect in its place is chiefly that of portraying the fickle crowd who soon forget their hero, and chatter and bustle cheerfully about their business or pleasure as before; which has its humorous or at least laughter-making ironical side to any one large-minded enough to avoid thinking of all such traits of humanity with reprobation and disgust. The last movement is on a scale more than equal to that of all the others, and, like them, strikes an almost entirely new note in symphonic finales. The light and simple character of Haydn's final rondos is familiar to every one; and he was consistent in aiming at gaiety for conclusion. Mozart in most cases did the same; but in the G minor Symphony there is a touch of rather vehement regretfulness, and in the C major of strength and seriousness. But the Finale of the *Eroica* first introduces qualities of massiveness and broad earnest dignity to that position in the symphony. The object is evidently to crown the work in a totally different sense from the light cheerful endings of most previous symphonies, and to appeal to fine feelings in the audience instead of aiming at putting them in a cheerful humour. It is all the difference between an audience before the revolutionary epoch and after. The starting-point of the movement is the same theme from the Prometheus music as that of the pianoforte variations in Eb (op. 35). The basis of the whole movement is mainly the variation-form, interspersed with fugal episodes; and a remarkable feature is the long Andante variation immediately before the final Presto—a somewhat unusual feature in such a position, though Haydn introduced a long passage of Adagio in the middle of the last movement of a symphony in F written about 1777; but of course in a very different spirit. The Finale of the *Eroica* as a whole is so unusual in form, that it is not wonderful that opinions have varied much concerning it. As a piece of art it is neither so perfect nor so convincing as the other movements; but it has very noble and wonderful traits, and, as a grand experiment in an almost totally new direction, has a decided historical importance.

It is not necessary to go through the whole series of Beethoven's Symphonies in detail, for one reason because they are so generally familiar to musicians and are likely to become more and more so; and for another because they have been so fully discussed from different points of view in this Dictionary. Some short simple particulars about each may however be useful and interesting. The order of composition of the works which

succeeded the Eroica Symphony is almost impossible to unravel. By opus-number the 4th Symphony, in Bb, comes very soon, being op. 60; but the sketches for the last movement are in the same sketch-book as parts of Fidelio, which is op. 72, and the Concerto in G, which is op. 58, was begun after Fidelio was finished. It can only be seen clearly that his works were crowded close together in this part of his life, and interest attaches to the fact that they represent the warmest and most popular group of all. Close to the Bb Symphony come the Overture to 'Coriolan,' the three String Quartets, op. 59, the Violin Concerto, the PF. ditto in G major, the Symphony in C minor, and the 'Sinfonia Pastorale.' The Bb is on a smaller scale than its predecessor, and of lighter and gayer cast. The opening bars of the Introduction are almost the only part which has a trace of sadness in it; and this is probably meant to throw the brightness of the rest of the work into stronger relief. Even the Slow Movement contains more serenity than deep emotion. The Scherzo is peculiar for having the Trio repeated—altogether a new point in symphony-writing, and one which was not left unpeated or unimitated. What the symphony was meant to express cannot be known, but it certainly is as complete and consistent as any.

The C minor which followed has been said to be the first in which Beethoven expressed himself freely and absolutely, and threw away all traces of formalism in expression or development to give vent to the perfect utterance of his musical feeling. It certainly is so far the most forcible, and most remote from conventionalism of every kind. It was probably written very nearly about the same time as the Bb. Nottebohm says the first two movements were written in 1805; and, if this is the fact, his work on the Bb and on the C minor must have overlapped. Nothing however could be much stronger than the contrast between the two. The C minor is, in the first and most striking movement, rugged, terrible in force; a sort of struggle with fate, one of the most thoroughly characteristic of Beethoven's productions. The second is a contrast; peaceful, though strong and earnest. The Scherzo again is one of his most original movements; in its musical spirit as utterly unlike anything that had been produced before as possible. Full of fancy, fun, and humour, and, notwithstanding the pauses and changes of time, wonderful in swing; and containing some devices of orchestration quite magical in their clearness, and their fitness to the ideas. The last movement, which follows without break after the Scherzo, is triumphant; seeming to express the mastery in the wrestling and striving of the first movement. It is historically interesting as the first appearance of trombones and contrafagotto in modern symphony; and the most powerful in sound up to that time. The next symphony, which is also the next opus-number, is the popular 'Pastoral,' probably written in 1808, the second of Beethoven's which has a definitely stated idea as the basis of its inspiration, and the first in which a programme is sug-

gested for each individual movement; though Beethoven is careful to explain that it is 'mehr Empfindung als Malerei.' Any account of this happy inspiration is clearly superfluous. The situations and scenes which it brings to the mind are familiar, and not likely to be less beloved as the world grows older. The style is again in great contrast to that of the C minor, being characterised rather by serenity and contentment; which, as Beethoven had not heard of all the troubles of the land question, might naturally be his feelings about country life. He used two trombones in the last two movements, but otherwise contented himself with the same group of instruments as in his earliest symphonies.

After this there was a pause for some years, during which time appeared many noble and delightful works on other lines, including the pianoforte trios in D and Eb, the Mass in C minor, op. 86, the music to Egmont, op. 84, and several sonatas. Then in one year, 1812, two symphonies appeared. The first of the two, in A major, numbered op. 92, is looked upon by many as the most romantic of all of them; and certainly has qualities which increase in attractiveness the better it is known and understood.¹ Among specially noticeable points are the unusual proportions and great interest of the Introduction (*poco sostenuto*); the singular and fascinating wilfulness of the first movement, which is enhanced by some very characteristic orchestration; the noble calm of the slow movement; the merry humour of the scherzo, which has again the same peculiarity as the 4th Symphony, that the trio is repeated (for which the world has every reason to be thankful, as it is one of the most completely enjoyable things in all symphonic literature); and finally the wild headlong abandonment of the last movement, which might be an idealised national or rather barbaric dance-movement, and which sets the crown fitly upon one of the most characteristic of Beethoven's works. The Symphony in F, which follows immediately as op. 93, is again of a totally different character. It is of specially small proportions, and has rather the character of a return to the old conditions of the Symphony, with all the advantages of Beethoven's mature powers both in the development and choice of ideas, and in the treatment of the orchestra. Beethoven himself, in a letter to Salomon, described it as 'eine kleine Symphonie in F,' as distinguished from the previous one, which he called 'Grosse Symphonie in A, eine meiner vorzüglichsten.' It has more fun and light-heartedness in it than any of the others, but no other specially distinctive external characteristics, except the substitution of the graceful and humorous 'Allegretto scherzando' in the place of the slow movement, and a return to the Tempo di Menuetto for the scherzo. After this came again a long pause, as the greatest of all symphonies did not make its appearance till 1824. During that time however, it is probable that symphonic work was not out of his mind, for it is certain that the preparations for putting this symphony down on

¹ Beethoven's own view of it may be read just below.

paper spread over several years. Of the introduction of voices into this form of composition, which is its strongest external characteristic, Beethoven had made a previous experiment in the Choral Fantasia; and he himself spoke of the symphony as 'in the style of the Choral Fantasia, but on a far larger scale.' The scale is indeed immensely larger, not only in length but in style, and the increase in this respect applies to it equally in comparison with all the symphonies that went before. The first movement is throughout the most concentrated example of the qualities which distinguish Beethoven and the new phase upon which music entered with him, from all the composers of the previous half century. The other movements are not less characteristic of him in their particular ways. The second is the largest example of the typical scherzo which first made its appearance for the orchestra in the *Eroica*; and the supreme slow movement (the Theme with variations) is the finest orchestral example of that special type of slow movement; though in other departments of art he had previously illustrated it in a manner little less noble and deeply expressive in the slow movements of the Bb Trio and the Bb Sonata (op. 106). These movements all have reference, more or less intelligible according to the organisation and sympathies of the hearer, to the Finale of the Symphony, which consists of a setting of Schiller's ode 'An die Freude.' Its development into such enormous proportions is of a piece with the tendency shown in Beethoven's previous symphonies, and in some of his sonatas also, to supplant the conventional type of gay last movement by something which shall be a logical or poetical outcome of the preceding movements, and shall in some way clench them, or crown them with its weight and power. The introduction of words moreover gives a new force to the definite interpretation of the whole as a single organism, developed as a poem might be in relation to definite and coherent ideas. The dramatic and human elements which Beethoven introduced into his instrumental music to a degree before undreamed of, find here their fullest expression; and most of the forms of music are called in to convey his ideas. The first movement of the symphony is in binary form; the second in scherzo, or idealised minuet and trio form; the third in the form of theme and variations. Then follows the curious passage of instrumental recitative, of which so many people guessed the meaning even before it was defined by the publication of the extracts from the MS. sketch-books in the Berlin Library; then the entry of the noble tune, the theme of the entire Finale, introduced contrapuntally in a manner which has a clear analogy to fugal treatment; and followed by the choral part, which treats the theme in the form of variations apportioned to the several verses of the poem, and carries the sentiment to the extremest pitch of exultation expressible by the human voice. The instrumental forces employed are the fullest; including, with the usual complement, four horns,

three trombones in the scherzo and finale, and contrafagotto, triangle, cymbals, and big drum in the finale. The choral forces include four solo voices and full chorus, and the sentiment expressed is proportionate to the forces employed.

In Beethoven's hands the Symphony has again undergone a change of status. Haydn and Mozart, as above pointed out, ennobled and enriched the form in the structural sense. They took up the work when there was little more expected of the orchestra than would have been expected of a harpsichord, and when the object of the piece was slight and almost momentary entertainment. They left it one of the most important branches of instrumental music, though still to a great extent dependent on formal perfection and somewhat obvious artistic management for its interest. Their office was in fact to perfect the form, and Beethoven's to use it. But the very use of it brought about a new ratio between its various elements. In his work first clearly appears a proportion between the forces employed and the nobility and depth and general importance of the musical ideas. In his hands the greatest and most pliable means available for the composer could be no longer fit for lightness and triviality, but only for ideal emotions of an adequate standard. It is true that earlier composers saw the advantage of adopting a breadth of style and largeness of sentiment when writing for the orchestra; but this mostly resulted in positive dullness. It seems as if it could only be when the circumstances of history had undergone a violent change that human sentiment could reach that pitch of comprehensiveness which in Beethoven's work raised the Symphony to the highest pitch of earnest poetic feeling: and the history of his development is chiefly the coordination of all the component elements; the proportioning of the expression and style to the means; the expansion of the form to the requirements of the expression; the making of the orchestration perfectly free, but perfectly just in every detail of expression, and perfectly balanced in itself; and the eradication of all traces of conventionalism both in the details and in the principal outlines, and also to a great extent in the treatment of the instruments. It is chiefly through Beethoven's work that the symphony now stands at the head of all musical forms whatever; and though other composers may hereafter misuse and degrade it as they have degraded the opera, the cantata, the oratorio, the mass, and such other forms as have equal possibilities with the symphony, his works of this kind stand at such an elevation of human sympathy and emotion, and at such a pitch of individuality and power, in expression and technical mastery, that it is scarcely likely that any branch of musical art will ever show anything to surpass them.

It might seem almost superfluous to trace the history of Symphony further after Beethoven. Nothing since his time has shown, nor in the changing conditions of the history of the race is it likely anything should show, any approach to the vitality and depth of his work. But it

is just these changing conditions that leave a little opening for composers to tread the same path with him. In the millions of the human species there are endless varieties of mental and emotional qualities grouped in different individuals, and different bands or sets of men; and the many-sided qualities of artistic work, even far below the highest standard, find their excuse and explanation in the various groups and types of mind whose artistic desires they satisfy. Those who are most highly organised in such respects find their most perfect and most sustained gratification in Beethoven's works; but others who feel less deeply, or are less wide in their sympathies, or have fewer or different opportunities of cultivating their tastes in such a musical direction, need musical food more in accordance with their mental and emotional organisation. Moreover, there is always room to treat an accepted form in the mode characteristic of the period. Beethoven's period was much more like ours than that of Haydn and Mozart, but yet it is not so like that a work expressed entirely in his manner would not be an anachronism. Each successive generation takes some colour from the combination of work and changes in all previous generations; in unequal quantities proportioned to its amount of sympathy with particular periods. By the side of Beethoven there were other composers, working either on parallel lines or in a different manner on the same lines. The succeeding generations were influenced by them as well as by him; and they have introduced some elements into symphony which are at least not prominent in his. One of the contemporary composers who had most influence on the later generation was Weber; but his influence is derived from other departments, and in that of Symphony his contribution is next to nothing—two only, so slight and unimportant, as probably to have had no influence at all.

Another composer's symphonies did not have much immediate influence, chiefly because they were not performed; what they will have in the future remains to be seen.¹ In delightfulness, Schubert's two best works in this department stand almost alone; and their qualities are unique. In his earlier works of the kind there is an analogy to Beethoven's early works. Writing for the orchestra seemed to paralyse his particular individuality; and for some time after he had written some of his finest and most original songs, he continued to write symphonies, which were chiefly a mild reflex of Haydn and Mozart, or at most of the early style of Beethoven. His first attempt was made in 1813, the last page being dated October 28 of that year, when he was yet only sixteen years old—one year after Beethoven's Symphonies in A and F, and more than ten years before the great D minor. In the five following years he wrote five more, the best of which is No. 4, the Tragic, in C minor; the Andante especially being

¹ As we write, the announcement appears of a complete edition of Schubert's works, published and MS., by Breitkopf & Härtel.

very fine and interesting, and containing many characteristic traits of the master. But none of the early works approach in interest or original beauty to the unfinished one in B minor, and the very long and vigorous one in C major; the first composed in 1822, before Beethoven's No. 9, and the second in 1828, after it. In these two he seems to have struck out a real independent symphony-style for himself, thoroughly individual in every respect, both of idea, form, and orchestration. They show singularly little of the influence of Beethoven, or Mozart, or Haydn, or any of the composers he must have been familiar with in his early days at the Konvikt; but the same spirit as is met with in his songs and piano-forte pieces, and the best specimens of his chamber music. The first movement of the B minor is entirely unlike any other symphonic first movement that ever was composed before. It seems to come direct from the heart, and to have the personality of the composer in it to a most unusual degree. The orchestral forces used are the usual ones, but in the management of them there are numbers of effects which are perfectly new in this department of art, indicating the tendency of the time towards direct consideration of what is called 'colour' in orchestral combinations, and its employment with the view of enhancing the degree of actual sensuous enjoyment of a refined kind, to some extent independent of the subjects and figures. Schubert's mature orchestral works are however too few to give any strong indication of this in his own person; and what is commonly felt is the supreme attractiveness of the ideas and general style. As classical models of form none of Schubert's instrumental works take the highest rank; and it follows that no compositions by any writer which have taken such hold upon the musicians of the present time, depend so much upon their intrinsic musical qualities as his do. They are therefore in a sense the extremest examples that can be given of the degree in which the status of such music altered in about thirty years. In the epoch of Mozart and Haydn, the formal elements absolutely predominated in importance. This was the case in 1795. The balance was so completely altered in the course of Beethoven's lifetime, that by 1824 the phenomenon is presented of works in the highest line of musical composition depending on the predominating element of the actual musical sentiment. It must be confessed that Schubert's position in art is unique; but at the same time no man of mark can be quite unrepresentative of his time, and Schubert in this way represents the extraordinary degree in which the attention of musical people and the intention of composers in the early years of the present century was directed to the actual material of music in its expressive sense, as distinguished from the external or structural aspect.

The relation of the dates at which more or less well-known symphonies made their appearance about this time is curious and not uninteresting. Mendelssohn's Reformation Symphony was pro-

duced only two years after Schubert's great Symphony in C, namely in 1830. His Italian Symphony followed in the next year; and Sterndale Bennett's in G minor, in 1834.

The dates and history of Spohr's productions are even more striking, as he was actually a contemporary of Beethoven's, and senior to Schubert, while in all respects in which his style is characteristic it represents quite a later generation. His first Symphony (in E♭) was composed in 1811, before Beethoven's 7th, 8th, and 9th, and when he himself was 27 years old. This was followed by several others, which are not without merit, though not of sufficient historical importance to require special consideration. The symphony of his which is best known at the present day is that called the 'Weihe der Töne,' which at one time enjoyed great celebrity. The history of this work is as follows. He intended first to set a poem of the same name by his friend Pfeiffer. He began the setting in 1832, but finding it unsatisfactory he abandoned the idea of using the words except as a programme; in which form they are appended to the score. The full description and purpose of the work as expressed on the title is 'Charakteristisches Tongemälde in Form einer Sinfonie, nach einem Gedicht von Carl Pfeiffer'; and a printed notice from the composer is appended to the score directing that the poem is to be either printed or recited aloud whenever the symphony is to be performed. Each movement also has its title, like the Pastoral of Beethoven; but it differs from that work not only in its less substantial interest, but also in a much more marked departure from the ordinary principles of form, and the style of the successive movements.

The earlier part of the work corresponds fairly well with the usual principles of structure. It opens with a short Largo of vague character, passing into the Allegro, which is a continuous movement of the usual description, in a sweet but rather tame style. The next movement might be taken to stand for the usual slow movement, as it begins Andantino; but the development is original, as it is broken up by several changes of tempo and time-signatures, and is evidently based upon a programme, for which its title supplies an explanation. The next movement again might be taken as an alternative to the Minuet and Trio, being marked 'Tempo di Marcia,' which would suggest the same general outline of form. But the development is again independent, and must be supposed to follow its title. From this point all connection with the usual outlines ceases. There is an Andante maestoso, based upon an Ambrosianischer Lobgesang, a Larghetto containing a second hymn-tune, and a short Allegretto in simple primary form to conclude with. From this description it will be obvious that the work is an example of thoroughgoing 'programme music.' It is clearly based rather on the musical portrayal of a succession of ideas in themselves independent of music, than upon the treatment of principles of abstract form, and ideas

intrinsically musical. It derives from this fact a historical importance which its musical qualities taken alone would not warrant, as it is one of the very first German examples of its kind possessing any high artistic excellences of treatment, expression, and orchestration. It contains a plentiful supply of Spohr's characteristic faults, and is for the most part superficial, and deficient in warmth of feeling and nobility of thought; but it has also a fair share of his good traits—delicacy and clearness of orchestration, and a certain amount of poetical sentiment. Its success was considerable, and this, rather than any abstract theorising upon the tendencies of modern music, led him to several further experiments in the same line. The symphony (in C minor) which followed the 'Weihe der Töne' was on the old lines, and does not require much notice. It contains experiments in unifying the work by unusual references to subjects, as in the first movement, where conspicuous reference is made in the middle part of the Allegro to the characteristic feature of the slow introduction; and in the last, where the same subject is somewhat transformed, and reappears in a different time as a prominent feature of the second section. In the next symphony, and in the 7th and 9th, Spohr again tried experiments in programme. Two of these are such curiosities as to deserve description. The 6th, op. 116, in G, is called 'Historische Symphonie,' and the four movements are supposed to be illustrations of four distinct musical periods. The first is called the Period of Handel and Bach, and dated 1720; the second, the Period of Haydn and Mozart, and dated 1780 (i.e. before any of the greatest instrumental works of either Haydn or Mozart were produced); the third is the Period of Beethoven, and dated 1810; and the fourth, 'Allerneueste Periode,' and dated 1840. This last title seems to imply that Spohr regarded himself as belonging to a different generation from Beethoven. The first period is represented by an introductory Largo in contrapuntal style, and an Allegro movement, part after the manner of the old Canzonas, and part a Pastorale, introduced for contrast. The style has scarcely the least affinity to Bach, but the Handelian character is extremely easy to imitate, and hence in some respects it justifies its title fairly well. The slow movement which follows has good qualities and graceful points. It has more the flavour of Mozart than Haydn, and this is enhanced by the Mozartian turns and figures which are introduced. One which is very conspicuous is the short figure:—

which is found in several places in Mozart's works. The second subject moreover is only an ingenious alteration of the second subject in the slow movement of Mozart's Prague Symphony in D:—

Nevertheless, the whole effect of the movement is not what its title implies. The scoring is fuller, and the inner parts richer and freer in their motion than in the prototypes, and the harmonization is more chromatic, after Spohr's manner. The Scherzo professes to be in Beethoven's style, and some of his characteristic devices of harmony and rhythm and treatment of instruments are fairly well imitated (e.g. the drums in G, D, and Eb), though in a manner which shows they were but half understood. Curiously enough, one of the most marked figures does not come from Beethoven, but from Mozart's G minor Symphony:—

The last movement, representing the then 'latest period,' has of course no names appended. Spohr probably did not intend to imitate any one, but was satisfied to write in his own manner, of which the movement is not a highly satisfactory example. It is perhaps rather to the composer's credit that his own characteristics should peep out at all corners in all the movements, but the result can hardly be called an artistic success. However, the experiment deserves to be recorded and described, as unique among works by composers of such standing and ability as Spohr; and the more so as it is not likely to be often heard in future. His next Symphony (No. 7, in C major, op. 121) is in many respects as great a curiosity of a totally different description. It is called 'Irdisches und Göttliches in Menschenleben,' and is a double symphony in three movements for two orchestras. The first movement is called 'Kinderwelt,' the second 'Zeit der Leidenschaften,' and the last (Presto) 'Endlicher Sieg des Göttlichen.' In the first two the second orchestra, which is the fuller of the two, is little more than an accompaniment to the first. In the last it has a good deal of work to do, uttering chiefly vehement and bustling passages in contrast with quiet and sober passages by the first orchestra; until near the end, when it appears to be subdued into consonance with the first orchestra. The idea seems to be to depict the divine and the worldly qualities more or less by the two orchestras; the divine being given to the smaller orchestra of solo instruments, and the worldly to the fuller orchestra. The treatment of the instrumental forces is on the whole very simple; and no very extraordinary effects seem to be aimed at.

Spohr wrote yet another programme symphony after this (No. 9, in B, op. 143) called 'Die Jahreszeiten,' in which Winter and Spring are joined to make Part I, and Summer and Autumn to make Part II. The work ap-

proaches more nearly to the ordinary outlines of the Symphony than his previous experiments in programme, and does not seem to demand so much detailed description. In fact, but for his having been so early in the field as a writer of thoroughgoing programme-music, Spohr's position in the history of the Symphony would not be an important one; and it is worthy of remark that his being so at all appears to have been an accident. The 'Weihe der Töne' would not have been a programme symphony but for the fact that Pfeiffer's poem did not turn out to be very suitable for a musical setting. It is not likely that the work would have attained such popularity as it did but for its programme; but after so good a result in relation to the public, it was natural that Spohr should try further experiments on the same lines; and hence he became one of the earliest representatives of artistic speculation in a direction which has become one of the most conspicuous subjects of discussion among modern musical philosophers. As far as intrinsic qualities are concerned it is remarkable how very little influence he has had upon the subsequent history of the Symphony, considering the reputation he enjoyed in his lifetime. His greatest excellence was his treatment of his orchestra, which was delicate, refined, and extremely clear; but it must be confessed that he erred on the side natural to the virtuoso violinist, and was too fond of bringing his first violins into prominence. His ideas and style generally were not robust or noble enough to stand the test of time. His melodies are not broad or strong; his harmonisation, though very chromatic to look at, is not radically free and vigorous; and his rhythm, though sometimes complicated and ingenious, is neither forcible nor rich in variety. None of his works however can be said to be without their good points, and the singularity of his attempts at programme-music give them an interest which the unlikelihood of many performances in the future does not by any means diminish.

An interesting fact in connection with Spohr and the history of the Symphony is that he seems to have been the first to conduct an orchestra in England with a baton; the practice having previously been to conduct 'at the pianoforte.' The occasion was one of the Philharmonic Concerts in 1820. The habit of conducting at the pianoforte was evidently a tradition continued from the days when the Symphony was an appendage of the Opera, when the principal authority, often the composer in person, sat at the principal clavier in the middle of the orchestra giving the time at his instrument, and filling in the harmonies under the guidance of a figured bass. Almost all the earlier independent symphonies, including those of Philip Emanuel Bach of 1776, and some of Haydn's earlier ones, have such a figured bass for the clavier player, and an extra bass part is commonly found in the sets of parts, which may be reasonably surmised to be for his use.¹ The practice was at last

¹ Mendelssohn's early symphonies are marked 'Klavier mit dem Bassa.' (See vol. II, 285, note 2.)

abrogated in England by Spohr, possibly because he was not a clavier but a violin player. In Germany it was evidently discontinued some time earlier.

The most distinguished composers of symphonies who wrote at the same time as Spohr, were entirely independent of him. The first of these is Mendelssohn, whose earliest symphonies even overlap Beethoven, and whose better-known works of the kind, as before mentioned, begin about the same time as Spohr's best examples, and extend over nearly the same period as his later ones. The earliest which survives in print is that in C minor dedicated to the London Philharmonic Society. This work was really his thirteenth symphony, and was finished on March 31, 1824, when he was only fifteen years old, in the very year that Beethoven's Choral Symphony was first performed. The work is more historically than musically interesting. It shows, as might be expected, how much stronger the mechanical side of Mendelssohn's artistic nature was, even as a boy, than his poetical side. Technically the work is extraordinarily mature. It evinces not only a perfect and complete facility in laying the outline and carrying out the details of form, but also the acutest sense of the balance and proportion of tone of the orchestra. The limits of the attempt are not extensive, and the absence of strong feeling or aspiration in the boy facilitated the execution. The predominant influence is clearly that of Mozart. Not only the treatment of the lower and subordinate parts of the harmony, but the distribution and management of the different sections and even the ideas are like. There is scarcely a trace of the influence of Beethoven, and not much of the features afterwards characteristic of the composer himself. The most individual movements are the slow movement and the trio. The former is tolerably free from the influence of the artificial and mannered slow movements of the Haydn and Mozart style, and at the same time does not derive its inspiration from Beethoven: it contains some very free experiments in modulation, enharmonic and otherwise, a few characteristic figures similar to some which he made use of later in his career, and passages of melody clearly predicting the composer of the *Lieder ohne Worte* and the short slow-movements of the organ sonatas. The Trio is long and very original in intention, the chief feature being ingenious treatment of arpeggios for the strings in many parts. The other movements are for the most part formal. The Minuet is extraordinarily like that of Mozart's G minor Symphony, not only in accent and style, but in the manner in which the strings and the wind are grouped and balanced, especially in the short passage for wind alone which occurs towards the end of each half of the movement. It was possibly owing to this circumstance that Mendelssohn substituted for it the orchestral arrangement of the Scherzo of his Octet when the work was performed later in his life. In the last movement the most characteristic passage is the second subject, with the short chords of pizzicato

strings, and the tune for the clarinet which comes after the completion of the first period by strings alone. He used the same device more than once later, and managed it more satisfactorily. But it is just such suggestions of the working of the musical spirit in the man which make an early work interesting.

His next symphony happened to illustrate the supposed tendency of the age towards programme. It was intended for the tercentenary festival of the Augsburg Protestant Confession in 1830, though owing to political circumstances its performance was deferred till later. He evidently had not made up his mind what to call it till some time after it was finished, as he wrote to his sister and suggested *Confession Symphony*, or *Symphony for a Church Festival*, as alternative names. But it is quite evident nevertheless that he must have had some sort of programme in his mind, and a purpose to illustrate the conflict between the old and new forms of the faith, and the circumstances and attributes which belonged to them. The actual form of the work is as nearly as possible what is called perfectly orthodox. The slow introduction, the regular legitimate allegro, the simple pretty scherzo and trio, the short but completely balanced slow movement, and the regular last movement preceded by a second slow introduction, present very little that is out of the way in point of structure; and hence the work is less dependent upon its programme than some of the examples by Spohr above described. But nevertheless the programme can be clearly seen to have suggested much of the detail of treatment and development in a perfectly consistent and natural manner. The external traits which obviously strike attention are two; first, the now well-known passage which is used in the Catholic Church at Dresden for the Amen, and which Wagner has since adopted as one of the most conspicuous religious motives of the Parsifal; and secondly, the use of Luther's famous hymn, 'Ein feste Burg,' in the latter part of the work. The Amen makes its appearance in the latter part of the opening Andante, and is clearly meant to typify the old church; and its recurrence at the end of the working out in the first movement, before the recapitulation, is possibly meant to imply that the old church still holds its own: while in the latter portion of the work the typical hymn-tune, introduced softly by the flute and by degrees taking possession of the whole orchestra, may be taken to represent the successful spread of the Protestant ideas, just as its final utterance fortissimo at the end of all, does the establishment of men's right to work out their own salvation in their own way. There are various other details which clearly have purpose in relation to the programme, and show clearly that the composer was keeping the possible succession of events and circumstances in his mind throughout. The actual treatment is a very considerable advance upon the Symphony in C minor. The whole work is thoroughly Mendelssohnian. There is no

obvious trace either in the ideas themselves, or in the manner of expression of the Mozartian influence which is so noticeable in the symphony of six years earlier. And considering that the composer was still but 21, the maturity of style and judgment is relatively quite as remarkable as the facility and mastery shown in the work of his 15th year. The orchestration is quite characteristic and free; and in some cases, as in part of the second movement, singularly happy. The principle of programme here assumed seems to have been maintained by him thenceforward; for his other symphonies, though it is not so stated in the published scores, are known to have been recognised by him as the results of his impressions of Italy and Scotland. The first of them followed very soon after the Reformation Symphony. In the next year after the completion of that work he mentioned the new symphony in a letter to his sister as far advanced; and said it was 'the gayest thing he had ever done.' He was in Rome at the time, and it appears most probable that the first and last movements were written there. Of the slow movement he wrote that he had not found anything exactly right, 'and would put it off till he went to Naples, hoping to find something to inspire him there.' But in the result it is difficult to imagine that Naples can have had much share. Of the third movement there is a tradition that it was imported from an earlier work; and it certainly has a considerable flavour of Mozart, though coupled with traits characteristic of Mendelssohn in perfect maturity, and is at least well worthy of its position; and even if parts of it, as is possible, appeared in an earlier work, the excellences of the Trio, and the admirable effect of the final Coda which is based on it, point to considerable rewriting and reconstruction at a mature period. The actual structure of the movements is based upon familiar principles, though not without certain idiosyncrasies: as for instance the appearance of a new prominent feature in the working-out portion, and the freedom of the recapitulation in the first movement. In the last movement, called Saltarello, he seems to have given a more free rein to his fancy in portraying some scene of unconstrained Italian gaiety to which he was a witness; and though there is an underlying consistency in the usual distribution of keys, the external balance of subjects is not so obvious. The last movement is hence the only one which seems to depend to any extent upon the programme idea; in all other respects the symphony belongs to the 'classical' order. Indeed such a programme as the purpose to reproduce impressions of particular countries is far too vague to lend itself to exact and definite musical portrayal of external ideas, such as might take the place of the usual outlines of structure. In fact it could lead to little more than consistency of style, which would be equally helpful to the composer and the audience; and it may well have served as an excuse for a certain laxity and profusion

in the succession of the ideas, instead of that difficult process of concentrating and making relevant the whole of each movement upon the basis of a few definite and typical subjects. The characteristics of the work are for the most part fresh and genial spontaneity. The scoring is of course admirable and clear, without presenting any very marked features; and it is at the same time independent and well proportioned in distribution of the various qualities of sound, and in fitness to the subject matter.

In orchestral effects the later symphony—the Scotch, in A minor—is more remarkable. The impressions which Mendelssohn received in Scotland may naturally have suggested more striking points of local colour; and the manner in which it is distributed from first page to last serves to very good purpose in unifying the impression of the whole. The effects are almost invariably obtained either by using close harmonies low in the scale of the respective instruments, or by extensively doubling tunes and figures in a similar manner, and in a sombre part of the scale of the instruments; giving an effect of heaviness and darkness which were possibly Mendelssohn's principal feelings about the grandeur and uncertain climate of Scotland. Thus in the opening phrase for wind instruments they are crowded in the harmonies almost as thick as they will endure. In the statement of the first principal subject again the clarinet in its darkest region doubles the tune of the violins an octave lower. The use of the whole mass of the strings in three octaves, with the wind filling the harmonies in rhythmic chords, which has so fine and striking an effect at the beginning of the 'working out' and in the coda, has the same basis: and the same effect is obtained by similar means here and there in the Scherzo; as for instance where the slightly transformed version of the principal subject is introduced by the wind in the Coda. The same qualities are frequently noticeable in the Slow movement and again in the coda of the last movement. As in the previous symphony, the structure is quite in accordance with familiar principles. If anything, the work errs rather on the side of squareness and obviousness in the outlines both of ideas and structure; as may be readily perceived by comparing the construction of the opening tune of the introduction with any of Beethoven's introductions (either that of the D or Bb or A Symphonies, or his overtures): or even the introduction to Mozart's Prague Symphony. And the impression is not lessened by the obviousness of the manner in which the succeeding recitative passages for violins are introduced; nor by the squareness and tune-like qualities of the first subject of the first movement, nor by the way in which the square tune pattern of the scherzo is reiterated. In the manipulation of the familiar distribution of periods and phrases, however, he used a certain amount of consideration. For example, the persistence of the rhythmic figure of the first subject of the first allegro,

in the inner parts of the second section of that movement, serves very good purpose; and the concluding of the movement with the melancholy tune of the introduction helps both the sentiment and the structural effect. The scherzo is far the best and most characteristic movement of the whole. In no department of his work was Mendelssohn so thoroughly at home; and the obviousness of the formal outlines is less objectionable in a movement where levity and abandonment to gaiety are quite the order of the day. The present scherzo has also certain very definite individualities of its own. It is a departure from the 'Minuet and Trio' form, as it has no break or strong contrasting portion in the middle, and is continuous bustle and gaiety from beginning to end. In technical details it is also exceptionally admirable. The orchestral means are perfectly suited to the end, and the utterances are as neat and effective as they could well be; while the perfect way in which the movement finishes off is delightful to almost every one who has any sense for art. The slow movement takes up the sentimental side of the matter, and is in its way a good example of his orchestral style in that respect. The last movement, *Allegro vivacissimo*, is restless and impetuous, and the tempo-mark given for it in the Preface to the work, '*Allegro guerriero*,' affords a clue to its meaning. But it evidently does not vitally depend upon any ideal programme in the least; neither does it directly suggest much, except in the curious independent passage with which it concludes, which has more of the savour of programme about it than any other portion of the work, and is scarcely explicable on any other ground. It is to be noticed that directions are given at the beginning of the work to have the movements played as quickly as possible after one another, so that it may have more or less the effect of being one piece. Mendelssohn's only other symphonic work was the *Lobgesang*, a sort of ecclesiastical counterpart of Beethoven's 9th Symphony. In this of course the programme element is important, and is illustrated by the calls of the brass instruments and their reiteration with much effect in the choral part of the work. The external form, as in Beethoven's 9th Symphony, is that of the three usual earlier movements (1) Introduction and *Allegro*, (2) Scherzo, or Minuet and Trio, and (3) Slow Movement (which in the present case have purposely a pietistic flavour), with the Finale or last movement supplanted by the long vocal part.

The consideration of these works shows that though Mendelssohn often adopted the appearance of programme, and gained some advantages by it, he never, in order to express his external ideas with more poetical consistency, relaxed any of the familiar principles of structure which are regarded as orthodox. He was in fact a thoroughgoing classicist. He accepted formulas with perfect equanimity, and aimed at resting the value of his works upon the vivacity of his ideas and the great mastery which he had attained in technical

expression, and clearness and certainty of orchestration. It was not in his disposition to strike out a new path for himself. The perfection of his art in many respects necessarily appeals to all who have an appreciation for first-rate craftsmanship; but the standard of his ideas is rather fitted for average musical intelligences, and it seems natural enough that these two circumstances should have combined successfully to attain for him an extraordinary popularity. He may fairly be said to present that which appeals to high and pure sentiments in men, and calls upon the average of them to feel at their best. But he leads them neither into the depths nor the heights which are beyond them; and is hence more fitted in the end to please than to elevate. His work in the department of Symphony is historically slight. In comparison to his great predecessors he established positively nothing new; and if he had been the only successor to Beethoven and Schubert it would certainly have to be confessed that the department of art represented by the Symphony was at a standstill. The excellence of his orchestration, the clearness of his form, and the accuracy and cleverness with which he balanced and disposed his subjects and his modulations, are all certain and unmistakeable; but all these things had been attained by great masters before him, and he himself attained them only by the sacrifice of the genuine vital force and power of harmonic motion and freedom of form in the ideas themselves, of which his predecessors had made a richer manifestation. It is of course obvious that different orders of minds require different kinds of artistic food, and the world would not be well served without many grades and standards of work. Mendelssohn did good service in supplying a form of symphony of such a degree of freshness and lightness as to appeal at once to a class of people for whom the sternness and power of Beethoven in the same branch of art would often be too severe a test. He spoke also in the spirit of his time, and in harmony with it; and as illustrations of the work of the period in one aspect his symphonies will be among the safest to refer to.

Among his contemporaries the one most natural to bracket with him is Sterndale Bennett, whose views of art were extraordinarily similar, and who was actuated in many respects by similar impulses. His published contribution to the department we are considering is extremely slight. The symphony which he produced in 1834 was practically withdrawn by him, and the only other work of the kind which he allowed to be published was the one which was written for the Philharmonic Society, and first played in 1864. The work is slight, and it is recorded that he did not at first put it forward as a symphony. It had originally but three movements, one of which, the charming minuet and trio, was imported from the Cambridge Installation Ode of 1862. A slow movement called *Romanze* was added afterwards. Sterndale Bennett was a severe classicist in his views about form in music, and

the present symphony does not show anything sufficiently marked to call for record in that respect. It is singularly quiet and unpretentious, and characteristic of the composer, showing his taste and delicacy of sentiment together with his admirable sense of symmetry and his feeling for tone and refined orchestral effect.

The contemporary of Mendelssohn and Sterndale Bennett who shows in most marked contrast with them is Robert Schumann. He seems to represent the opposite pole of music; for as they depended upon art and made clear technical workmanship their highest aim, Schumann was in many respects positively dependent upon his emotion. Not only was his natural disposition utterly different from theirs, but so was his education. Mendelssohn and Sterndale Bennett went through severe technical drilling in their early days. Schumann seems to have developed his technique by the force of his feelings, and was always more dependent upon them in the making of his works than upon general principles and external stock rules, such as his two contemporaries were satisfied with. The case affords an excellent musical parallel to the common circumstances of life; Mendelssohn and Sterndale Bennett were satisfied to accept certain rules because they knew that they were generally accepted; whereas Schumann was of the nature that had to prove all things, and find for himself that which was good. The result was, as often happens, that Schumann affords examples of technical deficiencies, and not a few things which his contemporaries had reason to compare unfavourably with the works of Mendelssohn and Sterndale Bennett; but in the end his best work is far more interesting, and far more deeply felt, and far more really earnest through and through than theirs. It is worth observing also that his feelings towards them were disinterested admiration and enthusiasm, while they thought very slightly of him. They were also the successful composers of their time, and at the head of their profession, while he was looked upon as a sort of half amateur, part mystic and part incompetent. Such circumstances as these have no little effect upon a man's artistic development, and drive him in upon his own resources. Up to a certain point the result for the world in this instance was advantageous. Schumann developed altogether his own method of education. He began with songs and more or less small pianoforte pieces. By working hard in these departments he developed his own emotional language, and in course of time, but relatively late in life as compared with most other composers, he seemed to arrive at the point when experiment on the scale of the Symphony was possible. In a letter to a friend he expressed his feeling that the pianoforte was becoming too narrow for his thoughts, and that he must try orchestral composition. The fruit of this resolve was the Bb Symphony (op. 38), which was produced at Leipzig in 1841, and was probably his first important orchestral work. It is quite extraordinary how

successfully he grappled with the difficulties of the greatest style of composition at the first attempt. The manner is thoroughly symphonic, impressive and broad, and the ideas are more genuinely instrumental both in form and expression than Mendelssohn's, and far more incisive in detail, which in instrumental music is a most vital matter. Mendelssohn had great readiness for making a tune, and it is as clear as possible that when he went about to make a large instrumental work his first thought was to find a good tune to begin upon. Schumann seems to have aimed rather at a definite and strongly marked idea, and to have allowed it to govern the form of period or phrase in which it was presented. In this he was radically in accord with both Mozart and Beethoven. The former in his instrumental works very commonly made what is called the principal subject out of two distinct items, which seem contrasted externally in certain characteristics and yet are inevitable to one another. Beethoven frequently satisfied himself with one principal one, as in the first movements of the *Eroica* and the *C minor*; and even where there are two more or less distinct figures, they are joined very closely into one phrase, as in the *Pastoral*, the *No. 8*, and the first movement of the *Choral*. The first movement of Schumann's Bb Symphony shows the same characteristic. The movement seems almost to depend upon the simple but very definite first figure—

which is given out in slow time in the Introduction,¹ and worked up as by a mind pondering over its possibilities, finally breaking away with vigorous freshness and confidence in the '*Allegro molto Vivace*.' The whole first section depends upon the development of this figure; and even the horns, which have the last utterances before the second subject appears, continue to repeat its rhythm with diminishing force. The second subject necessarily presents a different aspect altogether, and is in marked contrast to the first, but it similarly depends upon the clear character of the short figures of which it is composed, and its gradual work up from the quiet beginning to the loud climax, ends in the reappearance of the rhythmic form belonging to the principal figure of the movement. The whole of the working-out portion depends upon the same figure, which is presented in various aspects and with the addition of new features and ends in a climax which introduces the same figure in a slow form, very emphatically, corresponding to the statement in the Introduction. To this climax the recapitulation is duly welded on. The coda again makes the most of the same figure, in yet fresh aspects. The latter part is to all intents independent, apparently a sort of reflection on what has gone before, and is so far in definite contrast as to explain itself. The whole movement is direct

¹ See the curious anecdote, vol. III. p. 412.

and simple in style, and for Schumann, singularly bright and cheerful. The principles upon which he constructed and used his principal subjects in this movement are followed in the first movements of the other symphonies; most of all in the D minor; clearly in the C major; and least in the Eb, which belongs to the later period of his life. But even in this last he aims at gaining the same result, though by different means; and the subject is as free as any from the tune-qualities which destroy the complete individuality of an instrumental subject in its most perfect and positive sense. In the first movement of the D minor he even went so far as to make some important departures from the usual outlines of form, which are rendered possible chiefly by the manner in which he used the characteristic figure of his principal subject. It is first introduced softly in the latter part of the Introduction, and gains force quickly, so that in a few bars it breaks away in the vigorous and passionate allegro in the following form—

which varies in the course of the movement to

In one or other of these forms it continues almost ceaselessly throughout the whole movement, either as actual subject or accompaniment; in the second section it serves in the latter capacity. In the latter part of the working-out section a fresh subject of gentler character is introduced, seeming to stem and mitigate the vehemence expressed by the principal figures of the first subject: from the time this new subject makes its appearance there continues a sort of conflict between the two; the vehement subject constantly breaking in with apparently undiminished fire, and seeming at times to have the upper hand, till just at the end the major of the original key (D minor) is taken, and the more genial subject appears in a firm and more determined form, as if asserting its rights over the wild first subject; and thereupon, when the latter reappears, it is in a much more genial character, and its reiteration at the end of the movement gives the impression of the triumph of hope and trust in good, over the seeds of passion and despair. The result of the method upon which the movement is developed is to give the impression of both external and spiritual form. The requirements of key, modulation, and subject are fulfilled, though, from the point of view of classical orthodoxy, with unusual freedom. The spiritual form,—the expression in musical terms of a type of mental conflict, so depicted that thinking beings can perceive the sequence to be true of themselves—is also very prominent, and is the most important element in the work, as is the case in all Schumann's best works; moreover in this movement everything is strongly individual, and warm with real musical life in

his own style; which was not altogether the case with the first movement of the Bb. In the C major Symphony (op. 61) the first allegro is ushered in by a slow introduction of important and striking character, containing, like those of the two just mentioned, anticipations of its principal figures. In the allegro the two principal subjects are extremely strong in character, and the consistent way in which the whole movement is developed upon the basis of their constituent figures, with allusions to those of the introduction, is most remarkable. Here again there is a sort of conflict between the principal ideas. The first subject is just stated twice (the second time with certain appropriate changes), and then a start is instantly made in the Dominant key, with new figures characteristic of the second section; transition is made to flat keys and back, and an allusion to the first subject ends the first half; but all is closely consistent, vigorous, and concise. The development portion is also most closely worked upon the principal subjects, which are treated, as it seems, exhaustively, presenting especially the figures of the second subject in all sorts of lights, and with freshness and warmth of imagination, and variety of tone and character. The recapitulation is preceded by allusions to the characteristic features of the introduction, considerably transformed, but still sufficiently recognisable to tell their tale. The coda is made by fresh treatment of the figures of the principal subjects in vigorous and brilliant development.

The Symphony in Eb has no introduction, and Schumann seems to have aimed at getting his strong effects of subject in this case by means other than the vigorous and clear rhythmic forms which characterise the first movements of the earlier symphonies. The effect is obtained by syncopations and cross rhythms, which alternately obscure and strengthen the principal beats of the bar, and produce an effect of wild and passionate effort, which is certainly striking, though not so immediately intelligible as the rhythmic forms of the previous symphonies. The second subject is in strong contrast, having a more gentle and appealing character; but it is almost overwhelmed by the recurrence of the syncopations of the principal subject, which make their appearance with persistency in the second as in the first section, having in that respect a very clear poetical or spiritual meaning. The whole development of the movement is again consistent and impressive, though not so fresh as in the other symphonies. As a point characteristic of Schumann, the extreme conciseness of the first section of the first movement in the Bb, D minor, and C major Symphonies is to be noticed, as it bears strongly upon the cultivated judgment and intelligence which marks his treatment of this great instrumental form. The first half is treated almost as pure exposition; the working-out having logically the greater part of interesting development of the ideas. The recapitulation is generally free, and in the D minor Symphony is practically

supplanted by novel methods of balancing the structure of the movement. The coda either presents new features, or takes fresh aspects of the principal ones, enhanced by new turns of modulation, and ending with the insistence on the primary harmonies of the principal key, which is necessary to the stability of the movement. In all these respects Schumann is a most worthy successor to Beethoven. He represents his intellectual side in the consistency with which he develops the whole movement from a few principal features, and the freshness and individuality with which he treats the form; and he shows plenty of the emotional and spiritual side in the passionate or tender qualities of his subjects, and the way in which they are distributed relatively to one another. Schumann's symphonic slow movements have also a distinctive character of their own. Though extremely concise, they are all at the same time rich and full of feeling. They are somewhat in the fashion of a 'Romanze,' that in the D Symphony being definitely so called; and their development depends rather upon an emotional than an intellectual basis; as it seems most just that a slow movement should. His object appears to have been to find some noble and aspiring strain of melody, and to contrast it with episodes of similar character, which carry on and bear upon the principal idea without diverting the chain of thought into a different channel. Hence the basis of the movements is radically lyrical; and this affords an important element of contrast to the first movement, in which there is always an antithetical element in the contrast of the two principal subjects. The romanze of the D Symphony is constructed on a different principle; the sections and musical material being strongly contrasted; this may be partly owing to the closeness of its connection with other parts of the symphony, as will be noticed further on. The scherzos, including that in the 'Overture Scherzo and Finale' (op. 52), have a family likeness to one another, though their outlines are different; they all illustrate a phase of musical and poetical development in their earnest character and the vein of sadness which pervades them. The light and graceful gaiety of most of the minuets of Haydn and Mozart is scarcely to be traced in them; but its place is taken by a certain wild rush of animal spirits, mixed up in a strange and picturesque way with expressions of tenderness and regret. These scherzos are in a sense unique; for though following in the same direction as Beethoven's in some respects, they have but little of his sense of fun and grotesque, while the vein of genuine melancholy which pervades them certainly finds no counterpart either in Spohr or Mendelssohn; and, if it may be traced in Schubert, it is still in comparison far less prominent. In fact Schumann's scherzos are specially curious and interesting, even apart from the ordinary standpoint of a musician, as illustrating a phase of the intellectual progress of the race. Schumann belonged to the order of men with large and at the same time delicate sym-

pathies, whose disposition becomes so deeply impressed with the misfortunes and unsolvable difficulties which beset his own lot and that of his fellow men, that pure unmixed lightheartedness becomes almost impossible. The poetical and thoughtful side of his disposition, which supplied most vital ingredients to his music, was deeply tinged with sadness; and from this he was hardly ever entirely free. He could wear an aspect of cheerfulness, but the sadness was sure to peep out, and in this, among thoughtful and poetically disposed beings, he cannot be looked upon as singular. Hence the position of the Scherzo in modern instrumental music presents certain inevitable difficulties. The lively, almost childish, merriment of early examples cannot be attained without jarring upon the feelings of earnest men; at least in works on such a scale as the symphony, where the dignity and importance of the form inevitably produce a certain sense of responsibility to loftiness of purpose in the carrying out of the ideas. A movement corresponding to the old Scherzo in its relation to the other movements had to be formed upon far more complicated conditions. The essential point in which Schumann followed his predecessors was the definition of the balancing and contrasting sections. The outlines of certain groups of bars are nearly always very strongly marked, and the movement as a whole is based rather upon effects attainable by the juxtaposition of such contrasting sections than upon the continuous logical or emotional development which is found in the other movements. The structural outline of the old dance-forms is still recognisable in this respect, but the style and rhythm bear little trace of the dance origin; or at least the dance quality has been so far idealised as to apply rather to thought and feeling than to expressive rhythmic play of limbs. In Schumann's first Symphony the scherzo has some qualities of style which connect it with the minuets of earlier times, even of Mozart; but with these there are genuine characteristic traits of expression. In the later scherzos the poetical meaning seems more apparent. In fact the scherzo and the slow movement are linked together as the two sections of the work most closely representative of human emotion and circumstance; the first and last movements having more evident dependence upon what are called abstract qualities of form. In its structural outlines Schumann's Scherzo presents certain features. In the Symphonies in Bb and C he adopts the device of two trios. Beethoven had repeated the trio in two symphonies (4th and 7th), and Schumann advanced in the same direction by writing a second trio instead of repeating the first, and by making the two trios contrast not only with the scherzo, but also with each other; and as a further result the trios stand centrally in relation to the first and last statement of the scherzo, while it in its turn stands centrally between them, and thus the whole structure of the movement gains in interest. It is worthy of note that the codas to all Schumann's scherzos are specially interesting and

full; and some of them are singular in the fact that they form an independent little section conveying its own ideas apart from those of the principal subjects. His finales are less remarkable on general grounds, and on the whole less interesting than his other movements. The difficulty of conforming to the old type of light movements was even more severe for him than it was for Beethoven, and hence he was the more constrained to follow the example set by Beethoven of concluding with something weighty and forcible, which should make a fitting crown to the work in those respects, rather than on the principle of sending the audience away in a good humour. In the B♭ Symphony only does the last movement aim at gaiety and lightness; in the other three symphonies and the Overture, Scherzo, and Finale, the finales are all of the same type, with broad and simple subjects and strongly emphasised rhythms. The rondo form is only obscurely hinted at in one; in the others the development is very free, but based on binary form; and the style of expression and development is purposely devoid of elaboration.

Besides the points which have been already mentioned in the development of the individual movements, Schumann's work is conspicuous for his attempts to bind the whole together in various ways. Not only did he make the movements run into each other, but in several places he connects them by reproducing the ideas of one movement in others, and even by using the same important features in different guises as the essential basis of different movements. In the Symphony in C there are some interesting examples of this; but the Symphony in D is the most remarkable experiment of the kind yet produced, and may be taken as a fit type of the highest order. In the first place all the movements run into each other except the first and second; and even there the first movement is purposely so ended as to give a sense of incompleteness unless the next movement is proceeded with at once. The first subject of the first movement and the first of the last are connected by a strong characteristic figure, which is common to both of them. The persistent way in which this figure is used in the first movement has already been described. It is not maintained to the same extent in the last movement; but it makes a strong impression in its place there, partly by its appearing conspicuously in the accompaniment, and partly by the way it is led up to in the sort of intermezzo which connects the scherzo and the last movement, where it seems to be introduced at first as a sort of reminder of the beginning of the work, and as if suggesting the clue to its meaning and purpose; and is made to increase in force with each repetition till the start is made with the finale. In the same manner the introduction is connected with the slow movement or romanze, by the use of its musical material for the second division of that movement; and the figure which is most conspicuous in the middle of the romanze runs all through the trio of the succeeding movement. So

that the series of movements are as it were interlaced by their subject-matter; and the result is that the whole gives the impression of a single and consistent musical poem. The way in which the subjects recur may suggest different explanations to different people, and hence it is dangerous to try and fix one in definite terms describing particular circumstances. But the important fact is that the work can be felt to represent in its entirety the history of a series of mental or emotional conditions such as may be grouped round one centre; in other words, the group of impressions which go to make the innermost core of a given story seems to be faithfully expressed in musical terms and in accordance with the laws which are indispensable to a work of art. The conflict of impulses and desires, the different phases of thought and emotion, and the triumph or failure of the different forces which seem to be represented, all give the impression of belonging to one personality, and of being perfectly consistent in their relation to one another; and by this means a very high example of all that most rightly belongs to programme music is presented. Schumann however wisely gave no definite clue to fix the story in terms. The original autograph has the title '*Symphonische Fantaisie für grosses Orchester, skizziert im Jahre 1841; neu instrumentiert 1851.*' In the published score it is called 'Symphony,' and numbered as the fourth, though it really came second. Schumann left several similar examples in other departments of instrumental music, but none so fully and carefully carried out. In the department of Symphony he never again made so elaborate an experiment. In his last, however, that in E♭, he avowedly worked on impressions which supplied him with something of a poetical basis, though he does not make use of characteristic figures and subjects to connect the movements with one another. The impressive fourth movement is one of the most singular in the range of symphonic music, and is meant to express the feelings produced in him by the ceremonial at the enthronement of a Cardinal in Cologne Cathedral. The last movement has been said to embody 'the bustle and flow of Rhenish holiday life, on coming out into the town after the conclusion of the ceremony in the Cathedral.'¹ Of the intention of the scherzo nothing special is recorded, but the principal subject has much of the 'local colour' of the German national dances.

As a whole, Schumann's contributions to the department of Symphony are by far the most important since Beethoven. As a master of orchestration he is less certain than his fellows of equal standing. There are passages which rise to the highest points of beauty and effectiveness, as in the slow movement of the C major Symphony; and his aim to balance his end and his means was of the highest, and the way in which he works it out is original; but both the bent of his mind and his education inclined him to be occasionally less pellucid than his prede-

¹ For Schumann's intention see Wassilevsky, 3rd ed. 220, 272.

cessors, and to give his instruments things to do which are not perfectly adapted to their idiosyncrasies. On the other hand, in vigour, richness, poetry and earnestness, as well as in the balance which he was able to maintain between originality and justness of art, his works stand at the highest point among the moderns whose work is done; and have had great and lasting effect upon his successors.

The advanced point to which the history of the Symphony has arrived is shown by the way in which composers have become divided into two camps, whose characteristics are most easily understood in their extremest representatives. The growing tendency to attach positive meaning to music, as music, has in course of time brought about a new position of affairs in the instrumental branch of art. We have already pointed out how the strict outlines of form in instrumental works came to be modified by the growing individuality of the subject. As long as subjects were produced upon very simple lines, which in most cases resembled one another in all but very trifling external particulars, there was no reason why the structure of the whole movement should grow either complex or individual. But as the subject (which stands in many cases as a sort of text) came to expand its harmonic outlines and to gain force and meaning, it reacted more and more upon the form of the whole movement; and at the same time the musical spirit of the whole, as distinguished from the technical aspects of structure, was concentrated and unified, and became more prominent as an important constituent of the artistic *ensemble*. In many cases, such as small movements of a lyrical character for single instruments, the so-called classical principles of form were almost lost sight of, and the movement was left to depend altogether upon the consistency of the musical expression throughout. Sometimes these movements had names suggesting more or less of a programme; but this was not by any means invariable or necessary. For in such cases as Chopin's Preludes, and some of Schumann's little movements, there is no programme given, and none required by the listener. The movement depends successfully upon the meaning which the music has sufficient character of its own to convey. In such cases the art form is still thoroughly pure, and depends upon the development of music as music. But in process of time a new position beyond this has been assumed. Supposing the subjects and figures of music to be capable of expressing something which is definite enough to be put into words, it is argued that the classical principles of structure may be altogether abandoned, even in their broadest outlines, and a new starting-point for instrumental music attained, on the principle of following the circumstances of a story, or the succession of emotions connected with a given idea, or the flow of thought suggested by the memory of a place or person or event of history, or some such means; and that this would serve as a basis of consistency and a means of unifying the whole, without the common resources

of tonal or harmonic distribution. The story or event must be supposed to have impressed the composer deeply, and the reaction to be an outflow of music, expressing the poetical imaginings of the author better than words would do. In some senses this may still be pure art; where the musical idea has really sufficient vigour and vitality in itself to be appreciated without the help of the external excitement of the imagination which is attained by giving it a local habitation and a name. For then the musical idea may still have its full share in the development of the work, and may pervade it intrinsically as music, and not solely as representing a story or series of emotions which are, primarily, external to the music. But when the element of realism creeps in, or the ideas depend for their interest upon their connection with a given programme, the case is different. The test seems to lie in the attitude of mind of the composer. If the story or programme of any sort is merely a secondary matter which exerts a general influence upon the music, while the attention is concentrated upon the musical material itself and its legitimate artistic development, the advantages gained can hardly be questioned. The principle not only conforms to what is known of the practice of the greatest masters, but is on abstract grounds perfectly unassailable; on the other hand, if the programme is the primary element, upon which the mind of the composer is principally fixed, and by means of which the work attains a specious excuse for abnormal development, independent of the actual musical sequence of ideas, then the principle is open to question, and may lead to most unsatisfactory results. The greatest of modern programme composers came to a certain extent into this position. The development of pure abstract instrumental music seems to have been almost the monopoly of the German race; French and Italians have had a readier disposition for theatrical and at best dramatic music. Berlioz had an extraordinary perception of the possibilities of instrumental music, and appreciated the greatest works of the kind by other composers as fully as the best of his contemporaries; but it was not his own natural way of expressing himself. His natural bent was always towards the dramatic elements of effect and dramatic principles of treatment. It seems to have been necessary to him to find some moving circumstance to guide and intensify his inspiration. When his mind was excited in such a manner he produced the most extraordinary and original effects; and the fluency and clearness with which he expressed himself was of the highest order. His genius for orchestration, his vigorous rhythms, and the enormous volumes of sound which he was as much master of as the most delicate subtleties of small combinations of instruments, have the most powerful effect upon the hearer; while his vivid dramatic perception goes very far to supply the place of the intrinsically musical development which characterises the works of the greatest masters

of abstract music. But on the other hand, as is inevitable from the position he adopted, he was forced at times to assume a theatrical manner, and a style which savours rather of the stage than of the true dramatic essence of the situations he deals with. In the 'Symphonie Fantastique,' for instance, which he also called 'Episode de la Vie d'un Artiste,' his management of the programme principle is thorough and well-devised. The notion of the ideal object of the artist's affections being represented by a definite musical figure, called the 'idée fixe,' unifying the work throughout by its constant reappearance in various aspects and surroundings, is very happy; and the way in which he treats it in several parts of the first movement has some of the characteristic qualities of the best kind of development of ideas and figures, in the purely musical sense; while at the same time he has obtained most successfully the expression of the implied sequence of emotions, and the absorption consequent upon the contemplation of the 'beloved object.' In the general laying out of the work he maintains certain vague resemblances to the usual symphonic type. The slow introduction, and the succeeding Allegro agitato—representing his passion, and therefore based to a very great extent on the 'idée fixe'—are equivalent to the familiar opening movements of the classical symphonies; and moreover there is even a vague resemblance in the inner structure of the Allegro to the binary form. The second movement, called 'Un bal,' corresponds in position to the time-honoured minuet and trio; and though the broad outlines are very free there is a certain suggestion of the old inner form in the relative disposition of the waltz section and that devoted to the 'idée fixe.' In the same way the 'Scene aux Champs' corresponds to the usual slow movement. In the remaining movements the programme element is more conspicuous. A 'Marche au supplice' and a 'Songe d'un nuit de Sabbat' are both of them as fit as possible to excite the composer's love of picturesque and terrible effects, and to lead him to attempt realistic presentation, or even a sort of musical scene-painting, in which some of the characteristics of instrumental music are present, though they are submerged in the general impression by characteristics of the opera. The effect produced is of much the same nature as of that of passages selected from operas played without action in the concert-room. In fact, in his little preface, Berlioz seems to imply that this would be a just way to consider the work, and the condensed statement of his view of programme music there given is worth quoting: 'Le compositeur a eu pour but de développer, dans ce qu'elles ont de musical, différentes situations de la vie d'un artiste. Le plan du drame instrumental, privé du secours de la parole, a besoin d'être exposé d'avance. Le programme (qui est indispensable à l'intelligence complète du plan dramatique de l'ouvrage) doit donc être considéré comme le texte parlé d'un Opéra, servant à amener des morceaux de musique, dont il motive le caractère et l'ex-

pression.'¹ This is a very important and clear statement of the position, and marks sufficiently the essential difference between the principles of the most advanced writers of programme music, and those adopted by Beethoven. The results are in fact different forms of art. An instrumental drama is a fascinating idea, and might be carried out perfectly within the limits used even by Mozart and Haydn; but if the programme is indispensable to its comprehension those limits have been passed. This does not necessarily make the form of art an illegitimate one; but it is most important to realise that it is on quite a different basis from the type of the instrumental symphony; and this will be better understood by comparing Berlioz's statement with those Symphonies of Beethoven and Mendelssohn, or even of Raff and Rubinstein, where the adoption of a general and vague title gives the semblance of a similar use of programme. Beethoven liked to have a picture or scene or circumstance in his mind; but it makes all the difference to the form of art whether the picture or story is the guiding principle in the development of the piece, or whether the development follows the natural implication of the positively musical idea. The mere occurrence, in one of these forms, of a feature which is characteristic of the other, is not sufficient to bridge over the distance between them; and hence the 'instrumental drama' or poem, of which Berlioz has given the world its finest examples, must be regarded as distinct from the regular type of the pure instrumental symphony. It might perhaps be fairly regarded as the Celtic counterpart of the essentially Teutonic form of art, and as an expression of the Italo-Gallic ideas of instrumental music on lines parallel to the German symphony; but in reality it is scarcely even an offshoot of the old symphonic stem; and it will be far better for the understanding of the subject if the two forms of art are kept as distinct in name as they are in principle.

The only composer of really great mark who has worked on similar lines to Berlioz in modern times is Liszt; and his adoption of the name 'Symphonic poem' for such compositions sufficiently defines their nature without bringing them exactly under the head of symphonies. Of these there are many, constructed on absolutely independent lines, so as to appear as musical poems or counterparts of actual existing poems, on such subjects as Mazeppa, Prometheus, Orpheus, the battle of the Huns, the 'Preludes' of Lamartine, Hamlet, and so forth. [See p. 106.] A work which, in name at least, trenches upon the old lines is the 'Faust Symphony,' in which the connection with the programme-principle of Berlioz

¹ The composer has aimed at developing various situations in the life of an artist, so far as seemed musically possible. The plan of an instrumental drama, being without words, requires to be explained beforehand. The programme (which is indispensable to the perfect comprehension of the dramatic plan of the work) ought therefore to be considered in the light of the spoken text of an Opera, serving to lead up to the pieces of music, and indicate the character and expression.

² This important admission was made by Beethoven to Neate: 'I have always a picture in my thoughts when I am composing, and work to it.' (Thayer, iii. 322.)

is emphasised by the dedication of the piece to him. In this work the connection with the old form of symphony is perhaps even less than in the examples of Berlioz. Subjects and figures are used not for the purposes of defining the artistic form, but to describe individuals, ideas, or circumstances. The main divisions of the work are ostensibly three, which are called 'character pictures' of Faust, Margaret, and Mephistopheles severally; and the whole concludes with a setting of the 'Chorus mysticus.' Figures are used after the manner of Wagner's 'Leit-motiven' to portray graphically such things as bewildered inquiry, anxious agitation, love, and mockery, besides the special figure or melody given for each individual as a whole. These are so interwoven and developed by modifications and transformations suited to express the circumstances, as to present the speculations of the composer on the character and the philosophy of the poem in various interesting lights; and his great mastery of orchestral expression and fluency of style contribute to its artistic importance on its own basis; while in general the treatment of the subject is more psychological and less pictorially realistic than the prominent portions of Berlioz's work, and therefore slightly nearer in spirit to the classical models. But with all its striking characteristics and successful points the music does not approach Berlioz in vitality or breadth of musical idea.

The few remaining modern composers of symphonies belong essentially to the German school, even when adopting the general advantage of a vague title. Prominent among these are Raff and Rubinstein, whose methods of dealing with instrumental music are at bottom closely related. Raff almost invariably adopted a title for his instrumental works; but those which he selected admit of the same kind of general interpretation as those of Mendelssohn, and serve rather as a means of unifying the general tone and style of the work than of pointing out the lines of actual development. The several Seasons, for instance, serve as the general idea for a symphony each. Another is called 'Im Walde.' In another several conditions in the progress of the life of a man serve as a vague basis for giving a certain consistency of character to the style of expression, in a way quite consonant with the pure type. In one case Raff comes nearer to the Berlioz ideal, namely in the Lenore Symphony, in some parts of which he clearly attempts to depict a succession of events. But even when this is most pronounced, as in the latter part of the work, there is very little that is not perfectly intelligible and appreciable as music without reference to the poem. As a matter of fact Raff is always rather free and relaxed in his form; but that is not owing to his adoption of programme, since the same characteristic is observable in works that have no name as in those that have. The ease and speed with which he wrote, and the readiness with which he could call up a certain kind of genial, and often very attractive ideas, both interfered with the concentration

necessary for developing a closely-knit and compact work of art. His ideas are clearly defined and very intelligible, and have much poetical sentiment; and these facts, together with a very notable mastery of orchestral resource and feeling for colour, have ensured his works great success; but there is too little self-restraint and concentration both in the general outline and in the statement of details, and too little self-criticism in the choice of subject-matter, to admit the works to the highest rank among symphonies. In the broadest outlines he generally conformed to the principles of the earlier masters, distributing his allegros, slow movements, scherzos, and finales, according to precedent. And, allowing for the laxity above referred to, the models which he followed in the internal structure of the movements are the familiar types of Haydn, Mozart, and Beethoven. His finales are usually the most irregular, at times amounting almost to fantasias; but even this, as already described, is in conformity with tendencies which are noticeable even in the golden age of symphonic art. Taken as a whole, Raff's work in the department of symphony is the best representative of a characteristic class of composition of modern times—the class in which the actual ideas and general colour and sentiment are nearly everything, while their development and the value of the artistic side of structure are reduced to a minimum.

Rubinstein's works are conspicuous examples of the same class; but the absence of concentration, self-criticism in the choice of subjects, and care in statement of details, is even more conspicuous in him than in Raff. His most important symphonic work is called 'The Ocean'—the general title serving, as in Raff's symphonies, to give unity to the sentiment and tone of the whole, rather than as a definite programme to work to. In this, as in Raff, there is much spontaneity in the invention of subjects, and in some cases a higher point of real beauty and force is reached than in that composer's works; and there is also a good deal of striking interest in the details. The most noticeable external feature is the fact that the symphony is in six movements. There was originally the familiar group of four, and to these were added, some years later, an additional slow movement, which stands second, and a further genuine scherzo, which stands fifth, both movements being devised in contrast to the previously written adagio and scherzo. Another symphony of Rubinstein's, showing much vigour and originality, and some careful and intelligent treatment of subject, is the 'Dramatic.' This is in the usual four movements, with well devised introductions to the first and last. The work as a whole is hampered by excessive and unnecessary length, which is not the result of the possibilities of the subjects or the necessities of their development; and might be reduced with nothing but absolute advantage.

The greatest existing representative of the highest art in the department of Symphony is Johannes Brahms. Though he has as yet given

the world only two examples,¹ they have that mark of intensity, loftiness of purpose, and artistic mastery which sets them above all other contemporary work of the kind. Like Beethoven and Schumann he did not produce a symphony till a late period in his career, when his judgment was matured by much practice in other kindred forms of instrumental composition, such as pianoforte quartets, string sextets and quartets, sonatas, and such forms of orchestral composition as variations and two serenades. He seems to have set himself to prove that the old principles of form are still capable of serving as the basis of works which should be thoroughly original both in general character and in detail and development, without either falling back on the device of programme, or abrogating or making any positive change in the principles, or abandoning the loftiness of style which befits the highest form of art; but by legitimate expansion, and application of careful thought and musical contrivance to the development. In all these respects he is a thorough descendant of Beethoven, and illustrates the highest and best way in which the tendencies of the age in instrumental music may yet be expressed. He differs most markedly from the class of composers represented by Raff, in the fact that his treatment of form is an essential and important element in the artistic effect. The care with which he develops it is not more remarkable than the insight shown in all the possible ways of enriching it without weakening its consistency. In appearance it is extremely free, and at available points all possible use is made of novel effects of transition and ingenious harmonic subtleties; but these are used in such a way as not to disturb the balance of the whole, or to lead either to discursiveness or tautology. In the laying out of the principal sections as much freedom is used as is consistent with the possibility of being readily followed and understood. Thus in the recapitulatory portion of a movement the subjects which characterise the sections are not only subjected to considerable and interesting variation, but are often much condensed and transformed. In the first movement of the second symphony, for instance, the recapitulation of the first part of the movement is so welded on to the working-out portion that the hearer is only happily conscious that this point has been arrived at without the usual insistence to call his attention to it. Again, the subjects are so ingeniously varied and transformed in restatement that they seem almost new, though the broad melodic outlines give sufficient assurance of their representing the recapitulation. The same effect is obtained in parts of the allegrettos which occupy the place of scherzos in both symphonies. The old type of minuet and trio form is felt to underlie the well-woven texture of the whole, but the way in which the joints and seams are made often escapes observation. Thus in the final return to the

principal section in the Allegretto of the 2nd Symphony, which is in G major, the subject seems to make its appearance in F# major, which serves as dominant to B minor, and going that way round the subject glides into the principal key almost insensibly.² In the Allegretto of the Symphony in C the outline of a characteristic feature is all that is retained in the final return of the principal subject near the end, and new effect is gained by giving a fresh turn to the harmony. Similar closeness of texture is found in the slow movement of the same symphony, at the point where the principal subject returns, and the richness of the variation to which it is subjected enhances the musical impression. The effect of these devices is to give additional unity and consistency to the movements. Enough is given to enable the intelligent hearer to understand the form without its appearing in aspects with which he is already too familiar. Similar thoroughness is to be found on the other sides of the matter. In the development of the sections, for instance, all signs of 'padding' are done away with as much as possible, and the interest is sustained by developing at once such figures of the principal subjects as will serve most suitably. Even such points as necessary equivalents to cadences, or pauses on the dominant, are by this means infused with positive musical interest in just proportion to their subordinate relations to the actual subjects. Similarly, in the treatment of the orchestra, such a thing as filling up is avoided to the utmost possible; and in order to escape the over-complexity of detail so unsuitable to the symphonic form of art, the forces of the orchestra are grouped in masses in the principal characteristic figures, in such a way that the whole texture is endowed with vitality. The impression so conveyed to some is that the orchestration is not at such a high level of perfection as the other elements of art; and certainly the composer does not aim at subtle combinations of tone and captivating effects of a sensual kind so much as many other great composers of modern times; and if too much attention is concentrated upon the special element of his orchestration it may doubtless seem at times rough and coarse. But this element must only be considered in its relation to all the others, since the composer may reasonably dispense with some orchestral fascinations in order to get broad masses of harmony and strong outlines; and if he seeks to express his musical ideas by means of sound, rather than to disguise the absence of them by seductive misuse of it, the world is a gainer. In the putting forward and management of actual subjects, he is guided by what appears to be inherent fitness to the occasion. In the first movement of the Symphony in C, attention is mainly concentrated upon one strong subject figure, which appears in both the principal sections and acts as a centre upon which the rest of the musical materials are grouped; and

¹ A third, in F, was produced at Vienna on Dec. 2, 1882, but the facts ascertainable about it are not yet sufficiently full to base any discussion upon (Dec. 21).

² For a counterpart to this see the first movement of Beethoven's Sonata in F, op. 10, no. 2.

the result is to unify the impression of the whole movement, and to give it a special sentiment in an unusual degree. In the first movement of the Symphony in D there are even several subjects in each section, but they are so interwoven with one another, and seem so to fit and illustrate one another, that for the most part there appears to be but little loss of direct continuity. In several cases we meet with the devices of transforming and transfiguring an idea. The most obvious instance is in the Allegretto of the Symphony in D, in which the first Trio in 2-4 time (a) is radically the same subject as that of the principal section in 3-4 time (b), but very differently stated. Then a very important item in the second Trio is a version in 3-8 time (c) of a figure of the first Trio in 2-4 time (d).

Of similar nature, in the Symphony in C minor, are the suggestions of important features of subjects and figures of the first Allegro in the opening introduction, and the connection of the last movement with its own introduction by the same means. In all these respects Brahms illustrates the highest manifestations of actual art as art; attaining his end by extraordinary mastery of both development and expression. And it is most notable that the great impression which his larger works produce is gained more by the effect of the entire movements than by the attractiveness of the subjects. He does not seem to

aim at making his subjects the test of success. They are hardly seen to have their full meaning till they are developed and expatiated upon in the course of the movement, and the musical impression does not depend upon them to anything like the proportionate degree that it did in the works of the earlier masters. This is in conformity with the principles of progress which have been indicated above. The various elements of which the art-form consists seem to have been brought more and more to a fair balance of functions, and this has necessitated a certain amount of 'give and take' between them. If too much stress is laid upon one element at the expense of others, the perfection of the art-form as a whole is diminished thereby. If the effects of orchestration are emphasised at the expense of the ideas and vitality of the figures, the work may gain in immediate attractiveness, but must lose in substantial worth. The same may be said of over-predominance of subject-matter. The subjects need to be noble and well marked, but if the movement is to be perfectly complete, and to express something in its entirety and not as a string of tunes, it will be a drawback if the mere faculty for inventing a striking figure or passage of melody preponderates excessively over the power of development; and the proportion in which they are both carried upwards together to the highest limit of musical effect is a great test of the artistic perfection of the work. In these respects Brahms's Symphonies are extraordinarily successful. They represent the austere and noblest form of art in the strongest and healthiest way; and his manner and methods have already had some influence upon the younger and more serious composers of the day.

It would be invidious, however, to endeavour to point out as yet those in whose works his influence is most strongly shown. It must suffice to record that there are still many composers alive who are able to pass the symphonic ordeal with some success. Amongst the elders are Benedict and Hiller, who have given the world examples in earnest style and full of vigour and good workmanship. Among the younger representatives the most successful are the Bohemian composer Dvořák, and the Italian Sgambati; and among English works may be mentioned with much satisfaction the Norwegian Symphony of Cowen, which was original and picturesque in thought and treatment; the Elegiac Symphony of Stanford, in which excellent workmanship, vivacity of ideas, and fluency of development combine to establish it as an admirable example of its class; and an early symphony by Sullivan, which had such marks of excellence as to show how much art might have gained if circumstances had not drawn him to more lucrative branches of composition. It is obvious that composers have not given up hopes of developing something individual and complete in this form of art. It is not likely that many will be able to follow Brahms in his severe and uncompromising methods; but he himself has shown more than any one how elastic the old principles

may yet be made without departing from the genuine type of abstract instrumental music; and that when there is room for individual expression there is still good work to be done, though we can hardly hope that even the greatest composers of the future will surpass the symphonic triumphs of the past, whatever they may do in other fields of composition. [C.H.H.P.]

SYMPHONY ORCHESTRA, THE BOSTON (U.S.A.), owes its existence, and its large perpetual endowment, to the generosity and taste of Mr. Henry Lee Higginson, a well-known citizen of Boston, and affords a good instance of the munificent way in which the Americans apply their great riches for the public benefit in the service of education and art. Mr. Higginson had for long cherished the idea of having 'an orchestra which should play the best music in the best way, and give concerts to all who could pay a small price.'¹ At length, on March 30, 1881, he made his intention public in the Boston newspapers as follows:—The orchestra to number 60, and their remuneration to include the concerts and 'careful training.' Concerts to be twenty in number, on Saturday evenings, in the Music Hall, from middle of October to middle of March. Single tickets from 75 to 25 cents (3s. to 1s.); season tickets (concerts only) 10 to 5 dollars; one public rehearsal, 1s. entrance. Orchestra to be permanent, and to be called **THE BOSTON SYMPHONY ORCHESTRA.**

Mr. Georg Henschel was appointed conductor, and Mr. B. Listemann leader and solo violin. A full musical library was purchased, and the first concert took place on Oct. 22, 1881, at 8 p.m. Its programme, and that of the 17th concert, Feb. 18, 1882, give a fair idea of the music performed:—

I. Overture, op. 124, Beethoven. Air, Orpheus, Gluck. Symphony in Bb, Haydn. Ballet music, Rosamunde, Schubert. Scena, Odysseus, Max Bruch. Festival Overture [Jubilee], Weber.

XVII. Overture, Leonore, no. 1, Beethoven. Rhapsody for contralto, chorus, and orch. (op. 53), Brahms. Symphony no. 8, Beethoven. Violin Concerto, Mendelssohn. Overture, Phèdre, Massenet.

There were twenty concerts in all, and the last ended with the Choral Symphony.

Since the first season some extensions have taken place. There are now 24 concerts in the series. The orchestra numbers 72, and there is a chorus of 200. There are three rehearsals for each concert, and on the Thursdays a concert is given in some neighbouring city of New England. Both the performances and the open rehearsals are crowded, and so far the noble intention of the founder, 'to serve the cause of good art only,' has been fulfilled. We can only say *Esto perpetua.* [G.]

SYMPHONY SOCIETY, NEW YORK, U.S., organised October 15, 1878, and incorporated by the State legislature, April 8, 1879. Its object is the advancement of music by procuring the

public performance of the best classical compositions, especially those of a symphonic character. The society in its five seasons has given thirty regular concerts and as many public rehearsals (six in each season), and two special concerts with the public rehearsals—in all, sixty-four entertainments. At these concerts there have been brought out 89 works, 14 of them for the first time in New York. The orchestra numbers 70 players, and the soloists, vocal and instrumental, are the most distinguished attainable. The concerts of the first four seasons were given in Steinway Hall; those of the fifth in the Academy of Music. Dr. Leopold Damrosch has been the conductor since the start. Officers (1883):—president, Hilborne L. Roosevelt; treasurer, W. H. Draper, M.D.; recording secretary, Richmond Delafield; corresponding secretary, Morris Reno; librarian, D. M. Knevals, and twelve others, directors. [F.H.J.]

SYMPSON (or **SIMPSON**, as he sometimes spelled his name), **CHRISTOPHER**, was an eminent performer on, and teacher of the viol., in the 17th century. During the Civil War he served in the army raised by William Cavendish, Duke of Newcastle, in support of the royal cause, and afterwards became an inmate of the house of Sir Robert Bolles, a Leicestershire baronet, whose son he taught. In 1655 he annotated Dr. Campion's 'Art of Setting or Composing of Musick in Parts,' another edition of which appeared in 1664, and the tract and annotations were added to several of the early editions of Playford's 'Introduction to the Skill of Musick.' [See **CAMPION, THOMAS**, and **PLAYFORD, JOHN**.] In 1659 he published 'The Division Violist, or, An Introduction to the Playing upon a Ground,' dedicated to his patron, Sir Robert Bolles, for the instruction of whose son he tells us the book was originally prepared, with commendatory verses by Dr. Charles Colman, John Jenkins, Matthew Lock, John Carwarden, and Edward Galsthorp, prefixed. In 1665 he published a second edition with a Latin translation printed in parallel columns with the English text, and the double title, 'Chelys, Minuritionum Artificio Exornata sive, Minuritiones ad Basin, etiam Ex-tempore Modulandi Ratio. The Division Viol, or, The Art of Playing Ex-tempore upon a Ground,' dedicated to his former pupil, Sir John Bolles, who had succeeded to the baronetcy. A third edition appeared in 1712, to which a portrait of Sympson, finely engraved by Faithorne, after J. Carwarden, was prefixed. In 1665 he published 'The Principles of Practical Musick,' of which he issued a second edition in 1667, under the title of 'A Compendium of Practical Musick, in five Parts, Teaching, by a New and Easie Method. 1. The Rudiments of Song. 2. The Principles of Composition. 3. The Use of Discords. 4. The Form of Figurative Descant. 5. The Contrivance of Canon.' This was dedicated to the Duke of Newcastle, and had commendatory verses by Matthew Lock and John Jenkins prefixed. It became popular, and other editions with additions appeared in 1678, 1706,

¹ MS. letter to Editor.

1714, 1722, 1727, and 1732, and an undated edition about 1760. A portrait of the author, drawn and engraved by Faithorne, is prefixed to the first eight editions. Sir John Hawkins in his *History* gives a long description of the Division Viol and Compendium (Novello's edition, pp. 708-712). He tells us also that Symphon 'dwelt some years in Turnstile, Holborn, and finished his life there' (at what date is not stated), and that he was of the Romish communion. [W.H.H.]

SYNCOPIATION. The binding of two similar notes so that the accent intended for the second appears to fall upon the first. [See ACCENT.] In the Coda of the great 'Leonora' Overture ('No. 3') Beethoven has a passage given out syncopated on the wind and naturally on the strings, then *vice versa*.

It was not however always sufficient for Beethoven's requirements, as may be seen from a well-known place in the Scherzo of the Eroica, where he first gives a passage in syncopation—

and then repeats it in common time, which in this instance may be taken as an extreme form of syncopation.

Schumann was fonder of syncopation than any other composer. His works supply many instances of whole short movements so syncopated throughout that the ear loses its reckoning, and the impression of *contra-tempo* is lost: e.g. *Kinderszenen*, No. 10; *Faschingschwank*, No. 1, and, most noticeable of all, the opening bar of the 'Manfred' Overture.

Wagner has one or two examples of exceedingly complex syncopation: an accompaniment figure in Act 2 of 'Tristan und Isolde,' which runs thus throughout,

and a somewhat similar figure in Act 1 of 'Götterdämmerung' (the scene known as 'Hagen's watch'), where the quavers of a 12-8 bar are so tied as to convey the impression of 6-4. The prelude to Act 2 of the same work presents a still more curious specimen, no two bars having at all the same accent.

Its effect in the accompaniment of songs may be most charming. We will only refer to Mendelssohn's 'Nachtlied' (op. 71, no. 6), and to Schumann's 'Dein Bildniss' (op. 39, no. 2). [F.C.]

SYNTAGMA MUSICUM, i.e. Musical Treatise. A very rare work, by Michael Praetorius.

A detailed account is given in vol. iii. pp. 25-26. It remains only to speak of its interest as a bibliographical treasure. It was originally designed for four volumes, three only of which were published, with a supplementary collection of plates which Forkel mistook for the promised fourth volume. The first volume of the edition described by Fétis was printed at Wittemberg in 1615; the second and third at Wolfenbüttel in 1619; and the collection of plates—*Theatrum Instrumentorum seu Sciagraphia*—at Wolfenbüttel in 1620.¹ A copy of this edition is in the Town Library at Breslau;² Mr. Alfred H. Littleton also possesses a very fine and perfect copy, which corresponds, in all essential particulars, with that described by Fétis. But neither Fétis nor Mendel seems to have been aware of the existence of an older edition. A copy of this is in the possession of the Rev. Sir F. A. G. Ouseley. The 1st volume bears the same date as Mr. Littleton's copy, 'Wittebergae, 1615'; but the 2nd and 3rd volumes are dated 'Wolfenbüttel, 1618'; and the difference does not merely lie in the statement of the year, but clearly indicates an earlier issue. In the edition of 1618, the title-page of the 2nd volume is printed entirely in black: in that of 1619, it is in black and red. The title-page of the 3rd volume is black in both editions; but in different type: and, though the contents of the 2nd and 3rd volumes correspond generally in both copies, slight typographical differences may be detected in sufficient numbers to prove the existence of a distinct edition, beyond all doubt. It has long been known that twenty pages of the General Introduction were more than once reprinted; but these belong to the first volume, and are in no way concerned with the edition of 1618, of which, so far as we have been able to ascertain, Sir F. Ouseley's copy is an unique example.

But, apart from its rarity, the book is doubly interesting from the extraordinary dearth of other early treatises on the same subject. Three similar works only are known to have preceded it; and the amount of information in these is comparatively very small. The earliest is a small volume, of 112 pages, in oblong 4to, by Sebastian Virdung, entitled 'Musica getuscht und aussagezogen,

¹ In our description of this edition, in the article *PRAETORIUS*, the following errata occur—

Vol. III. p. 25 b, line 19, for 1518 read 1618.

note, for 1519 read 1619.

² See the exhaustive Catalogue by Emil Böhm (Berlin, 1863).

Basel, 1511.' It is written in German dialogue, carried on between the 'Autor' and 'Silvanus'; and is illustrated by woodcuts of Instruments, not unlike those in the Syntagma. The next, also in small oblong 4to, is the 'Musica instrumentalis deudsch' of Martin Agricola, printed at Wittemberg in 1529, but preceded by a Preface dated Magdeburg 1528. This also contains a number of woodcuts, like those given by Virdung. The third and last treatise—another oblong 4to—is the 'Musurgia seu praxis musicæ' of Ottomar Luscinius (Othmar Nachtigal, or Nachtgall), dated Argentorati (Strasburg) 1536, and reprinted, at the same place, in 1542. The first portion of this is a mere Latin translation of the dialogue of Virdung. The book contains 102 pages, exclusive of the Preface, and is illustrated by woodcuts, like those of Virdung and Agricola.

All these three volumes are exceedingly scarce, and much prized by collectors, as specimens of early typography, as well as by students, for the light they throw upon the Instrumental Music of the 16th century, concerning which we possess so little detailed information of incontestable authority. The Breslau Library possesses none of them. A copy of Nachtigal's 'Musurgia' is in the British Museum; and also a very imperfect copy—wanting pages 1-49, including the title-page—of Agricola's 'Musica Instrumentalis.' Mr. Littleton possesses perfect copies of the entire series.

An earlier work by Nachtgall—'Musice Institutiones'—printed at Strasburg in 1515, does not touch upon Orchestral or Instrumental Music; and does not, therefore, fall within our present category. [W.S.R.]

SYREN. [See SIREN, vol. iii. p. 517.]

SYSTEM. The collection of staves necessary for the complete score of a piece—in a string quartet, or an ordinary vocal score, four; a PF. trio, four; a PF. quartet, five; and so on. Two or more of these will go on a page, and then we speak of the upper or lower system, etc. [G.]

SZYMANOWSKA, MARIE, a distinguished pianist of her day, who would, however, hardly have been remembered but for Goethe's infatuation for her. She was born about 1790, of Polish parents named Wolowski, and was a pupil of John Field's at Moscow. She travelled much in Germany, France, and England, and died at St. Petersburg of cholera in Aug. 1831. One of her daughters married the famous Polish poet Mickiewicz, whom she had introduced to Goethe in July 1829. Goethe knew her as early as 1821, and even then overpraised her, setting her above Hummel; 'but those who do so,' says Felix Mendelssohn, who was then at Weimar, 'think more of her pretty face than her not pretty playing.' Goethe renewed the acquaintance in Aug. 1823, at Eger, where she and Anna Milder were both staying, calls her 'an incredible player,' and expresses his excitement at hearing music after an interval of over two years in a remarkable letter to Zelter of Aug. 24, 1823, again comparing her with Hummel, to the latter's disadvantage. Mme. Szymanowska appears to have helped to inspire the 'Trilogie der Leidenschaft,' and the third of its three poems, called 'Aussöhnung,' is a direct allusion to her. In 1824 she was in Berlin. 'She is furiously in love (rasend verliebt) with you,' says Zelter to the poet, 'and has given me a hundred kisses on my mouth for you.'

Her compositions were chiefly for the PF., with a few songs. [G.]

SCHÜTZ, HEINRICH (name sometimes Latinized SAGITTARIUS), 'the father of German music,' as he has been styled, was born at Köstritz, Saxony, Oct. 8, 1585. Admitted as a chorister into the chapel of the Landgraf Maurice of Hesse-Cassel, besides a thorough musical training, Schütz had the advantage of a good general education in the arts and sciences of the time, which enabled him in 1607 to proceed to the University of Marburg, where he pursued with some distinction the study of law. The Landgraf, when on a visit to Marburg, observing in his protégé a special inclination and talent for music, generously offered to defray the expense of his further musical cultivation at Venice under the tuition of Giovanni Gabrieli, the most distinguished musician of the age. Schütz accordingly proceeded to Venice in 1609, and already in 1611 published the firstfruits of his studies under Gabrieli, a book of five-part madrigals dedicated to his patron. On the death of Gabrieli in 1612, Schütz returned to Germany with the intention of resuming his legal studies, but the Landgraf's intervention secured him once more for the service of art. A visit to

Dresden led to his being appointed Capellmeister to the Elector of Saxony in 1615, an office which he continued to hold, with some interruptions, till his death in 1672. His first work of importance appeared in 1619, 'Psalmen David's sammt etlichen Motetten und Concerten mit 8 und mehr Stimmen,' a work which shows the influence of the new Monodic or Declamatory style which Schütz had learned in Italy. His next work in 1623, an oratorio on the subject of the Resurrection, testifies the same earnest striving after dramatic expression. In 1627 he was commissioned by the Elector to compose the music for the German version by Opitz of Rinuccini's 'Daphne,' but this work has unfortunately been lost. It deserves mention as being the first German opera, though it would appear to have been remodelled entirely on the primitive Italian opera of Peri and Caccini. Schütz made no further efforts towards the development of opera, but with the exception of a ballet with dialogue and recitative, composed in 1638, confined himself henceforward to the domain of sacred music, introducing into it, however, the new Italian

¹ Goethe and Mendelssohn, p. 25.

Stilo Recitativo, and the element of dramatic expression. In 1625 appeared his 'Geistliche Gesänge,' and in 1628 his music to Becker's metrical Psalms. After a second visit to Italy in 1628, he published the first part of his 'Symphonie Sacre' (the second part appeared in 1647, the third in 1650), which has been regarded as his chief work, and testifies how diligently he had studied the new art of instrumental accompaniment which had arisen in Italy with Monteverde. Two pieces from this work, The Lament of David for Absalom, and the Conversion of S. Paul, are given in Winterfeld's 'Gabrieli.' The Thirty Years War interrupted Schütz's labours at Dresden in 1633, and compelled him to take refuge at the Court of King Christian IV. of Denmark, and of Duke George of Brunswick. In this unsettled time appeared his 'Geistliche Concerte zu 1 bis 5 Stimmen,' 1636 and 1639, and in 1645 his 'Sieben Worte' (first published by Riedel, Leipzig, 1870). This last work may be considered as the germ of all the later Passion-music, uniting as it does the musical representation of the sacred narrative with the expression of the reflections and feelings of the ideal Christian community. As Bach later in his Passions, so Schütz in this work accompanies the words of our Lord with the full strings. On Schütz's return to Dresden, he found the Electoral Chapel fallen into such decay, and the difficulties of reorganisation so great for want of proper resources, that he repeatedly requested his dismissal, which however was not granted. Like Weber at Dresden with Morlacchi, so even in 1653 Schütz found it difficult to work harmoniously with his Italian colleague Bontempi. Italian art was already losing its seriousness of purpose, and in the further development of the Monodic style, and the art of instrumental accompaniment, was renouncing all the traditions of the old vocal and ecclesiastical style. This seems to have caused a reaction in the mind of Schütz, the representative of serious German art; and his last work—the four Passions, 'Historia des Leidens und Sterbens unseres Herrn und Heilandes Iesu Christi' (1665-6)—is an expression of this reaction. Instrumental accompaniment is here dispensed with, and dramatic expression restricted for the most part to the choruses; but in them is manifested with such truth and power as to surpass all previous essays of the same kind, and give an imperishable historical value to the work. Schütz himself regarded it as his best work. Carl Riedel has made selections from the 'Four Passions' so as to form one Passions-musik suitable for modern performances—a questionable proceeding. Schütz died Nov. 6, 1672. His importance in the history of music lies in the mediating position he occupies between the adherents of the old Ecclesiastical style and the followers of the new Monodic style. While showing his thorough appreciation

of the new style so far as regarded the importance of dramatic expression, he had no desire to lose anything of the beauty and power of the pure and real a-capella style. And so by his serious endeavour to unite the advantages of the Polyphonic and the Monodic styles, he may be considered as preparing the way for the later Polyodic style of Sebastian Bach. [See vol. ii. 539b, 665b.] [J.R.M.]

STIMPSON, JAMES, a well-known Birmingham musician, born at Lincoln Feb. 29, 1820, son of a lay vicar of the cathedral, who removed to Durham in 1822, where James became a chorister in 1827. In February 1834 he was articled to Mr. Ingham, organist of Carlisle Cathedral; in June 1836 was appointed organist of St. Andrew's, Newcastle; and in June 1841, on Ingham's death, was made organist of Carlisle.

In February 1842 James Stimpson was unanimously chosen organist at the Town Hall and St. Paul's, Birmingham, out of many competitors, and in the following year justified the choice by founding the Festival Choral Society and its Benevolent Fund, in connection with the Triennial Festivals. He continued organist and chorus-master to the Society until 1855. His activity, however, did not stop here. In 1844 he was instrumental in starting the weekly Monday Evening Concerts, of which, in 1859, he took the entire responsibility, to relinquish them only after heavy losses in 1867.

In 1845 Mr. Stimpson had the satisfaction of having the pedals of the Town Hall organ increased from 2 to 2½ octaves, so that he was able to perform the works of J. S. Bach un mutilated. He is still organist of the Town Hall, and gives weekly recitals throughout the year to audiences varying from 600 to 1000. In the absence of a permanent orchestra—a fact remarkable in a town of the wealth, importance, and intelligence of Birmingham—many a young amateur has derived his first taste for classical music from the excellent programmes of Mr. Stimpson. He played the organ at the production of 'Elijah,' and Mendelssohn's last appearance in Birmingham was to conduct the oratorio for Mr. Stimpson's benefit April 25, 1847. He introduced Sims Reeves and Charles Halle to Birmingham, and laboured from 1849 until 1868, in many ways, in the service of good music, gaining thereby the gratitude and respect of his fellow townsmen. He has been Professor of Music at the Blind Institution for 25 years.

D'Almaine published in 1850 'The Organists' Standard Library,' edited by Mr. Stimpson, consisting principally of pieces hitherto unpublished in this country. His other publications consist mostly of arrangements, one of the best known being the favourite anthem 'As pants the hart' from Spohr's 'Crucifixion.' His long experience in teaching the theory of music is embodied in a manual published by Rudall, Carte & Co. [G.]

T.

TABLATURE (Lat. *Tabulatura*, from *Tabula*, a table, or flat surface, prepared for writing; Ital. *Intavolatura*; Fr. *Tablature*; Germ. *Tabulatur*). A method of Notation, chiefly used, in the 15th and 16th centuries, for the Lute, though occasionally employed by Violists, and Composers for some other Instruments of like character.

In common with all other true systems of Notation, Tablature traces its descent in a direct

line from the Gamut of Guido, though, in its later forms, it abandons the use of the Stave. It was used, in the 16th century, by Organists, as a means of indicating the extended Scale of the instruments, which, especially in Germany, were daily increasing in size and compass. For this purpose the lower Octave of the Gamut was described in capital letters; the second, in small letters; the third, in small letters with a line drawn above them:—

This Scale was soon very much extended; the notes below Gamut G (F) being distinguished by double capitals, and those above \bar{g} by small letters with two lines above them, the lower notes being described as belonging to the Double Octave, and the two upper Octaves as the Once-marked, and Twice-marked Octaves.

Several minor differences occur in the works of early authors. Agricola, for instance, in his

'Musica instrumentalis,' carries the Scale down to FF; and, instead of capitals, permits the use of small letters with lines below them for the lower Octaves—ff g a etc. But the principle remained unchanged; and when the C Scale was universally adopted for the Organ, its Tablature assumed the form which it retains in Germany to the present day:—

The comparatively recent adoption of the C Pedal-board in England has led to some confusion as to the Tablature of the lower Octave; and hence our English organ-builders usually describe the Great C as Double C, using tripled capitals for the lowest notes—a circumstance which renders caution necessary in comparing English and German specifications, where the actual length of the pipes is not marked.

In process of time, a hook was added to the letters, for the purpose of indicating a ♯; as, q (c♯), d (d♯), etc.: and, in the absence of a corresponding sign for the b, ♭, was written for d♭, d for e♭, etc., giving rise, in the Scale of E♭, to the monstrous progression, D♯, F, G, G♯, A♯, C, D, D♯—an anomaly which continued in common use, long after Michael Praetorius had recommended, in his 'Syntagma Musicum,'¹ the use of hooks below or above the letters, to indicate the two forms of Semitone—c, c̄, etc. Even as late as 1808 the error was revived in connection with Beethoven's Eroica Symphony, which was

¹ See p. 44.

announced in Vienna as 'Symphonie in Dis' (D♯).²

For indicating the length of the notes, the following forms were adopted, at a very early period:—

	Breve.	Semi-breve.	Minim.	Crotchet.	Quaver.	Semi-quaver.
NOTES.	.	┃	♪	♩	♪	♫

Two Crotchets ♪ Four Quavers ♪♪♪♪ etc. etc.

By means of these Signs, it was quite possible to express passages of considerable complexity,

² Thayer's 'Chronologisches Verzeichniss,' p. 52.

without the use of a Stave; though, very frequently, the two methods of Notation were combined, especially in Compositions intended for a Solo Voice, with Instrumental Accompaniment. For instance, in the following example from Arnold Schlick's 'Tabulaturen Etlicher lobgeseng und liedlein uff die orgeln und lauten' (Mentz,

MARIA ZART.

Solution.

Though no doubt deriving its origin from this early form, the method of Tablature used by Lutenists differed from it altogether in principle, being founded, in all its most important points, upon the peculiar construction of the instrument for which it was intended. [See LUTE.] To the uninitiated, Music written on this system appears to be noted, either in Arabic numerals, or small letters, on an unusually broad Six-lined Stave. The resemblance to a Stave is, however, merely imaginary. The Lines really represent the six principal Strings of the Lute; while the letters, or numerals, denote the Frets by which the Strings are stopped, without indicating either the names of the notes to be sounded, or their relation to a fixed Clef. And, since the pitch of the notes produced by the use of the Frets will naturally depend upon that of the Open Strings, it is clearly impossible to decypher any given system of Tablature, without first ascertaining the method of tuning to which it is adapted, though the same principle underlies all known modifications of the general rule. We shall do well, therefore, to begin by comparing a few of the methods of tuning most commonly used on the Continent. [See SCORDATURA.]

Adrien le Roy, in his 'Briefve et facile Instruction pour apprendre la Tablature,' first printed at Paris in 1551, tunes the Chanterelle—i. e. the 1st, or highest String, to \bar{c} , and the lower Strings, in descending order, to \bar{g} , \bar{d} , bb , f , and c ; see (a) in the following example. Vincenzo Galilei, in the Dialogue called 'Il Fronimo' (Venice, 1583), tunes his instrument thus, beginning with the lowest String, G , c , f , a , \bar{d} , \bar{g} , as at (b): and this system was imitated by Agricola, in his 'Musica Instrumentalis' (Wittenberg, 1529); and employed by John Dowland in his 'Bookes of Songes or Ayres' (London, 1597-1603), and by most English Lutenists, who, however, always reckoned downwards, from the highest sound to the lowest, as at (c). Thomas Mace describes the English method, in 'Musick's Monument' (London, 1676 fol.), chap. ix. Scipione Cerreto, 'Della prattica

1512), the melody is given on the Stave, and the Bass in Organ Tablature, the notes in the latter being twice as long as those in the former—a peculiarity by no means rare, in a method of Notation into which almost every writer of eminence introduced some novelty of his own devising.

musica vocale et strumentale' (Napoli, 1601), gives a somewhat similar system, with 8 strings, tuned thus, beginning with the lowest, C , D , G , c , f , a , \bar{d} , \bar{g} , as at (d) in the example. Sebastian Virdung, in 'Musica getuscht' (1511), gives the following, reckoning upwards, as at (e)— A , d , g , b , \bar{e} , \bar{a} ; and this method, which was once very common in Italy, is followed in a scarce collection of Songs with Lute Accompaniment, published at Venice by Ottaviano Petrucci, in 1509.

(a) ADRIEN LE ROY.

(b) V. GALILEI.

(c) J. DOWLAND.

(d) S. CERRETO.

(e) O. PETRUCCI. SEB. VIRDUNG.

It will be understood that these systems apply only to the six principal Strings of the Lute, which, alone, were governed by the Frets. The longer Strings, sympathetically tuned in pairs, by means of a separate neck, were entirely ignored, in nearly all systems of Tablature, and used only after the manner of a Drone, when they happened to coincide with the Tonic of the Key in which the Music was written. Of this nature are the two lowest Strings at (d) in the foregoing example.

Of the Lines—generally six in number—used to represent the principal Strings, Italian Lutenists almost always employed the lowest for

the Chanterelle and the highest, for the gravest String. In France, England, Flanders, and Spain, the highest line was used for the Chanterelle, and the whole system reversed. The French system, however, was afterwards universally adopted, both in Italy and Germany—a circumstance which must be carefully borne in mind with regard to Music printed in those countries in the 17th century.

The Frets by which the six principal Strings were shortened, were represented, in Italy, by the numerals 1, 2, 3, 4, 5, 6, 7, 8, 9, to which were afterwards added the numbers 10, 11, 12, written x, i, ii. In France and England the place of these numerals was supplied by the letters a, b, c, d, e, f, g, h, i, etc.: and, after a time, these letters came into general use on the Continent also. Of course, one plan was just as good as the other; but there was this important practical difference between them: in England and France a represented the Open String, and b the first Fret; in Italy, the Open String was represented by a cypher, and the first Fret by the number 1. The letter b, therefore, corresponded to the figure 1; and c to 2. The letters, or numerals, were written either on the lines or in the spaces between them, each letter or numeral representing a Semitone in correspondence with the action of the Frets. Thus, when the lowest String was tuned to G, the actual note G was represented by a (or o); G♯, or Ab, by b (or 1); A, by c (or 2); A♯, or Bb, by d (or 3). But when the lowest String was tuned to A, b (or 1) represented Bb; c (or 2) represented B; and d (or 3) represented c. The following example shows both the French and the Italian Methods, the letters being written in the spaces—the usual plan in England—and the lowest place being reserved for an additional Open Bass String.

Solution.

In order to indicate the duration of the notes, the Semibreve, Minim, Crotchet, Quaver, and Dot—or Point of Augmentation—were represented by the following signs, written over the highest line; each sign remaining in force until it was contradicted by another—at least, during the continuance of the bar. At the beginning of a new bar, the sign was usually repeated.

Semibreve.	Minim.	Crotchet.	Quaver.	Dot.
	♩	♪	♫	.

In order to afford the reader an opportunity of practically testing the rules, we give a few short examples selected from the works already mentioned; showing, in each case, the method of tuning employed—an indulgence very unusual in the old Lute-Books. Ordinary notation was of course used for the voice part.

etc.

These examples will enable the student to solve any ordinary forms of Tablature. Those who wish to study the supplementary Positions of Galilei, and the complicated methods of Gerle,¹ Besardus,² and other German writers, will find no difficulty in understanding the rules laid down in their respective treatises, after having once mastered the general features of this system.

It remains only to speak of Tablature as applied to other instruments than that for which it was originally designed.

During the reign of King James I, Coperario, then resident in England, adapted the Lute Tablature to Music written for the Bass Viol.

¹ In most modern editions, this note is erroneously printed G.

² Musica Teutsch (Nürnberg, 1642).

³ Thesaurus harmonicus (Colon. Agr. 1608).

This method of Notation was used for beginners only, and not for playing in concert. John Playford, in his 'Introduction to the Skill of Music' (10th edit., London, 1683), describes this method of Notation as the 'Lyra-way'; and calls the instrument the Lero, or Lyra-Viol. The six strings of the Bass Viol are tuned thus, beginning with the 6th, or lowest String, and reckoning upwards—D, G (F), c, e, a, d; and the method proposed is exactly the same as that used for the Lute, adapted to this system of tuning. Thus, on the 6th String, a denotes D (the Open String); b denotes D♯; c denotes E; etc. A player, therefore, who can read Lute-Music, will find no difficulty in reading this.

John Playford, enlarging upon Coperario's idea, recommended the same method for beginners on the Violin, adapting it to the four Open Strings of that instrument—G, D, A, E. The following Air, arranged on this system, for the Violin, is taken from a tune called 'Parthenia.'

Solution.

This adaptation to the Violin is one of the latest developments of the system of Tablature on record: but Mendel,⁴ not without show of reason, thinks the term applicable to the Basso Continuo, or Figured-Bass; and we should not be very far wrong were we to apply it to the Tonic-Sol-Fa system of our own day. [W.S.R.]

TABLE ENTERTAINMENT. A species of performance consisting generally of a mixture of narration and singing delivered by a single individual seated behind a table facing the audience. When or by whom it was originated seems doubtful. George Alexander Stevens gave, about 1765, entertainments in which he was the sole performer, but such were probably rather lectures than table entertainments. In May 1775, R. Baddeley, the comedian (the original Moses in 'The School for Scandal'), gave an entertainment at Marylebone Gardens, described as 'an attempt at a sketch of the times in a variety of

⁴ Musikalisches Conversations Lexicon (Berlin, 1808).

caricatures, accompanied with a whimsical and satirical dissertation on each character'; and in the June following George Saville Carey gave at the same place 'A Lecture on Mimicry,' in which he introduced imitations of the principal theatrical performers and vocalists of the period. John Collins, an actor, in 1775 gave in London a table-entertainment, written by himself, called 'The Elements of Modern Oratory,' in which he introduced imitations of Garrick and Foote. After giving it for 42 times in London he repeated it in Oxford, Cambridge, Belfast, Dublin, and Birmingham. He subsequently gave, with great success, an entertainment, also written by himself, called 'The Evening Brush,' containing several songs which became very popular; among them the once well-known 'Chapter of Kings'—'The Romans in England once held sway, etc.'¹ Charles Dibdin commenced in 1789 a series of table entertainments in which song was the prominent feature, and which he continued with great success until 1801. Dibdin's position as a table entertainer was unique. He united in himself the functions of author, composer, narrator, singer, and accompanist. [See DIBDIN, CHARLES, in which article it was by mistake stated that Dibdin was the originator of this class of entertainment.] On April 3, 1816, the elder Charles Mathews gave, at the Lyceum Theatre, his 'Mail Coach Adventures,' the first of a series of table-entertainments which he continued to give for many years, and with which he achieved an unprecedented success. Into these his wonderful power of personation enabled him to introduce a new feature. After stooping behind his table he quickly reappeared with his head and shoulders in costume, representing to the life some singular character. The old Scotch-woman, the Thames waterman, and the Milton-struck ironmonger were a few only of such personations. Mathews's success led to similar performances by others. Foremost among these were the comedians John Reeve and Frederick Yates, whose *forte* was imitation of the principal actors of the day. W. S. Woodin gave for several seasons, with very great success, table-entertainments at the Lowther Rooms, King William Street, Strand; a place now known as Toole's Theatre.—Henry Phillips, the bass singer, and John Wilson, the Scotch tenor, gave similar entertainments, of a more closely musical kind: and Edney, the Frasers, and others, have followed in their wake. [See PHILLIPS, HENRY; and WILSON, JOHN.] [W.H.H.]

TABOR. A small drum used to accompany a pipe, both being played by the same man. [See PIPE and TABOR.] Tabret is a diminutive of Tabor. [V.deP.]

TABOUROT. [See ARBEAU, vol. i. p. 80.]

TACCHINARDI, NICCOLÒ, a distinguished tenor singer, born at Florence in September 1776. He was intended for an ecclesiastical career, but his artistic bias was so strong that he abandoned

the study of literature for that of painting and modelling. From the age of eleven he also received instruction in vocal and instrumental music. When 17 he joined the orchestra at the Florence theatre as violin-player, but after five years of this work, his voice having meanwhile developed into a beautiful tenor, he began to sing in public. In 1804 he appeared on the operatic stages of Leghorn and Pisa; afterwards on those of Venice, Florence, and Milan, where he took a distinguished part in the gala performances at Napoleon's coronation as king of Italy.

At Rome, where his success was as permanent as it was brilliant, his old passion for sculpture was revived by the acquaintance which he made with Canova, in whose studio he worked for a time. Canova executed his bust in marble, thus paying homage to him in his worst aspect, for he was one of the ugliest of men, and almost a hunchback. When he appeared at Paris in 1811, his looks created a mingled sensation of horror and amusement; but such was the beauty of his voice and the consummate mastery of his style, that he had only to begin to sing for these personal drawbacks to be all forgotten. He is said to have taken Babini for his model, but it is doubtful if he had any rival in execution and artistic resource. The fact of so ugly a man sustaining the part (transposed for tenor) of Don Giovanni, with success, shows what a spell he could cast over his audience.

After three successful years in Paris, Tacchinardi returned in 1814 to Italy, where he was appointed chief singer to the Grand Duke of Tuscany, with liberty to travel. He accordingly sang at Vienna, and afterwards in Spain, distinguishing himself especially at Barcelona, although then 50 years old. After 1831 he left the stage, and lived at his country house near Florence. He retained his appointment from the Grand Duke, but devoted himself chiefly to teaching, for which he became celebrated. He built a little private theatre in which to exercise his pupils, of whom the most notable were Mme. Frezzolini, and his daughter Fanny, Mme. Persiani, perhaps the most striking instance on record of what extreme training and hard work may effect, in the absence of any superlative natural gifts. His other daughter, Elisa, was an eminent pianiste. Tacchinardi was the author of a number of solfeggi and vocal exercises, and of a little work called 'Dell' opera in musica sul teatro italiano, e de' suoi difetti.' He died in 1860. [F.A.M.]

TACET. i.e. 'is silent.' An indication often found in old scores, meaning that the instrument to which it refers is to leave off playing. [G.]

TADOLINI, GIOVANNI, born at Bologna in 1793, learned composition from Mattei, and singing from Babini, and at the age of 18 was appointed by Spontini accompanist and chorus-master at the Théâtre des Italiens, Paris. He kept this post till the fall of Paris in 1814, when he returned to Italy. There he remained, writing operas and occupied in music till 1830, when he went back to the Théâtre Italien, with his wife, Eugenia

¹ See a copy of the words in 'Notes and Queries' for 1898.

Savorini (born at Forli, 1809), whom he had married shortly before, and resumed his old functions till 1839, when he once more returned to Italy, and died at Bologna Nov. 29, 1872. His operas are 'La Fata Alcina' (Venice, 1814); 'La Principessa di Navarra' (Bologna, 1816?); 'Il Credulo deluso' (Rome, 1820?); 'Tamerlano' (Bologna, 1822?) 'Moclar' (Milan, 1824?); 'Mitridate' (Venice, 1826?); 'Almanzor' (Trieste, 1828?). One of his canzonets, 'Eco di Scizia,' with horn obligato, was much sung by Rubini. Tadolini was at one time credited with having written the concluding fugue in Rossini's *Stabat* (see Berlioz, 'Soirées de l'orchestre' 2ème Epilogue). The above is chiefly compiled from Fétis. [G.]

TÄGLICHSECK, THOMAS, born of a musical family at Ansbach, in Bavaria, Dec. 31, 1799, studied at Munich under Rovelli and Gratz, and by degrees became known. Lindpaintner in 1820 gave him his first opportunity by appointing him his deputy in the direction of the Munich theatre, and about this time he produced his first opera, 'Weber's Bild.' After this he forsook Munich and wandered over Germany, Holland, and Denmark, as a violinist, in which he acquired great reputation. He then settled in Paris, and on Jan. 24, 1836, a symphony of his (op. 10) was admitted to the unwonted honour of performance at the Conservatoire. It must have had at least the merit of clearness and effect, or it would not have been followed by a second performance on April 2, 1837—a rare honour for any German composer but a first-rate one.

In 1827 he was appointed Kapellmeister of the Prince of Hohenzollern Hechingen, a post which he retained till its dissolution in 1848. The rest of his life was passed between Löwenberg in Silesia, Dresden, and Baden Baden, where he died Oct. 5, 1867. His works extend to op. 33, and embrace, besides the symphony already mentioned, three others—a mass, op. 25; a psalm, op. 30; a trio for PF. and strings; a great quantity of concertos, variations, and other pieces for the violin; part-songs, etc., etc. [G.]

TAGLIAFICO, JOSEPH DIEUDONNÉ, born Jan. 1, 1821, of Italian parents, at Toulon, and educated at the College Henri IV, Paris. He received instruction in singing from Piermarini, in acting from Lablache, and made his *début* in 1844 at the Italiens, Paris. He first appeared in England April 6, 1847, at Covent Garden Theatre, as Oroon in 'Semiramide,' on the occasion of the opening of the Royal Italian Opera. From that year until 1876 he appeared at Covent Garden season by season, almost opera by opera. His parts were small, but they were thoroughly studied and given, and invariably showed the intelligent and conscientious artist. In the intervals of the London seasons he had engagements in St. Petersburg, Moscow, Paris, and America; was stage manager at the Théâtre des Italiens, Monte Carlo, etc., and for many years corresponded with the 'Menestrel' under the signature of 'De Retz.' In 1877, on the death of M. Desplaces, he was appointed stage manager of the Italian Opera in London, which post he

resigned in 1882 on account of ill health. Mme. Tagliafico, formerly Cotti, was for many years a valuable 'comprimaria' both at Covent Garden and Her Majesty's. [A.C.]

TALEXY, ADRIEN. A pianist and voluminous composer, born about 1820; produced between 1872 and 1878 six one-act operettas at the Bouffes-Parisiens and other Paris theatres, none of which met with any special favour. He is the author of a 'Méthode de piano'; 20 'Etudes expressives,' op. 80 (with Colombier); and of a large number of salon and dance pieces for piano solo, some of which enjoyed great popularity in their day. In 1860 M. Talexty conducted a series of French operas at the St. James's Theatre, London, for Mr. F. B. Chatterton, beginning with *La Tentation*, May 28, which however did not prove a good speculation. He died at Paris in 1881. [G.]

TAILLE. Originally the French name for the tenor voice, Basse-taille being applied to the baritone; but most frequently employed to designate the tenor viol and violin. It properly denominates the large tenor, as distinguished from the smaller contralto or haute-contre: but is often applied to both instruments. The tenor violoncello clef was originally appropriated to the Taille. [See TENOR VIOLIN.] [E.J.P.]

TALISMANO, IL. Grand opera in 3 acts; music by Balfe. Produced at Her Majesty's Opera, June 11, 1874. The book, founded on Walter Scott's 'Talisman,' was written by A. Mattheson in English, and so composed; but was translated into Italian by Sig. Zaffira for the purpose of production at the Italian Opera. The work was left unfinished by Balfe, and completed by Dr. G. A. Macfarren. [G.]

TALLYS (as he himself wrote his name), TALYS, or TALLIS (as it is usually spelled), THOMAS, the father of English cathedral music, is supposed to have been born in the second decade of the 16th century. It has been conjectured that he received his early musical education in the choir of St. Paul's Cathedral under Thomas Mulliner, and was removed thence to the choir of the Chapel Royal; but there is no evidence to support either statement. The words 'Child there' which occur at the end of the entry in the Cheque-book of the Chapel Royal recording his death and the appointment of his successor, and which have been relied upon as proving the latter statement, are ambiguous, as they are applicable equally to his successor, Henry Eveseed, and to him. It is however highly probable that he was a chorister in one or other of the metropolitan choirs. He became organist of Waltham Abbey, which appointment he retained until the dissolution of the abbey in 1540, when he was dismissed with 20s. for wages and 20s. for reward.¹ It is probable that he soon after that event obtained the place of a Gentleman of the Chapel Royal. His celebrated Preces, Responses and Litany, and

¹ This fact was discovered by Mr. W. H. Cummings.

his Service in the Dorian mode, were most probably composed soon after the second Prayer Book of Edward VI. was issued in 1552. In 1560 he contributed eight tunes to Day's Psalter (one of which, a canon 2 in 1, was subsequently adapted and is still used to Ken's Evening Hymn), and four anthems to Day's Morning, Communion, and Evening Prayer. On January 21, 1575-6 he and William Byrd obtained Letters Patent giving them the exclusive right of printing music and ruled music paper for twenty-one years; the first of the kind. The first work printed under the patent was the patentees' own 'Cantiones quæ ab argumento Sacræ vocantur, quinque et sex partium,' containing 34 motets, 16 by Tallis, and 18 by Byrd, and dated 1575. In the patent the grantees are called 'Gent. of our Chappell' only, but on the title-page of the 'Cantiones' they describe themselves as 'Serenissimæ Reginæ Maiestati à priuato Sacello generosis, et Organis-tis.' The work is a beautiful specimen of early English musical typography. It contains not only three laudatory poems, one 'De Anglorum Musica' (unsigned), and two others by 'Richardus Mulcasterus' and 'Ferdinandus Richardsonus,' but also at the end a short poem by Tallis and Byrd themselves:—

AUTORES CANTIONUM AD LECTOREM.

*Has tibi primitias sic commendamus, amice
Lector, ut infantem depositura suum
Nutrici fidei vix firma puerpera credit,
Queis pro lacte tuæ græta frontis erit
Hac etenim fretæ, magnam promittere messem
Audebunt, cassæ, falsis honore cadent.*

which has been thus happily Englished:—¹

THE FRAMERS OF THE MUSIQUE TO THE READER.

*As one, that scarce recouer'd from her Throes
With trustie Nurse her feeble Babe bestowes;
These firstlings, Reader, in thy Hands we place,
Whose Milk must be the Faouour of thy Face;
By that sustayn'd, large Increase shal they shew,
Of that deprived, ungarn'er'd must they goe.*

About the same time Tallys composed his markable Song of Forty parts, for 8 choirs of 5 voices each, originally set to Latin words, but adapted to English words about 1630.² [See vol. iii. p. 274.] Tallys, like his contemporary, the famous Vicar of Bray, conformed, outwardly at least, to the various forms of worship which successive rulers imposed, and so retained his position in the Chapel Royal uninterruptedly from his appointment in the reign of Henry VIII until his death in that of Elizabeth. From the circumstance of his having selected his Latin motets for publication so lately as 1575 it may be inferred that his own inclination was toward the older faith. He died November 23, 1585, and was buried in the chancel of the parish church at Greenwich, where in a stone before the altar rails a brass plate was inserted with an epitaph in verse engraven upon it. Upon the church being taken down for rebuilding soon

after 1710 the inscription was removed, and Tallys remained without any tombstone memorial for upwards of 150 years, when a copy of the epitaph (which had been preserved by Strype in his edition of Stow's Survey of London, 1720,³ and reprinted by Hawkins, Burney and others) was placed in the present church. The epitaph was set to music as a 4-part glee by Dr. Cooke, which was printed in Warren's collections. Tallys's Service (with the Venite as originally set as a canticle), Preces and Responses, and Litany, and 5 anthems (adapted from his Latin motets), were first printed in Barnard's Selected Church Musick, 1641. The Service, Preces, Responses and Litany, somewhat changed in form and with the substitution of a chant for Venite instead of the original setting, and the addition of a chant for the Athanasian Creed, were next printed by Dr. Boyce in his Cathedral Music. All the various versions of the Preces, Responses and Litany are included in Dr. Jebb's 'Choral Responses and Litanies.' He appears to have written another service also in the Dorian mode, but 'in 5 parts two in one,' of which, as will be seen from the following list, the bass part only is at present known. A Te Deum in F, for 5 voices, is much nearer complete preservation (see List). Hawkins included in his History scores of two of the Cantiones, and, after having stated in the body of his work that Tallys did not compose any secular music, printed in his appendix the 4-part song, 'Like as the doleful dove.' Burney in his History printed an anthem from Day's Morning, Communion, and Evening prayer, and two of the Cantiones. Several MS. compositions by Tallys are preserved at Christ Church, Oxford, in Queen Elizabeth's Virginal Book, in the British Museum, and elsewhere. (See the List.) We give his autograph from the last leaf of a MS. collection of Treatises on Music, formerly belonging to Waltham Abbey, now in the British Museum (Lansdowne MS. 763).

A head, purporting to be his likeness, together with that of Byrd, was engraved (upon the same plate) for Nicola Haym's projected History of Music, 1726. A single impression alone is known, but copies of a photograph taken from it are extant. [W.H.H.]

The following is a first attempt to enumerate the existing works of Tallys:—

¹ By Mr. H. F. Wilson, of Trinity College, Cambridge, to whom the Editor's best acknowledgments are due.

² Copies are to be found in the Madrigal Society's Library, made by John Immyus; the British Museum; the Royal College of Music; the Library of Sir F. A. G. Ouseley.

³ By an odd misprint the composer's name is called 'Gallys' on Strype's copy.

I. PRINTED.

The earliest appearance is given.

- Hear the voice and prayer ('a In jejuniis et fletu, à 5. No. 26. Prayer').
 O Lord in thee is all my trust ('a Si enim (2da pars), à 7. No. 28. Prayer').
 Remember not, O Lord God ('the Anthem').
 If ye love me ('the Anthem').
 I give you a new Commandment.¹
 (All for four voices. Printed in John Day's 'Morning and Evening Prayer and Communion,' 1560?)
 Man blest no doubt, 1st tune.
 Let God arise, 2nd do.
 Why fumeth in fight, 3rd do.
 O come in one, 4th do.
 Even like the hunted hind, 5th do.
 Expend, O Lord, 6th do.
 Why bragst in malice high, 7th do.
 God grant with grace, 8th do.
 Come, Holy Ghost, eternal God.
 (All for four voices, in John Day's 'Whole Psalter' 1563? The 8 tunes (in the Tenor part) are in the 8 modes, 1 in each. No. 8—a Canon 2 in 1, sung upside down—is the tune usually sung to 'Glory to Thee, my God this night.')
 Salvator mundi, à 5. No. 1 (Burney, iii. 76). Adapted to 'With all our hearts,' by Barnard.
 Also (?) to 'Teach me, O Lord,' Ch. Ch., and 'When Jesus,' Absterge Domine, à 5. No. 2 (Hawkins, iii. 267). Adapted to 'Wipe away,' by Barnard.
 Also to 'Discomfit them, O Lord' (1598?) and 'I look for the Lord.'
 In manus tuas, à 5. No. 3.
 Mihi autem nimis, à 5. No. 7.
 Adapted to 'Blessed be thy name,' by Barnard. Also to 'Great and marvellous,' by Motett Society.
 Onata lux (Hymn), à 5. No. 8.
 O sacrum convivium, à 5. No. 9.
 Adapted to 'I call and cry,' by Barnard.
 Dereliquit impius, à 5. No. 13 (Burney, iii. 80).
 Sabbathum dum transisset, à 5. No. 14.
 Virtus, honor et potestas, à 5. No. 15.
 Illis dum pergunt (Hymn), à 5. No. 16 (? has a 2nd part, Rex Christe).
 Procul recedant (Hymn), à 5. No. 20.
 Salvator Mundi, à 5. No. 21 (different from No. 1).
 Facti sunt Nazareti, à 5. No. 22.
 (All from the Canticiones sacre, etc. 1575.)
 'First Service,' or 'Short Service'—in D dor. Venite, Te Deum, Benedictus, Kyrie, Creed, Sanctus, Gloria in Excelsis, Magnificat, Nunc Dimittis; all à 4.
 'First process.'
 First Psalm to do. (Ps. cxix.)
 'Wherewithal,' a chant harmonised.
 Second do., 'O do well,' do.
 Third do., 'My soul cleaveth,' do. all four à 4.
 Responses, Lord's Prayer, and Litany à 5.
 (Anthem) O Lord, give thy Holy Spirit, à 4. (Adapted from Latin, according to Tudway.)
 With all our hearts, à 5 (Salvator Mundi, No. 1).
 Blessed be thy name, à 5 (Mihi autem nimis).
 I call and cry, à 5 (O sacrum convivium).
 Wipe away my sins, à 5 (Absterge Domine).² See 'Forgive me,' MS.
 (All from Barnard's 'First Book of Selected Church Music, 1641.)
 Litany, Proses, and Responses, à 4.
 In Rimbault's 'Full Cathedral Services of Thomas Tallis'; and Jebb's 'Choral Responses and Litanies' (1847).
 Like as the doleful dove, à 4. In Hawkins, Appendix.
 All people that on earth do dwell, à 4. In Arnold's Cathedral Music, vol. 1.
 Hear my prayer, à 4. In 'Anthems' and Services for Church Choirs. Burns, 1848, vol. 1. 15.
 Blessed are those, à 5. In Motett Society's Collection, iii. 131.
 Great and marvellous, à 5. Ibid. iii. 99, adapted from 'Mihi autem nimis,' Cantio 7; and 'Blessed be thy Name,' in Barnard.
 Verba mea auribus, à 5. In Rochlitz's Sammlung. A retranslation of 'I call and cry.'
 'Come, Holy Ghost, our souls inspire,' Parish Choir.

II. MANUSCRIPT (NOT PRINTED).

The Editor has to express his sincere thanks to the Rev. Sir F. A. G. Ouseley, Bart.; Rev. J. H. Mee; Rev. W. E. Dickson; Mr. John Bishop; Mr. Bertram Pollock, and several others, for their kind help in making out this list. [G.]

TAMBERLIK, ENRICO, born March 16, 1820, at Rome, received instruction in singing from Borgna and Guglielmi, and made his *début* in 1841 at the Teatro Fondo, Naples, in Bellini's

The volumes in the Add. MSS. numbered 30,513 and 30,485 are valuable, not only because they contain works not known elsewhere, but because of the light they throw on the domestic position of music in the 16th century. They are arrangements for the Virginals—the fashionable keyed instrument of the day—exactly analogous to the arrangements for the Pianoforte of our own times; and it is startling to find that the sacred choral music of that day was the favourite music, and that the learned contrapuntal 5- and 6-part motets of Tallis, Edwards, Farrant, Taverner, Byrde, Oreguillon, Josquin, Orlando Lasso, and others, were compressed for the amusement of musical amateurs just as oratorios, operas, and operettas are now. From Add. MSS. 29,246, 29,247, another thing is plain, that these learned compositions were arranged for the Lute so that the top part could be sung solo, and the other parts played as accompaniment. An example of this may be found in the 'Echos du temps passé,' where Gibbons's 'Silver Swan' is set to French words (Le Croisé captif) as a solo with accompaniment; but it will be new to many to find the same practice in the 16th century.

This and 'Salve Intemerata,' for 3 voices in R.O.M., no. 1737, appear to be portions of 5-part motets to the same words, reduced to 3 parts by simple omissions of voice-parts. The same probably applies to all the 3-part motets in R.O.M. mentioned above; but they require investigation.

'I Capuletti.' He sang with success for several years at the San Carlo, also at Lisbon, Madrid, and Barcelona. He first appeared in England April 4, 1850, at the Royal Italian Opera, as Masaniello, and obtained immediate popularity in that and in his other parts of the season, viz. Pollio, Robert, Roderick Dhu, Otello; April 20, Amén-fi, on the production of a version of 'Mose in Egitto,' entitled 'Zora'; and July 25, in Leopold, on the production of 'La Juive' in England. He possessed a splendid tenor voice, of great richness of tone and volume, reaching to C in alt, which he gave with tremendous power, and 'as clear as a bell.' His taste and energy were equal, and he was an excellent singer, save for the persistent use of the 'vibrato.' In person he was singularly handsome, and was an admirable actor. He remained a member of the company until 1864 inclusive, excepting the season of 1857, singing in the winters at Paris, St. Petersburg, Madrid, North and South America, etc. His other parts included Arnold; Ernani; Aug. 9, 51, Phaon (Saffo); Aug. 17, 52, Pietro il Grande; June 25, 53, Benvenuto Cellini; May 10, 55, Manrico (Trovatore)—on production of those operas in England; also, May 27, 51, Florestan (Fidelio); July 15, 52, Ugo (Spohr's Faust); Aug. 8, 58, Zampa; July 2, 63, Gounod's Faust—on the revival or production of the operas at Covent Garden, etc. He reappeared at the same theatre in 1870 as Don Ottavio, the Duke (Rigoletto), John of Leyden; and in 1877, at Her Majesty's, as Ottavio, Otello, and Manrico, and was well received, though his powers were on the wane. He is now living at Madrid, where he carries on a manufactory of arms, occasionally singing in public. [A.O.]

TAMBOUR DE BASQUE. [See TAMBOURINE.] [V.deP.]

TAMBOURIN. A long narrow drum used in Provence, beaten with a stick held in one hand, while the other hand plays on a pipe or flageolet with only three holes, called a *galoubet*. [See DRUM 3, vol. i. p. 466.] [V.deP.]

TAMBOURIN, an old Provençal dance, in its original form accompanied by a Flute and Tambour de Basque, whence the name was derived. The drum accompaniment remained a characteristic feature when the dance was adopted on the stage, the bass of the tune generally consisting of single notes in the tonic or dominant. The Tambourin was in 2-4 time, of a lively character, and generally followed by a second Tambourin in the minor, after which the first was repeated. A well-known example occurs in Rameau's 'Pièces de Clavecin,' and has often been reprinted. It was introduced in Scene 7, Entrée III, of the same composer's 'Fêtes d'Hébé,' where it

is entitled 'Tambourin en Rondeau,' in allusion to its form, which is that of an 8-barred Rondeau followed by several 'reprises.' The same opera contains (in Entrée I, Scenes 5 and 9) two other Tambourins, each consisting of two parts (major and minor). We give the first part of one of them as an example. Mlle. Camargo is said to have excelled in this dance.

[W.B.S.]

TAMBOURINE (Fr. *Tambour de Basque*). This consists of a wooden hoop, on one side of which is stretched a vellum head, the other side being open. Small rods with fly-nuts serve to tighten or loosen the head. It is beaten by the hand without a stick. Several pairs of small metal plates, called jingles, are fixed loosely round the hoop by a wire passing through the centres of each pair, so that they *jingle* whenever the tambourine is struck by the hand or shaken. Another effect is produced by rubbing the head with the finger. It is occasionally used in orchestras, as in Weber's overture to 'Preciosa,' and at one time was to be seen in our military bands. In the last century it was a fashionable instrument for ladies. The instrument is

probably of Oriental origin, being very possibly derived from the Hebrew *Topā*¹ (Exod. xv. 20). The Egyptian form is somewhat similar to our own, but heavier, as may be seen from the woodcut, taken from Lane's 'Modern Egyptians.'

The French Tambourin is quite a different thing, and is described under the 3rd kind of Drums, as well as under its proper name. [DRUM 3, and TAMBOURIN.]

The modern Egyptians have drums (*Darbukkeh*) with one skin or head, and open at the bottom, which is the only reason for classifying them with tambourines. [See vol. i. p. 463.] The an-

nexed woodcut (also from Lane) shows two examples; the first of wood, inlaid with tortoise-

¹ This root survives in the Spanish *adufe*, a tambourine.

shell and mother-of-pearl. 17 inches high and 6½ diameter at top; the second is of earthenware, 10½ inches high and 8½ diameter. [V.de P.]

TAMBURINI, ANTONIO, baritone singer, eminent among the great lyric artists of the 19th century, was born at Faenza on March 28, 1800. His father was director of military music at Fossombrone, Ancona. A player himself on horn, trumpet, and clarinet, he instructed his son, at a very early age, in horn-playing, accustoming him in this way to great and sustained efforts, even to overtaxing his undeveloped strength. At nine the boy played in the orchestra, but seems soon to have been passed on to Aldobrando Rossi for vocal instruction. At twelve he returned to Faenza, singing in the opera chorus, which was employed not only at the theatre but for mass, a fact which led him to devote much time in early youth to the study of church music. He attracted the notice of Madame Pisaroni and the elder Mombelli; and the opportunities which he enjoyed of hearing these great singers, as well as Davide and Donzelli, were turned by him to the best account. At eighteen, and in possession of a fine voice, he was engaged for the opera of Bologna. The piece in which, at the little town of Cento, he first appeared, was 'La Contessa di colleerboso,' of Generali. His favourable reception there and at Mirandola, Correggio, and Bologna, attracted the notice of several managers, one of whom secured him for the Carnival at Piacenza, where his success in Rossini's 'Italiana in Algeri' procured for him an engagement that same year at the Teatro Nuovo at Naples. Although his beautiful baritone voice had now reached its full maturity, his execution was still imperfect, and the Neapolitan public received him somewhat coldly, though speedily won over by his great gifts and promise. The political troubles of 1820, however, closed the theatres, and Tamburini sang next at Florence, where, owing to indisposition, he did himself no justice. The memory of this was speedily wiped out by a series of triumphs at Leghorn, Turin, and Milan. About this time he lost his mother, an affliction which so plunged him in melancholy that he thought of retiring to a cloister. It is fortunate for the public that his calling interposed a delay between this design and its execution, so that it was never carried into effect. At Milan he met and married the lovely singer, Marietta Gioja, for whom, as well as for him, Mercadante wrote the opera of 'Il Posto abbandonato.'

Proceeding to Trieste, he passed through Venice, where an unexpected toll was demanded of him. Special performances were being given in honour of the Emperors of Austria and Russia, then at Venice, and Tamburini was not allowed to escape scot-free. He was arrested 'by authority,' and only after a few days, during which he achieved an immense success, was he allowed to proceed. From Trieste he went to Rome, where he remained for two years; thence, after singing in 'Mosè' at Venice, with Davide and Mme. Meric Lalande, he removed to Palermo, where he

spent another two years. He now received an engagement from Barbaja for four years, during which he sang in Naples, Milan, and Vienna, alternately. At Vienna he and Rubini were decorated with the order of 'the Saviour,' an honour previously accorded to no foreigner but Wellington. Tamburini first sang in London in 1832, and soon became an established favourite. His success was equally great at Paris, where he appeared in October of the same year as Dandini in the 'Cenerentola.' For ten years he belonged to London and Paris, a conspicuous star in the brilliant constellation formed by Grisi, Persiani, Viardot, Rubini, Lablache, and himself, and was long remembered as the baritone in the famous 'Puritani quartet.' Without any single commanding trait of genius, he seems, with the exception of Lablache, to have combined more attractive qualities than any man-singer who ever appeared. He was handsome and graceful, and a master in the art of stage-costume. His voice, a baritone of over two octaves extent, was full, round, sonorous, and perfectly equal throughout. His execution was unsurpassed and unsurpassable; of a kind which at the present day is wellnigh obsolete, and is associated in the public mind with soprano and tenor voices only. The Parisians, referring to this florid facility, called him 'Le Rubini des basse-tailles.' Although chiefly celebrated as a singer of Rossini's music, one of his principal parts was Don Giovanni. His readiness, versatility and true Italian cleverness are well illustrated by the anecdote of his exploit at Palermo, during his engagement there, when he not only sang his own part in Mercadante's 'Elisa e Claudio' but adopted the costume and the voice—a *soprano sfogato*—of Mme. Lipparini, the prima donna, who was frightened off the stage, went through the whole opera, *duets and all*, and finished by dancing a *pas de quatre* with the Taglionis and Mlle. Rinaldini. For the details of this most amusing scene the reader must be referred to the lively narrative of Mr. Sutherland Edwards' 'History of the Opera,' ii. 272.

In 1841 Tamburini returned to Italy and sang at several theatres there. Although his powers were declining, he proceeded to Russia, where he found it worth his while to remain for ten years. When, in 1852, he returned to London, his voice had all but disappeared, in spite of which he sang again after that, in Holland and at Paris. His last attempt was in London, in 1859. From that time he lived in retirement at Nice, till his death November 9th, 1876. [F.A.M.]

TAMERLANO. Opera in 3 acts; libretto by Piovene, music by Handel. Composed between July 3 and 23, 1724, and produced at the King's Theatre, London, Oct. 31, 1724. It comes between 'Giulio Cesare' and 'Rodelinda.' Piovene's tragedy has been set 14 times, the last being in 1824. [G.]

TAM-TAM. The French term for the gong in the orchestra; evidently derived from the Hindoo name for the instrument (Sanskrit *tum-tum*). [See GONG.] [G.]

TANCREDI. An opera seria in 2 acts; the libretto by Rossi, after Voltaire, music by Rossini. Produced at the Teatro Fenice, Venice, Feb. 6, 1813. In Italian at the Théâtre des Italiens, Paris; and in French (Castil Blaze) at the Odeon. In England, in Italian, at King's Theatre, May 4, 1820. Revived in 1837, Pasta; 1841, Viardot; 1848, Alboni; and July 22, 29, 1856, for Johanna Wagner. Tancredi contains the famous air 'Di tanti palpiti.' [G.]

TANGENT, in a clavichord, is a thick pin of brass wire an inch or more high, flattened out towards the top into a head one-eighth of an inch or so in diameter. It is inserted in the back end of the key, and being pushed up so as to strike the pair of strings above it, forms at once a hammer for them and a temporary bridge, from which they vibrate up to the soundboard bridge. In the clavichord no other means beyond this very primitive contrivance is used for producing the tone, which is in consequence very feeble, although sweet. The common damper to all the strings, a strip of cloth interwoven behind the row of tangents, has the tendency to increase this characteristic of feebleness, by permitting no sympathetic reinforcement.

In all clavichords made anterior to about 1725 there was a fretted (or *gebunden*) system, by which the keys that struck, what from analogy with other stringed instruments may be called open strings, were in each octave F, G, A, B♭, C, D, E♭. With the exception of A and D (which were always independent), the semitones were obtained by the tangents of the neighbouring keys, which fretted or stopped the open strings at shorter distance, and produced F♯, G♯, B♭, C♯, and E♭. Owing to this contrivance it was not possible, for example, to sound F and F♯ together by putting down the two contiguous keys; since the F♯ alone would then sound. We have reason to believe that the independence of A and D is as old as the chromatic keyboard itself, which we know for certain was in use in 1426. Old authorities may be quoted for the fretting of more tangents than one; and Adlung, who died in 1762, speaks of another fretted division which left E♭ and B independent, an evident recognition of the natural major scale which proves the late introduction of this system.

The tangent acts upon the strings in the same way that the bridging or fretting does upon the simple monochord, sharpening the measured distances which theory demands by adding tension. Pressing the key too much therefore makes the note sound intolerably out of tune. An unskilful player would naturally err in this direction, and Emanuel Bach cautions against it. In his famous essay¹ on playing he describes an effect special to the tangent, unattainable by either jack or hammer, viz. the *Beben* or *Bebung*, which was a tremolo or vibrato obtained by a tremulous pressure upon the key with the fleshy

end of the finger. It was marked with a line and dots like the modern *mezzo staccato*, but being upon a single note, was, of course, entirely different.

The article CLAVICHORD is to be corrected by the foregoing observations. [A.J.H.]

TANNHÄUSER UND DER SÄNGER-KRIEG AUF WARTBURG. An opera in 3 acts; words and music by Wagner. Produced at Dresden, Oct. 20, 1845. At Cassel, by Spohr, after much resistance from the Elector, early in 1853. At the Grand Opera, Paris (French translation by Ch. Nuitter), March 13, 1861. It had three representations only.² At Covent Garden, in Italian, May 6, 1876. The overture was first performed in England by the Philharmonic Society (Wagner conducting), May 14, 1855. Schumann saw it Aug. 7, 1847, and mentions it in his 'Theaterbüchlein' as 'an opera which cannot be spoken of briefly. It certainly has an appearance of genius. Were he but as melodious as he is clever he would be the man of the day.' [G.]

TANS'UR, WILLIAM, who is variously stated to have been born at Barnes, Surrey, in 1699, and at Dunchurch, Warwickshire, in 1700, and who was successively organist at Barnes, Ewell, Leicester, and St. Neot's, compiled and edited several collections of psalm tunes, and was author of some theoretical works. The principal of his several publications are 'The Melody of the Heart,' 1737; 'A Compleat Melody, or, The Harmony of Sion,' 1735 and 1738; 'Heaven on Earth, or, The Beauty of Holiness,' 1738; 'A New Musical Grammar,' 1746; in which he styles himself, 'William Tans'ur Musico Theorico'; 'The Royal Melody compleat, or, The New Harmony of Zion,' 1754 and 1755; 'The Royal Psalmist compleat' (no date); 'The Psalm Singer's Jewel,' 1760; 'Melodia Sacra,' 1772; and 'The Elements of Musick displayed,' 1772. He died at St. Neot's, Oct. 7, 1783. He had a son who was a chorister at Trinity College, Cambridge. [W.H.H.]

TAN-TA-RA. A word which occurs in English hunting songs, and is evidently intended to imitate the note of the horn. One of the earliest instances is in 'The hunt is up,' a song ascribed by Chappell to Henry VIII's time:—

The horses snort to be at the sport,
The dogs are running free,
The woods rejoice at the merry noise
Of hey tantara tee ree!

Another is 'News from Hide Park,' of Charles II's time:—

One evening a little before it was dark,
Sing tan-ta-ra-ra-ra tan-ti-vee, etc.

² For the extraordinary uproar which it created see Prosper Mérimée's 'Lettres à une Inconnue,' II. 151-3. One of the jokes was 'qu'on s'ennuie aux récitation, et qu'on se lasse aux airs.' Even a man of sense like Mérimée says that he 'could write something as good after hearing his cat walk up and down over the keys of the piano.' Berlioz writes about it in a style which is equally discreditable to his taste and his penetration (Correspondance inédite, Nos. ciii to cvi).

¹ 'Versuch über die wahre Art Klavier zu spielen,' 1788, another edition, 1789, and republished by Schelling, 1857.

But the word is as old as Ennius, who has

At tuba terribili sonitu taratantara dixit.

And the same form occurs in Grimald (1557) and Stanyhurst (1583). [G.]

TANTO, i.e. 'too much,' as in Beethoven's String Trio (op. 9, no. 1)—'Adagio ma non tanto,' i.e. Slow, but not too slow. Tanto has practically the same force as 'Troppo.' [G.]

TANTUM ERGO. The first words of the last two stanzas of the Hymn 'Pange lingua gloriosi Corporis Mysterium,' written by S. Thomas Aquinas, for the Festival of Corpus Christi.¹

The extreme solemnity of the circumstances under which 'Tantum ergo' is sung in the

MODUS I.

Tan-tum er-go Sa-cra-men-tum Ve-ne-re-mur cer-nu-i: Et an-ti-quum doe-u-men-tum
Gen-i-to-ri gen-i-to-que Laus et ju-bi-la-ti-o: Sa-lus, ho-nor, vir-tus quo-que

No-vo co-dat ri-tu-i: Pro-met-ti-des sup-ple-men-tum Sen-su-um de-fec-tui. A-men.
Sit et ben-e-dic-ti-o. Pro-ce-den-ti ab u-tro-que O-mni-um san-cto-um.

The antient Melody has been frequently treated in Polyphonic form, and that very finely; but no setting will bear comparison with the magnificent 'Pange lingua' in Palestrina's 'Hymni totius anni,' which concludes with a 'Tantum ergo' for 5 Voices, in which the Melody is assigned, entire, to the First Tenor, while the remaining Voices accompany it with Harmonies and Points of Imitation. Vittoria has also written a very beautiful 'Pange lingua,' which, unhappily, treats the alternate stanzas only; the first stanza of 'Tantum ergo' is therefore omitted, though the music written for the second—'Genitori, Genitoque'—may very consistently be sung to it.

The almost daily use of 'Tantum ergo' at the Office of Benediction has led to the fabrication of an immense number of modern Melodies, of more or less demerit. One of the best of these—a really good one—attributed to Michael Haydn, is extremely popular, in England, as a Hymn-Tune—8.6.8.6.8.6—under the title of 'Benediction.'² Another, said to be 'Gregorian,' and probably really of Plain-Chaunt origin, is scarcely less popular, under the title of 'S. Thomas.'³ A third, set for two Voices by V. Novello, is equally pleasing, though wanting in solemnity. These, however, are quite exceptionally good specimens. Notwithstanding the beauty of the text, and the solemnity of the occasions on which it is sung, it is doubtful whether any Hymn has ever been fitted to so much irreverent music as 'Tantum ergo.' The present Cardinal Archbishop of Westminster has sternly condemned the use of such Music in

¹ Not to be mistaken for the Hymn (better known in England), sung, under the same title, during Holy Week—'Pange lingua gloriosi Lauream certaminis.'

² Hymns Ancient and Modern, Hymn 67, new ed.

³ Ibid., Hymn 51, ibid.

Roman Catholic Church, renders its adaptation to solemn Music more than ordinarily imperative. It is used whenever the Eucharist is carried in Procession; at the conclusion of the Ceremony of Exposition; and at the Office of Benediction: and never heard but in the presence of the Eucharist. Except, of course, in Processions, it is sung kneeling.

The Plain Chaunt Melody of 'Tantum ergo' is the same as that used for 'Pange lingua.' The purest printed version is, that given in the new Ratisbon Office-Books; but, owing to the excision of certain 'grace-notes,' this version is, at present, less popular than that printed in the Mechlin Vespers.⁴ The pure version stands thus—

From the Ratisbon Vespers.

England, and his remonstrance has not been without effect; but hitherto the reform has only been a partial one.

Of orchestral settings of 'Tantum ergo,' the two finest are unquestionably those by Mozart—Nos. 142 and 197 in Köchel's Catalogue—for 4 Voices, with accompaniments for Stringed Instruments, 2 Trumpets, and Organ. Schubert has left three; one, op. 45, and one in MS., both in C, and both for quartet, orchestra, and organ; and one in Eb (MS., 1828). [W.S.R.]

TAPPERT, WILHELM, German critic and writer on music, born Feb. 19, 1830, at Ober-Thomaswaldau in Silesia; began life as a schoolmaster, but in 1856 adopted music, under Dehn for theory and Kullak for practice. Since that time he has resided in Berlin, where he is well known as a teacher and musical writer, and an able and enthusiastic partisan of Wagner. He was a teacher in Tausig's school for higher PF.-playing. His 'Wagner Lexicon' (1877) contains a collection of all the abuse that has been lavished on that composer and his friends—a useless and even mischievous labour. Much more important are his researches into ancient Tablatures, on which it is to be hoped he will soon publish something. From 1876-80 he edited the 'Allgemeine Deutsche Musikzeitung.' He is a contributor to the 'Musikalisches Wochenblatt' and has published several pamphlets, especially one on consecutive fifths, 'Das Verbot von Quintenparallelen' (1869). [G.]

TARANTELLA, a South Italian dance, which derives its name from Taranto, in the old province of Apulia. The music is in 6-8 time, played at continually increasing speed, with irregular alternations of minor and major. It is

⁴ For a free reading of the impure version, see 'Hymns Ancient and Modern,' Hymn 309, no. 3, new ed.

generally danced by a man and a woman, but sometimes by two women alone, who often play castagnets and a tambourine. It was formerly sung, but this is seldom the case now. The Tarantella has obtained a fictitious interest from the idea that by means of dancing it a strange kind of insanity, attributed to the effects of the bite of the *Lycosa Tarantula*, the largest of European spiders, could alone be cured. It is certain that a disease known as Tarantism prevailed in South Italy to an extraordinary extent, during the 15th, 16th, and 17th centuries, if not later, and that this disease—which seems to have been a kind of hysteria, like the St. Vitus dance epidemic in Germany at an earlier date—was apparently only curable by means of the continued exercise of dancing the Tarantella; but that the real cause of the affection was the bite of the spider is very improbable, later experiments having shown that it is no more poisonous than the sting of a wasp. The first extant notice of Tarantism is in Niccolo Perotto's '*Cornucopia Lingum Latinæ*' (p. 20 a, ed. 1489). During the 16th century the epidemic was at its height, and bands of musicians traversed the country to play the music which was the only healing medicine. The forms which the madness took were very various: some were seized with a violent craving for water, so that they were with difficulty prevented from throwing themselves into the sea, others were strangely affected by different colours, and all exhibited the most extravagant and outrageous contortions. The different forms which the disease assumed were cured by means of different airs, to which the Tarantists—the name by which the patients were known—were made to dance until they often dropped down with exhaustion. The epidemic seems only to have raged in the summer months, and it is said that those who had been once attacked by it were always liable to a return of the disease. Most of the songs, both words and music, which were used to cure Tarantism, no longer exist, but the Jesuit Kircher, in his '*Magneæ*' (Rome, 1641), book III, cap. viii., has preserved a few specimens. He says that the Tarantellas of his day were mostly rustic extemporisations, but the airs he gives (which are printed in Mendel's *Lexicon, sub voce Tarantella*) are written in the Ecclesiastical Mode, and with one exception in common time. They bear no resemblance to the tripping melodies of the modern dance.¹ Kircher's work contains an engraving of the Tarantula in two positions, with a map of the region where it is found, and the following air, entitled '*Antidotum Tarantulæ*,' which is also to be found in Jones's '*Maltese Melodies*' (London, 1805) and in vol. ii. of Stafford Smith's '*Musica Antiqua*' (1812), where it is said to be derived from Zimmermann's '*Florilegium*.'²

¹ It has been suggested that these fragments of melodies—for they are little more—are ancient Greek tunes handed down traditionally in Taranto.

² In Macchi's '*Balli, Corrailli, etc.*' (Rome, 1809), is a Tarantella in common time in the form of a short air with 'partita,' or variations. Mattheson (*Veitkommer Kapellmeister*, 1729) says there is one in the *Quintessence des Nouveaux* for 1737.

The Tarantella has been used by many modern composers. Auber has introduced it in '*La Muette de Portici*,' Weber in his *E minor Sonata*, Thalberg wrote one for Piano, and Rossini a vocal Tarantella '*La Danza*' (said to have been composed for Lablache) the opening bars of which are here given:—

One of the finest examples is in the Finale to Mendelssohn's Italian Symphony, where it is mixed up with a Saltarello in the most effective and clever manner. Good descriptions of the dance will be found in Mme. de Staël's '*Corinne*' (Book VI. ch. 1), Mercier Dupaty's '*Lettres sur l'Italie*' (1797), and Goethe's '*Fragmente über Italien*.' It was danced on the stage with great success by Cotellini (1783-1785) at the Teatro del Fiorentini at Naples, and in our own day by the late Charles Matthews. [W.B.S.]

TARARE. Opera, in prologue and 5 acts (afterwards 3 acts); words by Beaumarchais, music by Salieri. Produced at the Grand Opéra June 8, 1787. Translated into Italian (with many changes of text and music) as '*Azur, Re d'Ormus*,' for the betrothal of the Archduke Franz with Princess Elizabeth of Wurtemberg at Vienna, Jan. 8, 1788. Produced in English as '*Tarrare, the Tartar Chief*,' at the English Opera House, London, Aug. 15, 1825. [G.]

TARTINI, GIUSEPPE, famous violin-player and composer, was born at Pirano, a town in Istria, April 12, 1692. His father, a Florentine by birth and an elected Nobile of Parenzo, intended him for the Church, and sent him to the school of the Oratorians in his native town. Later on he attended an ecclesiastical school at Capo d'Istria, and there received his first instruction in music. Being entirely averse to the Church career, he went, at eighteen, to Padua, and matriculated as a student of law. But law was not more to his taste than theology. Led by his highly impulsive temperament he even set aside his musical studies in favour of the then fashionable art of fencing. In this he soon became so great an adept as to propose seriously to adopt it as a profession at Naples or Paris. Fortunately for music Tartini's passionate character involved him in a serious difficulty and caused him to exchange the sword for the fiddlestick and the pen. He fell in love with a niece of the Archbishop of Padua, Cardinal Cornaro, and was secretly married to her. The immediate consequences of this hasty step were disastrous. His parents withdrew all further support, and the Cardinal was so incensed by what he considered an insult to his family, that Tartini had to fly from Padua. He first went to Rome, but not considering himself safe there, took refuge in a monastery at Assisi, of which a relative of his was an inmate. Here he remained for two years, and in the solitude of monastic life resumed his musical studies, and at last discovered his true vocation. The organist of the monastery, Padre Boemo, was an excellent musician, and being delighted to find so talented a scholar, spared no time and trouble in teaching him counterpoint and composition. As a violinist he appears to have been his own teacher. His progress however must have been very rapid, as we know that his performances at the services of the monastery chapel soon became a well-known attraction to the neighbourhood. The development of his musical genius was not however the only fruit of these two years: he underwent a remarkable change of character. Influenced by the peaceful religious life around him, he seems entirely to have lost his quarrelsome temper, and acquired that modesty of manner and serenity of mind with which he has been credited by all who knew him later in life. His residence at Assisi came to a sudden end by a curious accident. One day, at the service, a gust of wind blew aside the curtain behind which Tartini was playing a solo. A Paduan, who happened to be present, instantly recognised his strongly-marked features, and brought the news of his whereabouts to his native town. Meanwhile the Archbishop's pride had softened, and Tartini was allowed to rejoin his wife. He went with her to Venice, where he met Veracini, and was so much struck with the great Florentine violinist, as at once to recognise the necessity for fresh studies, in order to modify his own style and correct the errors into which he, being almost entirely self-taught, had very naturally fallen. For this purpose he went to Ancona, leaving even his wife behind, and

remained for some time in complete retirement. In 1721 he appears to have returned to Padua, and was appointed solo violinist in the chapel of San Antonio, the choir and orchestra of which enjoyed a high musical reputation. That his reputation must have been already well established is proved not only by this appointment, but more especially by the fact that in 1723 he received and accepted an invitation to perform at the great festivities given for the coronation of Charles VI at Prague. On this occasion he met with Count Kinsky, a rich and enthusiastic amateur, who kept an excellent private band, and prevailed on Tartini to accept the post of conductor. This he retained for three years and then returned to his old position at Padua. From this time he appears never again to have left his beloved Padua for any length of time, where he held an highly honoured position, with an income sufficient for his modest requirements. An invitation to visit England, under most brilliant conditions (£3000), which he received from Lord Middlesex, he is reported to have declined by stating 'that, although not rich, he had sufficient; and did not wish for more.' His salary at San Antonio's was 400 ducats, to which must be added the fees from his numerous pupils and the produce of his compositions. Burney, who visited Padua a few months after his death, gives a few interesting details. But when he writes, 'He married a wife of the Xantippe sort, and his patience upon the most trying occasions was always truly Socratic,' we need not attach too much weight to such a statement. Great artists are frequently but indifferent managers, and, in their honest endeavours to restore the balance, their wives have often most undeservedly gained unpleasant reputations. Burney continues, 'He had no other children than his scholars, of whom his care was constantly paternal. Nardini, his first and favourite pupil, came from Leghorn to see him in his sickness and attend him in his last moments with true filial affection and tenderness. During the latter part of his life he played but little, except at the church of S. Antony of Padua, to which he devoted himself so early as the year 1722, where his attendance was only required on great festivals, but so strong was his zeal for the service of his patron-saint, that he seldom let a week pass without regaling him to the utmost of his palsied nerves.' He died Feb. 16, 1770, was buried in the church of S. Catherine, a solemn requiem being held in the chapel of S. Antonio. At a later period his statue was erected in the Prato della Valle, a public walk at Padua, where it may still be seen among the statues of the most eminent men connected with that famous university.

Tartini's fame rests on threefold ground. He was one of the greatest violinists of all time, an eminent composer, and a scientific writer on musical physics. To gain an idea of his style of playing we must turn to the testimony of his contemporaries. They all agree in crediting him with those qualities which make a great player: a fine tone, unlimited command of fingerboard

and bow, enabling him to overcome the greatest difficulties with complete ease; perfect intonation in double-stops, and a most brilliant shake and double-shake, which he executed equally well with all fingers. That the composer of the 'Trillo del Diavolo,' and many other fine and noble pieces, could not have played but with the deepest feeling and most consummate taste, it is almost superfluous to say. Indeed we have his own testimony, when Campagnoli in his Violin-School reports him as having remarked upon a brilliant virtuoso: 'That is beautiful! That is difficult! but here (pointing to the heart) he has said nothing to me.' At the same time it ought to be mentioned that QUARE (see that article), who heard him at Prague, and who certainly was no mean authority, while granting his eminence as a player generally, adds: 'his manner was cold, his taste wanting in noblesse and in the true style of singing.' Whatever the reason of this strange criticism may have been, to our mind it stands condemned by the deeply emotional and pathetic character of Tartini's compositions, and the want of taste we presume to have been on the side of the critic rather than of the artist. Quare also states, that he was fond of playing in extreme positions, a statement which is difficult to understand, because in his works we very rarely find him exceeding the compass of the third position. But if it is to be understood that Tartini, in order to continue the same musical phrase on the same string, frequently used the higher positions for passages which, as far as the mere mechanical production of the sounds was concerned, he might have played in lower ones, Quare's criticism would imply that Tartini used one of the most important and effective means for good musical phrasing and cantabile playing, in doing which he was anticipating the method by which the great masters of the Paris School, and above all Spohr, succeeded in making the violin the 'singing instrument' par excellence. That Tartini should ever have condescended to astonish his audiences by the execution of mechanical tricks after the fashion of a LOCATELLI (see that article), appears, from the character of all his known compositions, morally impossible. Both as player and composer he was the true successor of Corelli, representing in both respects the next step in the development of the art. But there is an undeniable difference of character and talent between the two great masters. They are striking instances of the two main types of the Italian artist, which can be distinguished from the oldest times down to our days. The one, to which Corelli belongs, gifted with an unerring sense of artistic propriety and technical perfection, the strongest feeling for beauty of form and sound—with pathos, dignity and gracefulness their chief means of expression; the other, of which Tartini was a representative, while sharing all the great qualities of the former, adds to them that southern fire of passionate emotion which carries everything before it. In technique Tartini represents a considerable progress upon Corelli by his introduction of a great variety of bowing,

which again was only possible by the use of a longer and elastic bow. [See BOW; and TOURTE.] His work, 'Arte dell' Arco,' 'L'art de l'archet'—a set of studies in the form of 50 Variations¹ gives a good idea not only of his manner of bowing, but also of his left-hand technique. In respect of the latter the advance upon Corelli is still more striking. Double stops of all kinds, shakes, and double shakes are of frequent occurrence. We remember how CORELLI (see that article) was puzzled by the difficulty of a passage in an overture of Handel's. That could certainly not have happened with Tartini. In some of his works there are passages which, even to the highly developed technique of the present day afford no inconsiderable difficulty. We will mention only the famous shake-passage in the 'Trillo.' But at the same time he shows his appreciation of purity of style by the absence of mere show-difficulties, which he certainly was quite capable of executing.

How great he was as a teacher is proved by the large number of excellent pupils he formed. The most eminent are Nardini, Bini, Manfredi, Ferrari, Graun, and Lahoussaye. Some of these have borne most enthusiastic testimony to his rare merits and powers as a teacher, to his unremitting zeal and personal devotion to his scholars, many of whom were linked to him by bonds of intimate friendship to his life's end. Of the pre-eminently methodical and systematic style of his teaching, we gain an idea from a most interesting letter, addressed by him to his pupil Maddalena Lombardini-Sirmen, and from his pamphlet 'Trattato delle appoggiature.' [See VIOLIN-PLAYING.] The following characteristic head is reproduced from a drawing in possession of Julian Marshall, Esq.

As a composer, not less than as a player, he stands on the shoulders of the greatest of his predecessors, Corelli. He on the whole adopts the concise and logical forms of that great master and of VIVALDI (see that article); but in his hands the forms appear less rigid, and gain ampler and freer proportions; the melodies are broader, the phrases more fully developed; the harmonies and

¹ Recently republished by Ferd. David. Offenbach. André.

modulations richer and more varied. Still more striking is the progress if we look at Tartini's subject-matter, at the character of his ideas, and the spirit of their treatment. Not content with the noble but somewhat conventional pathos of the slow movements of the older school, their well-written but often rather dry fugues and fugatos and traditional dance-rhythms, he introduces in his slow movements a new element of emotion and passion; most of his quick movements are highly characteristic, and even in their 'passages' have nothing dry and formal, but are full of spirit and fire. In addition to all this we not rarely meet with an element of tender dreamy melancholy and of vivid imagination which now and then grows into the fantastic or romantic. His works bear not so much the stamp of his time as that of his own peculiar individuality; and in this respect he may well be regarded as a prototype of the most individual of all violinists, Paganini. What we know from one of his pupils about his peculiar habits in composing, throws a significant light on the more peculiarly intellectual bent of his musical talent. Before sitting down to a new composition, he would read a sonnet of Petrarch; under the notes of his violin-parts he would write the words of a favourite poem, and to single movements of his sonatas he would often give mottoes, such as 'Ombra cara' or 'Volgete il riso in pianto o mie pupille.' The most striking illustration of this peculiar side of his artistic character is given in his famous sonata 'Il Trillo del Diavolo.' According to Lalande ('Voyage d'un Français en Italie 1765 et 66,' tom. 8) Tartini himself used to relate the circumstances under which he conceived the idea of this singularly fine piece, in the following manner: 'One night I dreamt that I had made a bargain with the devil for my soul. Everything went at my command,—my novel servant anticipated every one of my wishes. Then the idea struck me to hand him my fiddle and to see what he could do with it. But how great was my astonishment when I heard him play with consummate skill a sonata of such exquisite beauty as surpassed the boldest flight of my imagination. I felt enraptured, transported, enchanted; my breath was taken away; and I awoke. Seizing my violin I tried to retain the sounds I had heard. But it was in vain. The piece I then composed, the Devil's Sonata, although the best I ever wrote, how far below the one I had heard in my dream!'

The number of his compositions is enormous. Fétis enumerates over 50 Sonatas with bass, 18 Concertos with accompaniment of stringed orchestra, and a Trio for 2 violins and bass, all which were published in various editions at Paris, London, and Amsterdam. In addition to these a large number of works exist in MS. Gerber speaks of over 200 violin concertos, Fétis of 48 unpublished sonatas and 127 concertos. He also composed a Miserere, which was performed during Holy Week in the Sistine Chapel in the year 1768; but according to Fétis this was a work of little importance and has never been performed again.

It remains to speak of Tartini's writings on the theory of music. During his stay at Ancona, probably in 1716, he discovered the fact that, in sounding double stops, a third or combination-sound was produced. He was not content to utilise this observation by making the appearance of this third note a criterion of the perfect intonation of double stops (which do not produce it at all unless taken with the most absolute correctness), but he tried to solve the scientific problem underlying the phenomenon. In the then undeveloped state of acoustics it was impossible for him to succeed. It is also highly probable that his knowledge of mathematics was insufficient for the task. At any rate he wrote and published an elaborate work on the theory of musical science generally, and on the phenomenon of a third sound in particular, under the title '*Trattato di Musica secondo la vera scienza dell' Armonia*' (Padua, 1754). His theories were attacked in a number of pamphlets, amongst them one by J. J. Rousseau. In 1767 he published a second book, '*Dei principii dell' Armonia Musicale contenuta nel diatonico genere*,' and towards the end of his life he wrote a third one on the mathematics of music, '*Delle ragioni e delle proporzioni*,' which however has never been published and appears to be lost. The absolute value of Tartini's theoretical writings is probably not great, but there remains the fact, that he was the discoverer of an interesting acoustical phenomenon which only the advanced scientific knowledge of our days has been able to explain (Helmholtz)—a fact which, coupled with his serious attempts to solve the problem, speaks much for his intellectual attainments and versatility of mind.

Finally he wrote, under the title '*Trattato delle appoggiature si ascendenti che discendenti per il violino*,' etc., a little work on the execution and employment of the various kinds of shakes, mordents, cadenzas, etc. As giving an authentic explanation and direction for the execution of these ornaments according to the usage of the classical Italian school, this work is most interesting. It appears that it has never been published in Italian, but a French translation exists, under the title '*Traité des agréments de la Musique, composé par le célèbre Giuseppe Tartini à Padoue, et traduit par le Sigr. P. Denis. A Paris chez M. de la Chevadier*.'¹ [P.D.]

TASKIN, PASCAL, celebrated instrument-maker, and head of a family of musicians, born 1723, at Theux in the province of Liège, migrated early to Paris, and was apprenticed to Etienne Blanchet, the best French clavecin-maker of the period. Succeeding eventually to the business, he improved the tone of his spinets and harpsichords, by substituting slips of leather for the crowquills then in use in the jacks (1768). [See vol. ii. p. 27 a.] In 1772 Louis XV. offered him the post of Keeper of the Musical Instruments and the Chapel Royal, vacant by the death of

¹ The writer of this article has to acknowledge his obligations for much valuable information contained in Wasielewsky's book, '*Die Violine und ihre Meister*.'

Chiquelier, but the life at Versailles would not have suited the inventor, who wished to be at liberty to continue his experiments, and he contrived to get his nephew and pupil, Pascal Joseph, appointed in his stead. Having thus succeeded in preserving his independence without forfeiting the royal favour, he was shortly after elected an acting member of the corporation of musical instrument-makers (1775). He was brought more before the public by a piano made for the Princess Victoire in the shape of our present 'grands,' the first of the kind made in France. Other inventions were for using a single string doubled round the pin in his two-stringed pianos, working the pedal by the foot instead of by the knee, and the 'Armandine' (1789) called after Mlle. Armand, a pupil of his niece, who became an excellent singer at the Opéra and the Opéra Comique. This fine instrument, now in the museum of the Paris Conservatoire, is like a grand piano without a keyboard, and with gut-strings, and is therefore a cross between the harp and the psaltery. Other specimens of his manufacture are the harpsichord with two keyboards made for Marie Antoinette and still to be seen in the Petit Trianon, the pretty instrument in the possession of the distinguished pianist Mlle. Joséphine Martin, and those in the Conservatoire, and the Musée des Arts décoratifs in Paris. Pascal Taskin died in Paris, Feb. 9, 1795. His nephew,

PASCAL JOSEPH,¹ born Nov. 20, 1750, at Theux, died in Paris, Feb. 5, 1829, Keeper of the King's Instruments and the Chapel Royal, from 1772 to the Revolution, was his best pupil and assistant. He married a daughter of Blanchet, and was thus brought into close connection with the Couperin family. Of his two sons and two daughters, all musicians, the only one calling for separate mention here is the second son,

HENRI JOSEPH, born at Versailles, Aug. 24, 1779, died in Paris, May 4, 1852, learned music as a child from his mother, and so charmed the Court by his singing and playing, that Louis XVI made him a page of the Chapel Royal. Later he studied music and composition with his aunt, Mme. Couperin, a talented organist, and early made his mark as a teacher, virtuoso, and composer. Three operas were neither performed nor engraved, but other of his compositions were published, viz. trios for PF., violin, and cello; a caprice for PF. and violin; a concerto for PF. and orchestra; solo-pieces for PF., and songs. A quantity of Masonic songs remained in MS. Like his father he had four sons; none of them became musicians, but his grandson ALEXANDRE seems to have inherited his talent. This young singer (born in Paris, March 8, 1853) is a thorough musician, has already created several important parts, and may be considered one of the best artists at the Opéra Comique (1883).

The writer of this article, having had access to family papers, has been able to correct the errors of previous biographers. [G.O.]

¹ Fétis confuses the uncle and nephew.

TASTO SOLO. *Tasto* (Fr. *touche*) means the part in an instrument which is touched to produce the note; in a keyed instrument, therefore, the key. 'Tasto solo,' the key alone, is in old music written over those portions of the bass or continuo part in which the mere notes were to be played by the accompanist, without the chords or harmonies founded on them. [G.]

TATTOO¹ (*Rappel; Zapfenstreich*), the signal in the British army by which soldiers are brought to their quarters at night. The infantry signal begins at 20 minutes before the hour appointed for the men to be in barracks, by the bugles in the barrack-yard sounding the 'First Post' or 'Setting of the Watch.' This is a long passage of 29 bars, beginning as follows—

and ending with this impressive phrase:—

This is succeeded by the 'Rolls,'² consisting of three strokes by the big drum, each stroke followed by a roll on the side-drums:—

The drums and fifes then march up and down the barrack-yard playing a succession of Quick marches at choice, till the hour is reached. Then 'God save the Queen' is played, and the Tattoo concludes by the 'Second Post' or 'Last Post,' which begins as follows—

and ends like the 'First Post.' The other branches of the service have their tattoos, which it is not necessary to quote.

¹ The word is derived by Johnson from the French *tapotes tons*; and its original form seems to have been 'tap-to' (see Count Mansfield's 'Directions of Warre,' 1694), as if it were the signal for the tap-rooms or bars of the canteen to put-to or close. Curiously enough, however, 'tap' seems to be an acknowledged term for the drum—'tap of drum.' *Tapoter* is probably allied to the German *sapfen*, the tap of a cask, and *sapfenstreich*, the German term for tattoo; this also may mean the striking or driving home of the taps of the beer-barrels. The proverbial expression 'the devil's tattoo'—meaning the noise made by a person absorbed in thought drumming with foot or fingers, seems to show that the drum and not the trumpet was the original instrument for sounding the tattoo.

² For details see Potter's 'Instructions for the Side Drum.'

Since the time of Wallenstein the Zapfenstreich in Germany has had a wider meaning, and is a sort of short spirited march played not only by drums and fifes or trumpets but by the whole band of the regiment. It is in this sense that Beethoven uses the word in a letter to Peters (1823 ?):—'There left here last Saturday three airs, six bagatelles, and a tattoo, instead of a march . . . and to-day I send the two tattoos that were still wanting . . . the latter will do for marches.' [See ZAPFENSTREICH.] [G.]

TAUBERT, KARL GOTTFRIED WILHELM, one of those sound and cultivated artists who contribute so much to the solid musical reputation of Germany. He was the son of a musician, and was born at Berlin March 23, 1811. Though not actually brought up with Mendelssohn he trod to a certain extent in the same steps, learned the piano from Ludwig Berger, and composition from Klein, and went through his course at the Berlin University 1827-30. He first appeared as a PF. player; in 1831 was made accompanist to the Court concerts, and from that time his rise was steady. In 1834 he was elected member of the Academy of Arts, in 1841 became music-director of the Royal Opera, and in 1845 Court Kapellmeister—a position which he held till his retirement from the Opera in 1869 with the title of Oberkapellmeister. Since that time he has conducted the royal orchestra at the Court concerts and soirées, in which he has distinguished himself as much by very admirable performances as by the rigid conservatism which has governed the programmes. In 1875 he was chosen member of council of the musical section of the Academy. Among his first compositions were various small instrumental pieces, and especially sets of songs. The songs attracted the notice of Mendelssohn, and not only drew from him very warm praise and anticipation of future success (see the letter to Devrient, July 15, 1831), but led to a correspondence, including Mendelssohn's long letter of Aug. 27, 1831. In these letters Mendelssohn seems to have put his finger on the want of strength and spirit which, with all his real musicianlike qualities, his refined taste and immense industry, has prevented Taubert from writing anything that will be remembered.

The list of his published works is an enormous one:—3 Psalms and a Vater unser; 7 Operas, of which the last, 'Macbeth,' was produced Nov. 16, 1857; Incidental music to 8 dramas, including 'The Tempest' (Nov. 28, 1855); 4 Cantatas; 294 Solo-songs, in 52 nos., besides Duets and Part-songs; 3 Symphonies and a Festival-overture for full orchestra; 2 Trios for PF. and strings; 3 String-quartets; 6 Sonatas for PF. and violin; 6 Sonatas for PF. solo; and a host of smaller pieces. The complete catalogue, with full details of Taubert's career, will be found in Ledebur's 'Tonkünstler-Lexicon Berlins.'

In this country Taubert is almost unknown. [G.]

TAUDOU, ANTOINE, composer of the modern French school, born at Perpignan, Aug. 24,

1846, early evinced such aptitude for music that he was sent to Paris and entered at the Conservatoire, where he carried off successively the first prizes for solfeggio, violin (1866), harmony (67), fugue (68), and finally, after two years' study of composition with Reber, the Grand Prix de Rome (69). The subject of the cantata was 'Francesca da Rimini,' and the prize score was distinguished for purity and elegance.

So far, no work of M. Taudou's has been produced on the stage, but his chamber-music and orchestral pieces have been well received. These include a trio for flute, alto, and cello; another for PF., violin, and cello; a violin-concerto played at the Société des Concerts du Conservatoire, of which M. Taudou is one of the best violinists; a string-quartet in B minor, often heard in Paris; and for orchestra a 'Marche-Ballet,' a 'Chant d'automne,' and a 'Marche-Nocturne.' He has published songs and pieces for PF., but a cantata written for the inauguration of a statue to Arago (1879) at Perpignan, is still in MS. In January 1883 he was chosen professor of harmony and accompaniment at the Conservatoire. [G.C.]

TAUSCH, JULIUS, born April 15, 1827, at Dessau, where he was a pupil of F. Schneider's. In 1844 he entered the Conservatorium of Leipzig, then in the second year of its existence, and on leaving that in 1846 settled at Düsseldorf. Here he gradually advanced; on Julius Rietz's departure in 1847 taking the direction of the artists' Liedertafel, and succeeding Schumann as conductor of the Musical Society, temporarily in 1853, and permanently in 1855. He was associated in the direction of the Lower Rhine Festivals of 1863, 1866 (with O. Goldschmidt), 1869, 1872, and 1875. In the winter of 1878 he conducted the orchestral concerts at the Glasgow Festival.

Tausch has published a Fest-overture, music to Twelfth Night, various pieces for voices and orchestra, songs, and pianoforte pieces, solo and accompanied. His last publication is op. 17. [G.]

TAUSIG, CARL (1841-1871), 'the infallible, with his fingers of steel,' as Liszt described him, was, after Liszt, the most remarkable pianist of his time. His manner of playing at its best was grand, impulsive, and impassioned, yet without a trace of eccentricity. His tone was superb, his touch exquisite, and his manipulative dexterity and powers of endurance such as to astonish even experts. He made a point of executing his *tours de force* with perfect composure, and took pains to hide every trace of physical effort. His repertoire was varied and extensive, and he was ready to play by heart any representative piece by any composer of importance from Scarlatti to Liszt. A virtuoso *par excellence*, he was also an accomplished musician, familiar with scores old and new, a master of instrumentation, a clever composer and arranger.

Carl Tausig was born at Warsaw, Nov. 4, 1841, and was first taught by his father, Aloys Tausig, a professional pianist of good repute. When Carl was fourteen, his father took him to

Liszt, who was then at Weimar, surrounded by a very remarkable set of young musicians. It will suffice to mention the names of Bülow, Bronsart, Klindworth, Pruckner, Cornelius, Joseph Joachim (concertmeister), Joachim Raff (Liszt's amanuensis) to give an idea of the state of musical things in the little Thuringian town. During the interval from 1850-1858 Weimar was the centre of the 'music of the future.' Liszt, as capellmeister in chief, with a small staff of singers and a tolerable orchestra, had brought out 'Tannhäuser' and 'Lohengrin,' Berlioz's 'Benvenuto Cellini,' Schubert's 'Alfonso and Estrella,' etc. He was composing his 'Poèmes symphoniques,' revising his pianoforte works, writing essays and articles for musical papers. Once a week or oftener the pianists met at the Alte Burg, Liszt's residence, and there was an afternoon's 'lesson' (gratis of course). Whoever had anything ready to play, played it, and Liszt found fault or encouraged as the case might be, and finally played himself. Peter Cornelius used to relate how Liszt and his friends were taken aback when young Tausig first sat down to play. 'A very devil of a fellow,' said Cornelius, 'he dashed into Chopin's Ab Polonaise, and knocked us clean over with the octaves.' From that day Tausig was Liszt's favourite. He worked hard, not only at pianoforte playing, but at counterpoint, composition, and instrumentation. In 1858 he made his *début* in public at an orchestral concert conducted by Bülow at Berlin. Opinions were divided. It was admitted on all hands that his technical feats were phenomenal, but sober-minded people talked of noise and rant, and even those of more impulsive temperament who might have been ready to sympathise with his 'Lisztian eccentricities,' thought he would play better when his period of 'storm and stress' was over. In 1859 and 60 he gave concerts in various German towns, making Dresden his head-quarters. In 1862 he went to reside at Vienna, when, in imitation of Bülow's exertions in Berlin, he gave orchestral concerts with very 'advanced' programmes. These concerts were but partially successful in an artistic sense, whilst pecuniarily they were failures. After this, for some years, little was heard of Tausig. He changed his abode frequently, but on the whole led the quiet life of a student. The 'storm and stress' was fairly at an end when he married and settled in Berlin, 1865. Opinions were now unanimous. Tausig was hailed as a master of the first order. He had attained self-possession, breadth and dignity of style, whilst his technique was as 'infallible' as ever. At Berlin he opened a school, 'Schule des höheren Clavierspiels,' and at intervals gave pianoforte recitals, of which his 'Chopin recitals' were the most successful. He played at the principal German concert-institutions, and made the round of the Russian towns. He died of typhoid fever, at Leipzig, July 17, 1871.

Shortly before his death Tausig published an Opus 1,—'Deux Etudes de Concert.' With this he meant to cancel various compositions of previous date, some of which he was sorry to see in

the market. Amongst these latter are a pianoforte arrangement of 'Das Geisterschiff, Symphonische Ballade nach einem Gedicht von Strachwitz, op. 1,' originally written for orchestra; and 'Rémiscences de Halka, Fantaisie de concert.' A pianoforte concerto, which contains a Polonaise, and which, according to Felix Draeseke was originally called a Phantasie, several 'Poèmes symphoniques,' etc., remain in manuscript. Tausig's arrangements, transcriptions, and fingered editions of standard works deserve the attention of professional pianists. They are as follows:—

Wagner: Die Meistersinger von Nürnberg, vollständiger Clavierauszug.

Bach: Toccata und Fuge für die Orgel in D moll; Choral-Vorspiele für die Orgel; Praeludium, Fuge, und Allegro; 'Das wohltemperirte Clavier,' a selection of the Preludes and Fugues, carefully phrased and fingered.

Berlioz: Gnomonenreigen und Sylphentanz aus 'La Damnation de Faust.'

Schumann: El Contrabandista.

Schubert: Andantino und Variationen, Rondo, Marche militaire, Polonaise mélancolique.

Weber: Aufforderung zum Tanz.

Scarlatti: 3 Sonaten, Pastorale, und Capriccio.

Chopin: Concerto in E minor; score and PF. part discreetly retouched.

Beethoven: 6 Transcriptions from the string quartets, op. 59, 130, 131, and 135.

'Nouvelles soirées de Vienne—Valse caprices d'après Strauss,' 1-5. (These are pendants to Liszt's 'Soirées de Vienne' after Schubert.)

'Ungarische Zigeunerweisen' (fit to rank with the best of Liszt's 'Rhapsodies hongroises').

Clementi: Gradus ad Parnassum, a selection of the most useful Studies, with additional fingering and variantes.

Tausig's 'Tägliche Studien' is a posthumous publication, consisting of ingeniously contrived finger exercises; among the many 'Indispensables du Pianiste,' it is one of the few really indispensable. [E.D.]

TAVERNER, JOHN, was organist of Boston, Lincolnshire, and afterwards (about 1530), of Cardinal (now Christ Church) College, Oxford. Being associated with John Frith and other favourers of the Reformation, he was imprisoned upon suspicion of having concealed some (so-called) heretical books, but, by the favour of Wolsey, was released. His compositions consist of masses and motets, many of which are extant in MS. in the Music School and Christ Church,¹ Oxford, the British Museum,² and elsewhere. Hawkins printed a 3-part motet by him, 'O splendor gloriæ,'³ and Burney a 5-part motet, 'Dum transisset Sabbatum.' Morley includes him among the eminent musicians of his time. He died at Boston and was buried there.

Another JOHN TAVERNER, of an ancient Norfolk family, son of Peter Taverner, and grandson of Richard Taverner, who in the reigns of Edward VI. and Elizabeth was a lay-preacher, and in the latter reign high-sheriff of Oxfordshire, was born in 1584. On Nov. 17, 1610, he was appointed professor of music at Gresham College upon the resignation of Thomas Clayton. His autograph copy of 9 lectures, part in Latin and part in English, delivered by him in the college

¹ 17 motets for 3, 4, 5, 6 voices.

² Among the most interesting are parts of a Mass for 6 voices, 'Gloria tibi, Trinitas,' copied by Dr. Burney, Add. MS. 11,587.

³ This is noted in the Christ Church Catalogue as 'partly by Tye.'

in that year, is preserved in the British Museum (Sloane MSS., 2329). He subsequently entered into Holy Orders, and in 1622 became Vicar of Tillingham, Essex, and in 1627 Rector of Stoke Newington. He died at the latter place in August, 1638. [W.H.H.]

TAYLOR, EDWARD, was born Jan. 22, 1784, in Norwich, where, as a boy, he attracted the attention of Dr. Beckwith, who gave him instruction. Arrived at manhood he embarked in business in his native city, but continued the practice of music as an amateur. He possessed a fine, rich, full-toned bass voice, and became not only solo vocalist, but an active manager of the principal amateur society in Norwich. He took a leading part in the establishment in 1824 of the existing triennial Norwich Musical Festival, training the chorus, engaging the band and singers, and making out the entire programmes. In 1825 he removed to London, and, in connection with some relatives, entered upon the profession of civil engineer, but not meeting with success he, in 1826, adopted music as a profession, and immediately attained a good position as a bass singer. In 1830 he translated and adapted Spohr's 'Last Judgment.' This led to an intimacy with Spohr, at whose request he subsequently translated and adapted the oratorios, 'Crucifixion' (or 'Calvary'), 1836, and 'Fall of Babylon,' 1842. On Oct. 24, 1837, he was appointed professor of music in Gresham College in succession to R. J. S. Stevens. He entered upon his duties in Jan. 1838, by the delivery of three lectures, which he subsequently published. His lectures were admirably adapted to the understanding of a general audience; they were historical and critical, excellently written, eloquently read, and illustrated by well chosen extracts from the works described efficiently performed. In 1839 he published, under the title of 'The Vocal School of Italy in the 16th century,' a selection of 28 madrigals by the best Italian masters adapted to English words. He conducted the Norwich Festivals of 1839 and 1842. He wrote and composed an ode for the opening of the present Gresham College, Nov. 2, 1843. In 1844 he joined James Turle in editing 'The People's Music Book.' In 1845 he contributed to 'The British and Foreign Review,' an article entitled 'The English Cathedral Service, its Glory, its Decline, and its designed Extinction,' a production evoked by some then pending legislation connected with the cathedral institutions, which attracted great attention, and was afterwards reprinted in a separate form. He was one of the originators of the Vocal Society (of which he was the secretary), and of the Musical Antiquarian Society (for which he edited Purcell's 'King Arthur'), and the founder of the Purcell Club. [See MUSICAL ANTIQUARIAN SOCIETY, PURCELL CLUB, and VOCAL SOCIETY.] Besides the before-named works he wrote and adapted with great skill English words to Mozart's 'Requiem,' Graun's 'Tod Jesu,' Schneider's 'Sündfluth,' Spohr's 'Vater Unser,' Haydn's 'Jahreszeiten,' and a very large number of compositions intro-

duced in his lectures. He was for many years music critic to 'The Spectator' newspaper. He died at Brentwood, March 12, 1863. His valuable library was dispersed by auction in the following December. [W.H.H.]

TAYLOR, FRANKLIN, a well-known pianoforte-player and teacher in London, born at Birmingham, Feb. 5, 1843, began music at a very early age; learned the pianoforte under Chas. Flavell, and the organ under T. Bedamore, organist of Lichfield Cathedral, where at the age of 11 he was able to take the service. In 1859 he went to Leipzig and studied in the Conservatorium with Sullivan, J. F. Barnett, etc., under Plaidy and Moscheles for pianoforte, and Hauptmann, Richter, and Papperitz for theory. He left in 1861 and made some stay in Paris, where he had lessons from Mme. Schumann, and was in close intercourse with Heller, Schulhoff, Mme. Viardot, etc. In 1862 he returned to England, settled permanently in London, and began teaching, and playing at the Crystal Palace (Feb. 18, 1865, etc.), the Monday Popular Concerts (Jan. 15, 66, etc.), as well as at the Liverpool Philharmonic, Birmingham Chamber Concerts, and elsewhere. At the same time he was organist successively of Twickenham Parish Church, and St. Michael's, Chester Square. In 1876 he joined the National Training School as teacher, and in 1882 the Royal College of Music as Professor of the Pianoforte. He is President of the Academy for the higher development of pianoforte-playing.

His *Primer of the Pianoforte* (Macmillan 1879), — emphatically a 'little book on a great subject,' and a most useful and practical book too—has been published in German. He has also compiled a PF. tutor (Enoch), and has edited Beethoven's Sonatas 1-12 for C. Boosey. He has translated Richter's treatises on Harmony, Counterpoint, and Canon and Fugue (Cramer & Co.); and arranged Sullivan's *Tempest* music for four hands on its production. With all his gifts as a player it is probably as a teacher that his reputation will live. His attention to his pupils is unremitting, and his power of imparting tone, touch, and execution to them, remarkable. Gifted with a fine musical organisation himself, he evokes the intelligence of his pupils, and succeeds in making them musicians as well as mere fine technical performers. [G.]

TECHNIQUE (Germ. *Technik*). A French term which has been adopted in England, and which expresses the mechanical part of playing. A player may be perfect in technique, and yet have neither soul nor intelligence. [G.]

TEDESCA, ALLA (Italian), 'in the German style.' 'Tedesca' and 'Deutsch' are both derived from an ancient term which appears in mediæval Latin as *Theotisca*. Beethoven employs it twice in his published works—in the first movement of op. 79, the Sonatina in G,—

Presto alla tedesca.

and again in the fifth movement of the Bb quartet (op. 130)—

Alla danza tedesca. Allegro assai.

In a Bagatelle, No. 3 of op. 119, he uses the term in French—'A l'allemande,' but in this case the piece has more affinity to the presto of the sonatina than to the slower movement of the dance. All three are in G. The term 'tedesca,' says Bülow, has reference to waltz rhythm, and invites changes of time.—[See TEUTSCHE.] [G.]

TE DEUM LAUDAMUS (Eng. *We praise Thee, O God*). A well-known Hymn, called the Ambrosian Hymn, from the fact that the poetry is ascribed by tradition to S. Ambrose and S. Augustine. The English¹ version, one of the most magnificent to be found even in the Book of Common Prayer, appears in the first of the English Prayer-books in the place which it now occupies. The custom of singing Te Deum on great Ecclesiastical Festivals, and occasions of special Thanksgiving, has for many centuries been universal in the Western Church; and still prevails, both in Catholic and Protestant countries.

And this circumstance, even more than the sublimity of the Poetry, has led to the connection of the Hymn with music of almost every known School.

The antient Melody—popularly known as the 'Ambrosian Te Deum'—is a very beautiful one, and undoubtedly of great antiquity; though it cannot possibly be so old as the Hymn itself, nor can it lay any claim whatever to the title by which it is popularly designated, since it is written in the Mixed Phrygian Mode—i.e. in Modes III and IV combined; an extended Scale of very much later date than that used by S. Ambrose. Numerous versions of this venerable Melody are extant, all bearing more or less clear traces of derivation from a common original which appears to be hopelessly lost. Whether or not this original was in the pure Mode III it is impossible to say with certainty; but the older versions furnish internal evidence enough to lead to a strong conviction that this was the case, though we possess none that can be referred to the age of S. Ambrose, or within two centuries of it. This will be best explained by the subjoined comparative view of the opening phrases of some of the earliest known versions.

From the Dodecachordon of Glareanus (Basiliæ, 1547).

The traditional Roman Version, from the Supplement to the Ratisbon Gradual.

Early Anglican Version, from Marbecke's 'Booke of Common Praier noted' (London, 1550).

In all these cases, the music to the verse 'Te æternum Patrem' ('All the earth doth worship Thee') is adapted, with very little change, to the succeeding verses, as far as 'Te ergo quæsumus' ('We therefore pray Thee'), which verse, in Ca-

¹ In one verse only does this grand paraphrase omit a characteristic expression in the original—that which refers to the *White Robes* of the Martyrs:

'Te Martyrum candidatus laudat exercitus.'

'The noble army of Martyrs praise Thee.'

The name of the translator is not known.

tholic countries, is sung kneeling. The only exception to this is the phrase adapted to the word 'Sanctus' ('Holy'), which, in every instance, differs from all the rest of the Melody.² As far, then, as the verse 'Te ergo quæsumus' inclusive, we find nothing to prevent us from believing that the Music is as old as the text; for it nowhere deviates from the pure Third Mode, as sung by S. Ambrose. But, at the next

² Marbecke, however, makes another marked change at 'Thou arte the King of Glorye.'

verse, 'Æterna fac' ('Make them to be numbered'), the Melody passes into the Fourth Mode,

with a marked allusion to the Fourth Gregorian Tone, of which S. Ambrose knew nothing.

This phrase, therefore, conclusively proves, either that the latter portion of the Melody is a comparatively modern addition to the original form; or, that the whole is of much later date than has been generally supposed. We are strongly in favour of the first supposition; but the question is open to discussion on both sides.

The beauty of the old Melody has led to its frequent adoption as a *Canto fermo* for Polyphonic Masses; as in the case of the fifth and sixth Masses—'In Te, Domine, speravi,' for 5 voices, and 'Te Deum laudamus,' for 6—in Palestrina's Ninth Book. But the number of Polyphonic settings is less than that of many other Hymns of far inferior interest. The reason of this must be sought for in the immense popularity of the Plain Chaunt Melody in Italy, and especially in the Roman States. Every peasant knows it by heart; and, from time immemorial, it has been sung, in the crowded Roman Churches, at every solemn Thanksgiving Service, by the people of the city, and the wild inhabitants of the Campagna, with a fervour which would have set Polyphony at defiance.¹ There are, however, some very beautiful examples; especially, one by Felice Anerio, printed by Proske, in vol. iv. of 'Musica Divina,' from a MS. in the Codex Altaemps. Othobon., based on the antient Melody, and treating the alternate verses only of the text—an arrangement which would allow the people to take a fair share in the singing. The 'Tertius Tomus Musici operis' of Jakob Händl contains another very fine example, in which all the verses are set for two Choirs, which, however, only sing alternately, like the Decani and Cantoris sides in an English Cathedral.

Our own Polyphonic Composers have treated the English paraphrase, in many instances, very finely indeed: witness the settings in Tallis's and Byrd's Services in the Dorian Mode, in Farrant's in G minor, in Orlando Gibbons's in F (Ionian Mode transposed), and many others too well known to need specification. That these fine compositions should have given place to others, pertaining to a School worthily represented by 'Jackson in F,' is matter for very deep regret. We may hope that that School is at last extinct: but, even now, the 'Te Deum' of Tallis is far less frequently heard, in most Cathedrals, than the immeasurably inferior 'Boyce in A'—one of the most popular settings in existence. The number of settings, for Cathedral and Parochial use, by modern Composers, past and present, is so great that it is difficult even to count them.²

¹ An exceedingly corrupt excerpt from the Roman version—the verse 'Te æternum Patrem'—has long been popular here, as the 'Roman Chant.' In all probability it owes its introduction to this country to the zeal of some traveller, who 'picked it up by ear.'

² A second setting in the Dorian mode, and a third in F, by Tallis, both for 5 voices, are unfortunately incomplete. [See p. 54.]

It remains to notice a third method of treatment by which the text of the 'Te Deum' has been illustrated, in modern times, with extraordinary success. The custom of singing the Hymn on occasions of national Thanksgiving naturally led to the composition of great works, with Orchestral Accompaniments, and extended movements, both for Solo Voices and Chorus. Some of these works are written on a scale sufficiently grand to place them on a level with the finest Oratorios; while others are remarkable for special effects connected with the particular occasion for which they were produced. Among these last must be classed the Compositions for many Choirs, with Organ and Orchestral Accompaniments, by Benevoli, and other Italian Masters of the 17th century, which were composed for special Festivals, and never afterwards permitted to see the light. Sarti wrote a 'Te Deum' to Russian text, by command of the Empress Catherine II, in celebration of Prince Potemkin's victory at Otchakous, in which he introduced fireworks and cannon. Notwithstanding this extreme measure, the work is a fine one; but far inferior to that composed by Graun, in 1756, by command of Frederick the Great, in commemoration of the Battle of Prague, and first performed at Charlottenburg, in 1762, at the close of the Seven Years' War. This is unquestionably the most celebrated 'Te Deum' ever composed on the Continent; and also one of the finest. Among modern Continental settings, the most remarkable is that by Berlioz, for two Choirs, with Orchestra and Organ *obligato*, of which he says that the Finale, from 'Judex crederis,' is 'without doubt his grandest production.' Of this work (op. 22) nothing is yet known in England; but it was performed at Bordeaux, Dec. 14, 1883. Cherubini, in early youth, wrote a Te Deum, the MS. of which is lost; but, strangely enough, his official duties at the French Court never led him to reset the Hymn.

But the grandest Festal settings of the 'Te Deum' have been composed in England. The earliest of these was that written by Purcell for S. Cecilia's Day, 1694; a work which must at least rank as one of the greatest triumphs of the School of the Restoration, if it be not, indeed, the very finest production of that brilliant period. As this work has already been described in our account of that School,³ it is unnecessary again to analyse it here. It is, however, remarkable, not only as the first English 'Te Deum' with Orchestral Accompaniments; but also as having stimulated other English Composers to the production of similar works. In 1695, Dr. Blow wrote a 'Te Deum,' with Accompaniments for 2 Violins, 2 Trumpets, and Bass—

³ See vol. III. pp. 294–295.

the exact Orchestra employed by Purcell; and, not long afterwards, Dr. Croft produced another work of the same kind, and for the same Instruments.

The next advance was a very important one. The first Sacred Music which Handel composed to English words was the 'Utrecht Te Deum,' the MS. of which is dated Jan. 14, 1712.¹ Up to this time, Purcell's Te Deum had been annually performed, at St. Paul's, for the benefit of the 'Sons of the Clergy.' To assert that Handel's Te Deum in any way resembles it would be absurd: but both manifest too close an affinity with the English School to admit the possibility of their reference to any other; and, both naturally fall into the same general form, which form Handel must necessarily have learned in this country, and most probably really did learn from Purcell, whose English Te Deum was then the finest in existence. The points in which the two works show their kinship, are, the massive solidity of their construction; the grave devotional spirit which pervades them, from beginning to end; and the freedom of their Subjects, in which the sombre gravity of true Ecclesiastical Melody is treated with the artless simplicity of a Volkslied. The third—the truly national characteristic, and the common property of all our best English Composers—was, in Purcell's case, the inevitable result of an intimate acquaintance with the rich vein of National Melody of which we are all so justly proud; while, in Handel's, we can only explain it as the consequence of a power of assimilation which not only enabled him to make common cause with the School of his adoption, but to make himself one with it. The points in which the two compositions most prominently differ are, the more gigantic scale of the later work, and the fuller development of its Subjects. In contrapuntal resources, the Utrecht Te Deum is even richer than that with which Handel celebrated the Battle of Dettingen, fought June 27, 1743; though the magnificent Fanfare of Trumpets and Drums which introduces the opening Chorus of the latter, surpasses anything ever written to express the Thanksgiving of a whole Nation for a glorious victory.²

The Dettingen Te Deum represents the culminating point of the festal treatment to which the Ambrosian Hymn has hitherto been subjected. A fine modern English setting is Sullivan's, for Solos, Chorus, and Orchestra, composed to celebrate the recovery of the Prince of Wales, and performed at the Crystal Palace. A more recent one is Macfarren's (1884). [W.S.R.]

TELEMANN, GEORG PHILIPP, German composer, son of a clergyman, born at Magdeburg March 14, 1681, and educated there and at Hildesheim. He received no regular musical training, but by diligently studying the scores of the great masters—he mentions in particular Lully and Campra—made himself master of the science of music. In 1700 he went to the

university of Leipzig, and while carrying on his studies in languages and science, became organist of the Neukirche, and founded a society among the students, called 'Collegium musicum.' In 1704 he became Capellmeister to a Prince Promnitz at Sorau, in 1708 Concertmeister, and then Capellmeister, at Eisenach, and, still retaining this post, became Musikdirector of the Church of St. Catherine, and of a society called 'Frauenstein' at Frankfort in 1711, and also Capellmeister to the Prince of Bayreuth. In 1721 he was appointed Cantor of the Johanneum, and Musikdirector of the principal church at Hamburg, posts which he retained till his death. He made good musical use of repeated tours to Berlin, and other places of musical repute, and his style was permanently affected by a visit of some length to Paris in 1737, when he became strongly imbued with French ideas and taste. He died June 25, 1767.

Telemann, like his contemporaries Matheson and Keiser, is a prominent representative of the Hamburg school in its prime during the first half of the 18th century. In his own day he was placed with Hasse and Graun as a composer of the first rank, but the verdict of posterity has been less favourable. With all his undoubted ability he originated nothing, but was content to follow the tracks laid down by the old contrapuntal school of organists, whose ideas and forms he adopted without change. His fertility was so marvellous that he could not even reckon up his own compositions; indeed it is doubtful whether he was ever equalled in this respect. He was a highly-skilled contrapuntist, and had, as might be expected from his great productiveness, a technical mastery of all the received forms of composition. Handel, who knew him well, said that he could write a motet in 8 parts as easily as any one else could write a letter, and Schumann quotes an expression of his to the effect that 'a proper composer should be able to set a placard to 'music': but these advantages were neutralised by his lack of any earnest ideal, and by a fatal facility naturally inclined to superficiality. He was over-addicted, even for his own day, to realism; this, though occasionally effective, especially in recitatives, concentrates the attention on mere externals, and is opposed to all depth of expression, and consequently to true art. His shortcomings are most patent in his church works, which are of greater historical importance than his operas and other music. The shallowness of the church-music of the latter half of the 18th century is distinctly traceable to Telemann's influence, although that was the very branch of composition in which he seemed to have everything in his favour—position, authority, and industry. But the mixture of conventional counterpoint with Italian opera air, which constituted his style, was not calculated to conceal the absence of any true and dignified ideal of church music. And yet he composed 12 complete sets of services

¹ Old Style; representing Jan. 14, 1713, according to our present mode of reckoning.

² For an account of the curious work which, of late years, has been so frequently quoted in connection with the Dettingen Te Deum, we must refer the reader to the article on URIO, DOM FRANÇOIS.

³ 'Gesammelte Schriften.' II. 235. Compare Rameau's 'Qu'on me donne la Gazette de Hollande.'

for the year, 44 Passions, many oratorios, innumerable cantatas and psalms, 32 services for the installation of Hamburg clergy, 33 pieces called 'Capitänsmusik,' 20 ordination and anniversary services, 12 funeral, and 14 wedding services—all consisting of many numbers each. Of his grand oratorios several were widely known and performed, even after his death, especially a 'Passion' to the well-known words of Brockes of Hamburg (1716); another, in 3 parts and 9 scenes, to words selected by himself from the Gospels (his best-known work); 'Der Tag des Gerichts'; 'Die Tageszeiten' (from Zechariah); and the 'Tod Jesu' and the 'Auferstehung Christi,' both by Ramler (1730 and 1757). To these must be added 40 operas for Hamburg, Eisenach, and Bayreuth, and an enormous mass of vocal and instrumental music of all kinds, including no less than 600 overtures in the French style. Many of his compositions were published, and he even found time to engrave several himself; Gerber ('Lexicon,' ii. 631) gives a catalogue. He also wrote an autobiography, printed in Matheson's 'Ehrenpforte' and 'Generalbassschule' (1731, p. 168). A fine chorus for 2 choirs is given in Rochlitz's Sammlung, and Hullah's Vocal Scores. Others will be found in Winterfeld, and in a collection—'Beitrag zur Kirchenmusik'—published by Breitkopf. Organ fugues have been printed in Körner's 'Orgel Virtuos.' Very valuable examinations of his Church-Cantatas, and comparisons between them and those of Bach, will be found in Spitta's 'Bach' (Transl. i. 490 etc.) [A.M.]

TELLEFSEN, THOMAS DYKE AGLAND, a Norwegian musician, born at Dronthjem Nov. 26, 1823, and probably named after the well-known M.P. for North Devon, who was much in the habit of travelling in Norway—was a pupil of Chopin, and first came to England with his master in 1848. He was in the habit of returning to this country, had many pupils, and used to give concerts, at one of which he was assisted by Madame Lind-Goldschmidt. He edited a collection of Chopin's PF. works (Paris, Richault), and was interesting chiefly from his intimate connexion with that remarkable composer and player, though it can hardly be said that his playing was a good representation of Chopin's. He died at Paris in Oct. 1874. [G.]

TELL-TALE. A simple mechanical contrivance for giving information to an organ-blower (and sometimes also to an organist) as to the amount of wind contained in the bellows. A piece of string is fixed by one end to the top board of the bellows and carried over a pulley; a small metal weight is attached to the other end of the string. As the bellows rise the weight descends, as they sink the weight ascends; and the words 'Full' and 'Empty' mark the limits of the journey down and up. [J.S.]

TEMPERAMENT (Fr. *Tempérament*; Ger. *Temperatur*; comp. Ital. *temperare*, to tune) is the name given to various methods of TUNING, in which certain of the consonant intervals,

chiefly the Fifth and Major Third, are intentionally made more or less false or imperfect; that is to say, either sharper or flatter than exact consonance would require. If, on the contrary, all the consonant intervals are made perfectly smooth and pure, so as to give no BEATS (see Appendix), the tuning is then called Just Intonation.

When a piece of music containing much change of key is executed in just intonation, we find that the number of notes employed in each Octave is considerable, and that the difference of pitch between them is, in many cases, comparatively minute. Yet, however great the number of notes may be, and however small the intervals which separate them, all these notes can be correctly produced by the voice; as they may be derived from a few elementary intervals, namely the Octave, Fifth, Major Third, and Harmonic Seventh.¹ Instruments like the violin and the trombone are also suitable for the employment of just intonation; because, in these cases, the player can modify the pitch of each note at pleasure, being guided by his sense of key-relation. But it is otherwise with instruments whose tones are fixed, such as the pianoforte, organ, and harmonium. Here the precise pitch of each note does not depend on the player, but is settled for him beforehand by the tuner. Hence, in these instruments, the number of notes per Octave is limited, and cannot furnish all the varieties of pitch required in just intonation. A few scales may, indeed, be tuned perfectly; but if so, certain notes which belong to other scales will be missing. Compromise then becomes a mechanical necessity; and it is found that by putting most of the consonant intervals, except the Octave, slightly out of tune, the number of notes required in modulation may be considerably reduced, without too much offence to the ear. This mode of tuning is called TEMPERAMENT, and is now usually applied to all instruments with fixed tones. And although voices, violins, and trombones naturally have no need of temperament, they must all conform to the intonation of any tempered instrument which is played in concert with them.

We shall omit from the present article all reference to the arithmetical treatment of temperament, and simply deal with its physical and audible effects. We shall describe the means by which any student may obtain for himself a practical knowledge of the subject, and point out some of the conclusions to which such knowledge will probably lead him.² The first and most important thing is to learn by experience the effect of temperament on the quality of musical chords. To carry out this study properly it is ne-

¹ Some theorists exclude the Harmonic Seventh from the list of elementary intervals, but it is often heard in unaccompanied vocal harmony. See below, p. 77 a.

² Those who wish to study the subject more in detail may consult:—(1) Bosanquet, 'Elementary Treatise on Musical Intervals and Temperament' (Macmillan); (2) Helmholtz, 'Sensations of Tone,' chapters xiv. to xvii.; and Ellis's Appendix xix. sections A to G, tables 1. to vi.; (3) Perronet Thompson, 'On the Principles and Practice of Just Intonation'; (4) Woolhouse, 'Essay on Musical Intervals.'

cessary to have an instrument which is capable of producing all the combinations of notes used in harmony, of sustaining the sound as long as may be desired, and of distinguishing clearly between just and tempered intonation. These conditions are not fulfilled by the pianoforte; for, owing to the soft quality of its tones, and the quickness with which they die away, it does not make the effects of temperament acutely felt. The organ is more useful for the purpose, since its full and sustained tones, especially in the reed stops, enable the ear to perceive differences of tuning with greater facility. The harmonium is superior even to the organ for illustrating errors of intonation, being less troublesome to tune and less liable to alter in pitch from variation of temperature or lapse of time.

By playing a few chords on an ordinary harmonium and listening carefully to the effect, the student will perceive that in the usual mode of tuning, called Equal Temperament, only one consonant interval has a smooth and continuous sound, namely the Octave. All the others are interrupted by *beats*, that is to say, by regularly recurring throbs or pulsations, which mark the deviation from exact consonance. For example, the Fifth and Fourth, as at (x), are each made to give about *one* beat per second. This error is so slight as to be hardly worth notice, but in the Thirds and Sixths the case is very different. The Major Third, as at (y), gives nearly *twelve* beats per second: these are rather strong and distinct, and become still harsher if the interval is extended to a Tenth or a Seventeenth. The Major Sixth, as at (z), gives about *ten* beats per second, which are so violent, that this interval in its tempered form barely escapes being reckoned as a dissonance.

The Difference-Tones resulting from these tempered chords are also thrown very much out of tune, and, even when too far apart to beat, still produce a disagreeable effect, especially on the organ and the harmonium. [RESULTANT TONES.] The degree of harshness arising from this source varies with the distribution of the notes; the worst results being produced by chords of the following types—

By playing these examples, the student will obtain some idea of the alteration which chords undergo in equal temperament. To understand it thoroughly, he should try the following simple experiment. 'Take an ordinary harmonium and tune two chords perfect on it. One is scarcely enough for comparison. To tune the triad of C major, first raise the G a very little, by scraping the end of the reed, till the Fifth, C—G, is dead in tune. Then flatten the Third E, by scraping

the shank, till the triad C—E—G is dead in tune. Then flatten F till F—C is perfect, and A till F—A—C is perfect. The notes used are easily restored by tuning to their Octaves. The pure chords obtained by the above process offer a remarkable contrast to any other chords on the instrument.'¹ It is only by making oneself practically familiar with these facts, that the nature of temperament can be clearly understood, and its effects in the orchestra or in accompanied singing, properly appreciated.

Against its defects, equal temperament has one great advantage which specially adapts it to instruments with fixed tones, namely its extreme simplicity from a mechanical point of view. It is the only system of tuning which is complete with *twelve* notes to the Octave. This result is obtained in the following manner. If we start from any note on the keyboard (say Gb), and proceed along a series of twelve (tempered) Fifths upwards and seven Octaves downwards, thus—

we come to a note (F#) identical with our original one (Gb). But this identity is only arrived at by each Fifth being tuned somewhat too flat for exact consonance. If, on the contrary, the Fifths were tuned perfect, the last note of the series (F#) would be sharper than the first note (Gb) by a small interval called the 'Comma of Pythagoras,' which is about one-quarter of a Semitone. Hence in equal temperament, each Fifth ought to be made flat by one-twelfth of this Comma; but it is extremely difficult to accomplish this practically, and the error is always found to be greater in some Fifths than in others. If the theoretic conditions which the name 'equal temperament' implies, could be realised in the tuning of instruments, the Octave would be *equally* divided into twelve Semitones, six Tones, or three Major Thirds. Perfect accuracy, indeed, is impossible even with the best-trained ears, but the following rule, given by Mr. Ellis, is much less variable in its results than the ordinary process of guesswork. It is this:—'make all the Fifths which lie entirely within the Octave middle *c'* to treble *c''* beat *once* per second; and make those which have their upper notes above treble *c''* beat *three* times in *two* seconds. Keeping the Fifth treble *f'* and treble *c''* to the last, it should beat *once* in between *one* and *two* seconds.'² In ordinary practice, however, much rougher approximations are found sufficient.

The present system of tuning, by equal temperament, was introduced into England at a comparatively recent date. In 1854 organs

¹ Bosanquet, 'Temperament,' p. 6.

² Ibid. p. 5.

built and tuned by this method were sent out for the first time by Messrs. Gray & Davison, Walker, and Willis. 1854 is therefore the date of its definite adoption as the trade usage in England. There was no equally tempered organ of English make in the Great Exhibition of 1851; and before that time the present system appears to have been only used in a few isolated cases, as in the organ of S. Nicholas, Newcastle-upon-Tyne, which was retuned in 1842. For the pianoforte equal temperament came into use somewhat earlier than for the organ. It was introduced into the works of Messrs. Broadwood about 1846. In France the change had already taken place, for M. Aristide Cavaillé-Coll states that since 1835 he has consistently laboured to carry out the equal principle in the tuning of his organs.¹ What little is known of the history of temperament in Germany, seems to show that the new tuning was employed there at a still earlier date, but there are reasons for believing that equally tuned organs had not become general even as late as the time of Mozart (died 1791). Emanuel Bach seems to have been the first musician who advocated in a prominent manner the adoption of equal temperament, whence we may infer that it was unusual in his day.² His father is also said to have employed this system on his own clavichord and harpsichord: but even his authority was not sufficient to recommend it to his contemporary Silbermann, the famous organ-builder (1683-1753). An earlier builder, Schnitger, is said to have used something approaching it in the organ built by him about 1688-93, in the S. Jacobi Church at Hamburg. Before that time the system appears to have had hardly more than a theoretic existence in Europe.³

The mode of tuning which prevailed before the introduction of equal temperament, is called the Meantone System.⁴ It has hardly yet died out in England, for it may still be heard on a few organs in country churches. According to Don B. Yñiguez, organist of Seville Cathedral, the meantone system is generally maintained on Spanish organs, even at the present day.⁵ Till about a century ago, this tuning, or a closely allied variety, was almost universally employed, both in England and on the Continent. It was invented by the Spanish musician Salinas, who was born at Burgos in 1513, lived for many years in Italy, and died at Salamanca in 1590.⁶ On account of its historical interest, as well as its intrinsic merits, the meantone system requires a short explanation. It will be convenient to take equal temperament as the standard of comparison, and to measure the meantone intervals by the number of equal Semitones they contain.

¹ Ellis, in 'Nature' for Aug. 8, 1878, p. 383.

⁴ Otherwise Mesotonic; so called because in this tuning the Tone is a mean between the Major and the Minor Tones of Just Intonation; or half a Major Third. See p. 79b.

⁵ The invention of this temperament has also been attributed to Zarlinio and to Guido d'Arezzo.

The relations of the two systems may therefore be described as follows.

If we start from say D on the keyboard, and proceed along a series of four equal temperament Fifths upwards and two Octaves downwards, thus—

we arrive at a note (F#) which we employ as the Major Third of our original note (D). This tempered interval (D—F#) is too sharp for exact consonance by nearly one-seventh of a Semitone; but if we make these Fifths flatter than they would be in equal temperament, then the interval D—F# will approach the perfect Major Third. We may thus obtain a number of systems of tuning according to the precise amount of flattening we choose to assign to the Fifth. Of this class the most important is the Meantone System, which is tuned according to the following rule. First, make the Major Third (say D—F#) perfect; then make all the intermediate Fifths (D—A—E—B—F#) equally flat by trial. After a little practice this can be done by mere estimation of the ear; but if very accurate results are desired, the following method may be used. A set of tuning forks should be made (say at French pitch) giving $c' = 260.2$, $d' = 389.1$, $e' = 290.9$, $a' = 435$ vibrations per second. The notes c' , d' , e' , a' , of the instrument should be tuned in unison with the forks, and all other notes can be obtained by perfect Major Thirds and perfect Octaves above or below these.

There is one difficulty connected with the use of the meantone system, namely that it requires more than twelve notes to the Octave, in order to enable the player to modulate into any given key. This arises from the nature of the system; for as twelve meantone Fifths fall short of seven Octaves, the same sound cannot serve both for Gb and for F#. Hence if we tune the following series of meantone Fifths

E♭—B♭—F—C—G—D—A—E—B—F#—C#—G#

on the piano, or on any other instrument with twelve notes to the Octave, we shall have only six Major scales (B♭, F, C, G, D, A), and three Minor scales (G, D, A). When the remoter keys are required, the player has to strike G# instead of A♭, or E♭ instead of D#, producing an intolerable effect. For in the meantone system the interval G#—E♭ is sharper than the perfect Fifth by nearly one-third of a Semitone, and the four intervals B—E♭, F#—B♭, C#—F, G#—C, are each sharper than the perfect Major Third by more than three-fifths of a Semitone. The extreme roughness of these chords caused them to be compared to the howling of wolves. [WOLF.]

To get rid of the 'wolves' many plans were tried. For instance, the G# was sometimes raised till it stood half-way between G and A; but the result was unsatisfactory, for the error thus avoided in one place had to be distributed else-

where. This was called the method of Unequal Temperament, in which the notes played by the white keys were left in the meantone system, while the error was accumulated on those played by the black keys. The more usual scales were thus kept tolerably in tune, while the remote ones were all more or less false. Such a makeshift as this could not be expected to succeed, and the only purpose it served was to prepare the way for the adoption of equal temperament.

The meantone system is sometimes described as an 'unequal temperament,' but wrongly, since in it the so-called 'good keys' are all equally good; the 'bad keys' are simply those for which the necessary notes do not exist when the system is limited to twelve notes per Octave. The defect therefore lies not in the system itself, but in its application, and the only legitimate remedy is to increase the number of notes, and so provide a more extended series of Fifths. This was well understood from the first, for we find that as early as the 16th century many organs were constructed with extra notes.¹ Salinas tells us that he had himself played on one in the Dominican Monastery of Santa Maria Novella at Florence. Similar improvements were attempted in England. In the deed of sale of the organ built by Father Smith in 1682-3 for the Temple Church, London, special mention is made of the additional notes, which were played in the following manner:—two of the black keys were divided crosswise; the front halves, which were of the usual height, playing G♯ and E♭; the back ones, which rose above them, A♭ and D♯. About 1865, this organ was tuned for the first time in equal temperament, but the extra keys were not removed till 1878. The same method was followed in designing another organ of Father Smith's, which was built for Durham Cathedral in 1684-5, although the additional notes do not appear to have been actually supplied till 1691.² A different but equally ingenious plan of controlling the extra notes was used in the organ of the Foundling Hospital, London.³ Here the keyboard was of the ordinary form, without any extra keys; but by means of a special mechanism four additional notes, D♭, A♭, D♯, A♯, could be substituted at pleasure for C♯, G♯, E♭, B♭ of the usual series. Close to the draw-stops on either side there was a handle or lever working in a horizontal cutting, and having three places of rest. When both handles were in the mid position, the series of notes was the same as on an ordinary instrument, namely

E♭-B♭-F-C-G-D-A-E-B-F♯-C♯-G♯;

but when the handles on both sides were moved in the outward direction, the E♭ and B♭ pipes were shut off, and the D♯ and A♯ were brought into operation. The use of this mechanism was

¹ The extra notes were sometimes called 'Quartertunes,' not a very suitable name, since a Quartertone is not a sound, but an interval, and the Semitone is not divided equally in the meantone system.

² See vol. II. p. 593, note.

³ The history of this instrument has been carefully investigated by Mr. Alexander J. Ellis, F.R.S. The facts given in the text were derived by him from a MS. note-book made by Mr. Leffler (died 1819), organist of St. Katherine's (then by the Tower), and father of the singer WILLIAM LEFFLER. [See vol. II. p. 112.]

afterwards misunderstood; the levers were nailed up for many years, and at last removed in 1848; but the tuning remained unaltered till 1855, when the organ itself was removed and a new one built in its place. The history of the old organ just described is of special interest, as bearing on Handel's position with reference to the question of temperament. Unfortunately all that we can now ascertain on the subject amounts to this:—that Handel presented an organ to the Hospital; that he performed on it at the opening ceremony on May 1, 1750;⁴ and that it was still in existence in 1785.⁵ We first hear of the extra notes in 1799,⁶ but there is nothing to show that they did not belong to the original instrument given by Handel half a century before. Assuming this to have been the case, it would tend to show that the great composer was not in favour of abolishing the meantone system, but of remedying the defective form in which it was then employed. His example, and that of Father Smith, found few imitators, and those who did attempt to solve the problem seem often to have misunderstood its nature.⁷ The difficulty however could not be shirked; for the development of modern music brought the remote keys more and more into common use; and as instruments continued to be made with only twelve notes per Octave, the only possible way to get rid of the 'wolves' was to adopt equal temperament.

The long contest between the different systems of tuning having practically come to an end, we are in a position to estimate what we have gained or lost by the change. The chief advantage of equal temperament is that it provides keyed instruments with unlimited facility of modulation, and places them, in this respect, more on a level with the voice, violin and trombone. It has thus assisted in the formation of a style of composition and execution suited to the pianoforte. It is the only system of intonation which, in concerted music, can be produced with the same degree of accuracy on every kind of instrument. Its deviations from exact consonance, though considerable, can be concealed by means of unsustained harmony, rapid movement, and soft quality of tone, so that many ears never perceive them. By constantly listening to the equally tempered scale, the ear may be brought not only to tolerate its intervals, but to prefer them to those of any other system, at least as far as melody is concerned. It has proved capable of being applied even to music of a high order, and its adoption

⁴ Brownlow, 'History and Objects of the Foundling Hospital,' p. 78.

⁵ Burney, 'Sketch of the life of Handel,' p. 28, prefixed to 'Account of the Commemoration.'

⁶ See remarks by an anonymous writer in 'The European Magazine,' for Feb. 1799, who, however, states (1) that the organ with extra notes was not given by Handel, and (2) that it was built under the direction of Dr. Robert Smith, Master of Trinity College, Cambridge. The contradiction between this writer and Burney might be removed by supposing that a new instrument was built between 1785 and 1799; but of this we have no record. If the extra notes were designed by Dr. Smith, it must have been before 1768, as he died in that year, aged 79. In 1768 he had published a 'Postscript' to his treatise on 'Harmonics,' recommending an arrangement of stops by which a meantone series of nineteen notes to the Octave (D♭ to F♯♯) could be played with the ordinary keyboard. He had this plan carried out in a harpsichord constructed by Kirkman.

⁷ See account of Renatus Harris's invention, Hopkins, 'The Organ,' in Rimbault's 'History of the Organ,' pp. 121, 122.

may be considered an artistic success. From a commercial point of view, the change has been highly advantageous. It has enabled the maker of the pianoforte or the organ to obviate a serious imperfection without disturbing the traditional structure of the instrument; while, on the other hand, alterations both in the internal mechanism and in the form of keyboard would have been necessary if musicians had insisted that the 'wolves' should be got rid of without abolishing the old tuning. Trade usage will, therefore, be strongly on the side of equal temperament for a long time to come, and any attempt to recover the meantone system can only be made on a small scale, and for special purposes. Still, as many writers have pointed out, such a limited restoration would be useful. It would enable us to hear the music of the earlier composers as they heard it themselves. The ecclesiastical compositions of Bach, and all the works of Handel and his predecessors as far back as the 16th century, were written for the meantone system. By performing them in equal temperament we fail to realise the original intention. This would not be matter for regret if the old music were improved by our alteration; but such is certainly not the case. The tuning in which the old composers worked is far more harmonious than that which has replaced it. This much is generally admitted even by those who do not favour any attempt to restore the meantone system. They sometimes appeal to the authority of Sebastian Bach, and quote his approval of equal temperament as a reason why no other tuning should be used. But in reality very little is certainly known of Bach's relations to the subject. We are told that he was accustomed to tune his own clavichord and harpsichord equally, though the organ still remained in the meantone system. This statement is borne out by internal evidence. In Bach's organ works the remoter keys are scarcely ever employed, while no such restrictions are observable in his works for the clavichord. With his preference for a wide range of modulation he would naturally find the limits of the old-fashioned meantone organ irritating, and we can easily understand that he would have favoured any tuning which made all the keys available. He would doubtless have welcomed any practical method of extending the meantone system; but to provide this was a task beyond the inventive capacity of that age. His authority, then, may fairly be quoted to show that all the keys must be in tune to the same degree; but this condition can be realised by many other systems besides temperament when a sufficient number of notes is provided in each Octave. If the question were to be decided by an appeal to authority alone, we might quote the names of many musicians of last century who were acquainted with both kinds of temperament, and whose judgment was directly opposed to that of Bach. But this style of argument, always inconclusive, will appear peculiarly out of place when we consider what changes music has passed through since Bach's day. That the de-

fects of equal temperament were not so noticeable then as now, may be attributed both to the different kind of instrument and the different style of composition which have since been developed. The clavichord which is said to have been an especial favourite with Bach, was characterised by a much softer quality of tone, and feebler intensity, than the modern pianoforte.¹ Again, composers of a century and a half ago relied for effect chiefly on vigorous counterpoint or skilful imitation between the various melodic parts, and not on the thick chords and sustained harmonies which have become so marked a feature in modern music. Owing to these changed conditions the evils of temperament are greatly intensified nowadays, and the necessity for some remedy has become imperative. There is but one direction in which an efficient remedy can be found, namely in the use of some more harmonious form of intonation than that which at present prevails. It is only by the help of an instrument on which the improved systems of tuning can be employed in an adequate manner, that the student will be able to estimate their value. Such an instrument we will now proceed to describe.

If we wish to employ any other system of tuning than equal temperament, we must increase the number of notes per Octave, since the ordinary twelve notes, unless tuned equally, are useless for anything beyond illustration or experiment. The methods used by Father Smith and by Handel cannot be followed nowadays. The ordinary keyboard is already so unsymmetrical, that the insertion of a few additional black or white keys would make it almost unplayable; and the changing of levers would be a troublesome interruption of the performance. The only way to bring the improved systems of temperament within the range of practical music, is to remodel and simplify the keyboard. This has been done in different ways by several inventors of late years. At a meeting of the Musical Association of London on May 1, 1875, an organ on which one of the stops was tuned according to the meantone system was exhibited by Mr. R. H. M. Bosanquet, of St. John's College, Oxford. The keyboard of this instrument—which is now in the South Kensington Museum—is arranged symmetrically, so that notes occupying the same relative position always make the same musical interval. There are twelve finger keys in the Octave, of which seven as usual are white and five black. The distance across from any key to its Octave, centre to centre, is six inches; each key is three-eighths of an inch broad, and is separated on either side from the next key by the space of one-eighth of an inch. As the Octave is the only interval in which all systems of intonation agree, keys an Octave apart are on the same level with each other. The rest of the keys are placed at various points higher or lower to correspond with the deviations of the pitch of their notes from equal temperament. Thus the G key is placed a quarter of an inch

¹ Bosanquet, 'Temperament,' pp. 28, 29.

farther back, and one-twelfth of an inch higher than the C. The D key recedes and rises to the same extent relatively to the G, and so with the rest. After twelve Fifths we come to the B♯ key, and find it three inches behind and one inch above the C from which we started. This oblique arrangement enables us to greatly increase the number of notes per Octave without any inconvenience to the player. At the same time the fingering is greatly simplified, for any given chord or scale always has the same form under the hand, at whatever actual pitch it may be played. Nor is it necessary to decide beforehand on the exact key-relationship of the passage, as it will be played in the same manner, whatever view may be taken of its analysis. The advantage of having thus to learn only one style of fingering for the Major scale, instead of twelve different styles, as on the ordinary keyboard, is self-evident. Chromatic notes are played according to the following rule:—put the finger up for a sharp and down for a flat. This results from the principle on which the keyboard is arranged, the higher keys corresponding to notes which are reached by an upward series of Fifths, and the lower keys to notes reached by a downward series. The following diagram shows the positions of the notes on the keyboard when applied to the meantone system:—

As all proposed improvements, either in music or anything else, are sure to meet with opposition, we will here consider some of the objections which may be made to the use of an instrument such as we have just described. It is natural that the new form of keyboard should be received with some hesitation, and that its style of fingering should be thought difficult; but in fact the old keyboard is far from being a model of simplicity, and many attempts have been made to reform it, independently of any aim at improving the tuning. [See KEY, vol. ii. pp. 54,

55.] On the new keyboard the fingering is of the simplest possible character, and permits the attainment of any required rate of speed. All desirable combinations lie within easy grasp; related notes being nearly on the same level. To prove that ordinary music can be easily adapted to the meantone organ, Mr. Bosanquet performed on it three of Bach's preludes at the meeting of the Musical Association already referred to. There would be no difficulty in constructing this form of keyboard with several manuals, nor in applying the same symmetrical arrangement to a pedal.

The advantage gained by employing an improved system of tuning depends so much on the quality of tone of the instrument, that it is very doubtful whether it would be worth while to adopt the meantone system for the pianoforte. It is only on the modern 'concert-grand' that the defects of equal temperament are felt to any great extent, and it might therefore be well to construct these instruments with a complete meantone scale. Still, the result would hardly be so satisfactory as on the organ, whether used in solo performance or in leading the voices of a choir.

The last objection which has to be considered is that enharmonic changes are supposed by some to be impossible in any system of tuning which provides distinct sounds for G♭ and F♯. This view is incorrect, as we shall recognise if we enquire what enharmonic changes really are. For the most part they are merely *nominal*, being used to avoid the strange appearance of remote keys. Thus in the 'Pro Peccatis' of Rossini's 'Stabat Mater,' there is apparently an enharmonic modulation from the key of A♯ to that of D♭.

But in reality it is a *chromatic* modulation from A♯ to C♯, with no enharmonic element whatsoever. The passage would be played on a meantone instrument as follows:—

It would be unnecessary in general to translate passages of this kind into correct notation before performing them, as in most cases the key-relations would be tolerably clear, in whatever way they were written. Should there be any chance of error in taking the accidentals literally, a large acute or grave mark might be drawn across the staff, to indicate that the notes are to be played twelve Fifths higher or lower than they are written. In the present instance, the acute mark could be used.

Sometimes the enharmonic change is *real*, and not merely a device of notation. Take the following extract from 'The people shall hear' in the 'Israel in Egypt':—

Here Bb must be played in the second bar and A# in the third, a modulation which is rendered easy by the general construction of the passage. 'Enharmonic changes (Helmholtz remarks) are least observed when they are made immediately before or after strongly dissonant chords, or those of the Diminished Seventh. Such enharmonic changes of pitch are already sometimes clearly and intentionally made by violinists, and where they are suitable even produce a very good effect.'

The necessity of avoiding 'wolves' in the meantone system sometimes restricts the choice of notes. Thus in a passage in the 'Lachrymosa' of Mozart's Requiem:—

the discord Ab—F—Bb—Eb must be played exactly as it is written, owing to the Bb and Eb being prepared. Even if G# stood in the text, Ab would be substituted in performance, as the 'wolf' G#—Eb is inadmissible. All such difficulties can be solved in a similar way. On the other side, we have to reckon the great variety of chords and resolutions which are available in the meantone system, but have no existence in equal temperament. Many chromatic chords

¹ 'Sensations of Tone,' p. 513.

may have two or more forms, such as the following:—

each of which may be used according to the key-relation of the context, or the effect required in the melodic parts. Again, the Augmented Sixth is much flatter in the meantone system than in equal temperament, slightly flatter even than the interval called the Harmonic Seventh. When the strange impression which it causes at first has worn off, its effect is peculiarly smooth and agreeable, especially in full chords. It is also available as Dominant Seventh, and may be written with the acute mark (G—/F), to distinguish it from the ordinary Minor Seventh got by two Fifths downwards (G—C—F).

It is important to recognise the fact that the forms of chords can only be settled by actual trial on an instrument, and that the judgment of the ear, after full experience of the different modes of tuning, cannot be set aside in favour of deductions from any abstract theory. Practice must first decide what chord or progression sounds best; and this being done, it may be worth while to ask whether theory can give any reasons for the ear's decision. In many cases our curiosity will be unsatisfied, but our preference for one effect rather than another will remain unchanged. Neither can theory solve those questions which sometimes arise as to the correct mode of writing certain chords. All questions of notation can only be decided by playing the disputed passage in some system of tuning which supplies a separate sound for each symbol. The reason why Gb and F# were not written in the same chord was a purely practical one; these two signs originally meant different sounds, which formed combinations too rough for use. Our notation having been formed long before equal temperament came into use, it is not surprising that the symbols do not correspond with the sounds. But they correspond exactly with the meantone scales, and it is on this system of tuning that all our rules of notation are founded. 'It is only necessary to remember that we have here the original system, which belongs from the very beginning of modern music onward to our musical notation, to see that by employing it we have the true interpretation of our notation; we have the actual sounds that our notation conveyed to Handel, to all before Bach, and many after him, only cured of the wolf, which was the consequence of their imperfect methods.'

To carry out any system of temperament consistently in the orchestra is practically an impossible task. Tempered intervals can only be produced with certainty on a small number of the instruments, chiefly the wood-wind. The brass instruments have an intonation of their own, which differs widely from either of the temperaments we have described. Thus the French horn, whose notes are the harmonics

² Boesququet, 'Temperament,' p. 39.

arising from the subdivision of a tube, gives a Major Third much flatter than equal temperament, and a Fifth much sharper than the meantone system. [See *NODE*; and *PARTIAL TONES*.] There is necessarily a great deal of false harmony whenever the brass is prominently heard in tempered music. Again, the tuning of the string-quartet is accomplished by just Fifths (C—G—D—A—E), but as these instruments have free intonation, they can execute tempered intervals when supported by the pianoforte or organ. In the absence of such an accompaniment, both violinists and singers seem unable to produce equally tempered scales or chords. This is precisely what might have been expected on theoretic grounds, as the consonant relations of the different notes being partially lost through temperament, the altered intervals would naturally be difficult to seize and render. Fortunately, we have positive facts to prove the truth of this deduction. The subject has been recently investigated by two French savans, MM. Cornu and Mercadier.¹ Their experiments were made with three professional players, M. Léonard the Belgian violinist, M. Seligmann, violoncellist, and M. Ferrand, violinist of the Opéra Comique, besides amateur players and singers. The results showed that a wide distinction must be drawn between the intervals employed in unaccompanied melody, and those employed in harmony. In solo performances, continual variety of intonation was observed; the same pitch was seldom repeated, and even the Octave and the Fifth were sometimes sharpened or flattened. So far as any regularity could be traced, the intervals aimed at appeared to be those known as Pythagorean, of which the only consonant ones are the Octave, Fifth, and Fourth. The Pythagorean Major Third is obtained by four just Fifths up, and is consequently so sharp as to amount to a dissonance. In melody, a scale tuned in this manner is found to be not unpleasant, but it is impossible in harmony. This fact also was verified by Cornu and Mercadier, who report that, in two-part harmony, the players with whom they experimented invariably produced the intervals of just intonation. The Thirds and Sixths gave no beats, and the Minor Seventh on the Dominant was always taken in its smoothest form, namely the Harmonic Seventh. 'I have myself observed,' says Helmholtz, 'that singers accustomed to a pianoforte accompaniment, when they sang a simple melody to my justly intoned harmonium, sang natural Thirds and Sixths, not tempered, nor yet Pythagorean. I accompanied the commencement of the melody, and then paused while the singer gave the Third or Sixth of the key. After he had given it, I touched on the instrument the natural, or the Pythagorean, or the tempered interval. The first was always in unison with the singer, the others gave shrill beats.'²

Since, then, players on bowed instruments as well as singers have a strong natural tendency towards just intervals in harmony, it is not clear

why their instruction should be based on equal temperament, as has been the practice in recent times. This method is criticised by Helmholtz in the following words:—'The modern school of violin-playing, since the time of Spohr, aims especially at producing equally tempered intonation. . . . The sole exception which they allow is for double-stop passages, in which the notes have to be somewhat differently stopped from what they are when played alone. But this exception is decisive. In double-stop passages the individual player feels himself responsible for the harmoniousness of the interval, and it lies completely within his power to make it good or bad. . . . But it is clear that if individual players feel themselves obliged to distinguish the different values of the notes in the different consonances, there is no reason why the bad Thirds of the Pythagorean series of Fifths should be retained in quartet-playing. Chords of several parts, executed by a quartet, often sound very ill, even when each one of the performers is an excellent solo player; and, on the other hand, when quartets are played by finely cultivated artists, it is impossible to detect any false consonances. To my mind the only assignable reason for these results, is that practised violinists with a delicate sense of harmony, know how to stop the tones they want to hear, and hence do not submit to the rules of an imperfect school.'

Helmholtz found, by experiments with Herr Joachim, that this distinguished violinist in playing the unaccompanied scale, took the just and not the tempered intervals. He further observes that, 'if the best players, who are thoroughly acquainted with what they are playing, are able to overcome the defects of their school and of the tempered system, it would certainly wonderfully smooth the path of performers of the second order, in their attempts to attain a perfect ensemble, if they had been accustomed from the first to play scales by natural intervals.'

The same considerations apply to vocal music. 'In singing, the pitch can be made most easily and perfectly to follow the wishes of a fine musical ear. Hence all music began with singing, and singing will always remain the true and natural school of all music. . . . But where are our singers to learn just intonation, and make their ears sensitive for perfect chords? They are from the first taught to sing to the equally tempered pianoforte. . . . Correct intonation in singing is so far above all others the first condition of beauty, that a song when sung in correct intonation even by a weak and unpractised voice always sounds agreeable, whereas the richest and most practised voice offends the hearer when it sings false or sharpens. . . . The instruction of our present singers by means of tempered instruments is unsatisfactory, but those who possess good musical talents are ultimately able by their own practice to strike out the right path for themselves, and overcome the error of their original instruction. . . . Sustained tones are preferable as an accompaniment, because the singer himself can immediately hear the beats between

¹ See Ellis's Appendix to the 'Sensations of Tone,' p. 787.

² 'Sensations of Tone,' p. 640.

the instrument and his voice, when he alters the pitch slightly. . . . When we require a delicate use of the muscles of any part of the human body, as, in this case, of the larynx, there must be some sure means of ascertaining whether success has been attained. Now the presence or absence of beats gives such a means of detecting success or failure when a voice is accompanied by sustained chords in just intonation. But tempered chords which produce beats of their own, are necessarily quite unsuited for such a purpose.¹

For performance in just intonation the three quartets of voices, strings, and trombones have a pre-eminent value; but as it requires great practice and skill to control the endless variations of pitch they supply, we are obliged to have some fixed and reliable standard by which they can at first be guided. We must be certain of obtaining with ease and accuracy any note we desire, and of sustaining it for any length of time. Hence we come back once more to keyed instruments, which do not present this difficulty of execution and uncertainty of intonation. The only question is how to construct such instruments with an adequate number of notes, if all the intervals are to be in perfect tune. Theoretically it is necessary that every note on the keyboard should be furnished with its Fifth, Major Third, and Harmonic Seventh, upwards and downwards. There should be Fifths to the Fifths, Thirds to the Thirds, and Sevenths to the Sevenths, almost to an unlimited extent. Practically these conditions cannot be fully carried out, and all instruments hitherto constructed in just intonation have been provided with material for the simpler modulations only. One of the best-known historical examples is General Perronet Thompson's organ, now in the collection of instruments in the South Kensington Museum. In each Octave this organ has forty sounds, which may be divided into five series, the sounds of each series proceeding by perfect Fifths, and being related to those of the next series by perfect Major Thirds. The interval of the Harmonic Seventh is not given. With a regular and consistent form of keyboard it would have been more successful than it was, but the idea of arranging the keys symmetrically had not then been developed. The first application of this idea was made by an American, Mr. H. W. Poole, of South Danvers, Massachusetts. His invention is described and illustrated in 'Silliman's Journal' for July, 1867. The principle of it is that keys standing in a similar position with regard to each other shall always produce the same musical interval, provided it occurs in the same relation of tonality. But if this relation of tonality alters, the same interval will take a different form on the keyboard. There are five series of notes, each proceeding by perfect Fifths:—(1) the keynotes; (2) the Major Thirds to the keynotes; (3) the Thirds to the Thirds; (4) the Harmonic Sevenths to the keynotes; (5) the Sevenths to the Thirds. The Major

¹ 'Sensations of Tone,' pp. 505-510.

Thirds below the keynotes, which are so often required in modern music, as for instance in the theme of Beethoven's Andante in F, are not given. So that the range of modulation, though extensive, is insufficient for general purposes.²

Owing to the limited number of notes which keyed instruments can furnish, the attempt to provide perfect intervals in all keys is regarded by Helmholtz as impracticable. He therefore proposes a system of temperament which approaches just intonation so closely as to be indistinguishable from it in ordinary performance. This system is founded on the following facts:—We saw that in equal temperament the Fifth is too flat for exact consonance, and the Major Third much too sharp. Also that the interval got by four Fifths up (D—A—E—B—F♯) is identified with the Major Third (D—F♯).³ Now if we raise the Fifths, and tune them perfectly, the interval D—F♯ becomes unbearable, being sharper than the equal temperament Third. But in a *downward* series of just Fifths the pitch becomes at each step lower than in equal temperament, and when we reach G♭, which is eight Fifths below D, we find that it is very nearly identical with the just Major Third of D, thus—

The best way of applying this fact is to tune a series of eight notes by just Fifths—say D♭, A♭, E♭, B♭, F, C, G, D; then a similar series forming just Major Thirds with these; whence it will result that the last note of the latter series (F♯) will form an almost exact Fifth with the first note of the former series (D♭).⁴

In applying the ordinary musical notation to systems of temperament of this class, a difficulty arises; for the Major Third being got by eight Fifths downward, would strictly have to be written D—G♭. As this is both inconvenient and contrary to musical usage, the Major Third may still be written D—F♯, but to distinguish this F♯ from the note got by four Fifths up, the following convention may be used. The symbols G♭ and F♯ are taken to mean exactly the same thing, namely the note which is eight Fifths below D. We assume G♭—D♭—A♭—E♭—B♭—F—C—G—D—A—E—B as a normal or standard series of Fifths. The Fifth of B is written indifferently /G♭ or /F♯, the acute mark (/) serving to show that the note we mean belongs to the upward, and not to the downward series. The Fifth of /F♯ is written /C♯, and so on till we arrive at /B, the Fifth of which is written //F♯. In like manner, proceeding along a downward series, the

² The keyboard invented by Mr. Colin Brown of Glasgow, is similar in principle to Mr. Poole's, except that it does not give the two series of Harmonic Sevenths. See Bosanquet, 'Temperament.'

³ In general when a series of Fifths is compared with a Major Third, the number of Octaves (by which we must ascend or descend in order to bring the notes into the same part of the scale) is not expressed, but can be easily supplied by the reader.

⁴ The error, which is called a 'Skhisma,' is about the fifty-first part of a Semitone. This system, therefore, differs so slightly from just intonation, that we shall henceforward treat them as practically identical.

Fifth below F \sharp (or G \flat) is written \backslash B, and so on till we arrive at \backslash F \sharp , the Fifth below which is written \backslash B. The notes B, E, A, D have their Thirds in the same series as themselves, thus D—F \sharp , \backslash D— \backslash F \sharp . Other notes have their Thirds in the series next below, thus C— \backslash E, \backslash C— \backslash E. These marks may be collected at the signature, like sharps and flats. The keys of A and E will be unmarked; the key of C will have three grave notes, \backslash A, \backslash E, \backslash B. When it is necessary to counteract the grave or acute mark and restore the normal note, a small circle (o) may be prefixed, analogous to the ordinary natural.

To apply this mode of tuning to the organ would be expensive without any great advantages in return. Ordinary organ-tone, except in the reed and mixture stops, is too smooth to distinguish sharply between consonance and dissonance, and the pipes are so liable to the influence of heat and cold that attempts to regulate the pitch minutely are seldom successful. Still less would it be worth while to tune the pianoforte justly. It is chiefly to the orchestra that we must look for the development of just intonation; but among keyboard instruments the most suitable for the purpose is the harmonium, which is specially useful as a means of studying the effects obtainable from untempered chords.

There is in the South Kensington Museum a harmonium, the tuning of which may be considered identical with the system just explained. The form of keyboard is that which has already been described in connexion with the meantone temperament; and it is equally applicable to the system of perfect Fifths. Being an experimental instrument it was constructed with eighty-four keys in each Octave, but for ordinary purposes it is found that about half that number would be sufficient. The fingering of the Major scale resembles that of A \flat Major on the ordinary keyboard, and is always the same, from whatever

note we start as Tonic. Moreover the form which any given chord takes does not depend on theories of tonality, but is everywhere symmetrical. The diagram in the preceding column shows the positions of the notes on the keyboard when applied to the system of perfect Fifths.

It is unnecessary to consider here the objections which might be made to the use of this tuning, as they would, no doubt, be similar to those we have already noticed in dealing with the meantone temperament. But it may be pointed out that the supposed difficulty of enharmonic change no more exists here than elsewhere. We may even modulate through a series of eight Fifths down, and return by a Major Third down, without altering the pitch. The following passage from a madrigal, 'O voi che sospirate,' by Luca Marenzio (died 1590) illustrates this:—

In the 4th bar G \sharp and C \sharp are written for A \flat and D \flat ; and in the 5th bar F \sharp , \backslash B and D for G \flat , \backslash C \flat , E $\flat\flat$, but the confused notation would not affect the mode of performance either with voices or the justly tuned harmonium.

The practical use of this instrument has brought to light certain difficulties in applying just intonation to ordinary music. The chief difficulty comes from the two forms of Supertonic which are always found in a perfectly tuned Major Scale. Thus, starting from C, and tuning two Fifths upwards (C—G—D) we get what might be considered the normal Supertonic (D); but by tuning a Fourth and a Major Sixth upwards (C—F— \backslash D) we arrive at a flatter note, which might be called the grave Supertonic (\backslash D).

The first form will necessarily be employed in chords which contain the Dominant (G), the second form in chords which contain the Subdominant (F) or the Supradominant ($\backslash A$). Otherwise, false Fifths or Fourths ($G-\backslash D$; $D-\backslash A$) would be heard. The result is that certain chords and progressions are unsuitable for music which is to be performed in perfect tuning. Let us take the following example and arrange it in its four possible forms:—

All of these are equally inadmissible; No. 1 being excluded by the false Thirds ($F-A$; $A-C$); No. 2 by the false Fourth ($\backslash A-D$); No. 3 by the false Fifth ($G-\backslash D$); No. 4 by the sudden fall of the pitch of the tonic. If this kind of progression is employed, all the advantages of just intonation are lost, for the choice only lies between mistuned intervals and an abrupt depression or elevation of the general pitch.

The idea of writing music specially to suit different kinds of temperament is a somewhat unfamiliar one, although, as already remarked, Bach employed a narrower range of modulation in his works for the meantone organ than in those for the equally tempered clavichord. The case has some analogy to that of the different instruments of the orchestra, each of which demands a special mode of treatment, in accordance with its capabilities. The same style of writing will evidently not suit alike the violin, the trombone, and the harp. In the same way, just intonation differs in many important features both from the equal and from the meantone temperament; and before any one of these systems can be used with good effect in music, a practical knowledge of its peculiarities is indispensable. Such knowledge can only be gained with the help of a keyed instrument, and by approaching the subject in this manner, the student will soon discover for himself what modulations are available and suitable in perfect tuning. He will see that these restrictions are in no sense an invention of the theorist, but are a necessary consequence of the natural relations of sounds.

If just intonation does not permit the use of certain progressions which belong to other systems, it surpasses them all in the immense variety of material which it places within the composer's reach. In many cases it supplies two or more notes of different pitch where the ordinary temperament has but one. These alternative forms are specially useful in discords, enabling us to produce any required degree of roughness, or to avoid disagreeable changes of pitch. For instance, the Minor Seventh may be taken either as $C-\flat B$ (ten Fifths up), or as $C-\flat B$ (two Fifths down), or as $C-\backslash B$ (fourteen Fifths down). When added to the triad

$C-\backslash E-G$, the acute Seventh, $\flat B$, is the roughest, and would be used if the Minor Third $G-\flat B$ should occur in the previous chord. The intermediate form, $B\flat$, would be used when suspended to a chord containing F. The grave Seventh, $\backslash B\flat$, is the smoothest, being an approximation to the Harmonic Seventh. Many other discords, such as the triad of the Augmented Fifth and its inversions, may also be taken in several forms. But this variety of material is not the only merit of perfect tuning. One of the chief sources of musical effect is the contrast between the roughness of discords and the smoothness of concords. In equal temperament this contrast is greatly weakened, because nearly all the intervals which pass for consonant are in reality more or less dissonant. The loss which must result from this in the performance of the simpler styles of music on our tempered instruments, will be readily understood. On the other hand, in just intonation the distinction of consonance and dissonance is heard in its full force. The different inversions and distributions of the same chord, the change from Major to Minor Modes, the various diatonic, chromatic, and enharmonic progressions and resolutions have a peculiar richness and expressiveness when heard with untempered harmonies.

There is yet another advantage to be gained by studying the different kinds of tuning. We have seen that even in those parts of the world where equal temperament has been established as the trade usage, other systems are also employed. Many countries possess a popular or natural music, which exists independently of the conventional or fashionable style, and does not borrow its system of intonation from our tempered instruments. Among Oriental nations whose culture has come down from a remote antiquity, characteristic styles of music are found, which are unintelligible to the ordinary European, only acquainted with equal temperament. Hence transcriptions of Oriental music, given in books of travel, are justly received with extreme scepticism, unless the observer appears to be well acquainted with the principles of intonation and specifies the exact pitch of every note he transcribes. As illustrations of these remarks we may cite two well-known works on the history of the art, Kiesewetter's 'Musik der Araber,' and Villoteau's 'Musique en Égypte.' Both of these authors had access to valuable sources of information respecting the technical system of an ancient and interesting school of music. Both failed to turn their opportunities to any advantage. From the confused and contradictory statements of Kiesewetter only one fact can be gleaned, namely, that in the construction of the lute, the Persians and the Arabs of the Middle Age employed the approximately perfect Major Third, which is got by eight downward Fifths. From the work of Villoteau still less can be learnt, for he does not describe the native method of tuning, and he gives no clue to the elaborate musical notation in which he attempted to record a large number of Egyptian melodies. Yet it would

have been easy to denote the oriental scales and melodies, so as to enable us to reproduce them with strict accuracy, had these authors possessed a practical knowledge of untempered intervals.

It may be useful, in concluding this article, to refer to some current misapprehensions on the subject of temperament. It is sometimes said that the improvement of intonation is a mere question of arithmetic, and that only a mathematician would object to equal tuning. To find fault with a series of sounds because they would be expressed by certain figures, is not the kind of fallacy one expects from a mathematician. In point of fact, equal temperament is itself the outcome of a mathematical discovery, and furnishes about the easiest known method of calculating intervals. Besides, the tenor of this article will show that the only defects of temperament worth considering are the injuries it causes to the quality of musical chords. Next, it is said that the differences between the three main systems of tuning are too slight to deserve attention, and that while we hear tempered intervals with the outward ear, our mind understands what are the true intervals which they represent. But if we put these theories to a practical test, they are at once seen to be unfounded. It has been proved by experiment that long and habitual use of equal temperament does react on the sense of hearing, and that musicians who have spent many years at the keyboard have a dislike to just chords and still more to just scales. The Major Sixth is specially objected to, as differing widely from equal temperament. This feeling is so entirely the result of habit and training, that those who are not much accustomed to listen to keyed instruments do not share these objections, and even equally tempered ears come at last to relish just intervals. We may infer, then, that the contrast between the various kinds of intonation is considerable, and that the merits of each would be easily appreciated by ordinary ears. And although the student may, at first, be unable to perceive the errors of equal temperament or be only vaguely conscious of them, yet by following out the methods detailed above, he will soon be able to realise them distinctly. It need not be inferred that equal temperament is unfit for musical purposes, or that it ought to be abolished. To introduce something new is hardly the same as to destroy something old. An improved system of tuning would only be employed as an occasional relief from the monotony of equal temperament, by no means as a universal substitute. The two could not, of course, be heard together; but each might be used in a different place or at a different time. Lastly, it is said that to divide the scale into smaller intervals than a Semitone is useless. Even if this were true, it would be irrelevant. The main object of improved tuning is to diminish the error of the tempered consonances: the subdivision of the Semitone is an indirect result of this, but is not proposed as an end in itself. Whether the minuter intervals would ever be useful in melody is a question which experience alone can

decide. It rests with the composer to apply the material of mean and just intonation, with which he is now provided. The possibility of obtaining perfect tuning with keyed instruments is one result of the recent great advance in musical science, the influence of which seems likely to be felt in no branch of the art more than in Temperament. [J.L.]

TEMPESTA, LA. An Italian opera in 2 acts; libretto partly founded on Shakspeare, translated from Scribe; music by Halévy. Produced at Her Majesty's Theatre, London, June 8, 1850 (Sontag, Lablache, Carlotta Grisi, etc.). Produced in Paris, Théâtre Italien, Feb. 25, 1851. Mendelssohn, at the end of 1847, had the libretto under consideration, but it came to nothing. [See vol. ii. 289 b.] [G.]

TEMPEST, THE. 'The music to Shakspeare's Tempest' was Arthur Sullivan's op. 1. It consists of twelve numbers:—No. 1, Introduction; No. 2, Act 1, Sc. 2, Melodrama and Songs, 'Come unto these yellow sands,' and 'Full fathom five'; No. 3, Act 2, Sc. 1, Andante sostenuto, Orch. and Melodrama; No. 4, Prelude to Act 3; No. 5, Act 3, Sc. 2, Melodrama, Solemn music; and No. 6, Banquet dance; No. 7, Overture to Act 4; No. 8, Act. 4, Sc. 1, Masque, with No. 9, Duet, SS. 'Honour, riches'; No. 10, Dance of Nymphs and Reapers; No. 11, Prelude to Act 5; No. 12, Act 5, Sc. 1, Andante, Song, 'Where the bee sucks,' and Epilogue. It was first performed at the Crystal Palace April 5, 1862. The music is arranged for 4 hands with voices by F. Taylor, and published by Cramers. [G.]

TEMPLETON, JOHN, tenor singer, born at Riccarton, Kilmarnock, July 30, 1802. At the age of fourteen he made his first appearance in Edinburgh, and continued to sing in public until his sixteenth year, when his voice broke. Appointed precentor in Dr. Brown's church, Edinburgh, at the age of twenty, he began to attract attention, until Scotland became too limited for his ambition, and he started for London, where he received instruction from Blewitt in thorough bass, and from Welsh, De Pinna, and Tom Cooke in singing. In vocalisation, power, compass, flexibility, richness of quality, complete command over the different registers, Templeton displayed the perfection of art; though not remarkable for fulness of tone in the lower notes, his voice was highly so in the middle and upper ones, sustaining the A and Bb in alt with much ease and power. The blending of the chest register with his splendid falsetto was so perfect as to make it difficult to detect the break. He now resolved to abandon his prospects in Scotland and take to the stage. His first theatrical appearance was made at Worthing, as Dermot in 'The Poor Soldier,' in July 1828. This brought about engagements at the Theatre Royal, Brighton, Southampton and Portsmouth, and Drury Lane. He made his first appearance in London, Oct. 13, 1831, as Mr. Belville in 'Rosina.' Two days later he appeared as Young Meadows in 'Love in a Village,' Mr. Wood

taking the part of Hawthorn, with Mrs. Wood (Miss Paton) as Rosetta. After performing for a few months in stock pieces, he created the part of Reimbaut in Meyerbeer's 'Robert le Diable' on its first performance in this country, Feb. 20, 1832. He appeared as Lopez in Spohr's 'Der Alchymist' when first produced (March 20, 1832), Bishop's 'Tyrolese Peasant' (May 8, 1832), and John Barnett's 'Win her and wear her' (Dec. 18, 1832); but the first production of 'Don Juan' at Drury Lane, Feb. 5, 1833, afforded Templeton a great opportunity. Signor Begrez, after studying the part of Don Ottavio for eight weeks, threw it up a week before the date announced for production. Templeton undertook the character, and a brilliant success followed. Braham, who played Don Juan, highly complimented Templeton on his execution of 'Il mio tesoro,' and Tom Cooke called him 'the tenor with the additional keys.'

Madame Malibran, in 1833, chose him as her tenor, and 'Malibran's tenor' he remained throughout her brief but brilliant career. On the production of 'La Sonnambula,' at Drury Lane, May 1, 1833, Templeton's Elvino was no less successful than Malibran's Amina. After the performance Bellini embraced him, and, with many compliments, promised to write a part that would immortalise him. 'The Devil's Bridge,' 'The Students of Jena' (first time June 4, 1833), 'The Marriage of Figaro,' 'John of Paris,' etc., gave fresh opportunities for Templeton to appear with Malibran, and with marked success. In Auber's 'Gustavus the Third,' produced at Covent Garden, Nov. 13, 1833, he made another great success as Colonel Lillienhorn. During the season the opera was repeated one hundred times. Alfred Bunn, then manager of both theatres, so arranged that Templeton, after playing in 'La Sonnambula' or 'Gustavus the Third' at Covent Garden, had to make his way to Drury Lane to fill the rôle of 'Masaniello'—meeting with equal success at both houses.

On the return of Madame Malibran to England in 1835, the production of 'Fidelio' and of Balfe's 'Maid of Artois' (May 27, 1836) brought her and Templeton again together. July 16, 1836, was fated to be their last appearance together. At the end of the performance Malibran removed the jewelled betrothal ring from her finger which she had so often worn as Amina, and presented it to Templeton as a memento of respect for his talents; and it is still cherished by the veteran tenor as a sacred treasure. Templeton sustained the leading tenor parts in Auber's 'Bronze Horse' (1836), in Herold's 'Corsair' (1836), Rossini's 'Siege of Corinth' (1836), in Balfe's 'Joan of Arc' (1837) and 'Diadeste' (1838), in Mozart's 'Magic Flute' (1838), Benedict's 'Gipsy's Warning' (1838), H. Phillips' 'Harvest Queen' (1838), in Donizetti's 'Love Spell' (1839), and in 'La Favorita' (1843) on their first performance or introduction as English operas; altogether playing not less than eighty different leading tenor characters.

In 1836-37 Templeton made his first profes-

sional tour in Scotland and Ireland with great success. Returning to London, he retained his position for several years. In 1842 he visited Paris with Balfe, and received marked attention from Auber and other musical celebrities. The last twelve years of his professional career were chiefly devoted to the concert-room. In 1846 he starred the principal cities of America with his 'Templeton Entertainments,' in which were given songs illustrative of England, Scotland, and Ireland, and as a Scottish vocalist he sang himself into the hearts of his countrymen. With splendid voice, graceful execution, and exquisite taste, he excelled alike in the pathetic, the humorous, and the heroic; his rendering of 'My Nannie O,' 'Had I a cave,' 'Gloomy winter,' 'Jessie, the Flower o' Dunblane,' 'Corn Rigs,' 'The Jolly Beggar,' and 'A man's a man for a' that,' etc., left an impression not easily effaced. Mr. Templeton retired in 1852, and now enjoys a well-earned repose at New Hampton. [W. H.]

TEMPO (Ital., also *Movimento*; Fr. *Mouvement*). This word is used in both English and German to express the rate of speed at which a musical composition is executed. The *relative* length of the notes depends upon their species, as shown in the notation, and the arrangement of longer and shorter notes in bars must be in accordance with the laws of *Time*, but the *actual* length of any given species of note depends upon whether the *Tempo* of the whole movement be rapid or the reverse. The question of Tempo is a very important one, since no composition could suffer more than a very slight alteration of speed without injury, while any considerable change would entirely destroy its character and render it unrecognisable. The power of rightly judging the tempo required by a piece of music, and of preserving an accurate recollection of it under the excitement caused by a public performance, is therefore not the least among the qualifications of a conductor or soloist.

Until about the middle of the 17th century, composers left the *tempi* of their compositions (as indeed they did the *nuances* to a great extent) entirely to the judgment of performers, a correct rendering being no doubt in most cases assured by the fact that the performers were the composer's own pupils; so soon however as the number of executants increased, and tradition became weakened, some definite indication of the speed desired by the composer was felt to be necessary, and accordingly we find all music from the time of Bach¹ and Handel (who used tempo-indications but sparingly) marked with explicit directions as to speed, either in words, or by a reference to the METRONOME, the latter being of course by far the most accurate method. [See vol. ii. p. 318.]

Verbal directions as to tempo are generally written in Italian, the great advantage of this practice being that performers of other nationalities, understanding that this is the custom,

¹ In the 48 Preludes and Fugues there is but one tempo-indication. Fugue 24, vol. I. is marked 'Largo,' and even this is rather an indication of style than of actual speed.

and having learnt the meaning of the terms in general use, are able to understand the directions given, without any further knowledge of the language. Nevertheless, some composers, other than Italians, have preferred to use their own native language for the purpose, at least in part. Thus Schumann employed German terms in by far the greater number of his compositions, not alone as tempo-indications but also for directions as to expression,¹ and Beethoven took a fancy at one time for using German,² though he afterwards returned to Italian. [See vol. i. p. 193.]

The expressions used to denote degrees of speed may be divided into two classes, those which refer directly to the rate of movement, as *Lento*—slow; *Adagio*—gently, slowly; *Moderato*—moderately; *Presto*—quick, etc.; and those (the more numerous) which rather indicate a certain character or quality by which the rate of speed is influenced, such as *Allegro*—gay, cheerful; *Vivace*—lively; *Animato*—animated; *Maestoso*—majestically; *Grave*—with gravity; *Largo*—broad; etc. To these last may be added expressions which allude to some well-known form of composition, the general character of which governs the speed, such as *Tempo di Minuetto*—in the time of a Minuet; *Alla Marcia*, *Alla Polacca*—in the style of a march, polonaise, and so on. Most of these words may be qualified by the addition of the terminations *etto* and *ino*, which diminish, or *issimo*, which increases, the effect of a word. Thus *Allegretto*, derived from *Allegro*, signifies moderately lively, *Prestissimo*—extremely quick, and so on. The same varieties may also be produced by the use of the words *molto*—much; *assai*—very; *più*—more; *meno*—less; *un poco* (sometimes *un pochettino*³)—a little; *non troppo*—not too much, etc.

The employment, as indications of speed, of words which in their strict sense refer merely to style and character (and therefore only indirectly to tempo), has caused a certain conventional meaning to attach to them, especially when used by other than Italian composers. Thus in most vocabularies of musical terms we find *Allegro* rendered as 'quick,' *Largo* as 'slow,' etc., although these are not the literal translations of the words. In the case of at least one word this general acceptance of a conventional meaning has brought about a misunderstanding which is of considerable importance. The word is *Andante*, the literal meaning of which is 'going,'⁴ but as compositions to which it is applied are usually of a quiet and tranquil character, it has gradually come to be understood as synonymous with 'rather slow.' In consequence of this, the direction *più andante*, which really means 'going more' i.e. faster, has frequently been erroneously understood to mean slower, while the diminution of *andante*, *andantino*, literally

'going a little,' together with *meno andante*—'going less'—both of which should indicate a slower tempo than *andante*—have been held to denote the reverse. This view, though certainly incorrect, is found to be maintained by various authorities, including even Koch's 'Musikalisches Lexicon,' where *più andante* is distinctly stated to be slower, and *andantino* quicker, than *andante*. In a recent edition of Schumann's 'Kreisleriana' we find the composer's own indication for the middle movement of No. 3, 'Etwas langsamer,' incorrectly translated by the editor *poco più andante*, which coming immediately after *animato* has a very odd effect. Schubert also appears to prefer the conventional use of the word, since he marks the first movement of his Fantasia for Piano and Violin, op. 159, *Andante molto*. But it seems clear that, with the exception just noted, the great composers generally intended the words to bear their literal interpretation. Beethoven, for instance, places his intentions on the subject beyond a doubt, for the 4th variation in the Finale of the Sonata op. 109 is inscribed in Italian 'Un poco meno andante, cioè, un poco più adagio come il tema'⁵—a little less *andante*, that is, a little more slowly like (than?) the theme,' and also in German *Etwas langsamer als das Thema*—somewhat slower than the theme. Instances of the use of *più andante* occur in Var. 5 of Beethoven's Trio op. 1, no. 3, in Brahms's Violin Sonata op. 78, where it follows (of course with the object of quickening) the tempo of *Adagio*, etc. Handel, in the air 'Revenge, Timotheus cries!' and in the choruses 'For unto us' and 'The Lord gave the word,' gives the direction *Andante allegro*, which may be translated 'going along merrily.'

When in the course of a composition the tempo alters, but still bears a definite relation to the original speed, the proportion in which the new tempo stands to the other may be expressed in various ways. When the speed of notes of the same species is to be exactly doubled, the words *doppio movimento* are used to denote the change, thus the quick portion of Ex. 1 would be played precisely as though it were written as in Ex. 2.

BRAHMS, Trio, op. 8.

Allegro doppio movimento

Another way of expressing proportional tempi is by the arithmetical sign for equality (=), placed between two notes of different values. Thus $\text{♩} = \text{♪}$ would mean that a crochet in the one movement must have the same duration as a

¹ He used Italian terms in op. 1-4, 7-11, 13-15, 33, 41, 44, 47, 52, 54, and 61; the rest are in German.

² Beethoven's German directions occur chiefly from op. 81 a to 101, with a few isolated instances as far on as op. 128.

³ See Brahms, op. 34, Finale.

⁴ The word is derived from *andare*, 'to go.' In his Sonata op. 81 a, Beethoven expresses *Andante* by the words *In gehender Bewegung*—in going movement.

⁵ Beethoven's Italian, however, does not appear to have been faultless, for the German translation above shows him to have used the word *come* to express 'than' instead of 'like.'

minim in the other, and so on. But this method is subject to the serious drawback that it is possible to understand the sign in two opposed senses, according as the first of the two note-values is taken to refer to the new tempo or to that just quitted. On this point composers are by no means agreed, nor are they even always consistent, for Brahms, in his 'Variations on a Theme by Paganini,' uses the same sign in opposite senses, first in passing from Var. 3 to Var. 4, where a ♩ of Var. 4 equals a ♩ of Var. 3 (Ex. 3), and afterwards from Var. 9 to Var. 10, a ♩ of Var. 10 being equal to a ♩ of Var. 9 (Ex. 4).

Ex. 3. Var. 3.

A far safer means of expressing proportion is by a definite verbal direction, a method frequently adopted by Schumann, as for instance in the 'Faust' music, where he says *Ein Takt wie vorher zwei*—one bar equal to two of the preceding movement; and *Um die Hälfte langsamer* (by which is to be understood *twice* as slow, not *half* as slow again), and so in numerous other instances.

When there is a change of rhythm, as from common to triple time, while the total length of a bar remains unaltered, the words *l'istesso tempo*, signifying 'the same speed,' are written where the change takes place, as in the following example, where the crotchet of the 2-4 movement is equal to the dotted crotchet of that in 6-8, and so, bar for bar, the tempo is unchanged.

BEETHOVEN, Bagatelle, op. 119, No. 6.

Allegretto.*L'istesso tempo.*

The same words are occasionally used when there is no alteration of rhythm, as a warning against a possible change of speed, as in Var. 3

of Beethoven's Variations, op. 120, and also, though less correctly, when the notes of any given species remain of the same length, while the total value of the bar is changed, as in the following example, where the value of each quaver remains the same, although the bar of the 2-4 movement is only equal to two-thirds of one of the foregoing bars.

BEETHOVEN, Bagatelle, op. 126, No. 1.

*Andante con moto.**L'istesso tempo.*

A gradual increase of speed is indicated by the word *accelerando* or *stringendo*, a gradual slackening by *rallentando* or *ritardando*. All such effects being proportional, every bar and indeed every note should as a rule take its share of the general increase or diminution, except in cases where an *accelerando* extends over many bars, or even through a whole composition. In such cases the increase of speed is obtained by means of frequent slight but definite changes of tempo (the exact points at which they take place being left to the judgment of performer or conductor) much as though the words *più mosso* were repeated at intervals throughout. Instances of an extended *accelerando* occur in Mendelssohn's chorus, 'O! great is the depth,' from 'St. Paul' (26 bars), and in his Fugue in E minor, op. 35, no. 1 (63 bars). On returning to the original tempo after either a gradual or a precise change the words *tempo primo* are usually employed, or sometimes *Tempo del Tema*, as in Var. 12 of Mendelssohn's 'Variations Sérieuses.'

The actual speed of a movement in which the composer has given merely one of the usual tempo indications, without any reference to the metronome, depends of course upon the judgment of the executant, assisted in many cases by tradition. But there are one or two considerations which are of material influence in coming to a conclusion on the subject. In the first place, it would appear that the meaning of the various terms has somewhat changed in the course of time, and in opposite directions, the words which express a quick movement now signifying a yet more rapid rate, at least in instrumental music, and those denoting slow tempo a still slower movement, than formerly. There is no absolute proof that this is the case, but a comparison of movements similarly marked, but of different periods, seems to remove all doubt. For instance, the Presto of Beethoven's Sonata, op. 10, no. 3, might be expressed by M.M. ♩ = 144, while the Finale of Bach's Italian Concerto, also marked Presto, could scarcely be played quicker than ♩ = 126 without disadvantage. Again, the commencement of Handel's Overture to the 'Messiah' is marked Grave, and is played about ♩ = 60, while the Grave of Beethoven's Sonata Pathétique requires a tempo of only ♩ = 60, exactly twice as slow. The causes of these differences are probably on the one hand the greatly increased powers of execution pos-

seemed by modern instrumentalists, which have induced composers to write quicker music, and on the other, at least in the case of the pianoforte, the superior *sostenuto* possible on modern instruments as compared with those of former times. The period to which the music belongs must therefore be taken into account in determining the exact tempo. But besides this, the general character of a composition, especially as regards harmonic progression, exercises a very decided influence on the tempo. For the apparent speed of a movement does not depend so much upon the actual duration of the beats, as upon the rate at which the changes of harmony succeed each other. If, therefore, the harmonies in a composition change frequently, the tempo will appear quicker than it would if unvaried harmonies were continued for whole bars, even though the metronome-time, beat for beat, might be the same. On this account it is necessary, in order to give effect to a composer's indication of tempo, to study the general structure of the movement, and if the changes of harmony are not frequent, to choose a quicker rate of speed than would be necessary if the harmonies were more varied. For example, the first movement of Beethoven's Sonata, op. 22, marked *Allegro*, may be played at the rate of about $\text{♩} = 72$, but the first movement of op. 31, no. 2, though also marked *Allegro*, will require a tempo of at least $\text{♩} = 120$, on account of the changes of harmony being less frequent, and the same may be observed of the two *adagio* movements, both in 9-8 time, of op. 22 and op. 31, no. 1; in the second of these most bars are founded upon a single harmony, and a suitable speed would be about $\text{♩} = 116$, a rate which would be too quick for the *Adagio* of op. 22, where the harmonies are more numerous.¹

Another cause of greater actual speed in the rendering of the same tempo is the use of the time-signature C or *alla breve*, which requires the composition to be executed at about double the speed of the Common or C Time. The reason of this is explained in the article *BREVE*, vol. i. p. 274.

A portion of a composition is sometimes marked *a piacere*, or *ad libitum*, at 'pleasure,' signifying that the tempo is left entirely to the performer's discretion. Passages so marked however appear almost always to demand a slower, rather than a quicker tempo—at least, the writer is acquainted with no instance to the contrary. [F.T.]

TEMPO DI BALLO is the indication at the head of Sullivan's Overture composed for the Birmingham Festival 1870, and seems less to indicate a particular speed than that the whole work is in a dance style and in dance measures. [G.]

¹ Hummel, in his 'Pianoforte School,' speaking in praise of the Metronome, gives a list of instances of the variety of meanings attached to the same words by different composers, in which we find *Presto* varying from $\text{♩} = 72$ to $\text{♩} = 224$, *Allegro* from $\text{♩} = 50$ to $\text{♩} = 172$, *Andante* from $\text{♩} = 52$ to $\text{♩} = 152$, etc. But Hummel does not specify the particular movements he quotes, and it seems probable that, regard being had to their varieties of harmonic structure, the discrepancies may not really have been so great as at first sight appears.

TEMPO ORDINARIO (Ital.), common time, rhythm of four crotchets in a bar. The time-signature is an unbarred semicircle C , or in modern form C , in contradistinction to the barred semicircle C or C , which denotes a diminished value of the notes, i. e. a double rate of movement. [See *BREVE*; *COMMON TIME*.] In consequence of the notes in *tempo ordinario* being of full value (absolutely as well as relatively), the term is understood to indicate a moderate degree of speed. It is in this sense that Handel employs it as an indication for the choruses 'Lift up your heads,' 'Their sound is gone out,' etc. [F.T.]

TEMPO RUBATO (Ital., literally *robbed* or *stolen time*). This expression is used in two different senses; first, to denote the insertion of a short passage in duple time into a movement the prevailing rhythm of which is triple, or *vice versa*, the change being effected without altering the time-signature, by means of false accents, or accents falling on other than the ordinary places in the bar. Thus the rhythm of the following example is distinctly that of two in a bar, although the whole movement is 3-4 time.

SCHUMANN, Novellette, Op. 21, No. 4.

2. In the other and more usual sense the term expresses the opposite of strict time, and indicates a style of performance in which some portion of the bar is executed at a quicker or slower tempo than the general rate of movement, the balance being restored by a corresponding slackening or quickening of the remainder. [RUBATO.] Perhaps the most striking instances of the employment of *tempo rubato* are found in the rendering of Hungarian national melodies by native artists. [F.T.]

TENDUCCI, GIUSTO FERDINANDO, a celebrated sopranist singer, very popular in this country, was born at Siena, about 1736, whence (like a still greater singer) he was sometimes called Senesino. His earliest stage-appearances in Italy were made at about twenty years of age, and in 1758 he came to London, where he first sang in a pasticcio called 'Attalo.' But it was in the 'Ciro riconosciuto' of Cocchi that he first attracted special notice. Although he had only a subordinate part, he quite eclipsed, by his voice and style, the principal singer, Portenza, and from that time was established as the successor of Guadagni. In company with Dr. Arne, in whose 'Artaxerxes' he sang with great success, he travelled to Scotland and Ireland, returning to London in 1765, where he was the idol of the fashionable world, and received enormous sums for his performances. In spite of this, his vanity and extravagance were so unbounded that in

1776 he was forced to leave England for debt. In a year, however, he found means to return, and remained in London many years longer, singing with success as long as his voice lasted, and even when it had almost disappeared. In 1785 he took part in a revival of Gluck's 'Orfeo,' and appeared at Drury Lane Theatre as late as 1790. He also sang at the Handel Commemoration Festivals at Westminster Abbey, in 1784 and 1791. Ultimately he returned to Italy, and died there early in this century.

Tenducci was on friendly terms with the Mozart family during their visit to London in 1764. In 1778, at Paris, he again met Mozart, who, remembering their former intercourse, wrote a song for him, which has been lost. He was the author of a Treatise on Singing, and the composer of an overture for full band (Preston, London), and of 'Ranelagh Songs,' which he sang at concerts. [F.A.M.]

TENEBRÆ (Literally, DARKNESS). The name of a Service appointed, in the Roman Breviary, for the three most solemn days in Holy Week, and consisting of the conjoined Matins and Lauds,¹ for the Thursday, Friday, and Saturday, which are sung 'by anticipation' on the afternoons of the Wednesday, Thursday and Friday. The name is taken from the opening sentence of the Responsorium which follows the Fifth Lesson on Good Friday, *Tenebræ factæ sunt*—There was darkness.

The Service begins with three Nocturns, each consisting of three Psalms, with their doubled Antiphons, a Versicle and Response, and three Lessons, each followed by its appropriate Responsorium. The Psalms and Antiphons are sung in unisonous Plain Chaunt; and, at the conclusion of each, one of the fifteen candles on the huge triangular Candlestick by which the Chapel is lighted is ceremoniously extinguished. The Lessons for the First Nocturn on each of the three days are the famous 'Lamentations,' which have already been fully described.² The Lessons for the Second and Third Nocturns are simply monotoned. Music for the Responsorium has been composed by more than one of the greatest Polyphonic Masters; but most of them are now sung in unisonous Plain Chaunt. The Third Nocturn is immediately followed by Lauds, the Psalms for which are sung in the manner, and with the ceremonies, already described. Then follows the Canticle, 'Benedictus,' during the singing of which the six Altar Lights are extinguished, one by one. And now preparation is made for the most awful moment of the whole—that which introduces the first notes of the 'Miserere.'³ The fifteenth candle, at the top of the great Candlestick, is removed from its place, and hidden behind the Altar. The Antiphon, 'Christus factus est obediens,' is sung by a single Soprano Voice; and, after a dead silence of considerable duration, the Miserere is sung, in the manner, and with the Ceremonies described in vol. ii. pp. 335-338. The Pope then

¹ See MATINS, and LAUDS.

² See LAMENTATIONS.

³ See MISERERE.

says an appointed Prayer; the Candle is brought out from behind the Altar; and the Service concludes with a trampling of feet, sometimes said to represent the passage of the crowd to Calvary, or the Jews seizing our Lord.

The Services proper for Holy Week are described, in detail, in the 'Manuel des Cérémonies qui ont lieu pendant la Semaine Sainte,' formerly sold annually in Rome, but now very difficult to obtain. The Music was first published by Dr. Burney, in 'La Musica della Settimana Santa,' now very scarce, and has since been reprinted, by Alfieri, in his 'Raccolta di Musica Sacra.'

A minute and interesting account, though somewhat deformed by want of sympathy with the ancient Ritual, will be found in Mendelssohn's letter to Zelter, of June 16, 1831. [W.S.R.]

TENERAMENTE; CON TENEREZZA—'tenderly'; a term slightly stronger and used more emphatically than *dolce*, but having very much the same meaning and use in music. A good instance of the distinction between the terms is found in the lovely second movement of Beethoven's Sonata in E minor, op. 90, where the subject, at its first entry labelled *dolce*, is subsequently directed to be played *teneramente*. From the whole character of the movement it is evidently intended to become slightly more impassioned as it goes on; and it is generally understood that the second and following entries of the subject should be played with more feeling, and perhaps in less strict time, than the opening bars of the movement. [J.A.F.M.]

TENOR (Fr. *Taille*; Ger. *Tenor Stimme*). The term applied to the highest natural adult male voice and to some instruments of somewhere about the same compass. Its etymology is accepted to be *teneo*, 'I hold,' and it was the voice that, in early times, held, took, or kept the principal part (originally the only real part), the plainsong, subject, air, or motive of the piece that was sung. It holds the mid-position in the musical scale. Its clef is the C clef on the fourth line of the staff (in reality the middle line of the great staff of eleven lines⁴) generally superseded in the present day by the treble or G clef, which however does not represent or indicate the actual pitch, but gives it an octave too high.

The average compass of the tenor voice is C to A or B (a), though in large rooms notes below F (b) are usually of little avail. In primitive times,

before true polyphony or harmony were known, it was natural that what we now call the tenor voice should hold the one real part to be sung, should *lead*, in fact, the congregational singing, for the reason that this class of voice is sweeter and more flexible than the bass voice, and also would most readily strike the ear, as being the higher voice in range, until boys were employed;

⁴ See 'A Short Treatise on the Staff' (Hullah).

and even then boys could not have either the knowledge or authority to enable them to lead the singing, more especially as the chants or hymns were at first transmitted by oral tradition; and females were not officially engaged in the work. The boys probably sang in unison with, at times an octave higher than, the tenor, and the basses in unison with, or an octave below, the tenor, as suited them respectively.

An elaborate classification of voices was not then necessary. Indeed it is most probable that at first the only distinction was between the voices of boys and men, *altus* and *bassus* (*high* and *low*), the very limited scales then in use coming easily within the compass of the lower part of tenors and the higher part of basses; and it will have been only observed that some men could sing higher or lower than others, while the different qualities of voices will not have been taken into account. If a very low bass found a note rather high, he may have howled it as he best could, or it would perhaps itself have cracked up into falsetto, or he will have gone down instinctively to the octave below, or remained where he was until the melody came again within his reach—ears being not yet critically cultivated. Even now, towards the end of the 19th century, it is not at all unusual to hear amongst a congregation basses singing the air of a hymn below the actual bass part, or soprani singing in the tenor-compass for convenience sake. In a few village churches, and in many Scotch kirks, an after-taste of such early singing is still to be had. But with the extension of the scale and the introduction of a system of notation, and the consequent gradual replacement of the empirical mode of practice by more scientific study, the first rude attempts at harmony and polyphony, diaphony or organum (which see), would necessitate a more exact classification of voices.

The term Baritone is of comparatively late introduction. This voice is called by the French *basse-taille*, or low tenor, *taille* being the true French word for tenor, and it is not impossible that, as this word signifies also the waist or middle of the human figure, it may have been adopted to express the middle voice. The addition of a second part, a fourth or fifth above or below the *Canto Fermo* or plain-chant, would also so much increase the compass of music to be sung, that the varieties and capacities of different voices would naturally begin to be recognised, and with the addition of a third part, triplum (treble), there would at once be three parts, *altus*, *medius*, and *bassus*,—high, middle, and low; and as the *medius*, for reasons already given, would naturally be the leader who held (*tenuit*) the plain-song, the term tenor would replace that of *medius*. Then, as the science and practice of music advanced, and *opera* or musical drama became more and more elaborated, the sub-classification of each individual type of voice in accordance with its varied capacities of expression would be a matter of course. Hence we have *tenore robusto* (which used to be of about the compass of a modern

high¹ baritone), *tenore di forza*, *tenore di mezzo carattere*, *tenore di grazia*, and *tenore leggiere*, one type of which is sometimes called *tenore contraltino*. These terms, though used very generally in Italy, are somewhat fantastic, and the different qualifications that have called them forth are not unfrequently as much part of the morale as of the physique. Although not only a question of compass but of quality, the word 'tenor' has come to be adopted as a generic term to express that special type of voice which is so much and so justly admired, and cannot now be indicated in any other way.

The *counter-tenor*, or natural male alto, is a highly developed falsetto, whose so-called chest voice is, in most cases, a limited bass. Singers of this class down to the beginning of the 17th century came principally from Spain, they being afterward chiefly superseded by artificial male *alti*. One of the finest examples of counter-tenor known in London at the time of writing this article is an amateur distinguished for his excellent part-singing. Donzelli was a *tenore robusto* with a voice of beautiful quality. It has been the custom to call Duprez, Tamberlik, Wachtel, Mongini, and Mierzewski *tenori robusti*, but they belong more properly to the *tenori di forza*. The *tenore robusto* had a very large tenor quality throughout his vocal compass.

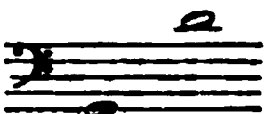

It is not easy to classify precisely such a voice as that of Mario,² except by calling it the perfection of a tenor voice. Mario possessed, in a remarkable degree, compass, volume, richness, grace, and flexibility (not agility, with which the word is often confounded in this country, but the general power of inflecting the voice and of producing with facility nice gradations of colour). Historical singers are generally out of the usual category, being in so many cases gifted with exceptional physical powers. Rubini, a *tenore di grazia*, physically considered, was endowed with an extraordinary capacity of pathetic expression, and could at times throw great force into his singing, which was the more striking as being somewhat unusual, but he indulged too much perhaps in the *vibrato*, and may not improbably be answerable for the vicious use of this (legitimate in its place) means of expression, which has prevailed for some years past, but which, being now a mannerism, ceases to express more than the so-called 'expression stop' on a barrel organ. But it must be said of Rubini that the *vibrato* being natural to him, had not the nauseous effect that it has with his would-be imitators.

Davide, who sang in the last half of the 18th century, must have been very great, with a beautiful voice and a thorough knowledge of his art. [See vol. i. p. 434.] His son is said to have been endowed with a voice of three octaves, comprised within four B flats. This doubtless included something like an octave of *falsetto*, which must have remained to him, instead of in great part disappearing with the development of the rest of

¹ Baritone may etymologically be considered to mean a heavy voice, and as the principal voice was the tenor, it may be taken to mean heavy tenor, almost equivalent to *Basse-taille*.

² Died at Rome Dec. 11, 1855.

the voice, as is usually the case. In connection with this may be mentioned the writer's experience of a tenor, that is to say a voice of decided tenor

tone, with a compass of  , that of

a limited bass only, thus showing how the word 'tenor' has come to express *quality* quite as much as *compass*.—Roger (French), another celebrity, and a cultivated man, overtaxed his powers, as many others have done, and shortened his active artistic career.—Campanini is a strong *tenore di mezzo carattere*. This class of tenor can on occasions take *parti di forza* or *di grazia*.

If the Germans would only be so good as to cultivate more thoroughly the art of vocalisation, we should have from them many fine *tenori di forza*, with voices like that of Vogel.

A *tenore di grazia* of modern times must not be passed without special mention. Italo Gardoni possessed what might be called only a moderate voice, but so well, so easily and naturally produced, that it was heard almost to the same advantage in a theatre as in a room. This was especially noticeable when he sang the part of Florestan, in 'Fidelio,' at Covent Garden, after an absence of some duration from the stage. The unaffected grace of his style rendered him as perfect a model for vocal artists as could well be found. Giuglini was another *tenore di grazia*, with more actual power than Gardoni. Had it not been for a certain mawkishness which after a time made itself felt, he might have been classed amongst the *tenori di mezzo carattere*. In this country Braham and Sims Reeves have their place as historical tenors, and Edward Lloyd, with not so large a voice as either of these, will leave behind him a considerable reputation as an artist.

Of the *tenore leggero*, a voice that can generally execute *fioritura* with facility, it is not easy to point out a good example. The light tenor, sometimes called *tenore contraltino*, has usually a somewhat extended register of open notes, and if the singer is not seen, it is quite possible to imagine that one is hearing a female contralto. The converse of this is the case when a so-called female tenor sings. One of these, Signora Mela, appeared at concerts in London in the year 1868. A favourite manifestation of her powers was the tenor part in Rossini's Terzetto buffo 'Pappataci.' Barlani-Dini is another female tenor, singing at present in Italy. These exhibitions are, however, decidedly inartistic and inelegant, and may easily become repulsive. A list of tenor singers will be found in the article SINGING. [See vol. iii. p. 511.]

Tenor is also the English name of the viola. [See TENOR VIOLIN.] The second of the usual three trombones in a full orchestra is a tenor instrument both in compass and clef.

The Tenor Bell is the lowest in a peal of bells, and is possibly so called because it is the bell upon which the ringers hold or rest. The Tenor-drum (without snares) is between the ordinary side-drum and the bass-drum, and, worn as a side-drum, is used in foot-regiments for rolls.

There are various opinions as to the advisability of continuing, or not, the use of the tenor clef. There is something to be said on both sides. It undoubtedly expresses a positive position in the musical scale; and the power to read it, and the other C clef, is essential to all musicians who have to play from the music printed for choirs and for orchestra up to the present day. But as a question of general utility a simplification in the means of expressing musical ideas can scarcely be other than a benefit, else why not continue the use of all the seven clefs? The fact that the compass of the male voice is, in round terms, an octave lower than the female (though from the point of view of mechanism the one is by no means a mere re-production of the other), renders it very easy, indeed almost natural, for a male voice to sing music in the treble clef an octave below its actual pitch, or musical position in the scale, and as a matter of fact, no difficulty is found in so doing. In violoncello or bassoon-music the change from bass to tenor clef is made on account of the number of ledger lines that must be used for remaining in the lower clef. This objection does not exist in expressing tenor music in the treble clef. On the contrary, if it exists at all it is against the tenor.—A kind of compromise is made by Mr. Otto Goldschmidt in the 'Bach Choir Magazine' (Novello), where a double soprano clef is used for the tenor part. This method was proposed and used by the late Mr. Oliphant.

While on the subject of clefs, passing reference may be made to Neukomm's somewhat erratic idea of putting the whole of the tenor part in his edition of Haydn's 'Creation' in the bass clef. It was an attempt to make the desired simplification, and at the same time denote the actual pitch of the voice. [H. C. D.]

TENOROON, a name sometimes given to the Tenor Bassoon or Alto Fagotto in F. It is obviously a modification of the word Bassoon, for which little authority can be found. The identity of this instrument with the Oboe di Caccia of Bach has already been adverted to, and the error of assigning parts written for it by that composer, Beethoven, and others, to the Corno Inglese or Alto Oboe in the same key has been corrected. At the present time it has entirely gone out of use. A fine specimen, now in the writer's possession, was until lately in the boys' band at the Foundling Hospital: supposed to be intended, from its smaller size, for the diminutive hands of young players.

Its tone is characteristic, somewhat more reedy than that of the Bassoon. The word survives as that of a reed-stop in some Organs. [W. H. S.]

TENOR VIOLIN (ALTO, CONTRALTO, QUINTE, TAILLE, BRATSCH, VIOLA, etc.) A violin usually about one-seventh larger in its general dimensions than the ordinary violin, and having its compass a fifth lower, or an octave above the violoncello. As its name implies, it corresponds in the string quartet to the tenor voice in the

vocal quartet. Its part is written in the C alto clef, thus—

The three uppermost strings of the Tenor are identical in pitch with the three lowest strings of the violin; but their greater length requires them to be proportionately stouter. The fourth string, like the third, is covered with wire. The player holds the Tenor like the violin; but the stop is somewhat longer, the bow used for it is somewhat heavier, and it requires greater muscular force in both hands. The method of execution in other respects is identical with that on the violin. The tone of the Tenor however, owing to the disproportion between the size and pitch of its strings on the one hand, and the comparatively small size of its body on the other, is of a different quality from that of the violin. It is less powerful and brilliant, having a muffled character, but is nevertheless sympathetic and penetrating. Bad Tenors are worse than bad violins; they are unequal and 'wolfish,' and have sometimes a decided nasal twang. The instrument is humorously described by Schnyder von Wartensee, in his 'Birthday Ode' addressed to Guhr:—

Mann nennt mich Frau Bass, (Aunt)
Denn etwas sprech' ich durch die Nase,
Doch ehrlich mein' ich es, und treu:
Altmodisch bin ich: meine Sitte
Ist stets zu bleiben in der Mitte,
Und nie mach' ich ein gross' Geschrei.

In this article, following common usage, the word 'Tenor' is used to denote the intermediate member of the quartet to the exclusion of 'Alto': but the fact is that the Tenor and Alto were once distinct instruments, and the instrument which we call 'Tenor' is really the Alto, the true Tenor, which was a size larger, though of the same pitch, being practically obsolete.

The Tenor is an earlier instrument than the violin, and is in fact the oldest instrument of the quartet. Both 'Violino' in Italian and 'Violon' in French appear to have originally designated the Tenor. In the first piece of music in which 'Violino' occurs, a double quartet in the church style, published in 1597,¹ this instrument has a part written in the alto clef, from which the following is an extract:—

This could not be played on the violin, and was obviously written for the Tenor: and an instrument of such a compass capable of holding its own against a cornet and six trumpets, however lightly voiced the latter may have been, can have been no ordinary fiddle. The large and solid Tenors of this period made by Gaspar di

¹ Giovanni Gabrieli, *Sonata Pian e Forte alla quarta bassa*. Printed in the Musical Appendix to Wąsielewski's 'Die Violine im XVII Jahrhundert.' The lowest parts in each quartet are assigned to trumpets (Tromboni), the other soprano part to the cornet (Zinken).

Salo, the earlier Amatis, Peregrino Zanetto, etc., many of which are still in existence, appear to represent the original 'Violino.' These Tenors when new, must have had a powerful tone, and they were probably invented in order to produce a stringed instrument which should compete in church music with the cornet and trumpet. Being smaller than the ordinary bass viola, which was the form of viol chiefly in use, they obtained the name 'Violino.' This name was however soon transferred to the ordinary violin. When the latter first made its appearance in Italian music,² it was called 'Piccolo Violino alla Francese'; indicating that this smaller 'Violino,' to which the name has been since appropriated, though not generally employed in Italy, had come into use in France. It accords with this that the original French name of the violin is 'Pardessus' or 'dessus' 'de Violon,' or 'treble of the Violon,' Violon being the old French diminutive of Viole,³ and exactly equivalent to 'Violino.' Again, the very old French name 'Quinte' for the Tenor, and its diminutive 'Quinton,' used for the violin, seems to indicate that the latter was a diminutive of some larger instrument in general use. We have therefore good ground for concluding that the Tenor is somewhat older than the treble or common violin, and is in fact its archetype.

Very soon after the 'Orfeo' of Monteverde, which is dated 1608, we find the above-mentioned composer, Gabrieli, writing regular violin passages in a sonata for three common violins and a Bass, the former being designated 'Violini.'⁴ We may therefore fairly suppose that the early years of the 17th century saw the introduction of the violin into general use in Italy, and the transfer of the name 'Violino' to the smaller instrument. In the same year (1615) we have a 'Canzon à 6' by the same writer, with two treble violins (Violini), a cornet, a tenor violin (called Tenore) and two trumpets.⁵ In Gregorio Allegri's 'Symphonia à 4'⁶ (before 1650) the Tenor is denominated 'Alto,' and the Bass is assigned to the 'Basso di Viola' or Viola da Gamba. Massimiliano Neri (1644), in his 'Canzone del terzo tuono'⁷ has a Tenor part in which the Tenor is called for the first time 'viola,' a name which has clung to it ever since.

Shortly after this (1663) we have a string quintet with two viola parts, the upper of which is assigned to the 'Viola Alto,' the lower, written in the Taille or true tenor clef, to the 'Viola Tenore.'⁸ It appears from the parts that the compass of the two violas was identical, nor is any distinction observable in the treatment. This use of the two violas is common in the Italian chamber music of the end of the 17th century, a remarkable instance being the 'Sonata Varie' of the Cremonese composer Vitali (Modena, 1684): and Handel's employment of the two instruments, mentioned lower down, is

² In the 'Orfeo' of Monteverde.

⁸ Sonata a cinque, da Giovanni Legrenzi. Wąsielewski, Appendix, p. 43. The treble parts are assigned to violins, the bass to the 'Viola da braccio.'

probably based on reminiscences of this class of music. But the compass and general effect of the instruments being the same, the disappearance of the great viola was only a matter of time. Though the fiddle-makers continued for some time to make violas of two sizes, alto and tenor [see STRADIVARI], the two instruments coalesced for practical purposes, and the superior facility with which the smaller viola (Alto) was handled caused the true Tenor to drop out of use. From about the end of the century the Alto viola appears to have assumed the place in the orchestra which it still occupies, and to have had substantially the same characteristics.

The Tenor has been made of all sizes, ranging from the huge instruments of Gaspar di Salo and his contemporaries to the diminutive ones, scarcely an inch longer than the standard violin, commonly made for orchestral use a century or so ago: and its normal size of one-seventh larger than the violin is the result of a compromise. The explanation is that it is radically an anomalous instrument. Its compass is fixed by strictly musical requirements: but when the instrument is built large enough to answer acoustically to its compass, that is, so as to produce the notes required of it as powerfully as the corresponding notes on the violin, it comes out too large for the average human being to play it fiddle-wise, and only fit to be played cello-wise between the knees. If, however, the Tenor is to be played like the violin, and no one has seriously proposed to play it otherwise, it follows that its size must be limited by the length of the human arm when bent at an angle of about 120 degrees. But even the violin is already big enough: though instruments have from time to time been made somewhat larger than usual, and that by eminent makers [see STRADIVARI], players have never adopted them; and it is practically found that one-seventh longer than the ordinary violin is the outside measurement for the Tenor if the muscles of the arms and hands are to control the instrument comfortably, and to execute ordinary passages upon it. The Tenor is therefore by necessity a dwarf: it is too small for its pitch, and its tone is muffled in consequence. But its very defects have become the vehicle of peculiar beauties. Every one must have remarked the penetrating quality of its lower strings, and the sombre and passionate effect of its upper ones. Its tone is consequently so distinctive, and so arrests the attention of the listener, that fewer Tenors are required in the orchestra than second violins.

Composers early discovered the distinctive capabilities of the Tenor. Handel knew them, though he made but little use of them: they were first freely employed in that improvement of the dramatic orchestra by Gluck and Sacchini, which preceded its full development under Mozart. Previously to this, the Tenor was chiefly used to fill up in the Tutti. Sometimes it played in unison with the violins; more frequently with the violoncellos: but in general it was assigned a lower second violin part. Handel employs the

Tenor with striking effect in 'Revenge, Timotheus cries.' The first part of the song, in D major, is led by the violins and hautboys in dashing and animated passages; then succeeds the trio in G minor, which introduces the vision of the 'Grecian ghosts, that in battle were slain.' Here the violins are silent, and the leading parts, in measured largo time, are given to the tenors in two divisions, each division being reinforced by bassoons. The effect is one of indescribable gloom and horror. It is noteworthy that the composer, whether to indicate the theoretical relation of the two parts, or the practical employment of the larger Tenors by themselves for the lower one, has written the first part only in the alto clef, and headed it 'Viola,' the second part being written in the Taille or true tenor clef, and headed 'Tenor': but the compass of the parts is identical. The climax will serve as a specimen:—

The musical score is presented in four systems, each with four staves. The staves are labeled as follows:

- Viola e Basson 1mo.** (Alto clef)
- Tenor e Basson 2do.** (Tenor clef)
- Voice** (Tenor clef)
- Cello Contrabasso** (Bass clef)

The lyrics are written below the Voice staff:

and un - bu-ry'd re-main. In -
 - glo-rious on the Plain and un -
 - bu-ried re-main. etc.

Berlioz, who overlooks this passage in Handel, enumerates among the early instances of the employment of its distinctive qualities, the passage in 'Iphigenia in Aulis,' where Orestes, overwhelmed with fatigue and remorse, and panting for breath, sings 'Le calme rentre dans mon cœur'; meanwhile the orchestra, in smothered agitation, sobs forth convulsive plaints, unceasingly dominated by the fearful and obstinate chiding of the Tenors. The fascination, the sensation of horror, which this evokes in the audience, Berlioz attributes to the quality of the note A on the Tenor's third string, and the syncopation of the note with the lower A on the basses in a different rhythm. In the overture to 'Iphigenia in Aulis,' Gluck employs the Tenors for another purpose. He assigns them a light bass accompaniment to the melody of the first violins, conveying to the hearer the illusion that he is listening to the violoncellos. Suddenly, at the forte, the basses enter with great force and surprising effect. Sacchini uses the Tenors for the same effect (*pour préparer une explosion*) in the air of Œdipus, 'Votre cœur devient mon asyle.' (This effect, it may be observed, is also to be found in Handel.) Modern writers have often used the Tenor to sustain the melody, in antique, religious, and sombre subjects. Berlioz attributes its use in this way to Spontini, who employs it to give out the prayers of the Vestal. Méhul, fancying that there resided in the Tenor tone a peculiar aptitude for expressing the dreamy character of the Ossianic poetry, employed Tenors for all the treble parts, to the entire exclusion of violins, throughout his opera of 'Uthal.' It was in the course of this dismal and monotonous wail that Grétry exclaimed 'Je donnerai un louis pour entendre une chanterelle!'

Berlioz, in 'Harold en Italie,' and Bennett, in his Symphony in G minor, have employed the Tenor with great effect to sustain pensive melodies. When melodies of a similar character are entrusted to the violoncellos, the tone acquires great roundness and purity if reinforced by the Tenors—witness the Adagio of Beethoven's Symphony in C minor. In chamber music, the Tenor executes sustained and arpeggio accompaniments, occasionally takes up melodic subjects, and employed in unison is a powerful supporter of either of its neighbours. Mozart's Trio for piano, clarinet, and viola, one of the most beautiful and effective works in the whole range of chamber music, affords admirable illustrations of its general capacities when used without a violoncello.

Brahms's Quintet in Bb, and one of his string quartets, will afford good examples of the prominent use of the viola, and the special effect produced by it. It is interesting to observe that the modern chamber string quartet, of which the Tenor is so important a member, is based, not on the early chamber music, but on the stringed orchestra of the theatre. Corelli, Purcell, and Handel employed the Tenor in their orchestral writings, but excluded it from their chamber music; nor was it until the orchestral quartet had been perfected for theatrical pur-

poses by Handel, Gluck, and Sacchini that the chamber quartet settled into its present shape in the hands of Haydn, Abel, J. C. Bach, and their contemporaries. Mozart marks the period when the Tenor assumed its proper rank in both kinds of music.

The Tenor is essentially an ancillary instrument. Played alone, or in combination with the piano only, its tone is thin and ineffective: and the endeavours which have been made by some musicians to create an independent school of tenor-playing, and a distinctive class of tenor music, are founded on error. It is simply a large violin, intended to fill up the gap between the fiddle and the bass; and except in special effects, where, as we have seen, it is used for purposes of contrast, it imperatively demands the ringing tones of the violin above it.

Competent musicians, who are masters of the piano, attracted by the simplicity of the tenor part in most quartets, often take up the Tenor with but little knowledge of the violin. This is a mistake: it is usually found that the Tenor can only be properly played by a practised violinist. The Violin and Tenor make an effective duet; witness the charming works of Haydn, Mozart, and Spohr, and the less known but very artistic and numerous ones of Rolla, by the aid of which any competent violinist will soon become master of the Tenor. Mozart wrote a concerto for Violin, Tenor, and Orchestra. The trios of Mozart and Beethoven for Violin, Tenor, and Violoncello are too well known to need more than mentioning.

Owing, probably, to the structural peculiarities that have been explained above, what is the best model for the violin is not the best for the Tenor. It would seem that the limitation which necessity imposes upon its length ought to be compensated by an increase in height: for Tenors of high model are undoubtedly better than those of flat model, and hence Stradivari Tenors are kept rather to be admired than played upon. The best Tenors for use are certainly those of the Amati school, or old copies of the same by good English makers: in this country the favourite Tenor-maker is undoubtedly Banks. New fiddles are sometimes fairly good in tone: but new Tenors are always intolerably harsh, from the combined effect of their newness and of the flat model which is now universally preferred. If, however, makers of the Tenor would copy Amati, instead of Stradivari, this would no longer be the case.

Mr. Hermann Ritter, a Tenor-player resident in Heidelberg, in ignorance of the fact that the large Tenor was in use for more than a century, and was abandoned as impracticable, claims a Tenor of monstrous proportions, on which he is said to play with considerable effect, as an invention of his own.¹ If all Tenor-players were of the herculean proportions of Mr. Ritter, the great Tenor might perhaps be revived: but human

¹ See 'Die Geschichte der Viola Alta, und die Grundsätze ihres Baues, Von H. Ritter' (Leipzig, Weber, 1877); 'Hermann Ritter und seine Viola Alta, Von E. Adams' (Würzburg, Stuber, 1881). The practical violin-maker may estimate the value of instruments constructed on Mr. Ritter's rules from the fact that he takes as his guide the 'calcolo' of Bagatella!

beings of ordinary stature are quite incapable of wrestling with such an instrument: to which it may be added that the singular and beautiful tenor tone, resulting from the necessary disproportion between the pitch and the dimensions of the instrument, is now too strongly identified with it to admit of any change.

The following is a list of special music for the Tenor.

Methods:

BRUNI, MARSH, FICKERT, LÜTGEN (recommended).

Studies:

CAMPAGNOLI—41 Caprices, op. 22.

KAYSER—Studies, op. 43, op. 55.

Tenor and Orchestra:

F. DAVID—Concertino, op. 12.

Tenor and Piano:

SCHUMANN—op. 113, 'Mährchen Bilder,' 4 pieces.

W. HILL—Notturmo, Scherzo, and Romance.

JOACHIM—Op. 9, Hebrew Melodies; op. 10, Variations on an original theme.

KALLIWODA—6 Nocturnes, op. 186.

LÜTGEN—Barcarole, op. 33.

TÄGLICHSECK—Op. 49, Concertstück.

HOFMANN, C.—Reverie, op. 45.

WALLNER—Fantaisie de Concert.

Herr H. Ritter has also edited 'Repertorium für Viola Alta' (Nürnberg, Schmid), containing twenty-two pieces, mostly classical transcriptions with pianoforte accompaniment. [E.J.P.]

Scherzo. Presto.

Finale of the first piece.

Andante. A flat.

Ferma.

Some further scraps of information have been kindly furnished by Mr. Thayer. 'Carl Holz told Otto Jahn that there was an Introduction to the Tenth Symphony in E♭ major, a soft piece; then a powerful Allegro in C minor. These were complete in Beethoven's head, and had been played to Holz on the piano.' Considering that the date of Beethoven's death was 1827, nearly three years after the summer of 1824, and considering also Beethoven's habit

TENTH SYMPHONY, BEETHOVEN'S.

In Beethoven's (dictated) letter to Moscheles acknowledging the £100 sent by the Philharmonic Society, and dated Vienna, March 18, 1827, eight days before his death, there occur the words 'A Symphony completely sketched is lying in my desk, as well as a new Overture and other things.' This therefore was the 'Tenth Symphony.' It should however be remarked that a large part of the letter containing the words quoted is struck through with the pen. Two days afterwards, says Schindler (ii. 142), 'he was greatly excited, desired to have the sketches for the Tenth Symphony again brought to him, and said much to me on the plan of the work. He intended it absolutely for the Philharmonic Society.' Some sketches—whether those alluded to or not—were printed in the 1st no. of Hirschbach's 'Musikalisch-kritisches Repertorium,' for Jan. 1844, with an introduction which we translate:—

'From Beethoven's sketch-books. Herr Schindler on his return from Berlin to Aix la Chapelle, not only showed many very remarkable relics of Beethoven to his friends at Leipzig, but has been good enough to allow us to publish some of them in this periodical. The following are some of the existing sketches of the Tenth Symphony and of an Overture on the name of Bach,¹ all belonging to the summer months of the year 1824, and in the order in which they were noted down.

'From the sketches for the Tenth Symphony:—'

of copious sketching at works which were in his head, it is almost impossible but that more sketches than the trifles quoted above exist in some of the sketch-books. And though Nottebohm is unhappily no more, some successor to him will doubtless be found to decypher and place these before us. [G.]

¹ Possibly for the overture mentioned above. These are omitted in the present reprint.

² We have no clue as to which of the words attached to the sketches are Beethoven's, and which Schindler's.

TENUTO, 'held'; a direction of very frequent occurrence in pianoforte music, though not often used in orchestral scores. It (or its contraction *ten.*) is used to draw attention to the fact that particular notes or chords are intended to be sustained for their full value, in passages where staccato phrases are of such frequency that the players might omit to observe that some notes are to be played smoothly in contrast. Its effect is almost exactly the same as that of *legato*, save that this last refers rather to the junction of one note with another, and *tenuto* to the note regarded by itself. Thus the commoner direction of the two for passages of any length, is *legato*: *tenuto* however occurs occasionally in this connection, as in the slow movement of Beethoven's Sonata, op. 2, no. 2, in A, where the upper stave is labelled 'tenuto sempre,' while the bass is to be played *staccato*. Another good instance is in the slow movement of Weber's Sonata in A♭, op. 39. [J.A.F.M.]

TERCE (Lat. *Officium (vel Oratio) ad horam tertiam. Ad tertiam*). The second division of the Lesser Hours, in the Roman Breviary. The Office consists of the Versicle and Response, 'Deus in adjutorium'; the Hymn 'Nunc Sancte nobis Spiritus'; 48 Verses of the Psalm, 'Beati immaculati,' beginning at Verse 33, and sung in three divisions under a single Antiphon; the Capitulum and Responsorium for the Season; and the Prayer or Collect for the Day. The Plain Chaunt Music proper to the Office will be found in the 'Antiphonarium Romanum,' and the 'Directorium Chori.' [W.S.R.]

TERPODION. A musical friction-instrument, invented by Buschmann of Berlin in 1816, and improved by his sons in 1832. The principle appears to have been the same as that of Chladni's clavicylinder, except that instead of glass, wood was employed for the cylinder. [See CHLADNI.] In form it resembled a square piano, and its keys embraced 6 octaves. Warm tributes to its merits by Spohr, Weber, Rink and Hummel are quoted (A. M. Z. xxxiv. 857, 858, see also 634, 645; and l. 451 note), but notwithstanding these, the instrument is no longer known. [G.]

TERZETTO (Ital.). Generally a composition for three voices. Beyond one instance in Bach, and a few modern examples consisting of pieces not in sonata-form, the term has never been applied to instrumental music. It is now becoming obsolete, being superseded by Trio, which is the name given to music written for three instruments, and now includes vocal music as well. It would have been wiser to preserve the distinction.

A Terzetto may be for any combination of three voices, whether for three trebles—as the unaccompanied Angels' Trio in 'Elijah,' those of the three ladies and three boys in 'Die Zauberflöte,' and that for three florid sopranos in Spohr's 'Zemire und Azor'—or for three male voices, like the canonic trio in the last-named opera. More frequent, naturally, are Terzetti for mixed voices, the combinations being formed according to the exigencies of the situation. There is nothing to

be observed in the form of a Terzetto different from that of any other vocal composition; but as regards harmony it should be noticed that when a bass voice is not included in the combination the accompaniment usually supplies the bass (where 4-part harmony is required) and the three upper parts, taken by the voices, must be so contrived as to form a tolerable 3-part harmony themselves. Such writing as the following, for voices—

though sounding well enough when played on the piano, would have a detestable effect if sung, as the bass would not really complete the chords of 6-3 demanded by the lower parts, on account of the difference of *timbre*.

We may point to the end of the 2nd act of Wagner's 'Götterdämmerung' as an example of three voices singing at the same time but certainly not forming a Terzetto. [F.C.]

TESI-TRAMONTINI, VITTORIA, celebrated singer, born at Florence in 1690.¹ Her first instructor was Francesco Redi, whose school of singing was established at Florence in 1706. At a later date she studied under Campeggi, at Bologna, but it is evident that she sang on the public stage long before her years of study were over. Fétis and others say that her *début* was made at Bologna, after which nothing transpires about her till 1719, in which year she sang at Venice and at Dresden, and just at the time when Handel arrived there in quest of singers for the newly-established Royal Academy in London. It seems probable that he and Vittoria had met before. In his Life of Handel, Dr. Chrysander suggests, and shows good reason for doing so, that Vittoria TESI was the young *prima donna* who sang in Handel's first Italian opera 'Rodrigo,' at Florence, in 1707, and in his 'Agrippina,' at Venice, in 1708, and who fell desperately in love with the young Saxon *maestro*. Her voice was of brilliant quality and unusual compass. Quantz, who heard her at Dresden, defines it as 'a contralto of masculine strength,' but adds that she could sing high or low with equally little effort. Fire, force, and dramatic expression were her strong points, and she succeeded best in men's parts: in florid execution she did not greatly excel. Her fame and success were at their zenith in 1719, but it does not appear that Handel made any effort to secure her for England. Perhaps he objected to her practice of singing bass songs transposed *all' ottava*. La TESI sang at Venice in 1723, at Florence and Naples in 1724-5, at Milan in 1727, Parma 1728, Bologna 1731, Naples (San Carlo Theatre) from November 4, 1737, till the

¹ Gerber.

end of the ensuing Carnival, for which engagement she received about 500l., a large sum in those days. In 1748 she was at Vienna, where, in 1749, she played in Jommelli's 'Didone.' The book was by Metastasio, who wrote of this occasion, 'The Tesi has grown younger by twenty years.' She was then fifty-five. Burney met her at Vienna in 1772, and speaks of her as more than eighty. Hiller and Fétis say she was only that age at her death, in 1775. But if Gerber's date and Chrysander's theory are right, Burney was right. Her nature was vivacious and *emporté* to a degree, and many tales were told of her freaks and escapades. Perhaps most wonderful of all is the story of her marriage, as told by Burney in his 'Musical Tour'; in which, to avoid marrying a certain nobleman, she went into the street, and addressing herself to a poor labouring man, said she would give him fifty ducats if he would marry her, not with a view to their living together, but to serve a purpose. The poor man readily consented to become her nominal husband, and they were formally married; and when the Count renewed his solicitations, she told him that she was already the wife of another. Among the pupils of La Tesi were the 'Teuberrinn,' and Signora de Amicis, who took a friendly interest in the boy Mozart, and sang in his earliest operatic efforts in Italy. [F.A.M.]

TESSITURA (Italian), literally texture, from *tessere*, to weave. A term, for which there is no direct equivalent in English, used by the Italians to indicate how the music of a piece 'lies'; that is to say, what is the prevailing or average position of its notes in relation to the compass of the voice or instrument for which it is written, whether high, low, or medium. 'Range' does not at all give the idea, as the range may be extended, and the general *tessitura* limited; while the range may be high and the *tessitura* low, or medium. In place of a corresponding word we say that a part 'lies high or low.'

'Vedrai carino,' 'Dalla sua pace,' 'Dove sono,' are examples of high *tessitura*, fatiguing generally to voices that are not highly developed. Indeed, there are many who would prefer singing the 'Inflammatus' from Rossini's 'Stabat Mater' to such a piece as 'Dove sono.' Many of the old Italian composers wrote music of a high *tessitura*, though it is true that the pitch was lower in their day than it is now. 'Deh! vieni, non tardar,' is an example of moderate *tessitura*, though it has a compass of two octaves. The *tessitura* of the vocal music in Beethoven's 9th Symphony is justly the singers' nightmare. [H.C.D.]

TETRACHORD (Gr. *τετράχορδον*). A system of four sounds, comprised within the limits of a Perfect Fourth.

It was for the purpose of superseding the cumbersome machinery of the Tetrachords upon which the old Greek Scale depended for its existence,¹ that

¹ A description of the Greek Tetrachords would be quite beside the purpose of the present article. Those who wish for a closer acquaintance with the peculiarities of the Greek Scale will do well to consult a little tract, by General Perronet Thompson, called 'Just Intonation' (London, Edinham Wilson, 11 Royal Exchange).

Guido d'Arezzo invented the series of Hexachords, which, universally accepted by the Polyphonic Composers of the Middle Ages, remained in constant use until the Ecclesiastical Modes were finally abandoned in favour of our present Scale;² and it is only by comparing these Hexachords with the divisions of the older system that their value can be truly appreciated. It is not pretended that they were perfect; but modern mathematical science has proved that the step taken by Guido was wholly in the right direction. The improvement which led to its abandonment was, in the first instance, a purely empirical one; though we now know that it rests upon a firm mathematical basis. The natural craving of the refined musical ear for a Leading Note led, first, to the general employment of a recognised system of 'accidental' sounds;³ and, in process of time, to the unrestricted use of the *Æolian* and *Ionian* Modes—the prototypes of our Major and Minor Scales. These changes naturally prepared the way for the unprepared Dissonances of Monteverde; and, with the introduction of these, the old system was suddenly brought to an end, and our present Tonality firmly established upon its ruins.

Our present Major Scale is formed of two Tetrachords, separated by a greater Tone: the Semitone, in each, occurring between the two highest sounds.

Our Minor Scale is formed of two dissimilar Tetrachords, also disjunct (i.e. separated by a greater Tone); in the uppermost of which the Semitone occurs between the two gravest sounds, as at (a); while, in the lower one, it is placed between the two middle ones; as at (b) (b).

This last Tetrachord maintains its form unchanged, whether the Scale ascend or descend; but, in the ascending Minor Scale, the upper Tetrachord usually takes the form of those employed in the Major Mode.

[W.S.R.]

TEUFELS LUSTSCHLOSS, DES (The Devil's Country-house). A comic opera in 3 acts, by Kotzebue, music by Schubert; composed between Jan. 11 and May 15, 1814, and re-written in the autumn. Act 2 was afterwards burnt. Acts 1 and 3 of the 2nd version are in the collection of Herr Nicolaus Dumba of Vienna. The overture was played by the London Musical Society, June 17, 1880, and at the Crystal Palace on Oct. 23 following. It contains a singular anticipation of the muted violin passage in the overture to

² See HEXACHORD.

³ See MUSICA FIOTA.

'Euryanthe.' The work will form no. 6 of Series XV, in the complete critical edition of Schubert, announced by Messrs. Breitkopfs. [G.]

TEUTSCHE. Mozart's way of spelling Deutsche, i.e. Deutsche Tänze—little German waltzes in 3-8 or 3-4, of which he, Beethoven, and Schubert, wrote many. For Schubert's 'Atzenbrucker Deutsche, July 1821,' see vol. iii. p. 334 b. The famous 'Trauer-Waltzer,' sometimes called 'Le Désir' (op. 9, no. 2), for long attributed to Beethoven, is a Teutsch. [ALLEMANDE, no. 2, vol. i. p. 55 b.] [G.]

THALBERG, SIGISMOND, one of the most successful virtuosi of this century, was born at Geneva—according to his biographer, Mendel, on May 5, according to Fétis on Jan. 7, according to a brother of his now established at Vienna, on Feb. 7, 1812. Being the son of Prince Dietrichstein, who had many wives without being married, Thalberg had several brothers of different family names. The one just mentioned is Mr. Leitzinger, three months older than Thalberg—a fact which speaks for itself. Another half-brother of his is Baron Denner. Thalberg's mother was the Baroness Wetzlar, a highly-educated lady, full of talent, who took the greatest care of Thalberg's early education. In Geneva he remained in the pension Siciliewski under the guidance of a governess, Mme. Denver, and the superintendence of his mother. This Mme. Denver, and Müller—a Frenchman, although his name be German—took Thalberg to Vienna to his father's palace. He was then just 10 years old. The Prince was so fond of him that he gave up an Ambassador's appointment to devote all his time to the education of 'Sigi' (this was his pet-name). Thalberg showed a great aptitude for music and languages, and was destined by his father to become a diplomatist, and with a view to this had the best masters to teach him. If a friendly—perhaps too friendly—source is to be credited, he made rapid progress, especially in Greek and geography, which may account for the curious collection of maps with which he adorned his room at Naples. His first success dates back so far as 1826, when he was 14 years old, and played at an evening party at Prince Clemens Metternich's, the then master of the diplomatic world, of whom it is said that, when a lady, a great patroness of music, asked him whether it was true that he was not fond of music, he replied:—'Oh, Madame, je ne la crains pas!' About Thalberg's piano teachers a number of divergent reports are current; but it is certain that he learned from Mittag, and that the great organist and harmonist, Sechter, the first German who simplified and most clearly demonstrated the principles of harmony, taught him counterpoint. Fétis's statements about Thalberg are not sufficiently verified. Czerny never taught him, though he gave five or six lessons to Franz Liszt. The first opportunity which offered for Thalberg's celebrity was in 1833, at a soirée given by Count Apponyi, then Austrian Am-

bassador at Paris, and later Austrian Ambassador in London. Thalberg was then 21 years old, of an agreeable aristocratic appearance, refined manners, very witty; only a trifle too much given to making puns, an amusement rather easy in French, and in which foreigners too much indulge. Kind-hearted, and uncommonly careful not to say an incautious word which might hurt any one's feelings, he became at once the ladies' pet—and what that means in Paris, those who know French society will not undervalue. His innovations on the piano were of the smallest possible importance; he invented forms and effects. He had wonderfully formed fingers, the forepart of which were real little cushions. This formation and very persevering study enabled Thalberg to produce such wonderful legatos, that Liszt said of him, 'Thalberg is the only artist, who can play the violin on the keyboard.' When he played for the first time in public, at Vienna, 1829, his touch and expression at once conquered the audience, but even then principally the ladies. In Paris his winning manners and the touch of scientific education, which with adroit modesty he knew how to show under pretence of concealing it, contributed as much as his talent to render him the talk of the day. Thalberg was so fond of music that he overcame Prince Dietrichstein's idea of a diplomatic career, by dint of earnest determination. He often left his bed at three o'clock in the morning to practise his piano, and those who heard him privately and knew him intimately were much more apt to estimate the ease with which he overcame difficulties, than those were who heard him play his compositions in public. Among all great piano-players, it should be said of him, as Catalani said of Sontag: 'His *genre* was not great, but he was great in his *genre*.' He was amiable, both as a man and as a performer. It was certainly a curious anomaly that while he so earnestly preached against the mania of the century to sacrifice everything to effect, the gist of his art, the aim and purpose of all his musical studies, was nothing but to produce effect.

In his career as a composer of operas, two events, both unfortunate, must be mentioned. His opera 'Cristina' was a dead failure. 'Florinda,' which was performed under Balfe's direction in London in 1851, with Cruvelli, Sims Reeves, Lablache, was, as an eyewitness states, by the best critics of the time found ugly, difficult to sing, uninteresting. Even the song which was the hit of the evening, so well sung by Sims Reeves that it created a genuine success, was, to say the least, unhandsome. The Queen and Prince Albert headed a most brilliant assembly, and everything was done that could make the work acceptable, but the thin stuff of the score could not be sustained. The story was badly told, the music devoid of interesting ideas, and so the fate of the opera was sealed; partly, it was asserted by Thalberg's friends, Mme. Cruvelli bore the fault of the non-success, because, not being pleased with her rôle, she deliberately sacrificed it, and at one moment hummed her air instead of singing it; so much so, that a person sitting in the front row of the

stalls, behind Balfe, who conducted, heard him call out to Crivelli, 'Sing properly, for if you do not respect yourself, you ought at least to respect the audience, and Her Majesty the Queen.'

But if Thalberg was not successful on the stage, it is but fair to say that his compositions for the piano not only combined novel effects both in form and arrangement, but real invention, because he had the talent, through adroit use of the pedal and new combinations, to make you believe that you heard two performers at the same time.

A catalogue at the end of this article gives a list of his piano compositions. It comprises more than ninety numbers, many of which earned glory and money for their author, and stamped him as a specialist for his instrument, the combined effects of which nobody had ever better understood. Robert Schumann was one of the composers for whom Thalberg entertained a perfect enthusiasm, although their natures both as musicians and men widely differed. It is undeniable that until 1830 the performers of Mozart, Beethoven, Hummel, Moscheles, etc., submitted their talent to the interpretation of the composer, whereas afterwards the sacrifice of the composer to the virtuoso became the fashion.

Thalberg married, not, as Fétis states, in 1845, but in 1843, at Paris, Mme. Boucher, the daughter of the famous Lablache, and widow of a painter of merit. He travelled through Belgium, Holland, England, and Russia in 1839, and Spain 1845, went to Brazil in 1855, North America 1856, and settled in Posilipo (Naples) in 1858. He appeared again in public in 1862, and in 1863 played in London, in concerts arranged by his brother-in-law, Frederic Lablache, after which he retired to Naples and lived as a landowner and winegrower. The writer saw him in his house at Posilipo, that wonderfully picturesque position above the Bay of Naples, opposite San Agata, and over all the property there was not a trace of a piano to be found. His collection of autographs (still apparently unsold) was of extraordinary interest and value. Thalberg died at Naples on April 27, 1871. He leaves a daughter (by an Italian singer, Mme. d'Angri), who resembles him much, and who broke what seemed to be a promising career as a prima donna by singing too early and straining her voice in parts too high for her tessitura, both common faults with present singers, who are always too anxious to reap before they have sown, and who fancy that shouting high notes to elicit injudicious applause is all that is required to make them renowned singers.

Schumann, in an access of ill-humour (*böser Laune*), says that Thalberg kept him in a certain tension of expectancy, not 'on account of the platitudes which were sure to come, but on account of the profound manner of their preparation, which warns you always when they are to burst upon you. He deceives you by brilliant hand and finger work in order to pass off his weak thoughts, and it is an interesting question how long the world will be pleased to put up with such me-

chanical music.' It was the *Grand Fantaisie* (op. 22) which so irritated Schumann. It once happened that while Mme. Schumann was playing Thalberg's waltzes, Schumann laid a few roses on the desk, which accidentally slipped down on the keyboard. By a sudden jump of the left-hand to the bass her little finger was wounded by one of the thorns. To his anxious inquiries she replied that nothing much was the matter, only a slight accident, which showed, like the waltzes themselves, no great suffering, only a few drops of blood caused by rose-thorns. Thalberg's first Caprice (E minor), says Schumann, contains a well-developed principal thought, and is sure to provoke loud applause; and he expresses the wish that Thalberg might furnish for the appreciation of the critic a piece thoroughly well-written throughout. His wrath however relents when speaking of Thalberg's Variations on two Russian airs. He finds the introduction, 'through which, every now and then, the child's song peeps like an angel's head, fanciful and effective.' 'Equally tender and flexible are the variations, very musicianlike, well-flowing, and altogether well rounded off. The finale, so short that the audience is sure to listen whether there is nothing more to come ere they explode in spontaneous applause, is graceful, brilliant, and even noble.' These expressions seem certainly enthusiastic enough, and scarcely bear out the severity of his judgment on the general qualities of the composer of the *Fantaisie*. (See 'Ges. Schriften,' i. 316; ii. 55).

Concerning Thalberg's fantasia on motifs from the 'Huguenots,' some of Erard's friends fancied that he had written the brilliant octave repetition variation to show off the *double échappement* of Erard. This is not very likely. Thalberg had one thing in view, and that only—to find new forms, new effects, new surprises for the public. Schumann says that in this fantasia Thalberg reminds him of Goethe's saying:—'Happy are those who by their birth are lifted beyond the lower stratum of humanity, and who need not pass through those conditions in which many a good man anxiously passes his whole life' (G. S. ii. 66).

Thalberg had the great art of composing works much more difficult in appearance than in reality. His studies, incomparably easier than those of Moscheles and Chopin, sound as brilliantly as if they required the most persevering labour to overcome their difficulties. That makes them grateful to play and pleasing to the ear. It has been said of the 'Etudes' that they are graceful work for ladies, 'for the tepid temperature of the drawing-room, not for the healthy atmosphere outside the house.' His studies and his 'Art du chant' are only specimens of what he could do best. It is in one or another form his full, light, energetic and singing touch. His studies are the expression of his successes, of his glory, and of his very industrious hard work. For be it well known, he studied perpetually. Thalberg was essentially the pianist of the French, who in art, politics, and life, have only one desire, 'Autre chose!' He was therefore continually forced to devise

some surprising effect, and thereby to find at every moment 'autre chose.' Schumann, who knew human nature well, says that to criticise Thalberg would be to risk a revolt of all the French, German, and foreign girls. 'Thalberg sheds the lustre of his performance on whatever he may play, Beethoven or Dussek, Chopin or Hummel. He writes melody in the Italian style, from eight bars to eight bars. He knows wonderfully how to dress his melodies, and a great deal might perhaps be said about the difference between real composition, and conglomeration in this new-fashioned style; but the army of young ladies advances again, and therefore nothing remains to be said but, He is a god, when seated at the piano.' (G. S. iii. 75.)

That Thalberg, like De Beriot, once took a grand motif of Beethoven and distorted it into 'effective variations,' enraged Schumann, as it must every true musician. His was a certain mission: elegance and effect; to pour a rain of rosebuds and pink diamonds into the eager listener's ear and enchant him for the moment—no more.

It is interesting to learn the opinion of two great authorities both in piano and composition, viz. Mendelssohn and Rubinstein, on the relative merits of Liszt and Thalberg. Mendelssohn, in his Letters, speaks of the 'heathen scandal (Heidenscandal) both in the glorious and the reprehensible sense of the word, which Liszt created at Leipsic.' He declares Thalberg's calm ways and self-control much more worthy of the real virtuoso. Compare this with Liszt's opinion of himself, when he has been heard to say, after Thalberg's immensely successful concerts, given at Vienna after his return from Paris, that 'he hoped to play as Thalberg did, when once he should be partly paralysed and limited to the use of one hand only.' Undoubtedly Liszt's execution was more brilliant, and particularly more crushing. The strings flew, the hammers broke, and thus Chopin said once to him, 'I prefer not playing in public, it unnerves me. You, if you cannot charm the audience, can at least astonish and crush them.' Mendelssohn continues, in his comparison of the two men, that Liszt's compositions are *beneath* his performance, since above all 'he lacks ideas of his own, all his writing aiming only at showing off his virtuosity, whereas Thalberg's "Donna del lago," for instance, is a work of the most brilliant effect, with an astonishing gradual increase of difficulties and ornamentation, and refined taste in every bar. His paw (*Pawst*) is as remarkable as the light deftness of his fingers. Yet Liszt's immense execution (*Technik*) is undeniable.' Now put against this, what Rubinstein said, when asked why in a Recital programme he had put Thalberg's Don Juan fantasia immediately after Liszt's Fantasia on motifs of the same opera: 'Pour bien faire ressortir la différence entre cet épicier et le Dieu de la musique.' Unnecessary to point out that with Rubinstein the 'God of music' is Liszt, and Thalberg the 'grocer.' Thalberg, a perfect aristocrat in look, never moved a muscle beyond his elbow.

His body remained in one position, and whatever the difficulties of the piece, he was, or at any rate he appeared, unmoved, calm, master of the keyboard, and what is more difficult, of himself. Liszt, with his long hair flying about at every arpeggio or scale, not to mention his restlessness when playing rapid octaves, studied his public unceasingly. He kept the audience well under his eye, was not above indulging in little comedies, and encouraging scenes to be played by the audience—for instance, that the ladies should throw themselves upon a glove of his, expressly forgotten, on the piano, tear it to bits and divide the shreds among themselves as relics! It gave a sensational paragraph! Thalberg thoroughly disdained such a petty course. In their fantasias—because, not until the gray hair adorned the celebrated Abbé's forehead, did his orchestral fertility assert itself—there was a marked difference to this effect: Liszt heaped, as Mendelssohn and Schumann said, difficulty upon difficulty, in order to furnish himself with a pretext for vanquishing them with his astounding mechanism. His smaller works, arrangements of Schubert's songs, Rossini's 'Soirées musicales,' etc., or the little Lucia fantasia—which so pleased Mendelssohn—with its arpeggios and shakes for the left hand excepted, there are very few that *le commun des martyrs* of the pianist-world could even attempt to play. In his Puritani fantasia and others there are sometimes shakes for the last two fingers, extending over several pages, which he himself played divinely, his shake with the little finger being most stupendous; but who else could do it? His concertos, unhandsome and unmusical, requiring a strength and execution very rarely to be met with, are not grateful, while Thalberg's compositions are so. In the latter, first of all, you find the fundamental basis of all music—singing. Where there is not one of those graceful little Andante-cantabile which he ordinarily puts at the beginning of his pieces, one finger is sure to sing a motif which the others in varied modes accompany. Whether the figure be that of chromatic scales as in the Andante, or the motif be surrounded with arpeggios as in 'Moïse,' or interwoven in scales as in the minuet of 'Don Juan,' or changing hands as in the Airs Russes, or specially brilliantly arranged for the left hand to play the motif, with accompanying chords written on two lines, while the right hand plays a brilliant variation noted on a third line, as in his fantasia on 'God save the Queen'—you always hear the two hands doing the work of three, sometimes you imagine that of four, hands.

Forty years ago photography had not reached its present place in artistic life—at least not portrait photography—and the likenesses of artists depended on the engraver: witness the wonderful portrait of Jenny Lind engraved at that date. At Vienna that was the grand time for the lithographers. Kaiser and the famous Kriehuber made the most successful portraits both of Thalberg and Liszt, especially of the latter, who courted advertisement of any kind, as

much as Thalberg treated it *infra dignitatem*. Kriehuber made a splendid portrait of Thalberg, though it seems never to have gone largely into the trade. In fact Thalberg never encouraged the hero-worship of himself in any shape.

Thalberg appeared at the Philharmonic Concerts in London on May 9 and June 6, 1836. He played at the first concert his Grand Fantasia, op. 1, and at the second his Caprice No. 2 in Eb.

The following is a list of his published compositions, in the order of their opus-number, from the 'Biographical Lexicon of the Austrian Empire' of Dr. von Wursbach (1882). The first three were published as early as 1828, when he was 16 years old.

| 22. Grand Fantaisie. | 65. Souvenir de Pesth. |
| 23. Sechs deutsche Lieder (19-24). | 66. Introd. et Var. sur la Barcarole de L'Elisir. |
| 24. Sechs ditto do. (25-30). | 67. Gr. Fantaisie (Don Pasquale). |
| 25. Sechs ditto do. (31-36). | 68. Fantaisie (Fille du Régiment). |
| 26. 13 Etudes. | 69. Trio. |
| 27. Gr. Fantaisie (God save the Queen and Rule Britannia) Ab. | 70. L'Art du chant appliqué au Piano. 4 Series containing 22 transcriptions. |
| 28. Nocturne (E). | 70 a. Ballade de Preciosa; trans. |
| 29. Sechs deutsche Lieder (37-42). | 70 b. Grand duo de Freischütz. |
| 30. Sechs ditto do. (43-48). | 71. Florinda, opéra. 6 Transcriptions. |
| 31. Scherzo (A). | 72 or 74. Home, sweet home! . . Variée. |
| 32. Andante in Db. | 73. The last rose of summer. . . Variée. |
| 33. Fantaisie (Möke). | 74. Lilly Dale . . Variée. |
| 34. Divertissement (Gipsy's Warning). | 75. Les Soirées de Pausilippa. 24 Pensées musicales, in 6 books. |
| 35. Grand Nocturne (F). | 76. Odebre Ballade. |
| 35 bis. Etrennes aux jeunes Pianistes. Nocturne. | 77. Gr. Fantaisie de Concert (Il Trovatore). |
| 36. (1) La Cadence. Impromptu (A minor). (2) Nouv. Etude de Perfection. (3) Mi manca la voce (Ab). (4) La Romanesca. (5) Canzonette Italienne. (6) Romance sans paroles. | 78. Ditto. do. (Traviata). |
| 37. Fantaisie (Oberon). | 79 a. 3 Melodies de F. Schubert transcrites. |
| 38. Romance et Etude (A). | 79 b. Romance dramatique. |
| 39. Souvenir de Beethoven. Fantaisie (A minor). | 80. La Napolitaine. Danse. |
| 40. Fantaisie (Donna del Lago). | 81. Souvenir du Ballo in Maschera. |
| 41. 2 Romances sans paroles. | 82. Ditto de Rigoletto. |
| 42. Gr. Fantaisie (Serenade et Menuet, D. Juan). | 83. Air d'Amazilly (Fernand Cortez). |

Unnumbered pieces.—Auf Flügeln (Mendelssohn) transcr.—2 Morceaux sur Lucresia.—Arietta, 'No so fremar.'—Zwei Gedichte.—Thalberg and Panofka, Grand Duo.—Graciosa, Rom. sans paroles.—Nocturne in D.—Romance variée in Eb.—Viola, Melodia.—Thalberg Galoppe.—La Berceuse.—Le fils du Corsic.—Pauline, Valse.—Larmes d'une jeune fille.—Pianoforte School.

[L.E.]

THAYER, ALEXANDER WHEELOCK, the biographer of Beethoven, was born near Boston, U.S.A., at South Natick, Massachusetts, Oct. 22, 1817, and is descended from original settlers of 1629. In 1843 he graduated at Harvard University, took the degree of Bachelor of Laws there, and was for a few years employed in the College library. In 1849 he left America for Europe, and remained for more than two years in Bonn, Berlin, Prague, and Vienna, studying German, corresponding with newspapers at home, and collecting materials for a life of Beethoven, the idea of which had presented itself to him while at Harvard, and which has since been his one serious pursuit for 30 years. In 1852 he tried journalism on the staff of the New York 'Tribune,' but only to the detriment of his health. 'Dwight's Journal of Music' was started at Boston in April 1852, and Thayer soon became a prominent and favourite writer therein. In 1854 he returned to Germany, and worked hard at the rich Beethoven materials in the Royal Library at Berlin for nearly a year. Ill-health and want of means drove him back to Boston in 1856, and amongst other work he there catalogued the musical library of Lowell Mason. In the summer of 1858, by Mason's help, he was enabled to cross once more to Europe, remained for some months in Berlin and Frankfurt on the Oder, and in 1859 arrived at Vienna more inspired than ever for his mission. A severe and able review of Marx's Beethoven in the 'Atlantic Monthly,' republished in German by Otto Jahn, had made him known in Germany, and henceforth the Biography became his vocation. The next year was passed in Berlin, Vienna, Gratz, Linz, Salzburg, Frankfurt, Bonn, etc., in intercourse with Hüttenbrenner, Wegeler, Schindler and other friends of Beethoven, in minute investigation of documents, and in a fruitless visit to Paris for the sake of papers elucidating the history of Bonn. His next visit was to London, where he secured the reminiscences of Neate, Potter, and Hogarth (Neate's particularly valuable), and received much substantial kindness from Chorley. From England he returned to Vienna, and in 1862 accepted a small post in the U.S. Legation there, afterwards exchanged for that of U.S. Consul at Trieste, where he still resides. His book is entitled 'Ludwig van Beethoven's Leben.' It was written in English, translated into German by Herr H. Deiters of Bonn, and published by Weber of Berlin—vol. 1 (1770-1796) in 1866; vol. 2 (1792-1806) in 1872; vol. 3 (1807-1816) in 1879. Vol. 4 is in preparation, but can hardly finish the work, since 11 full and complicated years are still left to be described.

The quantity of new letters and facts, and of rectifications of dates, contained in the book is very great. For the first time Beethoven's life is placed on a solid basis of fact. At the same time Mr. Thayer is no slavish biographer. He views his hero from a perfectly independent point of view, and often criticises his caprice or harshness (as in the cases of Mälzel and

Johann Beethoven) very sharply. When the work is completed it will be a mine of accurate information, indispensable for all future students. With some condensations an English edition would be very welcome.

Besides the Biography, Mr. Thayer is the author of countless articles in American newspapers; of 'Signor Masoni' (Berlin, Schneider, 1862); of 'Ein kritischer Beitrag zur Beethoven-Literatur' (Berlin, Weber, 1877); and of 'The Hebrews and the Red Sea' (Andover, Mass., Draper). [G.]

THEATRE. A term usually employed in England for a house in which plays are acted, in contradistinction to an opera-house, in which musical pieces are performed. Abroad this distinction, either of house or word, does not prevail to at all the same extent as here. [G.]

THEILE, JOHANN, known to his contemporaries as 'the father of contrapuntists,' the son of a tailor, was born at Naumburg, July 29, 1646, learned music under great difficulties at Halle and Leipzig, and became a pupil of the great Heinrich Schütz. In 1673 he became Capellmeister to the Duke of Holstein at Gottorp, and in 1678 produced a Singspiel, 'Adam and Eva,' and an opera, 'Orontes,' at Hamburg. In 1685 he became Capellmeister at Wolfenbüttel, then went to Merseburg and finally back to his native town, where he died in 1724. Buxtehude, Hasse, and Zachau were all his scholars. His principal works are a German Passion (Lübeck 1675); a Christmas Oratorio (Hamburg, 1681, MS.); 'Noviter inventum opus musicalis compositionis 4 et 5 vocum,' etc.—20 masses in Palestrina style; Opus secundum—instrumental; two treatises on double counterpoint, 1691. Körner has printed in the 'Orgel-virtuoe' No. 65 a chorale by Theile, which is characterised by Spitta (Bach, i. p. 98) as 'very scientific but intolerably pedantic and stiff.' No other work of his appears to have been reprinted. [G.]

THEMATIC CATALOGUE. A catalogue of musical works, in which, in addition to the title and other particulars of each, the first few bars—the *theme*—either of the whole work or of each movement are given in musical notation.

1. The earliest published list of this description was in six parts, issued between 1762 and 1765, and 16 supplements extending from 1766 to 1787, the whole forming a thick 8vo. volume of 792 pages. Part I is signed by Johann Gottlob Immanuel Breitkopf, the virtual founder of the great firm. [See vol. i. p. 272.] It is mentioned by Burney in his Musical Tour (ii. 74).

2. Haydn, towards the end of his life (1797), made a thematic catalogue of a large number of his works. This has not been printed, but copies have been made by Dehn, Otto Jahn, and others. It is now superseded by the complete thematic list which forms so valuable a part of Mr. C. F. Pohl's 'Life of Haydn' (i. 284, etc.; 317, etc.; 334; 345; ii. Anhang).

3. A thematic catalogue has been preserved, in

which Mozart entered his works as he composed them, from Feb. 9, 1784, to Nov. 15, 1791. This interesting document was published by Andre in Nov. 1828. The title, in Mozart's hand, runs as follows:—

Verzeichniss
aller meiner Werke
vom Monath Febraro 1784 bis Monath 1

Wolfgang Amade Mozart.

It contains 145 works, begins with the PF. concerto in Eb (K. 449), 'gte Hornung,'¹ 1784, and ends with the 'kleine Freymaurer Kantate,' Nov. 15, 1791—nineteen days before his death.

4. A thematic catalogue of the MSS. by Mozart then in the hands of Andre—an octavo pamphlet of 79 closely printed pages—was published by him at Offenbach on May 1, 1841; one of 172 important symphonies and overtures was issued by Hofmeister in 1831; and one of Mozart's PF. sonatas, prepared by Edward Holmes, by Messrs. Novello & Co. in 1849.

5. In 1851, Breitkopf & Härtel published their first thematic catalogue of Beethoven's works. This was a thick volume of 167 pages, large 8vo, and a great advance on anything before it. It is arranged in order of opus-numbers, with names of dedicatees and publishers, arrangements, etc. The 2nd edition, 1868, is much enlarged (220 pages) by the addition of many interesting particulars, dedications, dates of composition, etc. It is in fact a new work, and is a model of accuracy, as may be inferred from the name of its compiler, Gustav Nottebohm. So is the Catalogue of Schubert by the same indefatigable explorer and critic—288 pages, published by Schreiber, Vienna, 1874, dealing both with the published and the unpublished works, and extraordinarily accurate considering the immense difficulties involved. Catalogues of Mendelssohn, Schumann, Chopin, and Liszt have been published by Breitkopf; of Moscheles by Kistner; and of Bach's instrumental works in Peters's collected edition (by A. Dörffel, Aug. 1867).

Two Catalogues stand apart from the rest owing to the vast amount of information that they contain, and still more to the important fact that they are arranged in the chronological order of the composition of the works—the only real method of contemplating the productions of a composer. These are Von Köchel's 'Chronologisch-thematisches Verzeichniss' of all Mozart's works (Breitkopfs, 1862, 551 pages), and Jähns's 'Carl Maria von Weber in seinen Werken. Chron. Them. Verzeichniss,' etc. (Schlesinger, 1871—480 pages, and 8 pages more of facsimiles of handwriting). These two works (the latter perhaps a trifle overdone) are indispensable to all students. [G.]

THEME—i.e. Subject, or Text (Ital. *Il Tema*,² *Il Soggetto*, *Il Motivo*; Germ. from Lat. *Thema*, from Ital. *Motiv*; Fr. *Thème*, *Air*). A term only to be applied, in its fullest significance, to the principal subject of a musical composition;

¹ The old German term for February.

² Used thus, with the masculine article, in order to distinguish it from *La Tema* (fear).

although, in general language, it is frequently used to denote a Subject of any kind, whether of a leading or subsidiary character. From the time of Sebastian Bach to our own, the terms Theme and Subject have been used with much looseness. In his 'Musikalisches Opfer,' Bach designates the Motivo given to him by Frederick the Great as 'Il Soggetto reale,' in one place, and 'Thema regium' in another; thus proving, conclusively, that he considered the two terms as interchangeable. But, in another work, founded on a Motivo by Legrenzi, he calls the principal Subject 'Thema,' and the Counter-Subject 'Subiectum'; and this is unquestionably the more correct method of using the terms. [See SUBJECT, vol. iii. p. 749.]

A familiar application of the word 'Thema' is found in connection with a Subject followed by Variations; as, 'Tema con Variazioni,' with its equivalent in other languages. In the 18th century, this form of composition was called 'Air et Doubles'; the substitution of the word 'Doubles' for 'Variations,' clearly owing its origin to the then almost universal custom of writing the two first Variations in the Second and Third Orders of Counterpoint—that is to say, in notes the rapidity of which was doubled at each new form of development. [W.S.R.]

THEORBO (Fr. *Théorbe*, *Tuorbe*; Ital. *Tiorba* or *Tuorba*, also *Archilute*). The large double-necked lute with two sets of tuning pegs, the lower set holding the strings which lie over the fretted finger-board, while the upper set are attached to the bass strings, or so-called diapasons, which are used as open notes. The illustration has been engraved from a specimen at South Kensington Museum. According to Baron's 'Untersuchung des Instruments d. Lauten' (Nürnberg 1727, p. 131), the Paduan theorbo was the true one. The English Archlute of that time, so frequently named as an alternative to the harpsichord or organ for the Basso Continuo or 'Through Base' accompaniment, was such a theorbo, and we must, on Baron's authority, allow it a deeper register than has been stated in the article **ARCHLUTE** [vol. i. p. 81]. He gives

—eight notes on the fingerboard and nine off. This is the old lute-tuning of Thomas Mace ('Musick's Monument,' London 1676), who says (p. 207) that the theorbo is no other than the old English lute. But early in the 17th century many large lutes had been altered to theorbos by substituting double necks for the original single ones. These altered lutes, called, according to Mersenne, 'luth téorbé' or 'luto attiorbato,' retained the double strings in the bass. The theorbo engraved in Mersenne's 'Harmonie Universelle' (Paris, 1636) is really a theorboed lute. He gives it the following accordance:—

The Chanterelle single. For the 'Tuorbe' as practised at Rome the same authority gives (p. 88)—

In the musical correspondence of Huygens, edited by Jonckbloet and Land, and published (1882) at Leyden, is to be found a letter of Huygens wherein he wishes to acquire a large lute, to elevate it to the quality of a theorbo, for which he considered it from its size more fit. The same interesting work enables the writer to make some corrections to LUTE. [See vol. ii. p. 177 b.] It was Charles I who bought a Laux Maler lute for £100 sterling, and gave it to his lutenist, whose name should be spelt Gaultier.¹ The lute had belonged to Jehan Ballard, another famous lutenist who never would part with it. The King bought it of his heir. Two other corrections in the same article may be here appropriately introduced. As M. Chouquet has pointed out, the wood of old lutes could not be used for repairing fiddles. What happened was, the lutes were transformed into Vielles or Hurdy-gurdies. Professor Land suggests that Luther is a local name. Lutemaker in German would be Lauter. The drawing of the Maler lute, vol. ii. p. 176, shows a guitar head and single stringing, which became adopted before the lute went entirely out. Following Gaultier in the Huygens correspondence, Maler's period was about 1500–20, later than the date given by Carl Engel.

Prætorius ('Organographia,' Wolfenbüttel 1619, p. 50), with whom Mersenne agrees, states that the difference between lute and theorbo is that the lute has double and the theorbo single basses. The Paduan theorbo is about 4 ft. 7 ins. high. Prætorius, in the work referred to

¹ Huygens met Gaultier in England, in 1622 at the Killigrews, whose musical room he remembered all his life.

(p. 52), seems to prefer the Roman theorbo or CHITARRONE, which, although according to his measurement about 6 ft. 1 in. in height, is not so broad in the body or so awkward to hold and grasp as the Paduan. Baron praises especially the Roman theorbos of Buchenberg or Buckenberg, a German lute-maker, who was living at Rome about A.D. 1606. His instruments had 'ovalround' bodies of symmetrical form and a delicate and penetrating metallic *timbre*; a criterion of good tone in a stringed instrument.

Mace regards the lute as a solo instrument, and the theorbo as a concert or accompanying instrument: the name theorbo, however it originated, certainly became fixed to the double-necked lute; which first appeared with the introduction of opera and oratorio, when real part-playing was exchanged for the chords of the figured bass. Mersenne ('*Harmonicorum*,' lib. xii. Paris, 1636) calls it 'Cithara bijuga.' One account credits the invention of the double neck to a Signor Tiorba about 1600. Athanasius Kircher ('*Musurgia*,' Rome 1650, cap. ii. p. 476) attributes the introduction of the theorbo to a Neapolitan market follower, who gave it the name in a joke. His idea, says the same authority, was brought to perfection by a noble German, Hieronymus Capsberger. M. Victor Mahillon, in his catalogue of the Brussels Museum (1880, p. 249), names as the inventor, a Roman called Bardella (properly Antonio Naldi) who was in the service of the Medici, and was much praised by Caccini in the preface to '*Nuove Musiche*' (A.D. 1601). These attributions all centre in the same epoch, that of the rise of accompaniment. The theorbo was last written for by Handel, as late as 1732, in the oratorio of 'Esther,' in combination with a harp, to accompany the song 'Breathe soft, ye winds,' a fact which would seem to support Mace's view of its being an orchestral instrument. The Archliuto also appears in 'Deborah,' 1733, in 'Gentle Airs.' It remained in occasional use until the end of the 18th century. Breitkopf's Thematic Catalogue for 1769 contains eight pages of 'Partite per il Liuto solo.'

The drawing to ARCHLUTE and CHITARRONE should be referred to. [A.J.H.]

THEORY. A term often used in England to express the knowledge of Harmony, Counterpoint, Thorough-bass, etc., as distinguished from the art of playing, which is in the same way called 'Practice.' 'The theory and practice of music' is an expression often heard, and to be interpreted as above. [G.]

THESIS (from *thesis*, a putting down), an ancient musical term, the opposite of *ARISIA*. [See vol. i. p. 95b]. It is now only occasionally employed for the down-beat of the bar in conducting. [G.]

THESPIS, OR THE GODS GROWN OLD. Comic opera in 2 acts; words by W. S. Gilbert, music by Arthur Sullivan. Produced at the Gaiety Theatre, Dec. 23, 1871, the tenor part being taken by Mr. Toole. It ran 80 nights con-

secutively, but has not been revived. Thespis was the first of the series of Gilbert-Sullivan pieces which have proved so popular. [G.]

THIBAUT, ANTON FRIEDRICH JUSTUS, born Jan. 4, 1772, at Hameln on the Weser, studied law at Göttingen, became tutor at Königsberg, and law-professor at the University of Kiel, then at Jena, and in 1805 at Heidelberg, where he remained till his death, March 25, 1840. The Archduke of Baden made him Geheimrath. He was an ardent admirer of the old Italian church-composers, especially of Palestrina, and founded a society for the practice of such music at his own house.¹ The performances took place before a select circle of invited guests, and were distinguished for their variety, Thibaut placing at their disposal the whole of his valuable and scarce collection of music. After his death Heidelberg no longer took the same interest in the Palestrina school, but in the meantime a large proportion of the professors and amateurs of Germany had become familiarised with one of the noblest and most elevating branches of the art. Mendelssohn for instance writes with the greatest enthusiasm about Thibaut, 'There is but one Thibaut,' he says, 'but he is as good as half a dozen. He is a man.' Again, in a letter to his mother from Heidelberg, dated Sept. 20, 1827, is the following characteristic passage. 'It is very singular, the man knows little of music, not much even of the history of it, he goes almost entirely by instinct; I know more about it than he does, and yet I have learned a great deal from him, and feel I owe him much. He has thrown quite a new light on the old Italian church music, and has fired me with his lava-stream. He talks of it all with such glow and enthusiasm that one might say *his speech blossoms*. I have just come from taking leave of him, and as I was saying that he did not yet know the highest and best of all, for that in John Sebastian Bach the best of everything was to be found, he said Good-bye, we will knit our friendship in Luis da Vittoria (Palestrina's favourite pupil, and the best exponent of his traditions) and then we shall be like two lovers, each looking at the full moon, and in that act no longer feeling their separation.'²

One of Thibaut's greatest services to the cause of art was his collection of music, which included a very valuable series of Volkslieder of all nations. The catalogue was published in 1847 (Heidelberg) and Thibaut's widow endeavoured to sell it to one of the public libraries of Germany, but was unable to do so till 1850, when it was acquired for the court library of Munich. Of still greater value is his book '*Ueber Reinheit der Tonkunst*' (Heidelberg 1825, with portrait of Palestrina; 2nd edition 1826). The title does not indicate (as his friend Bähr observes in the preface to the 3rd edition, 1853) purity either of construction or execution, but purity of the art

¹ From this, Gervinus seems to have taken the idea of his Society for the cultivation of Handel's music.

² See '*The Mendelssohn Family*,' vol. i. p. 132.

itself. Music was to him an elevating, I might say a moral, art, and this treatise may justly claim to have exercised a moral influence. Thibaut maintains that as there is music which acts as a powerful agent in purifying and cultivating the mind, so there is music which has as depraving an influence as that exercised by immoral literature. From this point of view he urges the necessity of purity in music, and sets himself firmly against all that is shallow, common, unhealthy or frivolous. But this is difficult ground. His idea of impurity may be gathered from the fact that in the essay on instrumentation he unhesitatingly condemns the flutes, clarinets, and bassoons, added by Mozart to 'The people that walked in darkness,' urging that they entirely change the character of the piece. He also strongly censures the frequent changes of tempo and expression by which Mozart gives colour to his splendid motet 'Misericordias Domine.' The remaining articles are on the following topics:—The Chorale; Church-music outside the Chorale; Volksesänge; The study of models as a means of culture; Instrumentation as a means of effect; the great masters compared; Versatility; Corruptions of the text; and Choral unions. It is not too much to say that this book, dealing as it does in a spirit of great earnestness with questions which are at this moment agitating the musical world, will always be of interest. The last German edition came out in 1861. The English version ('Purity in Musical Art,' John Murray 1877) is by Mr. W. H. Gladstone, son of the Premier. [F.G.]

THILLON, ANNA, was born in 1819 in London. Her father's name was Hunt. At the age of fourteen she left England for France with her mother and sister, and received instruction from Bordogni, Tadolini, and M. Thillon, conductor of the Havre Philharmonic Society, whom she married at the early age of fifteen. She appeared at Havre, Clermont, and Nantes, with such success as to obtain an engagement at the Théâtre de la Renaissance, Paris (Salle Ventadour), where she made her *début* Nov. 15, 1838, as the heroine, on the production of Grisar's 'Lady Melvil.' She was very popular in that and several new operas, as Argentine in 'L'Eau Merveilleuse,' Grisar; Dénise in 'La Chasse Royale,' Godefroid; La chaste Suzanne, Monpou; etc. Her voice was a 'soprano sfogato' of marvellous timbre, from Bb below the stave to Eb in alt., and, combined with her personal charms, it obtained for her the favour of the public in a remarkable degree. In August 1840 she first appeared at the Opéra Comique as Mathilde in 'La Neige.' She next played Elizabeth in 'Lestocq,' and became a great favourite with Auber, who gave her instruction, and composed 'Les Diamans de la Couronne' (produced March 6, 1841) expressly for her. She also sustained the parts of Bianca di Molina and Casilda in his 'Duc d'Olonne' and 'Part du Diable' on their production. Mme. Thillon also created Geraldine ('Les Puits d'Amour'), Balfe; Corilla ('Cagliostro'), Adam; Marquise de Gèvres ('Sainte Cecile'); Montfort;

and played Laurette on the revival of Grétry's 'Richard Cœur de Lion.' On May 2, 1844, she first appeared in public in England at the Princess's in the 'Crown Diamonds,' and met with extraordinary success, both on account of her voice, her charming acting and attractive manners; and the opera, then first produced in England, ran to the end of the season. She was also well received at the Philharmonic and other concerts. She afterwards appeared in England in 45 and 46 at Drury Lane, playing Stella in the 'Enchantress,' on its production May 14, 45, a part composed expressly for her by Balfe; in 46 at the Haymarket in 'Le Domino noir' and 'L'Eau merveilleuse'; and in 48 at the Princess's in 'La Fille du Regiment.' She also played at Brussels and in the French and English provinces, and from 51 to 54 in America, first introducing opera at San Francisco. She reappeared in 54 at Jullien's concerts, after which she was only heard at intervals, on account of a severe throat attack. Her last appearances in opera were in 1856 at the Lyceum as La Catarina. The performances ended abruptly on account of her illness. She was last heard in public at Kuhe's Festival of 1867. She and her husband now reside at Torquay. [A.C.]

THIRD. One of the most important intervals in modern music, since, by one or other of its principal forms, it supplies the means of definition in all the most characteristic chords. Three forms are met with in modern music—major, minor, and diminished. The first of these occurs most characteristically in the major scale between the Tonic and the Mediant—as between C and E in the key of C (a). It is also an important factor in the Dominant chord, whether in the major or minor mode—as between G and B in the Dominant of the key of C (b). The minor third occurs most characteristically in the minor scale as the converse to the principal major third in the major scale; that is, between Tonic and Mediant; as C and Eb in C minor (c). It also makes its appearance characteristically in the chord of the subdominant—as F-Ab in C minor (d); but both this minor third and the major

third of the dominant chord are sometimes supplanted by major and minor thirds respectively for the convenience of melodic progression in the minor mode. In all fundamental discords, such as the Dominant seventh and Dominant major and minor ninths, the first interval from the root-note in the original position of the chord is a major third.

The major third is well represented in the series of partial tones or harmonics, by the tone which comes fourth in order, and stands in the second octave from the prime tone or generator.

The ratio of the sounds of the major third is 4:5, and that of the minor third 5:6. Thirds were not accepted by the ancients as consonances,

and when they began to come into use in the early middle ages as so-called imperfect consonances the major third used was that commonly known as the Pythagorean third, which is arrived at by taking four fifths from the lower note. The ratio of this interval is 64:81, and it is therefore considerably sharper than the just or natural third; while the major third of equal temperament generally used in modern music lies between the two, but a little nearer to the Pythagorean third.

The resultant tones of thirds are strong. That of the major third is two octaves lower than the lowest of the two notes, and that of the minor third two octaves and a major third.

Diminished thirds are rough dissonances; they occur in modern music as the inversions of augmented sixths, as F♯—A♭ (e); and their ratio is 225:256. They are of powerful effect, but are sparingly used by great masters of the art. They rarely appear in the position of actual thirds, but more commonly in the extended position as diminished tenths. [C.H.H.P.]

THIRLWALL, JOHN WADE, born Jan. 11, 1809, at a Northumbrian village named Shilbottle, was the son of an engineer who had been the playmate of George Stephenson. He appeared in public before he was 8 years old, at the Newcastle Theatre, afterwards became music director at the Durham Theatre, and was engaged by the Duke of Northumberland to collect Northumbrian airs. He subsequently came to London, was employed in the Opera band, and was music director at Drury Lane, the Haymarket, Olympic, and Adelphi Theatres successively. After the death of Nadaud in 1864 he was appointed conductor of the ballet music at the Royal Italian Opera. In 1843 he composed the music for 'A Book of Ballads,' one of which, 'The Sunny Days of Childhood,' was very popular; also many songs, violin solos, and instrumental trios. He was for some time music critic to the 'Pictorial Times,' 'Literary Gazette,' and 'Court Circular.' Besides music he cultivated poetry and painting, and in 1872 published a volume of poems. He died June 15, 1875.

His daughter and pupil, ANNIE, a soprano singer, first appeared at the National Concerts, Exeter Hall, in 1855. On Feb. 4, 1856, she first performed on the stage at the Strand Theatre, whence she removed to the Olympic, Oct. 12, 1856. In Oct. 1859 she joined the Pyne and Harrison company at Covent Garden. A few years afterwards she became the leading member of an English-Opera company which performed in the provinces, and retired in 1876. [W.H.H.]

THOINAN, ERNEST, the *nom de plume* of Ernest Roquet, a distinguished amateur and collector of works on music. From collecting he advanced to writing, first as a contributor to 'La France musicale,' 'L'Art musical,' and others. His essays in these periodicals he has since published:— 'La Musique à Paris en 1862' (Paris, 1863); 'L'Opera des Troyens au Père La chaise' (1863); 'Les origines de la Chapelle musique des souverains de France' (1864); 'Les deplora-

tions de Guillaume Crestin' (1864); 'Mangars' (1865); 'Antoine de Consu' (1866); 'Curiosités musicales' (1866); 'Un Bisaieul de Molière: recherches sur les Mazuel' (1878); Louis Constantin, roi des violons' (1878); 'Notes bibliographiques sur la guerre des Gluckistes et des Piccinnistes' (1878). These pamphlets contain much curious information, and many corrections of Fétis's mistakes. He has also republished the very scarce 'Entretien des musiciens,' by Annibal Gantaz (1878), with notes and explanations. He has in preparation a book on Lully, said to embody many unpublished documents. [G.C.]

THOMAS, ARTHUR GOBING, born at Ratton, Sussex, in November, 1851, was educated for another profession and did not begin to study music seriously until after he came of age. In 1875 he went to Paris, and studied for two years under M. Emile Durand. On his return to England he entered the Royal Academy, studied there for three years under Messrs. Sullivan and Prout, and twice gained the annual prize for composition. His principal compositions are an opera in 3 acts (MS.), libretto by Mr. Clifford Harrison, on Moore's poem 'The Light of the Harem'; four Concert-scenas, two of which have been performed in London and one at the Crystal Palace; an anthem for soprano solo, chorus, and orchestra, performed at St. James's Hall in 1878; some detached pieces for orchestra; ballet music, etc.; a number of songs; and a cantata, 'The Sun-worshippers,' given with success at the Norwich Festival in 1881. His 4-act opera, 'Esmeralda,' words by Randegger and Marzials, was produced by Carl Rosa at Drury Lane, March 26, 1883, with great success, and has since been reproduced at Cologne. [W.B.S.]

THOMAS, CHARLES AMBROISE, eminent French composer, born at Metz, Aug. 5, 1811. The son of a musician, he learnt his notes with his alphabet, and while still a child played the piano and violin. Having entered the Paris Conservatoire in 1828, he carried off the first prize for piano in 1829, for harmony in 1830, and the Grand Prix in 1832. He also studied the piano with Kalkbrenner, harmony with Barbereau, and composition with the venerable Lesueur, who used to call him his 'note sensible' (leading-note), because he was extremely sensitive, and the seventh of his pupils who had gained the Prix de Rome. His cantata 'Hermann und Ketty' was engraved, as were also the works composed during his stay in Italy, immediately after his return. The latter comprise a string-quartet and quintet; a trio for PF., violin, and cello; a fantasia for PF. and orchestra; PF. pieces for 2 and 4 hands; 6 Italian songs; 3 motets with organ; and a 'Messe de Requiem' with orchestra.

Early works of this calibre gave promise of a musician who would work hard, produce much, and by no means rest content with academical honours. He soon gained access to the Opéra Comique, and produced there with success 'La double Echelle,' 1 act (Aug. 23, 1837); 'Le

Perruquier de la Régence,' 3 acts (March 30, 1838); and 'Le Panier fleuri,' 1 act (May 6, 1839). Ambition however prompted him to attempt the Académie, and there he produced 'La Gipsy' (Jan. 28, 1839), a ballet in 3 acts, of which the 2nd only was his; 'Le Comte de Carmagnola' (April 19, 1841); 'Le Guerillero' (June 2, 1842), both in 2 acts; and 'Betty' (July 10, 1846), ballet in 2 acts: but it was hard for so young a composer to hold his own with Auber, Halévy, Meyerbeer, and Donizetti, so Thomas returned to the Opéra Comique. There he composed successively 'Carline,' 3 acts (Feb. 24, 1840); 'Angélique et Médor,' 1 act (May 10, 1843); 'Mina,' 3 acts (Oct. 10, 1843); 'Le Cald,' 2 acts (Jan. 3, 1849); 'Le Songe d'une nuit d'été,' 3 acts (April 20, 1850); 'Raymond,' 3 acts (June 5, 1851); 'La Tonelli,' 2 acts (March 30, 1853); 'La Cour de Célimène,' 2 acts (April 11, 1855); 'Psyché,' 3 acts (Jan. 26, 1857, revived with additions May 21, 1878); 'Le Carnaval de Venise,' 3 acts (Dec. 9, 1853); 'Le Roman d'Elvire,' 3 acts (Feb. 3, 1860); 'Mignon,' 3 acts (Nov. 17, 1866); and 'Gille et Gillotin,' 1 act, composed in 1861, but not produced till April 22, 1874. To these must be added two cantatas composed for the inauguration of a statue to Lesueur at Abbeville (Aug. 10, 1852), and for the Boieldieu centenary at Rouen (June 13, 1875); a 'Messe Solennelle' (Nov. 22, 1857), a 'Marche Religieuse' (Nov. 22, 1865) composed for the Association des Artistes Musiciens; and a quantity of part-songs and choral scenes, such as 'France,' 'Le Tyrol,' 'L'Atlantique,' 'Le Carnaval de Rome,' 'Les Traineaux,' 'La Nuit du Sabbat,' etc. The life and dramatic movement of his unaccompanied part-songs for men's voices showed the essentially dramatic nature of M. Thomas's genius, which after enlarging the limits of opéra comique, found a congenial though formidable subject in 'Hamlet,' 5 acts (March 9, 1868). The Prince of Denmark was originally cast for a tenor, but there being at that time no tenor at the Opéra capable of creating such a part, Thomas altered the music to suit a baritone, and entrusted it to Faure. The success of this great work following immediately on that secured by 'Mignon,' pointed out its composer as the right man to succeed Auber as director of the Conservatoire¹ (July 6, 1871). The work he has done there—daily increasing in importance—has been already described. [See CONSERVATOIRE, vol. i. 393.] A post of this nature leaves scant leisure for other employment, and during the last twelve years M. Thomas has composed nothing beyond the solfegios and exercises for the examinations, except one opera 'Françoise de Rimini' (April 14, 1882), the prologue and fourth act of which are entitled to rank with his 'Hamlet.'

The musical career of Ambroise Thomas may be divided into three distinct periods. The first period extended to 1848, and, taking 'Mina' and 'Betty' as specimens, its main characteristics

¹ He had been Professor of Composition since 1862, and a member of the Institute from 1861.

were elegance and grace. The second began with the opéra bouffe 'Le Cald,' the refined wit of which was a protest against the hackneyed phrases and forced declamation of the Italian school, and continuing with 'Le Songe d'une Nuit d'été,' 'Raymond,' and 'Psyché,' all works novel in form, and poetic in idea, ended in 1861. The last 20 years include 'Mignon,' 'Hamlet,' and 'Françoise de Rimini,' all full of earnest thought, and showing continuous progress.

Carrying forward the work begun by Hérold, he brings to his task an inborn instinct for the stage, and a remarkable gift of interpreting dramatic situations of the most varied and opposite kinds. His skill in handling the orchestra is consummate, both in grouping instruments of different *timbre*, and obtaining new effects of sound; but though carrying orchestral colouring to the utmost pitch of perfection, he never allows it to overpower the voices. With a little more boldness and individuality of melody this accomplished writer, artist, and poet—master of all moods and passing in turn from melancholy musings to the liveliest banter—would rank with the leaders of the modern school of composers; as it is, the purity and diversity of his style make him a first-rate dramatic composer.

Ambroise Thomas is one of the few survivors of a society of eminent artists—Gatteaux, Baltard, Hippolyte Flandrin, Alexandre Hesse, and many others—who gathered round Ingres as their head. Intimate from his youth with the family of Horace Vernet, he was much in good society, though it would be unfair to call him devoted to it. Tall, slender, and fond of physical exertion, he enjoys country life, but he is also known as a connoisseur of old furniture and *bric-a-brac*, and an assiduous frequenter of the Hotel Drouot. Indeed his rooms at the Conservatoire, his villa at Argenteuil, and his island retreat at Zilliec in Brittany, may almost be called museums. M. Thomas was made a Grand Cross of the Legion of Honour in 1880.

There is a fine oil-painting of him by Hippolyte Flandrin, a terra-cotta bust by Doublemard, and a marble bust and medallion, the last a striking likeness, by Oudiné. [G.C.]

THOMAS, HAROLD, born at Cheltenham, July 8, 1834, a favourite pupil of Sterndale Bennett, under whom he was placed at the Royal Academy of Music at a very early age. His other masters were Cipriani Potter (theory), and Henry Blagrove (violin). He made his first appearance as a pianist at a Royal Academy Concert, May 25, 1850, and after this appeared frequently at the same concerts, both as pianist and composer. In 1858, Mr. Thomas played before the Queen and Prince Consort at Windsor, and in 1864 played Bennett's First Concerto at the Philharmonic. A few years later, he retired from public life and devoted himself to teaching. Mr. Thomas is now Professor of the piano at the Royal Academy of Music, and the Guildhall School of Music. His compositions include many original piano pieces, some songs, many arrangements, etc., and three overtures for orchestra:—

'Overture for a Comedy'; 'As you like it,' produced by the Musical Society of London in 1864; and 'Mountain, Lake, and Moorland,' produced at the Philharmonic in 1880. The last two works have been frequently played with great success. [W.B.S.]

THOMAS, JOHN (known in Wales as 'Pencerdd Gwalia,' i.e. chief of the Welsh minstrels, a title conferred on him at the Aberdare Eisteddfod of 1861), a very distinguished harpist, was born at Bridgend, Glamorganshire, on St. David's Day, 1826. He played the piccolo when only four, and when eleven won a harp at an Eisteddfod. In 1840 he was placed by Ada, Countess of Lovelace (Byron's daughter), at the Royal Academy, where he studied under J. B. Chatterton (harp), C. J. Read (piano), and Lucas and Cipriani Potter (composition). He remained at the Academy for about eight years, during which time he composed a harp concerto, a symphony, several overtures, quartets, two operas, etc. On leaving the Academy he was made in succession Associate, Honorary Member, and Professor of the Harp. In 1851 he played in the orchestra of Her Majesty's Opera, and in the same year went a concert tour on the continent, a practice he continued during the winter months of the next ten years, playing successively in France, Germany, Russia, Austria, and Italy. In 1862 Mr. Thomas published a valuable collection of Welsh melodies, and in the same year gave with great success the first concert of Welsh music in London. In 1871 he was appointed conductor of a Welsh Choral Union, which for six years gave six concerts annually. In 1872, on the death of Mr. J. B. Chatterton, he was appointed Harpist to the Queen, and is now teacher of the harp at the Royal College of Music.

Mr. Thomas has always taken a deep interest in the music of his native country. There has scarcely been an Eisteddfod of importance held during the last twenty years at which he has not appeared as both adjudicator and performer, and he has recently (1883) collected a large sum with which he has endowed a permanent scholarship for Wales at the Royal Academy of Music. In 1866, at the Chester Eisteddfod, he was presented with a purse of 500 guineas in recognition of his services to Welsh music. Mr. Thomas is a member of the Academies of St. Cecilia and the Philharmonic of Rome, the Florentine Philharmonic, and the Royal Academy, Philharmonic, and Royal Society of Musicians, of London. His compositions include a large amount of harp music, amongst which are 2 concertos, one of which was played at the Philharmonic in 1852; 'Llewelyn,' a cantata for the Swansea Eisteddfod (1863); and 'The Bride of Neath Valley,' for the Chester Eisteddfod (1866). [W.B.S.]

THOMAS, LEWIS WILLIAM, born in Bath, of Welsh parents, learnt singing under Bianchi Taylor, and in 1850, when 24, was appointed lay-clerk in Worcester Cathedral. In 1852 he was made master of the choristers, and during the next few

years sang frequently at Birmingham, Gloucester, Hereford, and Worcester. In 1854 he made his first appearance in London, at St. Martin's Hall; in 1855 he sang at the Sacred Harmonic, and in 1856 settled in London, with an appointment at St. Paul's. In the following year Mr. Thomas left St. Paul's for the choir of the Temple Church, and in the same year was appointed a gentleman of Her Majesty's Chapel Royal. In 1857 he had lessons of Mr. Randegger, and appeared under his direction on the operatic stage, which however he soon abandoned for the concert-room, where he is chiefly known as a bass singer of oratorio music. During the last few years Mr. Thomas has been a contributor to the press on matters connected with music and art. [W.B.S.]

THOMAS, THEODORE, born Oct. 11, 1835, at Esens, in Hanover; received his first musical instruction from his father, a violinist, and at the age of six made a successful public appearance. The family emigrated to the United States in 1845, and for two years Theodore made frequent appearances as a solo violinist in concerts at New York. In 1851 he made a trip through the Southern States. Returning to New York he was engaged as one of the first violins in concerts and operatic performances during the engagements of Jenny Lind, Sontag, Grisi, Mario, etc. He occupied the position of leading violin under Arditì, and subsequently, the same position in German and Italian troupes, a part of the time officiating as conductor, until 1861, when he withdrew from the theatre. In 1855 he began a series of chamber-concerts at New York, with W. Mason, J. Mosenthal, Carl Bergmann, G. Matska, and F. Bergner, which were continued every season until 1869. In 1864 Mr. Thomas began his first series of symphony concerts at Irving Hall, New York, which were continued for five seasons, with varying success. In 1872 the symphony concerts were resumed and carried on until he left New York in 1878. Steinway Hall was used for these concerts, and the orchestra numbered eighty performers. In the summer of 1866, in order to secure that efficiency which can only come from constant practice together, he began the experiment of giving nightly concerts at the Terrace Garden, New York, removing, in 1868, to larger quarters at the Central Park Garden. In 1869 he made his first concert tour through the Eastern and Western States. The orchestra, at first numbering forty players, was, in subsequent seasons, increased to sixty. The programmes presented during these trips, as well as at New York, were noticeable for their catholic nature, and for the great number of novelties brought out. But it was also noticeable that the evenings devoted to the severer class of music, old or new, in the Garden concerts at New York, were often the most fully attended. Thomas's tendencies, it was plainly seen, were toward the new school of music; but he was none the less attentive to the old, and he introduced to American amateurs a large number of compositions by the older masters. The

repertory of the orchestra was very large, and included compositions in every school. In 1878 Thomas was appointed director of the new College of Music at Cincinnati. In April, 1879, he was unanimously elected conductor of the New York Philharmonic Society, a position which he had occupied in the season of 1877-78. The concerts by the Brooklyn Philharmonic Society were in his charge during the seasons of 1862, 1866 to 1870 inclusive, and have been since his last election, May 26, 1873. He has directed several festivals at Cincinnati and New York since 1873. In 1883 he went from New York to San Francisco with an orchestra and several eminent singers, giving, on his way, concerts in the principal cities. In some cities embraced in this tour, notably Baltimore, Pittsburg, Chicago, Milwaukee, St. Louis, Denver, and San Francisco, festivals, in which were included performances of important choral works, were given with the aid of local societies under his direction. Mr. Thomas withdrew from the College of Music at Cincinnati in 1880. At present (1883) he is director of the Philharmonic Societies of Brooklyn and New York, and of the New York Chorus Society. [F.H.J.]

THOMSON, GEORGE, born at Limekilns, Edinburgh, Mar. 4, 1757 or 1759, died at Leith, Feb. 11, 1851, was for fifty years 'Secretary to the Board of Trustees for the Encouragement of Arts and Manufactures in Scotland.' His place in musical history is that of the most enthusiastic, persevering and successful collector of the melodies of Scotland, Wales and Ireland, a work begun in his youth and continued for forty years or more.

I. (1) *Scotland*. He proposed to rescue from oblivion, so far as it could possibly be accomplished, every existing Scotch melody, in all its forms and varieties. Being in correspondence with and knowing personally gentlemen in every part of Scotland, no man had greater facilities for the work. He proposed, further, to publish 'all the fine airs both of the plaintive and lively kind, unmixed with trifling and inferior ones.' The precise date at which he began the publication in 'sets' does not appear; but the preface to the second edition of the first volume—containing 25 songs—is dated Edinburgh, Jan. 1, 1794.

(2) *Ireland*. At first he included 20 favourite Irish airs in his 'sets,' denoting them in the index by an asterisk. Burns persuaded him to undertake a separate publication of Irish melodies, and offered to write the new texts. This was the origin of the two volumes under that title, for the collection of which Thomson was indebted especially to Dr. J. Latham of Cork, and other friends in various parts of Ireland, who are responsible for whatever faults of omission and commission they exhibit. [See IRISH MUSIC, vol. ii. p. 22.]

(3) *Wales*. Meantime he undertook to collect the melodies played by Welsh harpers and adapt them to the voice. The project found favour in Wales, and friends in all parts of it sent

them to him as played by the harpers; 'but the anxiety he felt to have a complete and authentic collection induced him to traverse Wales himself, in order to hear the airs played by the best harpers, to collate and correct the manuscripts he had received, and to glean such airs as his correspondents had omitted to gather.' There was of course no deciding as to the original form of an air on which no two harpers agreed, and Thomson could only adopt that which seemed to him the most simple and perfect. Very few if any had Welsh texts, or were at all vocable. To make them so, he in some cases omitted monotonous repetitions; in some repeated a strain; in most discarded the ornaments and divisions of the harpers; but no changes were made in the tunes except such as were absolutely necessary to 'make songs of them.'¹

II. In regard to their texts, these three collections of melodies consisted of four classes: (1) without words; (2) with none in English; (3) with English texts, silly, vapid, or indecent, not to say obscene; (4) a few with unimpeachable words, even in which cases he mostly thought it well to add a new song.² In fact, in the first 24 Scotch airs, 16 have 2 songs each, most if not all written expressly for the work. A large number of eminent authors were employed by Thomson for this purpose.

When the melody was known to the poet, there was no difficulty in writing an appropriate song; when not, Thomson sent a copy of it with its character indicated by the common Italian terms, *Allegro*, etc., which were a sufficient guide. Burns was the principal writer. Allan Cunningham, in his 'Life and Works' of the poet, leaves the impression that Thomson was niggardly and parsimonious towards him. Thomson disdained to take any public notice of Cunningham's charges; but in a copy of the work in possession of his son-in-law, George Hogarth (1860), there are a few autograph notes to the point. Thus in July 1793, Burns writes:

'I assure you, my dear sir, that you truly hurt me with your pecuniary parcel. It degrades me in my own eyes. However, to return it would savour of affectation; but as to any more traffic of this debtor and creditor kind, I swear by that HONOUR which crowns the upright statue of ROBERT BURNS'S INTEGRITY—on the least motion of it I will indignantly spurn the by-past transaction, and from that moment commence entire stranger to you!'³

Thomson writes, Sept. 1, to Burns:—

'While the muse seems so propitious, I think it right to inclose a list of all the favours I have to ask of her—no fewer than twenty and three! . . . most of the remaining airs . . . are of that peculiar measure and rhythm that they must be familiar to him who writes for them.'

A comparison of dates removes the doubt in

¹ This of course detracts largely from the value of his labour. [G.]

² The same heaven of interference.

³ This protest evidently refers to all songs written or to be written, and thus disposes of Cunningham's arguments.

relation to Moore, raised in the article on IRISH MUSIC. True, the completed volumes of Thomson's 'Irish Melodies' are dated 1814; but they were completed long before, except as to the instrumental accompaniments. Messrs. Power engaged Moore to write songs for their rival publication in 1806, at which time the poet was only known in Edinburgh as a young writer of indecent and satiric effusions. (See 'Edinburgh Review' of July 1806.)

III. As to the instrumental accompaniments, Thomson's plan was as new and original as it was bold. Besides the pianoforte accompaniment each song was to have a prelude and coda, and parts *ad libitum* throughout for violin, or flute, and violoncello, the composition to be entrusted to none but the first composers.

In the years 1791-3, Pleyel stood next to Haydn and Mozart; they in Vienna, he at that time much in London. Thomson engaged Pleyel for the work, but he soon ceased to write, and Thomson was compelled to seek another composer. Mozart was dead; Haydn seemed to occupy too lofty a position; and Kozeluch of Vienna was engaged. But the appearance of Napier's Collection of Scotch Songs with pianoforte accompaniments, written by Haydn during his first visit to London, showed Thomson that the greatest living composer did not disdain this kind of work. Thomson applied to him; and Haydn worked for him until about 1806. The star of Beethoven had now risen, and he did not disdain to continue the work. But he, too, died before Thomson's work was completed, and Bishop and George Hogarth made up the sixth volume of Scotch songs (1841).

The following list exhibits each composer's share in the work:—

SCOTCH SONGS.

Vol. I. originally all by Pleyel.

Vol. II. " " Kozeluch (?).

In the second edition of these (1803) Thomson substituted arrangements by Haydn for several which were 'less happily executed than the rest.'

Vols. III, IV. all by Haydn.

Vol. V. (Pref. dated June 1, 1818)	Haydn . . .	4	
	Beethoven . .	26

As a means of extending the knowledge of the Scotch melodies, Thomson, at the beginning of his intercourse with Pleyel and Kozeluch, ordered sonatas based upon such airs. Both composed

works of this kind; but how many does not appear. It is evident from a letter of Beethoven to Thomson (Nov. 1, 1806) that besides arrangements of melodies, the latter had requested trios, quintets, and sonatas on Scotch themes from him also. Beethoven's price for compositions, which could only sell in Great Britain and Ireland, was such as could not be acceded to, and none were written. About 1818-20 he wrote variations on a dozen Scotch melodies, which Thomson published, but which never paid the cost of printing either in Great Britain or Germany. At the lowest estimate Beethoven received for his share in Thomson's publications not less than £550. George Hogarth, who married Thomson's daughter, told the writer that the Scotch songs only paid their cost.

In the winter of 1860-61 there appeared in Germany a selection of these songs from Beethoven's MSS., edited by Franz Espagne, in the preface to which he writes: 'The songs printed in Thomson's collection are, both as to text and music, not only incorrectly printed, but wilfully altered and abridged.' These groundless charges were made honestly, but with a most plentiful lack of knowledge. They need not be discussed here, as they were amply met and completely refuted in the Vienna 'Deutsche Musikzeitung' of Nov. 23 and Dec. 28, 1861. All Beethoven's Scotch and Irish songs are contained in Breitkopf's complete edition of his works, Series 24, Nos. 257-260. [A.W.T.]

THOMSON, JOHN, first Professor of Music at Edinburgh University, was the son of an eminent clergyman, and was born at Ednam, Kelso, Oct. 28, 1805. His father afterwards became minister of St. George's Church, Edinburgh. He made the acquaintance of Mendelssohn during the visit of the latter to Edinburgh in the summer of 1829, and showed him much attention, which Mendelssohn requited by a warm letter of introduction to his family in Berlin, in which he says of Thomson 'he is very fond of music; I know a pretty trio of his composition and some local pieces which please me very well' (*ganz gut gefallen*). During his visit to Germany he studied at Leipzig, kept up his friendship with Mendelssohn, and made the intimate acquaintance of Schumann, Moscheles, and other musicians, and of Schnyder von Wartensee, whose pupil he became. In 1839 he was elected the first Reid Professor at Edinburgh, a result which was doubtless not uninfluenced by the warm testimonials from his Leipzig friends which he submitted. He gave the first Reid Concert on Feb. 12, 1841, and the book of words contains analytical remarks by him on the principal pieces—probably the first instance of such a thing. Thomson died May 6, 1841, deeply lamented. He wrote three operas or dramatic pieces, 'Hermann, or the Broken Spear,' 'The House of Aspen,' and 'The Shadow on the Wall.' The last two were brought out at the Royal English Opera (Lyceum), on

¹ He spells the name Thompson, but it must surely be the same man. See 'Die Familie Mendelssohn,' l. 242.

Oct. 27, 1834, and April 21, 1835 respectively, and had each a long run. Two of his songs, 'Harold Harfager,' and 'The Pirates' Serenade,' are mentioned as spirited and original. [G.]

THORNE, EDWARD H., born at Cranbourne, Dorsetshire, May 9, 1834, received his musical education at St. George's Chapel, Windsor, where he was articled to Sir George Elvey. In 1832 he was appointed to the Parish Church, Henley, and in 1862 to Chichester Cathedral, which appointment he resigned in 1870 in order to devote himself more closely to the more congenial work of teaching the pianoforte. Mr. Thorne removed to London, and has been successively organist at St. Patrick's, Brighton; St. Peter's, Cranley Gardens; and St. Michael's, Cornhill. His published works comprise several services, including a Magnificat and Nunc Dimittis for chorus, soli, and orchestra, written for the Festival of the Sons of the Clergy; the 125th Psalm; a festival march, toccata and fugue, funeral march, overture, and six books of voluntaries for the organ; some pianoforte pieces; several songs and part-songs; the 47th Psalm (for female voices), etc. His unpublished works include trios for piano-violin, and violoncello; sonatas for the violoncello, and the clarinet; the 57th Psalm for tenor solo, chorus, and orchestra; and many other compositions. [W.B.S.]

THORNE, JOHN, of York, an eminent musician in the middle of the 16th century, is mentioned by Morley in his 'Introduction.' He was probably attached to York Cathedral. A 3-voice motet by him, 'Stella cœli,' is printed in Hawkins's History. He was also a skilled logician. He died Dec. 7, 1573, and was buried in York Cathedral. [W.H.H.]

THOROUGH-BASS (Thoroughbase, Figured-Bass; Lat. *Bassus generalis*, *Bassus continuus*; Ital. *Continuo*, *Basso continuo*¹; Germ. *Generalbass*; Fr. *Basse continue*, *Basse chiffée*). An instrumental Bass-Part, continued, without interruption, throughout an entire piece of Music, and accompanied by Figures, indicating the general Harmony.

In Italy, the Figured-Bass has always been known as the *Basso continuo*, of which term our English word, Thorough (i.e. Through) bass, is a sufficiently correct translation. But, in England, the meaning of the term has been perverted, almost to the exclusion of its original intention. Because the Figures placed under a Thoroughbass could only be understood by a performer well acquainted with the rules of Harmony, those rules were vulgarly described as the Rules of Thoroughbass; and, now that the real Thoroughbass is no longer in ordinary use, the word survives as a synonym for Harmony—and a very incorrect one.

The invention of this form of accompaniment was long ascribed to Lodovico Viadana (1566-1644), on the authority of Michael Prætorius, Johann Crüger, Walther, and other German

historians of almost equal celebrity, fortified by some directions as to the manner of its performance, appended to Viadana's 'Concerti ecclesiastici.' But it is certain that the custom of indicating the Intervals of a Chord by means of Figures placed above or below the Bass-note, was introduced long before the publication of Viadana's directions, which first appeared in a reprint of the 'Concerti' issued in 1612, and are not to be found in any earlier edition; while a true Thoroughbass is given in Peri's 'Euridice,' performed and printed in 1600; an equally complete one in Emilio del Cavaliere's Oratorio, 'La rappresentazione dell'anima e del corpo,' published in the same year; and another, in Caccini's 'Nuove Musiche' (Venice, 1602). There is, indeed, every reason to believe that the invention of the Continuo was synchronous with that of the Monodic Style, of which it was a necessary contingent; and that, like Dramatic Recitative, it owed its origin to the united efforts of the enthusiastic reformers who met, during the closing years of the 16th century, at Giovanni Bardi's house in Florence. [See VIADANA, LUDOVICO; MONODIA; RECITATIVE; also vol. ii. p. 98.]

After the general establishment of the Monodic School, the Thoroughbass became a necessary element in every Composition, written, either for Instruments alone, or for Voices with Instrumental Accompaniment. In the Music of the 18th century, it was scarcely ever wanting. In the Operas of Handel, Buononcini, Hasse, and their contemporaries, it played a most important part. No less prominent was its position in Handel's Oratorios; and even in the Minuets and Gavottes played at Ranelagh, it was equally indispensable. The 'Vauxhall Songs' of Shield, Hook, and Dibdin, were printed on two Staves, on one of which was written the Voice-Part, with the Melody of the Ritornelli, inserted in single notes, between the verses, while the other was reserved for the Thoroughbass. In the comparatively complicated Cathedral Music of Croft, Greene, and Boyce, the Organ-Part was represented by a simple Thoroughbass, printed on a single Staff, beneath the Vocal Score. Not a chord was ever printed in full, either for the Organ, or the Harpsichord; for the most ordinary Musician was expected to play, at sight, from the Figured-Bass, just as the most ordinary Singer, in the days of Palestrina, was expected to introduce the necessary accidental Sharps, and Flats, in accordance with the laws of Cantus Fictus. [See MUSICA FICTA.]

The Art of playing from a Thoroughbass still survives—and even flourishes—among our best Cathedral Organists. The late Mr. Turle, and Sir John Goss, played with infinitely greater effect from the old copies belonging to their Cathedral libraries, than from modern 'arrangements' which left no room for the exercise of their skill. Of course, such copies can be used only by those who are intimately acquainted with all the laws of Harmony: but, the application of those laws to the Figured Bass is exceedingly simple, as we shall now proceed to show.

¹ Not to be mistaken for *Basso continuo* (Fr. *Basse continue*) which indicates a Ground-Bass.

1. A wholesome rule forbids the insertion of any Figure not absolutely necessary for the expression of the Composer's intention.

2. Another enacts, that, in the absence of any special reason to the contrary, the Figures shall be written in their numerical order; the highest occupying the highest place. Thus, the full figuring of the Chord of the Seventh is, in all ordinary cases, $\frac{7}{5}$; the performer being left at liberty to play the Chord in any position he may find most convenient. Should the Composer write $\frac{3}{5}$, it will be understood that he has some particular reason for wishing the Third to be placed at the top of the Chord, the Fifth below it, and the Seventh next above the Bass; and the performer must be careful to observe the directions implied in this departure from the general custom.

3. In conformity with Rule 1, it is understood that all Bass-notes unaccompanied by a Figure are intended to bear Common Chords. It is only necessary to figure the Common Chord, when it follows some other Harmony, on the same Bass-note. Thus, at (a), in Example 1, unless the Common Chord were figured, the $\frac{6}{4}$ would be continued throughout the Bar; and in this case, two Figures are necessary for the Common Chord, because the Sixth descends to a Fifth, and the Fourth to a Third. At (b) two Figures are equally necessary; otherwise, the performer would be perfectly justified in accompanying the lower G with the same Chord or the upper one. Instances may even occur in which three Figures are needed, as at (c), where it is necessary to show that the Ninth, in the second Chord, descends to an Eighth, in the third. But, in most ordinary cases, a 3, a 5, or an 8, will be quite sufficient to indicate the Composer's intention.

Ex. 1.

The First Inversion of the Triad is almost always sufficiently indicated by the Figure 6, the addition of the Third being taken as a matter of course; though cases will sometimes occur in which a fuller formula is necessary; as at (a), in Example 2, where the 3 is needed to show the Resolution of the Fourth, in the preceding Harmony; and at (b), where the 8 indicates the Resolution of the Ninth, and the 3, that of the Fourth. We shall see, later on, how it would have been possible to figure these passages in a more simple and convenient way.

A small treatise which was once extraordinarily popular in England, and is even now used to the exclusion of all others, in many 'Ladies Schools,' foists a most vicious rule upon the Student, with regard to this Chord; to the effect that, when the Figure 6 appears below the

Supertonic of the Key, a Fourth is to be added to the Harmony. We remember, when the treatise was at the height of its popularity, hearing Sir Henry Bishop inveigh bitterly against this abuse, which he denounced as subversive of all true musical feeling; yet the pretended exception to the general law was copied into another treatise, which soon became almost equally popular. No such rule was known at the time when every one was expected to play from a Thoroughbass. Then, as now, the Figure 6 indicated, in all cases, the First Inversion of the Triad, and nothing else; and, were any such change now introduced, we should need one code of laws for the interpretation of old Thorough-Basses, and another for those of later date.

Ex. 2.

The Second Inversion of the Triad cannot be indicated by less than two Figures, $\frac{6}{4}$. Cases may even occur, in which the addition of an 8 is needed; as, for instance, in the Organ-Point at (a), in Example 3; but these are rare.

Ex. 3.

In nearly all ordinary cases, the Figure 7 only is needed for the Chord of the Seventh; the addition of the Third and Fifth being taken for granted. Should the Seventh be accompanied by any Intervals other than the Third, Fifth, and Octave, it is, of course, necessary to specify them; and instances, analogous to those we have already exemplified when treating of the Common Chord, will sometimes demand even the insertion of a 3 or a 5, when the Chord follows some other Harmony, on the same Bass-note. Such cases are very common in Organ Points.

The Inversions of the Seventh are usually indicated by the formulae, $\frac{6}{4}$, $\frac{4}{2}$, and $\frac{2}{1}$; the Intervals needed for the completion of the Harmony being understood. Sometimes, but not very often, it will be necessary to write $\frac{6}{4}$, $\frac{4}{2}$, or $\frac{2}{1}$. In some rare cases, the Third Inversion is indicated by a simple 4: but this is a dangerous form of abbreviation, unless the sense of the passage be very clear indeed; since the Figure 4 is constantly used, as we shall presently see, to indicate another form of Dissonance. The Figure 2, used alone, is more common, and always perfectly intelligible: the 6 and the 4 being understood.

The Figures 9, whether placed under the Dominant, or under any other Degree of the Scale, indicate a Chord of the Ninth, taken by direct percussion. Should the Ninth be accompanied by other Intervals than the Seventh, Fifth, or Third, such Intervals must be separately noticed. Should it appear in the form of a Suspension, its figuring will be subject to certain modifications, of which we shall speak more particularly when describing the figuring of Suspensions generally.

The formulæ $\frac{7}{4}$ and $\frac{9}{4}$ are used to denote the chord of the Eleventh—i.e. the chord of the Dominant Seventh, taken upon the Tonic Bass. The chord of the Thirteenth—or chord of the Dominant Ninth upon the Tonic Bass—is represented by $\frac{7}{4}$ or $\frac{9}{4}$ or $\frac{7}{4}$. In these cases, the 4 represents the Eleventh, and the 6 the Thirteenth: for it is a rule with modern Composers to use no higher numeral than 9; though in the older Figured Basses—such as those given in Peri's 'Euridice,' and Emilio del Cavaliere's 'La Rappresentazione dell' anima e del corpo,'—the numerals, 10, 11, 12, 13, and 14, are constantly used to indicate reduplications of the Third, Fourth, Fifth, Sixth, and Seventh, in the Octave above.

Accidental Sharps, Flats, and Naturals are expressed in three different ways. A ♯, b, or ♮, used alone—that is to say, without the insertion of a numeral on its own level—indicates that the Third of the Chord is to be raised or depressed a Semitone, as the case may be. This arrangement is entirely independent of other numerals placed above or below the Accidental Sign, since these can only refer to other Intervals in the Chord. Thus, a Bass-note with a single b beneath it, must be accompanied by a Common Chord, with a flattened Third. One marked $\frac{6}{b}$ must be accompanied by the First Inversion of the Chord of the Seventh, with its Third flattened. It is true that, in some Thoroughbasses of the last century, we find the forms ♯3, b3, or ♮3; but the Figure is not really necessary.

A dash drawn through a 6, or 4, indicates that the Sixth or Fourth above the Bass-note, must be raised a Semitone. In some of Handel's Thoroughbasses, the raised Fifth is indicated by 5̄; but this form is not now in use.

In all cases except those already mentioned, the necessary Accidental Sign must be placed before the numeral to which it is intended that it should apply; as b6, ♯7, ♮5, b9, b4, ♮4, ♮6, etc.; or, when two or more Intervals are to be altered, $\frac{b6}{b4}$, $\frac{b6}{b5}$, $\frac{b7}{b5}$, etc.; the Figure 3 being always suppressed in modern Thoroughbasses, and the Accidental Sign alone inserted in its place when the Third of the Chord is to be altered.

By means of these formulæ, the Chord of the Augmented Sixth is easily expressed, either in its Italian, French, or German form. For instance, with the Signature of G major, and Eb for a Bass-note, the Italian Sixth would be indicated by 6̄, the French by $\frac{4}{\sharp}$, the German by $\frac{6}{\sharp}$, or $\frac{6}{\sharp}$.

The employment of Passing-Notes, Appoggiaturas, Suspensions, Organ-Points, and other passages of like character, gives rise, sometimes, to very complicated Figuring, which, however, may be simplified by means of certain formulæ, which save much trouble, both to the Composer and the Accompanyist.

A horizontal line following a Figure, on the same level, indicates that the note to which the previous Figure refers is to be continued, in one of the upper Parts, over the new Bass-note, whatever may be the Harmony to which its retention gives rise. Two or more such lines indicate that two or more notes are to be so continued; and, in this manner, an entire Chord may frequently be expressed, without the employment of a new Figure. This expedient is especially useful in the case of Suspensions, as in Example 4, the full Figuring of which is shown above the Continuo, and, beneath it, the more simple form, abbreviated by means of the horizontal lines, the arrangement of which has, in some places, involved a departure from the numerical order of the Figures.

Ex. 4.

Any series of Suspended Dissonances may be expressed on this principle—purposely exaggerated in the example—though certain very common Suspensions are denoted by special formulæ which very rarely vary. For instance, 4 3 is always understood to mean $\frac{4}{3}$ —the Common Chord, with its Third delayed by a suspended Fourth—in contradistinction to $\frac{6}{4}$ already mentioned; 9 8 means the Suspended Ninth resolving into the Octave of the Common Chord; $\frac{9}{4}$ indicates the Double Suspension of the Ninth and Fourth, resolving into the Octave and Third; etc.

In the case of Appoggiaturas, the horizontal lines are useful only in the Parts which accompany the Discord. In the Part which actually contains the Appoggiatura, the absence of the Concord of Preparation renders them inadmissible, as at (a) in Example 5.

Passing-Notes, in the upper Parts, are not often noticed in the Figuring, since it is rarely necessary that they should be introduced into the Organ or Harpsichord Accompaniment; unless, indeed, they should be very slow, in which case they are very easily figured, in the manner shown at (b) in Example 5.

Ex. 5.

The case of Passing-Notes in the Bass is very different. They appear, of course, in the Continuo itself; and the fact that they really are Passing-Notes, and are, therefore, not intended to bear independent Harmonies, is sufficiently proved by a system of horizontal lines indicating the continuance of a Chord previously figured; as in Example 6, in the first three bars of which the Triad is figured in full, because its intervals are continued on the three succeeding Bass-Notes.

Ex. 6.

But in no case is the employment of horizontal lines more useful than in that of the Organ Point, which it would often be very difficult to express clearly without their aid. Example 7 shows the most convenient way of figuring complicated Suspensions upon a sustained Bass-Note.

Ex. 7.

HANDEL.

In the Inverted Pedal-Point, the lines are still more valuable, as a means of indicating the continuance of the sustained note in an upper Part;

as in Example 8, in which the Figure 8 marks the beginning of the C, which, sustained in the Tenor Part, forms the Inverted Pedal, while the horizontal line indicates its continuance to the end of the passage.

Ex. 8.

When, in the course of a complicated Movement, it becomes necessary to indicate that a certain phrase—such as the well-known Canto-Fermo in the 'Hallelujah Chorus'—is to be delivered in Unison,—or, at most, only doubled in the Octave—the passage is marked *Tasto Solo*, or, T. S.—i. e. 'with a single touch' (= key).¹ When the Subject of a Fugue appears, for the first time, in the Bass, this sign is indispensable. When it first appears in an upper Part, the Bass Clef gives place to the Treble, Soprano, Alto, or Tenor, as the case may be, and the passage is written in single Notes, exactly as it is to be played. In both these cases it is usual also to insert the first few Notes of the Answer, as a guide to the Accompanyist, who only begins to introduce full Chords when the figures are resumed. In any case, when the Bass Voices are silent, the lowest of the upper Parts is given in the Thoroughbass, either with or without Figures, in accordance with the law which regards the lowest sound as the real Bass of the Harmony, even though it may be sung by a Soprano Voice. An instance of this kind is shown in Example 9.

Ex. 9.

HANDEL.

We shall now present the reader with a general example, serving as a practical application of the rules we have collected together for his guidance; selecting, for this purpose, the concluding bars of the Chorus, 'All we like sheep,' from Handel's 'Messiah.'

Ex. 10.

HANDEL.

¹ As lately as the last century, the keys of the Organ and Harpsichord were called 'Touches' by English writers.

The Figuring here given contains nothing which the Modern Professor of Harmony can safely neglect to teach his pupils. The misfortune is, that pupils are too often satisfied with *writing* their exercises, and too seldom expected to *play* from a Thoroughbass at sight. Many young students could write the figured Chords correctly enough; but few care to acquire sufficient fluency of reading and execution to enable them to accompany a Continuo effectively, though this power is indispensable to the correct rendering, not only of the works of Handel and Bach, but even of the Oratorios and Masses of Haydn and Mozart—the latest great works in which the Organ Part is written on a single Stave. [W.S.R.]

THREE CHOIRS, OF GLOUCESTER, WORCESTER, AND HEREFORD, MEETINGS, OR FESTIVALS OF THE. These Meetings were first held in 1724, if not earlier, but became permanent in that year, when the Three Choirs assembled at Gloucester for the performance of cathedral service on a grand scale, with orchestral accompaniment. Their establishment was mainly promoted by Rev. Thomas Bisse, chancellor of Hereford, and brother of Dr. Philip Bisse, bishop of the diocese, and the proceeds were applied in aid of a fund for the relief of the widows and orphans of the poorer clergy of the three dioceses, or of the members of the three choirs.¹ In 1725 a sermon was preached at Worcester for the benefit of the charity, and in 1726 a remarkable one by the Rev. Thomas Bisse at Hereford. The meetings have since continued to be held, in unbroken succession, up to the present time, the 160th meeting having taken place at Gloucester in 1883. They are held alternately in each of the three cities, each having thereby in its turn a triennial festival. On their first establishment it was customary for the members of the Three Choirs to assemble on the first Tuesday in September, and unitedly to perform choral service on the following two days. Six stewards, two from each diocese, were appointed to superintend the distribution of the charity. Evening con-

¹ The latter did not long continue to participate in the benefits of the charity; the relief is supposed to have been discontinued when their performance ceased to be gratuitous.

THREE CHOIRS.

certs were given, in the Shire Halls usually, on each of the two days. Purcell's *Te Deum* and *Jubilate* in D, and Handel's *Utrecht Te Deum* and *Jubilate* were constantly performed, and from 1748 the *Dettingen Te Deum*. Oratorios were given, as well as secular music, at the evening concerts, but it was not until 1759 that they were admitted into the cathedrals, when the '*Messiah*' was performed in Hereford Cathedral, and continued to be the only oratorio so performed until 1787, when '*Israel in Egypt*' was given in Gloucester Cathedral. In 1753 the festivals were extended to three days, and in 1836 to four days, at which they have ever since continued. It has always been the practice to hand over the collections made at the cathedral doors after the morning performances intact to the charity, the excess, if any, of expenditure over receipts from sale of tickets being made good by the stewards. The excess became eventually so permanent that in 1837 great difficulty was experienced in inducing gentlemen to undertake the office of steward, and the existence of the Meeting was seriously imperilled; but the difficulty has been since overcome by very largely increasing the number of stewards. The festivals are conducted by the organist of the cathedral in which they are successively held, the organists of the other two cathedrals officiating respectively as organist and pianoforte accompanist. Deviations from this practice have, however, sometimes occurred. For instance, Mr. (afterwards Dr.) Boyce conducted in 1737, and for several subsequent years; Dr. William Hayes (at Gloucester), in 1757 and 1760; and Dr. John Stephens (at Gloucester) in 1766. The last occasion upon which a stranger was called upon to conduct was in 1842, when, in consequence of the illness of the then organist of Worcester cathedral, the baton was placed in the hands of Mr. Joseph Surman. Until 1859 the first morning of the festival was devoted to the performance of cathedral service by the whole of the performers, but since that time the service has been performed at an early hour by the members of the Three Choirs only, to organ accompaniment, and an oratorio given later in the day. In 1875 an attempt was made, at Worcester, to alter the character of the performances in the cathedrals, by excluding oratorios and substituting church music interspersed with prayers. But this met with decided opposition and has not been repeated. The band at these festivals is composed of the best London professors, and the chorus comprises, in addition to the members of the Three Choirs, members of the local choral societies and others. The most eminent principal singers of the day are engaged for the solo parts. The pieces usually selected for performance at the Meetings were those which were most popular. But occasionally new and untried compositions were introduced. For instance, an anthem by Boyce, Worcester, 1743; anthems by Dr. Alcock and J. S. Smith, Gloucester, 1773; Clarke-Whitfeld's '*Crucifixion*,' Hereford, 1822;

F. Mori's 'Fridolin,' Worcester, 1851; an anthem (1852) and Jubilate (1855) by G. T. Smith, Hereford; anthems by G. J. Elvey, Gloucester, 1853, and Worcester, 1857; and Sullivan's 'Prodigal Son,' Worcester, 1869; Beethoven's Mass in D, Mendelssohn's Lobgesang and Elijah, Spohr's Oratorios, and other favourite works. In later years new compositions were more frequently produced, and recently scarcely a year has passed without some new work being given. At the Gloucester Meeting of 1883 no fewer than three new works were performed for the first time, viz. sacred cantatas by Drs. Stainer and Arnold, and a secular choral work by Dr. Hubert Parry. This is not the place to discuss, from either an artistic or a financial point of view, the desirability of such a course, but it may be noted that at the Gloucester Festival of 1883 the excess of expenditure over receipts from sale of tickets exceeded 500*l*. [W.H.H.]

THURNAM, EDWARD, born at Warwick, Sept. 24, 1825, was organist of Reigate Parish Church from 1849, and from 1849 to 1876 conductor of the Reigate Choral Society, and also an able violinist, and the composer of a Cathedral Service, and several songs and pieces for various instruments, of considerable merit. He died Nov. 25, 1880. [W.H.H.]

THURSBY, EMMA, born at Brooklyn, New York, Nov. 17, 1857, is the daughter of an Englishman, and is descended by her mother from an old United States family. She received instruction in singing first from Julius Meyer and Achille Erani, then in 1873 at Milan from Lamperti and San Giovanni, and finally completed her studies in America under Madame Rudersdorff. In 1875 she undertook a tour through the United States and Canada. She made her *début* in England May 22, 1878, at the Philharmonic, with such success that she was engaged at a subsequent concert of the Society in the same season. She remained in England until the end of 1879, singing with acceptance at the Crystal Palace, the Popular Concerts, Leslie's Choir, etc., and in the summer of the same year sang in Paris and the French provinces. In 1880-81 she made an extended concert-tour through Germany, Austria, Holland, Belgium, Spain, Norway, Denmark, etc., and returned to America at the end of 82. In 1883 she was singing in the States and Canada.

Her voice is a soprano, of remarkable compass, ranging from middle C to Eb above the lines; not large but rich; somewhat veiled, but noble and sympathetic. 'Miss Thursby's technique is extraordinary; her legato and staccato are models of certainty and correctness, her respiration is admirably managed, and her shake as rippling as it is long enduring.'¹ [A.C.]

TICHATSCHKE, JOSEPH ALOIS, born July 11, 1807, at Ober Weckelsdorf, in Bohemia. He began by studying medicine, but abandoned it for music, and received instruction in singing from

Ciccimara, a favourite Italian singing master. In 1830 he became a chorus singer at the Kärnthnertheater theatre, was next appointed chorus inspector, played small parts, and afterwards, those of more importance, viz. Idreno ('Semiramide'), Alphonse ('Stumme'), and Raimond ('Robert'). He sang for two years at Gratz, and again at Vienna, as principal tenor. On Aug. 11, 1837, he made his *début* at Dresden as Gustavus III. (Auber), with such success as to obtain an engagement for the following year. At this period he attracted the attention of Schroeder-Devrient, who gave him the benefit of her advice and experience, with the result of a long and intimate friendship, which terminated only with her death. Until his retirement in 1870, he remained permanently in Dresden, where, on Jan. 16, as Idomeneo, he celebrated the 40th anniversary of his professional career, having previously, on Jan. 17, 1863, celebrated his 25th anniversary at Dresden, as Hernando Cortes (Spontini). His repertoire consisted of the tenor parts in the operas of Gluck, Mozart, Beethoven, Weber,² Marschner, Méhul, Boieldieu, Auber, Nicolo, Meyerbeer, Spontini, Flotow, Spohr, etc.; and on Oct. 20, 42, and Oct. 19, 45 respectively, was the original Rienzi, and Tannhäuser. In 1841 he sang for a few nights in German at Drury Lane Theatre as Adolar, Tamino, Robert, etc.; also at Liverpool and Manchester, and is thus described by a contemporary—'Herr Tichatschek has proved himself the hit of the season; he is young, prepossessing, and a good actor; his voice is excellent, and his style, though not wanting in cultivation, is more indebted to nature than art.'³ [A.C.]

TIE. A curved line uniting two notes of the same pitch, whereby they form a single note which is sustained for the value of both. The tie is also called the Bind, and by some writers the Ligature, although this term properly refers to certain slurred groups of notes which occur in ancient music. [LIGATURE, vol. ii. p. 136.] It has already been described under the former heading, but to what was there stated it may be added, that ties are occasionally met with in pianoforte music where the note is actually repeated. [See BIND, vol. i. p. 242.] To effect this repetition properly some skill and care are required; the finger which strikes the first of the two tied notes is drawn inwards, and the following finger falls over it as closely and rapidly as possible, so as to take its place before the key has had time to rise to its full distance, and therefore before the damper has quite fallen. Thus there is no actual silence between the two sounds, the repetition takes place before the first sound has ceased, and an effect is produced which resembles the old effect of BEBUNG as nearly as the modern pianoforte can imitate it. [See vol. i. p. 160.] The particular occasions on which this effect is required are not indicated

¹ 'Illustrated Sporting and Dramatic News,' Oct. 18, 1879; and F. Gumbert, in the Neue Berliner Musikzeitung.

² On Oct. 13, 1842, he sang the part of Max on the occasion of the hundredth performance of 'Der Freischütz,' a part he sang no less than 106 times during his career up to 1862.

³ 'Musical World,' June 17, 1841.

by any specific sign, since an experienced performer can always judge from the nature of the passage. As a rule, it may be said that whenever two tied notes are written for which a single longer note might have been substituted, repetition is indicated—for the use of the tie proper is to express a note-value which cannot be represented by a single note, *e.g.* five quavers. Thus Ex. 1, which is an instance in point, might, if no repetition had been required, have been written in quavers, as in Ex. 2.

BEETHOVEN. Sonata, op. 106. Adagio.

Another instance of the employment of this close repetition sometimes occurs when an unaccented note is tied to an accented one, as in Ex. 3. Here the rhythm would be entirely lost if the tied notes were sustained instead of repeated.

CHOPIN. Valse, op. 31, no. 1.

In the same sense it seems quite possible that the subject of the scherzo of Beethoven's Sonata for piano and violoncello, op. 69, and other similar phrases, may have been intended to be played with repetition; and in support of this view it may be mentioned that an edition exists of the Sonata Pastorale, op. 28, by Cipriani Potter, who had opportunities of hearing Beethoven and becoming acquainted with his intentions, in which the analogous passage in the first movement is printed with what is evidently meant for a sign of separation between the tied notes, thus—

[F.T.]

TIEDGE, CHRISTOPH AUGUST, born 1752, died March 8, 1841; a German elegiac poet and friend of Beethoven's, who in Rhineland dialect always called him 'Tiedsche,' and who set some lines to Hope—'an die Hoffnung'—from his largest and best poem, 'Urania,' to music twice, once in Eb, op. 32, and again in G, op. 94. Both are for voice and piano; the former dates from 1808, the latter from 1816. Tiedge's name occurs in the correspondence between Beethoven and Amalie Sebald, and there is a most interesting letter from Beethoven to him of Sept. 11, 1811, betokening great intimacy. (Thayer, iii. 179, 213, etc.) [G.]

TIERCE, *i.e.* Tiers, third. I. A name given to the interval of the Third, whether Major or Minor.

II. The fourth of the series of natural harmonics, being the Major Third in the third octave above the ground-tone or prime; its vibrations are five times as numerous as those of its prime.

III. An open metal organ stop of the same pitch as the similarly-named harmonic; *i.e.* if the note CC is held down and the Tierce-stop drawn, the E above middle C will be heard. That such a stop can only be used in combination with certain other harmonics, and then but sparingly, will be evident when it is remembered that if C, E, and G be held down there will be heard at the same time G sharp and B. Hence, the Tierce when found in a modern organ is generally incorporated as a rank of the Sesquialtera or Mixture, in which case it is of course combined with other harmonics, its near relations. Some organ-builders, however, altogether exclude it. A serious difficulty is now met with, if a Tierce be introduced; it is this—modern organs are tuned to 'equal temperament,' whereas the Tierce (whether a separate stop or a rank) certainly ought to be tuned to its prime in 'just intonation,' in which case tempered and natural thirds would be heard simultaneously when the Tierce is used. Much difference of opinion exists as to the utility or effect of this stop. [J.S.]

TIERCE DE PICARDIE. In Polyphonic Music, it is essential that every Composition should end with a Major Third, even though the Third of the Mode in which it is written should be Minor. The Third, thus made Major by an Accidental Sharp or Natural, is called the 'Tierce de Picardie.' It is not very easy to arrive at the origin of the term; though it may perhaps be accounted for by the proximity of Picardy to Flanders, in which country the characteristic Interval was in common use, at a very early period. Rousseau's explanation of the term (Dictionnaire, 'Tierce') is a very strange one, viz. that it was given 'in joke, because the use of the interval on a final chord is an old one in church music, and therefore frequent in Picardy, where there is music in many cathedrals and other churches'! [W.S.R.]

TIERSCH, OTTO, born Sept. 1, 1838, at Kalbrieth in Thuringia, received instruction from Töpfer of Weimar, Billermann, Marx, and Erk; was then teacher in Stern's Conservatorium, and is now teacher of singing to the city of Berlin. His writings are practical, and concern themselves much with an endeavour to make the modern discoveries of Helmholtz and others, in acoustics, available in teaching singing. The principal are as follows, 'System und Method der Harmonielehre' (1868); 'Elementarbuch der musikalischen Harmonie und Modulationslehre' (1874); 'Kurzes praktisches generalbass Harmonielehre' (1876); the same for Counterpoint and Imitation (1879). The article on 'Harmonielehre' in Mendel's Lexicon is by him. [G.]

TIETJENS or TITIENS, THERESE CAROLINE JOHANNA, the great prima donna, was born at Hamburg, of Hungarian parents, according to some biographers in 1834, to others, in 1831. The latter date agrees best with subsequent facts, and also with the inscription on her tombstone, which states that she died in 1877, aged 46.

Her voice, even in childhood, gave so much promise of future excellence that she was educated for the lyric stage. She appeared for the first time at the Hamburg Opera, in 1849, as Lucrezia Borgia, and achieved an immediate success. She proceeded to Frankfort, and thence, in 1856, to Vienna, where, though not engaged as the leading prima donna, her performance of Valentine raised her at once to the highest rank.

The late Madame Jullien heard her at this time, and it was largely due to her glowing accounts that Mdlle. Tietjens was quickly engaged by Mr. Lumley for his last season at Her Majesty's Theatre in London; and when, on April 13, 1858, she appeared in 'The Huguenots,' her impersonation of Valentine achieved a success which increased with every repetition of the opera, and was the first link in that close union between the performer and the public which was only to be severed by death.

England from that time became her home. She remained at Her Majesty's Theatre during the successive managements of Mr. E. T. Smith and Mr. Mapleson, and after the burning of the theatre in 1867 followed the fortunes of the company to Drury Lane. She sang at Covent Garden during the two years' coalition of the rival houses in 69 and 70, returning to Drury Lane in 71, and finally, just before her death, to the new house in the Haymarket.

Her performances are still fresh in the memory of all opera and concert goers. Never was so mighty a soprano voice so sweet and luscious in its tone: like a serene, full, light, without dazzle or glare, it filled the largest arena without appearing to penetrate. It had none of a soprano's shrillness or of that peculiar clearness called 'silvery'; when it declined, as it eventually did, in power, it never became wiry. It had a mezzo-soprano quality extending to the highest register, perfectly even throughout, and softer than velvet. Her acting in no way detracted from her singing; she was earnest, animated, forcible, in all she did conscientious and hearty, but not electric. Her style of singing was noble and pure. When she first came to England her rapid execution left much to be desired; it was heavy and imperfect. Fluency and flexibility were not hers by nature, but by dint of hard work she overcame all difficulties, so as to sing with success in the florid music of Rossini and Bellini. Indeed she attempted almost everything, and is perhaps the only singer, not even excepting Malibran, who has sung in such completely opposite rôles as those of Semiramide and Fides. But her performance of light or comic parts was a mere *tour de force*; her true field was grand opera. As Lucrezia, Semiramide, Countess Almaviva, she was great; as Donna Anna and Valentine she

was greater; best of all as Fidelio, and as Medea in Cherubini's opera, revived for her and not likely to be forgotten by any who heard it.

In the 'Freischütz,' as in 'Fidelio,' her appearance was unsuited to her part, but she sang the music as no one else could sing it. In her later years she set a good example by undertaking the rôle of Ortrud in 'Lohengrin.' The music however did not show her voice to advantage, and this was still more the case with the music of Fides, although her acting in both parts was very fine. Her repertoire also included Leonora ('Trovatore'), the Favorita, Alice, Lucia, Amalia ('Un Ballo in Maschera'), Norma, Pamina, Margherita, Marta, Elvira ('Ernani') Reiza ('Oberon'), and Iphigenia in Tauris.

Her voice was as well suited to sacred as to dramatic music, and she applied herself assiduously to the study of oratorio, for which her services were in perpetual request. Perhaps the hardest worked singer who ever appeared, she was also the most faithful and conscientious of artists, never disappointing her public, who knew that her name on the bills was a guarantee against change of programme, or apology for absence through indisposition. No doubt her splendid physique enabled her often to sing with impunity when others could not have done so, but her ceaseless efforts must have tended to break up her constitution at last. This great conscientiousness, as well as her genial sympathetic nature, endeared her to the whole nation, and, though there never was a 'Tietjens fever,' her popularity steadily increased and never waned. Her kindness and generosity to young and struggling artists and to her distressed countrymen knew no bounds and became proverbial.

The first symptoms of the internal disorder which proved fatal to her appeared in 1875, but yielded to treatment. They recurred during a visit to America in the next year, but were again ward off for the time, and throughout a subsequent provincial tour in this country she sang 'as well as she had ever done in her life.' In 1876 she had her last benefit concert, at the Albert Hall. In April 1877 her illness increased to an alarming extent, and her last stage-appearance was on May 19, as Lucrezia. 'She fainted twice during the performance, in her dressing-room; but she would appear, though she had to undergo a painful operation on the following Tuesday. 'If I am to die,' she said to a friend, 'I will play Lucrezia once more.' Those who then heard her will always recall her rendering of the despairing cry after Gennaro's death. She died Oct. 3, 1877, and was buried in Kensal Green Cemetery. On the day before, a messenger had arrived from the Queen and Princesses with special enquiries, which had greatly pleased her. Her death was felt as a national loss, and it may be long before any artist arises who can fill the place she filled so worthily and so well. [F.A.M.]

TIETZE. [See TITZE.]

TIGRANE, IL. An Italian opera, composed by Righini, 1800, the overture of which was at

one time a favourite in London. The discovery of the parts of this overture in his father's warehouse gave Schumann his first opportunity of conducting.¹ It has been lately re-scored, and published by Aibl of Munich. [G.]

TILMANT, THÉOPHILE, French conductor, born at Valenciennes July 8, 1799, and educated at the Paris Conservatoire, where he took the first violin prize in R. Kreutzer's class in 1818. He played with great fire and brilliancy, and had a wonderful instinct for harmony, though without much scientific knowledge. On the formation of the Société des Concerts in 1828 he was appointed vice-conductor, and also played solo in a concerto of Mayseder's. In 1834 he became vice- and in 1838 chief-conductor at the Théâtre Italien, where he remained till 1849. In 1838, with his brother Alexandre, a distinguished cellist (born at Valenciennes Oct. 2, 1808, died in Paris June 13, 1880), he founded a quartet-society, which maintained its popularity for some ten years or so. In 1849 he succeeded Labarre as conductor of the Opéra Comique, an enviable and responsible post, which he held for nearly 20 years. The composers whose operas he mounted found him earnest and conscientious, and he conducted with a fire and a dash perfectly irresistible, both there and at the Concerts du Conservatoire, which he directed from 1860 to 1863. In 1868 he left the Opéra Comique, and retired to Asnières, where he died May 7, 1878. He received the Legion of Honour in 1861. [G.C.]

TIMANOFF, VERA, a native of Russia, received pianoforte instruction in music from Liszt, and for a long time past has enjoyed a wide continental reputation. She made her début in England, August 28, 1880, at the Promenade Concerts, Covent Garden, where she fulfilled six nights' engagement under the conductorship of Mr. F. H. Cowen, and made a lively impression by her brilliant rendering of the works of her master and other pieces of the same school. On May 19, 1881, she played Chopin's Concerto in F minor at the Philharmonic, and 'by her brilliant execution of the florid passages, by the delicacy with which she rendered the fairylike fancies of the composer, and by the marked character resulting from her strong feeling for rhythm and accent, gave the concerto an adventitious interest.'² On May 13, 1882, she played at the Crystal Palace Liszt's 'Fantasia on the Ruins of Athens,' and on June 6 of the same year she gave a recital and was heard with pleasure in light pieces of Moskowski, Liszt, and Rubinstein. [A.C.]

TIMBALES is the French word for Kettle-drums. [See DRUM 2; vol. i. p. 463.] In that article, at p. 464 b, it is mentioned that Meyerbeer used 3 drums, G, C, and D, in No. 17 of the score of 'Robert le Diable'; but it was really written for 4 drums, in G, C, D, and E, and was so played at the Paris Académie, where it was produced. This real kettle-drum solo begins

thus, and is probably a unique example of its kind:—

The printed score has only 3 drums, G, C, and D, to facilitate the performance in ordinary orchestras, the E being then played by the contrabasso. [V. de P.]

TIMBRE. A French word, originally signifying a bell, or other resonant metallic instrument, of which the sense was subsequently extended to denote peculiar ringing tones, and lastly employed by the older writers on Acoustics to indicate the difference between notes which, though of identical pitch, produce dissimilar effects upon the ear. The cause of this variety not being then understood, the vagueness which characterises the expression was hardly misplaced. But the researches of Helmholtz put an end to the ambiguity, by showing that difference of *timbre* was due to change in the upper-partial tones, or harmonics, which accompany the foundation-tone, or ground-tone, of a note or sound.

A somewhat better, but rather metaphorical phrase was afterwards suggested in Germany; by which varieties of timbre were termed *Klang-farbe* or Sound-colours. This term, in the outlandish shape of 'Clangtint,' was adopted by Tyndall and other writers as an English equivalent of the German word.

But a term has been latterly employed which must commend itself to all as at once a pure English word and a symbol to express the idea, now become definite; namely the word **QUALITY**. A sound may therefore be said in fair English to possess three properties, and no more—Pitch, Intensity, and Quality; respectively corresponding to the Frequency, the Amplitude, and the Form of the Sound-wave. In case this definition be objected to as unnecessarily geometrical, the Quality, or *Timbre*, of a note may be described as the sum of the associated vibrations which go to make up that complex mental perception.

'If the same note,' says Helmholtz,³ 'is sounded successively on a pianoforte, violin, clarinet, oboe, or trumpet, or by the human voice, notwithstanding its having the same force and pitch, the musical tone of each is different, and we recognise with ease which of these is being used. Varieties of tone-quality seem to be infinitely numerous even in instruments; but the human voice is still richer, and speech employs these very qualitative varieties of tone in order to distinguish different letters. The different vowels belong to the class of sustained tones which can be used in music; while the character of consonants mainly depends on brief and transient noises.'

It is well known that he analysed these compound tones by means of Resonators, and subsequently reproduced them synthetically by a

¹ Wasielewski, p. 14.

² Daily Telegraph.

³ 'Sensations of Tone,' Ellis's transl. p. 22.

system of electrically controlled tuning-forks. The full demonstration of these facts occupies the larger part of his classical work on 'Sensations of Tone,' and can hardly be given in a brief summary. Pure tones can be obtained from a tuning-fork held over a resonance tube, and by blowing a stream of air from a linear slit over the edge of a large bottle. The quality of tone in struck strings depends on (1) the nature of the stroke, (2) the place struck, and (3) the density, rigidity, and elasticity of the string. In bowed instruments no complete mechanical theory can be given; although Helmholtz's beautiful 'Vibration Microscope' furnishes some valuable indications. In violins, the various parts, such as the belly, back, and soundpost, all contribute to modify the quality; as also does the contained mass of air. By blowing across the *f*-hole of a Stradivarius violin, Savart obtained the note *c'*; in a violoncello, *F*; and in a viola, a note one tone below that of the violin.

Open organ pipes, and conical double reed instruments, such as the oboe and bassoon, give all the notes of the harmonic series. Stopped pipes and the clarinet give only the partial tones of the uneven numbers. On this subject, neither Helmholtz nor any other observer has given more detailed information: indeed the distinguished German physicist points out that here there is still 'a wide field for research.'

The theory of vowel-quality, first enunciated by Wheatstone in a criticism on Willis's experiments, is still more complicated. Valuable as are Helmholtz's researches, they have been to some extent corrected and modified of late by R. Koenig in his 'Experiences d'Acoustique.'¹ The latter writer begins by stating that, according to the researches of Donders and Helmholtz, the mouth, arranged to produce a particular vowel-sound, has a powerful resonance-tone which is fixed for each vowel, whatever be the fundamental note. A slight change of pronunciation modifies the sound sufficiently to sustain the proposition made by Helmholtz of defining by these accessory sounds the vowels which belong to different idioms and dialects. It is therefore very interesting to determine the exact pitch of these notes for the different vowels. Helmholtz and Donders however differ considerably in their results. Koenig determines the accessory resonance-tones for the vowels as pronounced by the North-Germans as follows:—

OU	O	A	E	I
Bb ₂	Bb ₂	Bb ₄	Bb ₆	Bb ₆
225	450	900	1800	3600 vibrations.

The simplicity of these relations is certainly in their favour, and is suggested by M. Koenig as the reason why we find essentially the same five vowels in all languages, in spite of the undoubted powers which the human voice possesses of producing an infinite number and variety of such sounds.

[W.H.S.]

¹ Quelques Expériences d'Acoustique, Paris 1882 (privately printed). Essay vi. p. 42.

TIME (Lat. *Tempus*, *Tactus*; Ital. *Tempo*, *Misura*, *Tatto*; Fr. *Mesure*; Germ. *Takt*, *Taktart*, *Taktordnung*).

No musical term has been invested with a greater or more confusing variety of significations than the word Time; nor is this vagueness confined to the English language. In the Middle Ages, as we shall show, its meaning was very limited; and bore but a very slight relation to the extended signification accorded to it in modern Music. It is now used in two senses, between which there exists no connection whatever. For instance, an English Musician, meeting with two Compositions, one of which is headed, 'Tempo di Valza,' and the other, 'Tempo di Menuetto,' will naturally (and quite correctly) play the first in 'Waltz-Time'; that is to say, at the *pace* at which a Waltz is commonly danced; and the second, at the very much slower pace peculiar to the Minuet. But an Italian Musician will tell us that both are written in 'Tempo di tripla di semiminima'; and the English Professor will (quite correctly) translate this by the expression, 'Triple Time,' or '3-4 Time,' or 'Three Crotchet Time.' Here, then, are two Compositions, one of which is in 'Waltz-Time,' and the other in 'Minuet Time,' while both are in 'Triple Time'; the words 'Tempo' and 'Time' being indiscriminately used to indicate pace and rhythm. The difficulty might have been removed by the substitution of the term 'Movimento' for 'Tempo,' in all cases in which pace is concerned; but this word is very rarely used, though its French equivalent, 'Mouvement,' is not uncommon.

The word TEMPO having already been treated, in its relation to speed, we have now only to consider its relation to rhythm.

In the Middle Ages, the words 'Tempus,' 'Tempo,' 'Time,' described the proportionate duration of the Breve and Semibreve only; the relations between the Large and the Long, and the Long and the Breve, being determined by the laws of Mode,² and those existing between the Semibreve and the Minim, by the rules of Prolation.³ Of Time, as described by mediæval writers, there were two kinds—the Perfect and the Imperfect. In Perfect Time, the Breve was equal to three Semibreves. The Signature of this was a complete Circle. In Imperfect Time—denoted by a Semicircle—the Breve was equal to two Semibreves only. The complications resulting from the use of Perfect or Imperfect Time in combination with the different kinds of Mode and Prolation, are described in the article NOTATION, and deserve careful consideration, since they render possible, in ancient Notation, the most abstruse combinations in use at the present day.

In modern Music, the word Time is applied to rhythmic combinations of all kinds, mostly indicated by fractions ($\frac{3}{8}$ etc.) referring to the aliquot parts of a Semibreve—the norm by which

² Here, again, we meet with another curious anomaly; for the word 'Mode' is also applied, by mediæval writers, to the peculiar forms of Tonality which preceded the invention of the modern Scale. ³ See MODE, PROLATION, and Vol. II. pp. 471 b–472 a.

the duration of all other notes is and always has been regulated. [See TIME-SIGNATURE.]

Of these combinations, there are two distinct orders, classed under the heads of Common (or Duple) Time, in which the contents of the Bar¹—as represented by the number of its Beats—are divisible by 2; and Triple Time, in which the number of beats can only be divided by 3. These two orders of Time—answering to the Imperfect and Perfect forms of the earlier system—are again subdivided into two lesser classes, called Simple and Compound. We shall treat of the Simple Times first, begging the reader to remember, that in every case the rhythmic value of the Bar is determined, not by the number of notes it contains, but by the number of its Beats. For it is evident that a Bar of what is generally called Common Time may just as well be made to contain two Minims, eight Quavers, or sixteen Semiquavers, as four Crotchets, etc., though it can never be made to contain more or less than four Beats. It is only by the number of its Beats, therefore, that it can be accurately measured.

I. Simple Common Times (Ital. *Tempi pari*; Fr. *Mesures à quatre ou à deux temps*; Germ. *Einfache gerade Takt*). The forms of these now most commonly used, are—

1. The Time called 'Alla Breve,' which contains, in every Bar, four Beats, each represented by a Minim, or its value in other notes.

This species of Time, most frequently used in Ecclesiastical Music, has for its Signature a Semicircle, with a Bar drawn perpendicularly through it² ($\overline{\text{C}}$); and derives its name from the fact that four Minims make a Breve.

2. Four Crotchet Time (Ital. *Tempo ordinario*;³ Fr. *Mesure à quatre temps*; Germ. *Vier-vierteltakt*) popularly called Common Time, *par excellence*.

This kind of Time also contains four Beats in a Bar, each Beat being represented by a Crotchet—or its value, in other notes. Its Signature is an unbarred Semicircle (C), or, less commonly, $\frac{4}{4}$.

3. The Time called Alla Cappella—sometimes very incorrectly misnamed Alla Breve—

¹ Strictly speaking, the term 'Bar' applies only to the lines drawn perpendicularly across the Staff, for the purpose of dividing a Composition into equal portions, properly called 'Measures.' But, in common language, the term 'Bar' is almost invariably substituted for 'Measure,' and consequently used to denote not only the perpendicular lines, but also the Music contained between them. It is in this latter sense that the word is used throughout the present article.

² Not a 'capital C, for Common Time,' as neophytes sometimes suppose.

³ Not to be mistaken for the 'Tempo ordinario' so often used by Handel, in which the term 'Tempo' refers to pace, and not to rhythm, or measure.

containing two Minim Beats in the Bar, and having for its Signature a barred Semicircle exactly similar to that used for the true Alla Breve already described (No. 1).

This Time—essentially modern—is constantly used for quick Movements, in which it is more convenient to beat twice in a Bar than four times. Antient Church Music is frequently translated into this time by modern editors, each bar of the older Notation being cut into two; but it is evidently impossible to call it 'Alla Breve,' since each bar contains the value not of a Breve but of a Semibreve only.

4. Two Crotchet or Two-four Time, sometimes, though very improperly, called 'French Common Time' (Ital. *Tempo di dupla*; Fr. *Mesure à deux temps*; Germ. *Zweivierteltakt*), in which each Bar contains two Beats, each represented by a Crotchet.

In very slow Movements, written in this Time, it is not at all unusual for the Conductor to indicate four Beats in the Bar instead of two; in which case the effect is precisely the same as that which would be produced by Four Crotchet Time, taken at the same rate of movement for each Beat. It would be an excellent plan to distinguish this slow form of $\frac{2}{4}$ by the Time-Signature, $\frac{4}{8}$; since this sign would indicate the subsidiary Accent to be presently described.

5. Eight Quaver Time (Germ. *Achtachteltakt*)—that is, eight Beats in a Bar, each represented by a Quaver—is not very frequently used: but an example, marked $\frac{8}{8}$, will be found in the PF. arrangement of the Slow Movement of Spohr's Overture to 'Faust.'

In the Orchestral Score, each Bar of this Movement is divided into two, with the barred Semicircle of Alla Cappella for its Time-Signature. It is evident that the gross contents of a Bar of this Time are equal, in value, to those of a Bar of $\frac{4}{4}$; but there is a great difference in the rendering, which will be explained later on.

6. Two Quaver Time (Germ. *Zweiachteltakt*, or *Viersechszehnteiltakt*), denoted by $\frac{2}{8}$ or $\frac{4}{16}$ is also very uncommon: but examples will be found in the Chorus of Witches in Spohr's Faust, and in his Symphony 'Die Weihe der Töne.'

The forms of Simple Common Time we have here described suffice for the expression of every kind of Rhythm characterised by the presence of

two, four, or eight Beats in a Bar, though it would be possible, in case of necessity, to invent others. Others indeed have actually been invented by some very modern writers, under pressure of certain needs, real or supposed. The one indispensable condition is, not only that the number of Beats should be divisible by 2 or 4, but that each several Beat should also be capable of subdivision by 2 or 4, *ad infinitum*.¹

II. When, however, each Beat is divisible by 3, instead of 2, the Time is called Compound Common (Germ. *Gerade zusammengesetzte Takt*): Common, because each Bar contains two, four, or eight Beats; Compound, because these Beats are represented, not by simple, but by dotted notes, each divisible by three. For Times of this kind, the term Compound is especially well-chosen, since the peculiar character of the Beats renders it possible to regard each Bar as an agglomeration of so many shorter Bars of Triple Time.

The forms of Compound Common Time most frequently used are—

1a Twelve-four Time (Germ. *Zwölfvierteltakt*), $\frac{12}{4}$, with four Beats in the Bar, each Beat represented by a dotted Minim—or its equivalent, three Crotchets; used, principally, in Sacred Music.

2a Twelve-eight Time (Ital. *Tempo di Dodiupla*; Germ. *Zwölfachteltakt*), $\frac{12}{8}$, with four Beats in the Bar, each represented by a dotted Crotchet, or its equivalent, three Quavers.

3a Twelve-sixteen Time, $\frac{12}{16}$; with four Beats in the Bar, each represented by a dotted Quaver, or its equivalent, three Semiquavers.

4a Six-two Time, $\frac{6}{2}$; with two beats in each Bar; each represented by a dotted Semibreve—or its equivalent, three Minims; used only in Sacred Music, and that not very frequently.

5a Six-four Time, (Germ. *Sechsvierteltakt*), with two Beats in the bar, each represented by a dotted Minim—or its equivalent, three Crotchets.

6a Six-eight Time (Ital. *Tempo di Sestupla*; Germ. *Sechachteltakt*), with two Beats

¹ This law does not militate against the use of Triplets, Sextoles, or other groups containing any odd number of notes, since these abnormal groups do not belong to the Time, but are accepted as inflections of its rules.

in the Bar, each represented by a dotted Crotchet—or its equivalent, three Quavers.

7a. Six-sixteen Time, $\frac{6}{16}$, with two Beats in the Bar, each represented by a dotted Quaver—or its equivalent, three Semiquavers.

8a. Twentyfour-sixteen, $\frac{24}{16}$, with eight Beats in the Bar, each represented by a dotted Quaver—or its equivalent, three Semiquavers.

III. Unequal, or Triple Times (Ital. *Tempi dispari*; Fr. *Mesures à trois temps*; Germ. *Ungerade Takt*; *Tripel Takt*) differ from Common, in that the number of their Beats is invariably three. They are divided, like the Common Times, into two classes—Simple and Compound—the Beats in the first class being represented by simple notes, and those in the second by dotted ones.

The principal forms of Simple Triple Time (Germ. *Einfache ungerade Takt*) are—

1b. Three Semibreve Time (Ital. *Tempo di Tripla di Semibreve*), $\frac{3}{1}$, or 3, with three Beats in the Bar, each represented by a Semibreve. This form is rarely used in Music of later date than the first half of the 17th century; though, in Church Music of the School of Palestrina, it is extremely common.

2b. Three-two Time, or Three Minim Time (Ital. *Tempo di Tripla di Minime*) with three Beats in the Bar, each represented by a Minim, is constantly used, in Modern Church Music, as well as in that of the 16th century.

3b. Three-four Time, or Three Crotchet Time (Ital. *Tempo di Tripla di Semiminime*, *Emiolia maggiore*; Germ. *Dreivierteltakt*) with three Beats in the Bar, each represented by a Crotchet, is more frequently used, in modern Music, than any other form of Simple Triple Time.

4b. Three-eight Time, or Three Quaver Time (Ital. *Tempo di Tripla di Crome*, *Emiolia minore*; Germ. *Dreiachteltakt*) with three Beats in the Bar, each represented by a Quaver, is also very frequently used, in modern Music, for slow movements.

It is possible to invent more forms of Simple Triple Time (as $\frac{3}{16}$, for instance), and some very modern Composers have done so; but the cases in which they can be made really useful are exceedingly rare.

IV. Compound Triple Time (Germ. *Zusammengesetzte Ungeradetakt*) is derived from the simple form, on precisely the same principle as that already described with reference to Common Time. Its chief forms are—

1c. Nine-four Time, or Nine Crotchet Time (Ital. *Tempo di Nonupla maggiore*; Germ. *Neunvierteltakt*) contains three Beats in the Bar, each represented by a dotted Minim—or its equivalent, three Cro ets.

2c. Nine-eight Time, or Nine Quaver Time (Ital. *Tempo di Nonupla minore*; Germ. *Neunachteltakt*) contains three Beats in a Bar, each represented by a dotted Crotchet—or its equivalent, three Quavers.

3c. Nine-sixteen Time, or Nine Semiquaver Time (Germ. *Neunsechszehnteltakt*), contains three Beats in the Bar, each represented by a dotted Quaver—or its equivalent, three Semiquavers.

It is possible to invent new forms of Compound Triple Time (as $\frac{9}{2}$); but it would be difficult to find cases in which such a proceeding would be justifiable on the plea of real necessity.

V. In addition to the universally recognised forms of Rhythm here described, Composers have invented certain anomalous measures which call for separate notice: and first among them we must mention that rarely used but by no means unimportant species known as QUINTUPLE Time ($\frac{5}{4}$ or $\frac{5}{8}$), with five Beats in the Bar, each Beat being represented either by a Crotchet or a Quaver as the case may be. As the peculiarities of this rhythmic form have already been fully described,¹ we shall content ourselves by quoting, in addition to the examples given in vol. iii. p. 61, one beautiful instance of its use by Brahms, who, in his 'Variations on a Hungarian Air,' Op. 21, No. 2, has fulfilled all the most necessary conditions, by writing throughout in alternate Bars of Simple Common and Simple Triple Time, under a double Time-Signature at the beginning of the Movement.

There seems no possible reason why a Composer, visited by an inspiration in that direction, should not write an Air in Septuple Time, with

¹ See QUINTUPLE TIME.

seven beats in a bar. The only condition needful to ensure success in such a case is, that the inspiration must come first, and prove of sufficient value to justify the use of an anomalous Measure for its expression. An attempt to write in Septuple Time, for its own sake, must inevitably result in an ignoble failure. The chief mechanical difficulty in the employment of such a Measure would lie in the uncertain position of its Accents, which would not be governed by any definite rule, but must depend, almost entirely, upon the character of the given Melody, and might indeed be so varied as to give rise to several different species of Septuple Time²—a very serious objection, for, after all, it is by the position of its Accents that every species of Time must be governed.³ It was for this reason that, at the beginning of this article, we insisted upon the necessity for measuring the capacity of the Bar, not by the number of the notes it contained, but by that of its Beats: for it is upon the Beats that the Accents fall; and it is only in obedience to the position of the Beats that the notes receive them. Now it is a law that no two Accents—that is to say, no two of the greater Accents by which the Rhythm of the Bar is regulated, without reference to the subordinate stress which expresses the division of the notes into groups—no two of these greater Accents, we say, can possibly fall on two consecutive Beats; any more than the strong Accent, called by Grammarians the 'Tone,' can fall on two consecutive syllables in a word. The first Accent in the Bar—marked thus (^) in our examples, corresponds in Music with what is technically called the 'Tone-syllable' of a word. Where there are two Accents in the Bar, the second, marked thus, (^), is of much less importance. It is only by remembering this, that we can understand the difference between the Time called 'Alla Cappella,' with two Minim Beats in the Bar, and $\frac{4}{4}$, with four Crotchet Beats: for the value of the contents of the Bar, in notes, is exactly the same, in both cases; and in both cases, each Beat is divisible by 2, indefinitely. The only difference, therefore, lies in the distribution of the Accents; and this difference is entirely independent of the pace at which the Bar may be taken.

In like manner, six Quavers may be written,

² See the remarks on an analogous uncertainty in Quintuple Time. Vol. III. p. 61 b.

³ The reader will bear in mind that we are here speaking of Accent, *par et simple*, and not of emphasis. A note may be emphasised, in any part of the Bar; but the quiet dwelling upon it which constitutes true Accent—Accent analogous to that used in speaking—can only take place on the accented Beat, the position of which is invariable. Hence it follows that the most strongly accented notes in a given passage may also be the softest. In all questions concerning Rhythm, a clear understanding of the difference between Accent—produced by quietly dwelling on a note—and Emphasis—produced by forcing it, is of the utmost importance.

with equal propriety, in a Bar of $\frac{3}{4}$ or in one of $\frac{6}{8}$ Time. But the effect produced will be altogether different; for, in the first case, the notes will be grouped in three divisions, each containing two Quavers; while, in the second, they will form two groups, each containing three Quavers. Again, twelve Crotchets may be written in a Bar of $\frac{6}{8}$, or $\frac{12}{8}$ Time; twelve Quavers, in a Bar of $\frac{6}{4}$, or $\frac{12}{8}$; or twelve Semiquavers, in a Bar of $\frac{3}{4}$, or $\frac{6}{8}$; the division into groups of two notes, or three, and the effect thereby produced, depending entirely upon the facts indicated by the Time-Signature—in other words, upon the question whether the Time be Simple or Compound. For the position of the greater Accents, in Simple and Compound Time, is absolutely identical; the only difference between the two forms of Rhythm lying in the subdivision of the Beats by 2, in Simple Times, and by 3, in Compound ones. Every Simple Time has a special Compound form derived directly from it, with the greater Accents—the only Accents with which we are here concerned—falling in exactly the

same places; as a comparison of the foregoing examples of Alla Breve and $\frac{12}{4}$, C and $\frac{12}{8}$, Alla Cappelletta and $\frac{6}{4}$, $\frac{2}{4}$ and $\frac{6}{8}$, $\frac{4}{8}$ and $\frac{12}{16}$, $\frac{8}{8}$ and $\frac{24}{16}$, $\frac{2}{8}$ and $\frac{6}{16}$, $\frac{3}{8}$ and $\frac{9}{16}$, $\frac{3}{4}$ and $\frac{9}{8}$, $\frac{3}{8}$ and $\frac{9}{16}$, will distinctly prove. And this rule applies, not only to Common and Triple Time, but also to Quintuple and Septuple, either of which may be Simple or Compound at will. As a matter of fact, we believe we are right in saying that neither of these Rhythms has, as yet, been attempted, in the Compound form. But such a form is possible: and its complications would in no degree interfere with the position of the greater Accents.¹ For the strongest Accent will, in all cases, fall on the first Beat in the Bar; while the secondary Accent may fall, in Quintuple Time—whether Simple or Compound—either on the third or the fourth Beat; and in Septuple Time—Simple or Compound—on the fourth Beat, or the fifth—to say nothing of other places in which the Composer would be perfectly justified in placing it.²

In a few celebrated cases—more numerous, nevertheless, than is generally supposed—Com-

SPORR, 'Die Weihe der Töne.'

¹ Compound Quintuple Rhythm would need, for its Time-Signature, the fraction $\frac{15}{8}$ or $\frac{3}{16}$; and Compound Septuple Rhythm, $\frac{7}{8}$ or $\frac{7}{16}$. Tyros are sometimes taught the perfectly correct though by no

means satisfactory 'rule of thumb,' that all fractions with a numerator greater than 5 denote Compound Times.

² See TIME-BEATING.

posers have produced particularly happy effects by the simultaneous employment of two or more different kinds of Time. A very simple instance will be found in Handel's so-called 'Harmonious Blacksmith,' where one hand plays in Four-Crotchet Time (C), and the other in $\frac{24}{16}$. A more ingenious combination is found in the celebrated Movement in the Finale of the First Act of 'Il Don Giovanni,' in which three distinct Orchestras play simultaneously a Minuet in $\frac{3}{4}$ Time, a Gavotte in $\frac{2}{4}$, and a Waltz in $\frac{3}{8}$, as in Ex. 1 on previous page; the complexity of the arrangement being increased by the fact that each three bars of the Waltz form, in their relation to each single bar of the Minuet, one bar of Compound Triple Time ($\frac{9}{8}$); while in relation to each single bar of the Gavotte, each two bars of the Waltz form one bar of Compound Common Time ($\frac{6}{8}$).

A still more complicated instance is found in the Slow Movement of Spohr's Symphony, 'Die Weihe der Töne' (Ex. 2 on previous page); and here again the difficulty is increased by the continuance of the slow Tempo—*Andantino*—in the part marked $\frac{9}{16}$, while the part marked *Allegro* starts in *Doppio movimento*, each Quaver being equal to a Semiquaver in the Bass.

Yet these complications are simple indeed when compared with those to be found in Palestrina's Mass 'L'homme armé,' and in innumerable Compositions by Josquin des Pres, and other writers of the 15th and 16th centuries; triumphs of ingenuity so abstruse that it is doubtful whether any Choristers of the present day could master their difficulties, yet all capable of being expressed with absolute certainty by the various forms of Mode, Time, and Prolation, invented in the Middle Ages, and based upon the same firm principles as our own Time-Table. For, all the mediæval Composers had to do, for the purpose of producing what we call Compound Common Time, was to combine Imperfect Mode with Perfect Time, or Imperfect Time with the Greater Prolation; and, for Compound Triple Time, Perfect Mode with Perfect Time, or Perfect Time with the Greater Prolation. [W.S.R.]

TIME, BEATING. Apart from what we know of the manners and customs of Greek Musicians, the practice of beating Time, as we beat it at the present day, is proved, by the traditions of the Sistine Choir, to be at least as old as the 15th century, if not very much older. In fact, the continual variations of Tempo which form so important an element in the interpretation of the works of Palestrina and other mediæval Masters, must have rendered the 'Solfa'—or, as we now call it, the *Bâton*—of a Conductor indispensable; and in the Pontifical Chapel it has been considered so from time immemorial. When the Music of the Polyphonic School gave place to Choruses accompanied by a full Orchestra, or, at least, a Thoroughbass, a more uniform Tempo became not only a desideratum, but almost a necessity. And because good Musicians found no difficulty in keeping together, in Move-

ments played or sung at an uniform pace from beginning to end, the custom of beating time became less general; the Conductor usually exchanging his desk for a seat at the Harpsichord, whence he directed the general style of the performance, while the principal First Violin—afterwards called the Leader—regulated the length of necessary pauses, or the pace of *ritardandi*, etc., with his Violin-bow. Notwithstanding the evidence as to exceptional cases, afforded by Handel's Harpsichord, now in the South Kensington Museum,¹ we know that this custom was almost universal in the 18th century, and the earlier years of the 19th—certainly as late as the year 1829, when Mendelssohn conducted his Symphony in C Minor from the Pianoforte, at the Philharmonic Concert, then held at the Argyle Rooms.² But the increasing demand for effect and expression in Music rendered by the full Orchestra, soon afterwards led to a permanent revival of the good old plan, with which it would now be impossible to dispense.

Our present method of beating time is directly derived from that practised by the Greeks; though with one very important difference. The Greeks used an upward motion of the hand, which they called the *ápois* (*arsis*), and a downward one, called *thesis* (*thesis*). We use the same. The difference is, that with us the Thesis, or down-beat, indicates the accented part of the Measure, and the Arsis, or up-beat, its unaccented portion, while with the Greeks the custom was exactly the reverse. In the Middle Ages, as now, the Semibreve was considered as the norm from which the proportionate duration of all other notes was derived. This norm comprised two beats, a downward one and an upward one, each of which, of course, represented a Minim. The union of the Thesis and Arsis indicated by these two beats was held to constitute a Measure—called by Morley and other old English writers a 'Stroke.' This arrangement, however, was necessarily confined to Imperfect, or, as we now call it, Common Time. In Perfect, or Triple Time, the up-beats were omitted, and three down-beats only were used in each Measure; the same action being employed whether it contained three Semibreves or three Minims.

When two beats only are needed in the bar,

we beat them, now, as they were beaten in the time of Morley; the down-beat representing the Thesis, or accented part of the Measure, and the up-beat, the Arsis, or unaccented portion, as at (A) in the annexed diagram.³ But it sometimes happens that Prestissimo Movements are taken at a pace too rapid to admit the delivery

¹ See vol. II. p. 564, note.

² See vol. II. p. 203.

³ The diagrams indicate a downward motion towards 1, for the beginning of the bar. The hand then passes through the other beats, in the order in which they are numbered, and, on reaching the last, is supposed to descend thence perpendicularly, to 1, for the beginning of the next bar.

of even two beats in a bar; and, in these cases, a single down-beat only is used, the upward motion of the Conductor's hand passing unnoticed, in consequence of its rapidity, as at (B).

When three beats are needed in the bar, the custom is, in England, to beat once downwards, once to the left, and once upwards, as at (A) in Fig. 2. In France, the same system is used in the Concert-room; but in the Theatre it is usual to direct the second beat to the right,

as at B, on the ground that the Conductor's Baton is thus rendered more easily visible to performers seated behind him. Both plans have their advantages and their disadvantages; but the fact that motions directed downwards, or towards the right, are always understood to indicate either primary or secondary accents, weighs strongly in favour of the English method.

But in very rapid Movements—such as we find in some of Beethoven's Scherzos—it is better

FIG. 2.

FIG. 3.

FIG. 4.

to indicate 3-4 or 3-8 Time by a single down-beat, like those employed in very rapid 2-4; only that, in this case, the upward motion which the Conductor necessarily makes in preparation for the downward beat which is to follow must be made to correspond as nearly as possible with the third Crotchet or Quaver of the Measure, as in Fig. 3.

When four beats are needed in the bar, the first is directed downwards; the second towards the left; the third towards the right; and the fourth upwards. (Fig. 4.)

It is not possible to indicate more than four full beats in a bar, conveniently. But it is easy to indicate eight in a bar, by supplementing each full beat by a smaller one in the same direction,

FIG. 5.

as at (A) in Fig. 5; or, by the same means, to beat six Quavers in a bar of very slow 3-4 Time, as at (B), or (C).

Compound Times, whether Common or Triple, may be beaten in two ways. In moderately quick Movements, they may be indicated by the same number of beats as the Simple Times from which they are derived: *e.g.* 6-8 Time may be beaten like 2-4; 6-4 like *Alla Cappella*; 12-8 like 4-4; 9-8 like 3-4; 9-16 like 3-8, etc., etc. But, in slower Movements, each constituent of the Compound Measure must be indicated by a triple motion of the Baton; that is to say, by one full beat, followed by two smaller ones, in

the same direction; 6-4 or 6-8 being taken as at (A) in Fig. 6; 9-4 or 9-8 as at (B); and 12-8 as at (C). The advantage of this plan is, that in all cases the greater divisions of the bar are indicated by full beats, and the subordinate ones by half-beats.

For the anomalous rhythmic combinations with five or seven beats in the bar, it is difficult to lay down a law the authority of which is sufficiently obvious to ensure its general acceptance. Two very different methods have been recommended; and both have their strong and their weak points.

One plan is, to beat each bar of Quintuple

Time in two distinct sections; one containing two beats, and the other, three: leaving the question whether the duple section shall precede the triple one, or the reverse, to be decided by the nature of the Music. For Compositions like that by Brahms (Op. 21, No. 2), quoted in the preceding article, this method is not only excellent, but is manifestly in exact accordance with the author's intention—which, after all, by divid-

ing each bar into two dissimilar members, the one duple and the other triple, involves a compromise quite inconsistent with the character of strict Quintuple Rhythm, notwithstanding the use that has been made of it in almost all other attempts of like character. The only Composition with which we are acquainted, wherein five independent beats in the bar have been honestly maintained throughout, without any compromise

whatever, is Reeve's well-known 'Gypsies' Glee';¹ and, for this, the plan we have mentioned would be wholly unsuitable. So strictly impartial is the use of the five beats in this Movement, that it would be quite impossible to fix the position of a second Accent. The bar must therefore be expressed by five full beats; and the two most convenient ways of so expressing it are those indicated at (A) and (B) in Fig. 7.

This is undoubtedly the best way of indicating Quintuple Rhythm, in all cases in which the Com-

poser himself has not divided the bar into two unequal members.

Seven beats in the bar are less easy to manage. In the first place, if a compromise be attempted, the bar may be divided in several different ways; *e. g.* it may be made to consist of one bar of 4-4, followed by one bar of 3-4; or, one bar of 3-4, followed by one bar of 4-4; or, one bar of 3-4, followed by two bars of 2-4; or, two bars of 2-4, followed by one of 3-4; or, one bar of 2-4, one of 3-4, and one of 2-4. But, in the absence

FIG. 7.

of any indication of such a division by the Composer himself, it is much better to indicate seven honest beats in the bar. (Fig. 8.)

Yet another complication arises, in cases in which two or more species of Rhythm are employed simultaneously, as in the Minuet in 'Don Giovanni,' and the Serenade in Spohr's 'Weihe der Töne.' In all such cases, the safest rule is, to select the shortest Measure as the norm, and to indicate each bar of it by a single down-beat. Thus, in 'Don Giovanni,' the Minuet, in 3-4 Time, proceeds simultaneously with a Gavotte in

2-4, three bars of the latter being played against two bars of the former; and also with a Waltz in 3-8, three bars of which are played against each single bar of the Minuet, and two against each bar of the Gavotte. We must, therefore, select the Time of the Waltz as our norm; indicating each bar of it by a single down-beat; in which case each bar of the Minuet will be indicated by three down-beats, each bar of the Gavotte by two, and each bar of the Waltz by one—an arrangement which no orchestral player can possibly misunderstand.

In like manner, Spohr's Symphony will be

¹ See vol. III. p. 61 A.

most easily made intelligible by the indication of a single down-beat for each Semiquaver of the part written in 9-16 Time—a method which Mendelssohn always adopted in conducting this Symphony.¹

This method of using down-beats only is also of great value in passages which, by means of complicated syncopations, or other similar expedients, are made to go *against the time*; that is to say, are made to sound as if they were

written in a different Time from that in which they really stand. But, in these cases, the down-beats must be employed with extreme caution, and only by very experienced Conductors, since nothing is easier than to throw a whole Orchestra out of gear, by means used with the best possible intention of simplifying its work. A passage near the conclusion of the Slow Movement of Beethoven's 'Pastoral Symphony' will occur to the reader as a case in point.

FIG. 8.

The rules we have given will ensure mechanical correctness in beating Time. But, the iron strictness of a Metronome, though admirable in its proper place, is very far from being the only qualification needed to form a good Conductor, who must not only know how to beat Time with precision, but must also learn to beat it easily and naturally, and with just so much action as may suffice to make the motion of his Baton seen and understood by every member of the Orchestra, and no more. For the antics once practised by a school of Conductors, now happily almost extinct, were only so many fatal hindrances to an artistic performance.

Many Conductors beat Time with the whole arm, instead of from the wrist. This is a very bad habit, and almost always leads to a very much worse one—that of dancing the Baton, instead of moving it steadily. Mendelssohn, one of the most accomplished Conductors on record, was very much opposed to this habit, and reprehended it strongly. His manner of beating was excessively strict; and imparted such extraordinary precision to the Orchestra, that, having brought a long level passage—such, for instance, as a continued *forte*—into steady swing, he was sometimes able to leave the performers, for a considerable time, to themselves; and would often lay down his Baton upon the desk, and cease to beat Time for many bars together, listening intently to the performance, and only resuming his active functions when his instinct told him that his assistance would presently be needed. With a less experienced chief, such a proceeding would have been fatal: but, when he did it—and it was his constant practice

—one always felt that everything was at its very best.

It may seem strange to claim, for the mechanical process of time-beating, the rank of an element—and a very important element—necessary to the attainment of ideal perfection in art: yet Mendelssohn's method of managing the Baton proved it to be one. He held 'Tempo rubato' in abhorrence; yet he indicated *nuances* of emphasis and expression—as opposed to the inevitable Accents described in the foregoing article—with a precision which no educated musician ever failed to understand; and this with an effect so marked, that, when even Ferdinand David—a Conductor of no ordinary ability—took up the baton after him at the Gewandhaus, as he frequently did, the soul of the Orchestra seemed to have departed.² The secret of this may be explained in a very few words. He knew how to beat *strict Time with expression*; and his gestures were so full of meaning, that he enabled, and compelled, the meanest Ripieno to assist in interpreting his reading. In other words, he united, in their fullest degree, the two qualifications which alone are indispensable in a great Conductor—the noble intention, and the power of compelling the Orchestra to express it. No doubt, the work of a great Conductor is immeasurably facilitated by his familiarity with the Orchestra he directs. Its members learn to understand and obey him, with a certainty which saves an immensity of labour. Sir Michael Costa, for instance, attained a position so eminent, that for very many years there was not, in all England, an orchestral player of any reputation

¹ See the examples of these two passages, in the foregoing article (p. 121).

² We do not make this assertion on our own unsupported authority. The circumstance has been noticed, over and over again; and all who carefully studied Mendelssohn's method will bear witness to the fact.

who did not comprehend the meaning of the slightest motion of his hand. And hence it was that, during the course of his long career, he was able to modify and almost revolutionise the method of procedure to which he owed his earliest successes. Beginning with the comparatively small Orchestra of Her Majesty's Theatre, as it existed years ago, he gradually extended his sway, until he brought under command the vast body of 4000 performers assembled at the Handel Festivals at the Crystal Palace. As the number of performers increased, he found it necessary to invent new methods of beating Time for them; and, for a long period, used an uninterrupted succession of consecutive down-beats with a freedom which no previous Conductor had ever attempted. By using down-beats with one hand, simultaneously with the orthodox form in the other, he once succeeded, at the Crystal Palace, in keeping under command the two sides of a Double Chorus, when every one present capable of understanding the gravity of the situation believed an ignoble crash to be inevitable. And, at the Festival of 1883, his talented successor, Mr. Manns, succeeded, by nearly similar means, in maintaining order under circumstances of unexampled difficulty, caused by the sudden illness of the veteran chief whose place he was called upon to occupy without due time for preparation. In such cases as these the Conductor's left hand is an engine of almost unlimited power, and, even in ordinary conducting, it may be made extremely useful. It may beat four in a bar, or, in unequal combinations, even three, while the right hand beats two; or the reverse. For the purpose of emphasising the meaning of the right hand, its action is invaluable. And it may be made the index of a hundred shades of delicate expression. Experienced players display a wonderful instinct for the interpretation of the slightest action on the part of an experienced Conductor. An intelligent wave of the bâton will often ensure an effective *sforzando*, even if it be not marked in the copies. A succession of beats, beginning quietly, and gradually extending to the broadest sweeps the bâton can execute, will ensure a powerful *crescendo*, and the opposite process, an equally effective *diminuendo*, unnoticed by the transcriber. Even a glance of the eye will enable a careless player to take up a point correctly, after he has accidentally lost his place—a very common incident, since too many players trust to each other for counting silent bars, and consequently re-enter with an indecision which energy on the part of the Conductor can alone correct.

It still remains to speak of one of the most important duties of a Conductor—that of starting his Orchestra. And here an old-fashioned scruple frequently causes great uncertainty. Many Conductors think it beneath their dignity to start with a preliminary beat: and many more players think themselves insulted when such a beat is given for their assistance. Yet the value of the expedient is so great, that it is madness to sacrifice it for the sake of idle prejudice.

No doubt good Conductors and good Orchestras can start well enough without it, in all ordinary cases; but it is never safe to despise legitimate help, and never disgraceful to accept it. A very fine Orchestra, playing Beethoven's Symphony in C minor for the first time under a Conductor with whose 'reading' of the work they were unacquainted, would probably escape a vulgar crash at starting, even without a preliminary beat; but they would certainly play the first bar very badly: whereas, with such a beat to guide them, they would run no risk at all. For one preliminary beat suffices to indicate to a cultivated Musician the exact rate of speed at which the Conductor intends to take the Movement he is starting, and enables him to fulfil his chief's intention with absolute certainty. [W.S.R.]

TIME-SIGNATURE (Lat. *Signum Modi, vel Temporis, vel Prolationis*; Germ. *Taktzeichen*). A Sign placed after the Clef and the Sharps or Flats which determine the Signature of the Key, in order to give notice of the Rhythm in which a Composition is written.

Our present Time-signatures are directly descended from forms invented in the Middle Ages. Mediæval Composers used the Circle—the most perfect of figures—to denote Perfect (or, as we should now say, Triple) Rhythm; and the Semi-circle for Imperfect or Duple forms. The Signatures used to distinguish the Greater and Lesser Modes,¹ Perfect or Imperfect—*Signa Modi*, Modal Signs—were usually preceded by a group of Rests,² showing the number of Longs to which a Large was equal in the Greater Mode, and the number of Breves which equalled the Long in the Lesser one—that is to say, three for the Perfect forms, and two for the Imperfect. Sometimes these Rests were figured once only; sometimes they were twice repeated. The following forms were most commonly used:—

Greater Mode Perfect.

Greater Mode Imperfect.

Lesser Mode Perfect.

Lesser Mode Imperfect.

Combinations of the Greater and Lesser Modes, when both were Perfect, were indicated by a Point of Perfection, placed in the centre of the Circle, as at (a) in the following example. When the Greater Mode was Perfect, and the Lesser Imperfect, the Point was omitted, as at (b).

¹ See MODES.

² The reader must be careful to observe the position of these Rests; because it is only when they precede the Circle or Semicircle, that they are used as signs. When they follow it, they must be counted as marks of silence.

When both Modes were Imperfect, or the Greater Imperfect and the Lesser Perfect, the difference was indicated by the groups of Rests, as at (c) and (d).

The Circle and the Semicircle, were also used either alone or in combination with the figures 3 or 2, as Signatures of Time, in the limited sense in which that term was used in the Middle Ages;¹ i.e. as applied to the proportions existing between the Breve and the Semibreve only—three to one in Perfect, and two to one in Imperfect forms.

The same signs were used to indicate the proportion between the Semibreve and the Minim, in the Greater and Lesser Prolation;² but generally with a bar drawn perpendicularly through the Circle or Semicircle, to indicate that the beats were to be represented by Minims; and sometimes, in the case of the Greater Prolation, with the addition of a Point of Perfection.

Combinations of Mode, Time, and Prolation sometimes give rise to very complicated forms, which varied so much at different epochs, that even Ornithoparchus, writing in 1517, complains of the difficulty of understanding them.³ Some writers used two Circles or Semicircles, one within the other, with or without a Point of Perfection in the centre of the smaller one. The inversion of the Semicircle (C) always denoted a diminution in the value of the beats, to the extent of one-half; but it was only at a comparatively late period that the doubled figure (C C) indicated an analogous change in the opposite direction. Again, the barred Circle or Semicircle always indicated Minim beats; but the unbarred forms, while indicating Semibreves, in Mode, and Time, were used, by the Madrigal writers, to indicate Crotchet beats, in Prolation.

The application of these principles to modern

Time-signatures is exceedingly simple, and may be explained in a very few words. At present we use the unbarred Semicircle to indicate four Crotchet beats in a bar; the barred Semicircle to indicate four Minim beats, in the Time called *Alla breve*, and two Minim beats in *Alla Cappella*. Some German writers once used the doubled Semicircle, barred, (C|C) for *Alla breve*—which they called the *Grosse Allabrevetakt*, and the ordinary single form, barred, for *Alla Cappella*—*Kleine Allabrevetakt*: but this distinction has long since fallen into disuse.

The Circle is no longer used; all other forms of Rhythm than those already mentioned being distinguished by fractions, the denominators of which refer to the aliquot parts of a Semibreve, and the numerators, to the number of them contained in a bar, as $\frac{2}{4}$ ($= \frac{2}{4}$), $\frac{3}{4}$ ($= \frac{3}{4}$), etc. And even in this we only follow the mediæval custom, which used the fraction $\frac{3}{2}$ to denote Triple Time, with three Minims in a bar, exactly as we denote it at the present day.

A complete list of all the fractions now used as Time-Signatures will be found in the article TIME, together with a detailed explanation of the peculiarities of each. [W.S.R.]

TIME TABLE. A Table denoting the forms and proportionate duration of all the notes used in measured Music.

The earliest known indication of a Time Table is to be found in the well-known work on *Cantus mensurabilis*, written by Franco of Cologne about the middle of the 11th century. Franco mentions only four kinds of notes, the Large (or Double Long), the Long, the Breve, and the Semibreve. Franchinus Gafurius, in his 'Practica musicæ,' first printed at Milan in 1496, describes the same four forms, with the addition of the Minim. These were afterwards supplemented by the Greater Semiminim, now called the Crotchet, and the Lesser Semiminim, or Quaver; and, later still, by the Semiquaver, the Demisemiquaver, and the Half-Demisemiquaver.

The modern Time Table, denoting the proportionate value of all these notes, is too well known in our schoolrooms to need a word of description here. [W.S.R.]

TIMIDAMENTE. The indication written by Beethoven in his MS. of the Mass in D at the well-known passage in the 'Agnus' where the trumpets produce their thrilling effect—'Ah Miserere!' etc.; but changed by the engravers of the first score and subsequent editions to 'Tremidamente.' The mistake was corrected in Breitkopf's critical edition. [G.]

TIMPANI is the Italian word for kettle-drums. Printers and copyists often substitute y for i in this word, which is a great fault, as the letter y does not exist in the Italian language. [V. de P.]

TINCTORIS, JOANNES DE, known in Italy as Giovanni del Tintore, and in England as John Tincter, was born at Nivelles in Brabant

¹ See p. 17 b.

² See PROLATION.

³ See vol. III. p. 42.

in the year 1434 or 1435.¹ The peculiar form of his name has led to the supposition that he was the son of a dyer; but the custom of using the genitive case, when translating proper names into Latin, was so common in Flanders during the Middle Ages, that it cannot, in this instance, be accepted as a proof of the fact. All we really know of his social status is, that his profound learning and varied attainments were rewarded with honourable appointments, both in his own country and in Italy. In early youth he studied the Law; took the Degree of Doctor, first in Jurisprudence, and afterwards in Theology; was admitted to the Priesthood, and eventually obtained a Canonry in his native town. He afterwards entered the service of Ferdinand of Arragon, King of Naples, who appointed him his Chaplain and Cantor, and treated him with marked consideration and respect. At Naples he founded a public Music-School, composed much Music, and wrote the greater number of his theoretical works. He returned to Nivelles in 1490, and died there, as nearly as can be ascertained, in 1520. Franchinus Gafurius makes honourable mention of him in several places. None of his Compositions have been printed, but several exist in MS. among the Archives of the Pontifical Chapel. One of these, a 'Missa l'homme armé,' à 5, is remarkable for the number of extraneous sentences interpolated into the text. In the 'Sanctus' the Tenor is made to sing 'Cherubim ac Seraphim, cæterique spiritus angelici Deo in altissimis incessabili voce proclamant'; in the first 'Osanna,' the Altus sings 'Pueri Hebræorum sternentes vestimenta ramos palmarum Iesu filio David, clamabant'; and in the 'Benedictus,' the Tenor interpolates 'Benedictus semper sit filius Altissimi, qui de coelis huc venit'; while, in each case, the other Voices sing the usual words of the Mass.² This senseless corruption of the authorised text, it will be remembered, was one of the abuses which induced the Council of Trent to issue the decree which resulted in the composition of the 'Missa Papæ Marcelli.'³

The theoretical works of J. de Tinctoris are more numerous and important, by far, than his Compositions. Their titles are 'Expositio manus,' 'Liber de natura et proprietate tenorum,' 'De notis ac pausis,' 'De regulari valore notarum,' 'Liber imperfectionum notarum,' 'Tractatus alterationum,' 'Super punctis musicalibus,' 'Liber de arte contrapuncti,' 'Proportionale musices,' 'Complexus effectuum musices,' and 'Terminorum musice diffinitorium.'

This last-named work will, we imagine, be invested with special interest for our readers, since it is undoubtedly the first Musical Dictionary that ever was printed. It is of such extreme rarity, that, until Forkel discovered a copy in the Library of the Duke of Gotha, in the latter half of the last century, it was altogether unknown. About the same time, Dr. Burney discovered an-

other copy, in the Library of King George III, now in the British Museum.⁴ The work is undated, and the place of publication is not mentioned; but there is reason for believing that it was printed at Naples about the year 1474. It contains 291 definitions of musical terms, arranged in alphabetical order, exactly in the form of an ordinary Dictionary. The language is terse and vigorous, and, in most cases, very much to the purpose. Indeed it would be difficult to over-estimate the value of the light thrown, by some of the definitions, upon the Musical Terminology of the Middle Ages. Some of the explanations, however, involve rather curious anomalies, as for instance, 'MELODIA idem est quod armonia.'

Forkel reprinted the entire work in his 'Literatur der Musik,' p. 204 etc.; and his reprint has been republished, in the original Latin, under the editorship of Mr. John Bishop, of Cheltenham, by Messrs. Cocks & Co.⁵

No other work by J. de Tinctoris has ever been printed; though both Fétis and Choron are said to have once contemplated the publication of the entire series. [W.S.R.]

TIRABOSCHI, GIROLAMO, a well-known writer on Italian literature, born at Bergamo, Dec. 28, 1731, and educated by the Jesuits, to which order he at one time belonged. He was librarian of the Brera in Milan for some years, and in 1770 removed to a similar post at Modena. His 'Storia della Letteratura Italiana' (13 vols. quarto, 1772 to 1782) includes the history of Italian music. He published besides 'Biblioteca Modenese' (6 vols. 1781 to 86) the last volume of which, 'Notizie de' pittori, scultori, incisori, ed architetti, nati degli Stati del Sig. Duca di Modena,' has an appendix of musicians. Tiraboschi died June 3, 1797, at Modena. [F.G.]

TIRANA. An Andalusian dance of a very graceful description, danced to an extremely rhythmical air in 6-8 time. The words which accompany the music are written in 'coplas' or stanzas of four lines, without any 'estrevillo.' [See SEGUIDILLA, vol. iii. p. 457 a.] There are several of them in Preciso's 'Collección de Coplas,' etc. (Madrid, 1799), whence the following example is derived:—

Tú eres mi primer amor,
Tú me enseñaste á querer
No me enseñes á olvidar,
Que no lo quiero aprender.⁶

Tiranas are generally danced and sung to a guitar accompaniment. The music of one ('Si la mar fuera de tinta') will be found in 'Arias y Canciones Nacionales Españoles' (London, Lonsdale, 1871). [W.B.S.]

TIRARSI, DA, 'to draw out.' Trombe, or Corni, da tirarsi, i.e. Trumpets or Horns with slides, are found mentioned in the scores of Bach's Kirchencantatas, usually for strengthening the voices. See the Bachgesellschaft volumes, ii. pp. 293, 317, 327; x. 189, etc. etc. [G.]

¹ Not, as some historians have supposed, in 1450.

² See vol. ii. pp. 228 b, 229 a.

³ See vol. iii. p. 263.

⁵ At the end of 'Hamilton's Dictionary of 2000 Musical Terms.'

⁶ Translation:—Thou art my first love, Thou taughtest me to love, Teach me not to forget, For I do not wish to learn it.

'TIS THE LAST ROSE OF SUMMER.

A song written by Thomas Moore to the tune of 'The Groves of Blarney'; this again being possibly a variation of an older air called 'The Young Man's dream,' which Moore has adapted to the words 'As a beam on the face of the waters may glow.' Blarney, near Cork, became popular in 1788 or 1789, and it was then that the words of 'The Groves of Blarney' were written by R. A. Millikin, an attorney of Cork. The tune may be older, though this is not at all certain: it is at all events a very beautiful and characteristic Irish melody. We give it in both its forms, as it is a good example of the way in which Moore, with all his taste, often destroyed the peculiar character of the melodies he adapted.¹

The Groves of Blarney.*The Last Rose of Summer.*

Beethoven (20 Irische Lieder, No. 6) has set it, in Eb, to the words 'Sad and luckless was the season.' Mendelssohn wrote a fantasia on the air, published as op. 15,² considerably altering

¹ The writer is indebted to Mr. T. W. Joyce for the above information. See too Mr. and Mrs. S. O. Hall's 'Ireland,' l. 49, and Lover's 'Lyrics of Ireland.'

² Of the date of this piece no trace is forthcoming. It probably belongs to his first English visit. Its publication (by Spina) appears to date from Mendelssohn's visit to Vienna, en route to Italy.

the notation; and Flotow has made it the leading motif in the latter part of 'Martha.' Berlioz's enthusiasm for the tune equals his contempt for the opera. 'The delicious Irish air was so simply and poetically sung by Patti, that its fragrance alone was sufficient to disinfect the rest of the work.'³ [G.]

TITZE, or TIETZE, LUDWIG, member of the Imperial chapel and of the Tonkünstler-Societät, and Vice-Pedell of the University of Vienna, born April 1, 1797, died Jan. 11, 1850. Possessor of a sympathetic and highly-trained tenor voice, with a very pure style of execution, Titze was universally popular. He sang at the Concerts Spirituels, and acted as choir-master, Karl Holz being leader, and Baron Lannoy conductor. Between 1822 and 1839 he appeared at 26 concerts of the Tonkünstler-Societät, singing the tenor solos in such works as Handel's 'Solomon,' 'Athaliah,' 'Jephthah,' and 'Messiah,' and Haydn's 'Creation' and 'Seasons,' associated in the latter with Staudigl after 1833. From 1822 he also sang at innumerable concerts and soirées of the Gesellschaft der Musikfreunde. His special claim to distinction, however, was his production of Schubert's songs at these soirées. He sang successively, 'Rastlose Liebe' (1824 and 31); 'Erlkönig' (1825); 'Der Einsame' (1826); 'Nachthelle' (1827); 'Norman's Gesang' (March 8, 1827, accompanied by Schubert on the PF., and 1839); 'Gute Nacht' (1828); 'Der blinde Knabe,' and 'Drang in die Ferne' (1829); 'Liebesbotschaft,' and 'Auf dem Strome' (1832); 'An mein Herz,' 'Sehnsucht,' and 'Die Sterne' (1833); besides taking his part in the quartets 'Geist der Liebe' (1823 and 32); 'Die Nachtigall' (1824); 'Der Gondelfahrer' (1825); and the solo in the 'Song of Miriam' (1832). At the single concert given by Schubert, March 26, 1828, he sang 'Auf dem Strome,' accompanied on the French horn by Lewy, jun., and on the PF. by Schubert. These lists show that Schubert's works were not entirely neglected in Vienna. His name appears in the programmes of the Gesellschaft soirées 88 times between 1821 and 1840. [C.F.P.]

TOCCATA (Ital.), from *toccare*, to touch, is the name of a kind of instrumental composition originating in the beginning of the 17th century. As the term Sonata is derived from the verb *suonare*, to sound, and may thus be described as a sound-piece, or *Tonstück*, so the similarly formed term Toccata represents a touch-piece, or a composition intended to exhibit the touch and execution of the performer. In this respect it is somewhat synonymous with the prelude and fantasia; but it has its special characteristics, which are so varied as to make them difficult to define clearly. The most obvious are a very flowing movement in notes of equal length and a homophonous character, there being often indeed in the earlier examples but one part throughout, though occasionally full chords were employed. There is no decided subject which is made such by repetition, and the whole has the air of a

³ 'Lettres intimes,' p. 283.

showy improvisation. Giovanni Gabrieli (1557-1613) and Claudio Merulo (1533-1604) were the first writers of any importance who used this form, the Toccatas of the latter being scarcely so brilliant as those of the former, though more elaborate. Frescobaldi, Luigi Rossi, and Scherer developed the idea and sometimes altered the character of the movement, using chords freely and even contrapuntal passages. It was Bach however who raised the Toccata far beyond all previous and later writers. The Toccatas to his Fugues for Clavecin are in some cases a chain of short movements of markedly different tempi and styles. The fourth of those in the Peters volume of 'Toccatas and Fugues' is the only one which answers to the description given above, the others being almost overtures. That to the G minor Fugue in No. 211 of the same edition is very extended. His organ Toccatas are very grand, one of the finest being that in F on this subject¹—

the semiquaver figure of which is treated at great length alternately by the two hands in thirds and sixths over a pedal bass, and then by the pedals alone. Another in C (Dörffel, 830) is equally brilliant. Bach sometimes begins and ends with rapid cadenza-like passages in very short notes divided between the two hands, as in the well-known Toccata in D minor, with its fugue, which Tausig has arranged as a piano solo.²

Probably from the fact of its faint individuality the Toccata has in later times had but a flickering vitality, and has found scant favour with composers of the first rank. A collection of six Toccatas for piano published by Mr. Pauer has resuscitated as prominent specimens one by F. Pollini (not the famous one of his 32) in G, and others by Czerny, Onslow, Clementi, etc. That by Pollini is of the form and character of a Bourrée, and the others would be better named Etudes in double notes, having all definite subjects and construction. The same may be said of Schumann's Toccata in C (op. 7), which is a capital study for practice, and is in sonata form. Contemporary musicians have given us two or three specimens of real Toccatas worth mention, prominent among them being that in G minor by Rheinberger, which is a free fugue of great boldness and power. The same composer has used the diminutive term TOCCATINA for one of a set of short pieces; and another instance of the use of this term is the Toccata in E♭ by Henselt, a short but very showy and difficult piece. Dupont has published a little PF. piece entitled TOCCATELLA. Toccatas by Walter Macfarren and A. H. Jackson may close our list of modern pieces bearing that name. [See TOUCH; TUCKET.] [F.C.]

¹ (Dörffel's Cat. No. 816). In the old editions of this, Schumann has pointed out a host of errors. See 'Gesammelte Schriften,' iv. 59.

² Both these—in D and F—are entitled 'Praeludium (Toccata).' Three Toccatas—in F with a fugue, in D minor, and in E with two fugues—are printed in vol. 15 of the Bachgesellschaft edition.

TODI, MARIA FRANCESCA (or LUIGIA, according to a contemporary Berlin opera-book, and to the inscription on some of her portraits), was a famous mezzo-soprano singer, born in Portugal about the year 1748. She received her musical education from David Perez, at Lisbon. When, in her seventeenth year, she first appeared in public, she at once attracted notice by the beautiful, though somewhat veiled, quality of her voice. She made her *début* in London in 1777, in Paisiello's 'Due Contesse,' but was not successful. Her voice and style were unsuited to comic opera, which, from that time, she abandoned. At Madrid, in the same year, her performance of Paisiello's 'Olimpiade' won warm admiration, but her European fame dates from 1778, when her singing at Paris and Versailles created a lasting sensation. She returned for one year to Lisbon, but in 1781 was at Paris again. In 1782 she engaged herself for several years to the Berlin Opera, at a yearly salary of 2000 thalers. But the Prussian public thought her affected and over-French in manner, and at the end of a year she gave up her engagement and returned to Paris, where she always found an enthusiastic welcome. Madame Mara was also in Paris, and the two queens of song appeared together at the Concert Spirituel. The public was divided into 'Maratistes' and 'Todistes,' and party spirit ran as high as between the 'Gluckistes' and 'Piccinnistes,' or the adherents of Cuzzoni and Faustina. The well-known retort shows that the contest was not conducted without wit:—'Laquelle étoit la meilleure? C'est Mara. C'est bien Todi (bientôt dit).'

Mara excelled in *bravura*, but Todi would seem to have been the more pathetic. Their rivalry gave rise to the following stanza—

Todi, par sa voix touchante,
De doux pleurs mouille mes yeux;
Mara, plus vive, plus brillante,
M'étonne, me transporte aux cieux.
L'une ravit et l'autre enchante,
Mais celle qui plait le mieux
Est toujours celle qui chante.

Todi returned to Berlin in 1783, where she sang the part of Cleofide in 'Lucio Papirio.' The king wished her to remain, but she had already signed an engagement for St. Petersburg. There her performance of Sarti's 'Armida' was an immense success. She was overwhelmed with presents and favours by the Empress Catherine, between whom and the *prima donna* there sprang up a strange intimacy. Todi acquired over Catherine an almost unbounded influence, which she abused by her injustice to Sarti, the imperial Chapelmaster, whom she disliked. Seeing that she was undermining his position at court, Sarti revenged himself by bringing Marchesi to St. Petersburg, whose wonderful vocal powers diverted some part of the public admiration from Todi. Todi retorted by procuring Sarti's dismissal. This ugly episode apart, she is asserted to have been amiable and generous.

Meanwhile the king of Prussia was tempting her back to Berlin, and, as the Russian climate was telling on her voice, she, in 1786, accepted his offers,

and was far more warmly received than upon her first visit. With the exception of six months in Russia, she remained at Berlin till 1789, achieving her greatest triumphs in Reichardt's 'Andromeda' and Neumann's 'Medea.' In March 1789 she reappeared in Paris, and among other things sang a scena composed for her by Cherubini, 'Sarete alfin contenti,' eliciting much enthusiasm. After a year's visit to Hanover she proceeded to Italy, and sang with great success. In 1792 she returned to Lisbon, where, in the following year, she died.

It is strange that Todi should have made no impression in this country, for there seems no doubt that she was one of the best singers of her time, equal in many respects, superior in some, to Mara, who was much admired here. Lord Mount-Edgewcombe speaks of her as having 'failed to please here,' and Burney, later in her career, writes of her, 'she must have improved very much since she was in England, or we treated her very unworthily, for, though her voice was thought to be feeble and seldom in tune while she was here, she has since been extremely admired in France, Spain, Russia, and Germany, as a most touching and exquisite performer.'

There is a pretty and scarce portrait of her in character, singing, called 'L'Euterpe del Secolo XVIII' (1791). She was twice married, and left to her husband and her eight children, who survived her, a sum of 400,000 francs, besides jewels and trinkets worth a fortune. [F.A.M.]

TOD JESU, DER, i.e. the Death of Jesus—the 'Messiah' of Germany, a 'Passions-Cantate,' words by Ramler, music by Graun. It was first performed in the Cathedral of Berlin, on Wednesday before Easter, March 26, 1755, and took such hold as to become an essential part of the Passion week at Berlin. It is still given there at least twice a year. In England I can find no record of its complete performance. There are three editions of the full score—1760, 1766, 1810; and PF. arrangements without number, beginning with one by J. Adam Hiller, 1783, and ending with one in Novello's 8vo. series. [G.]

TOFTS, MRS. CATHERINE, 'little inferior, either for her voice or her manner, to the best Italian women,'¹ was the first of English birth who sang Italian Opera in England. A subscription concert was instituted in November 1703 at the Theatre in Lincoln's Inn Fields, where Mrs. Tofts sang several songs, both Italian and English.² In the following year she continued to sing at the 'Subscription Music.' On January 29, Margherita de l'Épine sang for the first time, at Drury Lane. On the second appearance of this, Tofts's future rival, a disturbance occurred at the Theatre, while she was singing, which 'was suspected' to have been created by her emissaries,³ a suggestion which she denied in the 'Daily Courant,' Feb. 8, 1704. In the same year she sang and played the part of Pallas in Weldon's 'Judgment of Paris.'

In 1705 came the first attempt to plant Italian,

or pseudo-Italian, Opera in England; and to the success of this endeavour Mrs. Tofts and her rival were the chief contributors, the former playing successively the chief parts in 'Arwinoe,' 'Camilla,' 'Rosamond,' 'Thomyris,' and 'Love's Triumph.' 'Mrs. Tofts,' who took her first grounds of musick here in her own country, before the Italian taste had so highly prevailed, was then not an adept in it; yet whatever defect the fashionably skilful might find in her manner, she had, in the general sense of her spectators, charms that few of the most learned singers ever arrive at. The beauty of her fine proportioned figure, and the exquisitely sweet, silver tone of her voice, with that peculiar rapid swiftness of her throat, were perfections not to be imitated by art or labour.' At a very early stage of her short but brilliant career, she drew a salary of £500,⁴ higher than that which was paid to any other member of the company,—a sure test of the estimation in which she was held by the management and the public: at the same time, Valentini and de l'Épine only drew £400 apiece, and the Baroness, £200. At another time, this salary was commuted⁵ into a share in the profits of the theatre. Again, we find her⁶ offering to sing for 20 guineas a night, or 'in consideration the year is so far advanced' for 400 guineas till the 1st of July, provided she was allowed to sing in another play, to be produced elsewhere, if not on an opera night. These were high terms in 1708. She sang also at the concerts at Court. Meanwhile, she was no stranger to the quarrels and disputes which seem to have prevailed at the Opera then as in later times. There was a warm correspondence⁷ about a bill of 80 guineas, for Camilla's dress, which Rich declined to pay; but Camilla refused to appear in 'Thomyris' till it was paid; and Rich then compromised the matter. She further demanded⁸ an allowance for 'locks for hair, jewels, ribbons, muslin for vails, gloves, shoes, washing of vails, etc.,' for which she modestly affirmed that '£100 was not sufficient for the season.'

Were it not that similar complaints and demands were common from other singers, there would seem to be here some foundation for the charge brought against Mrs. Tofts in the epigram, attributed to Pope:—

So bright is thy beauty, so charming thy song,
As had drawn both the beasts and their Orpheus along;
But such is thy avarice, and such is thy pride,
That the beasts must have starved, and the poet have died!

She must however have had a great passion for money, and a great disregard of the means of raising it, if Lady Wentworth's contemporary account may be trusted. 'Mrs. Taufs,' says that delightful writer and most eccentric speller, 'was on Sunday last at the Duke of Somerset's, where there were about thirty gentlemen, and every kiss was one guinea; some took three, others four, others five at that rate, but none less than one.'⁹

⁴ Hawkins.

⁵ Burney.

This unfortunate singer, the first English-woman distinguished in Italian Opera, lost her reason early in 1709. In a most ungenerous vein Steele alludes to her affliction,¹ and attributes it to the habit she had acquired of regarding herself as really a queen, as she appeared on the stage, a habit from which she could not free herself. Burney supposes that this was an exaggeration, by means of which the writer intended only to 'throw a ridicule on opera quarrels in general, and on her particular disputes at that time with the Margarita or other female singers.' Hawkins says that she was cured, temporarily at least, and 'in the meridian of her beauty, and possessed of a large sum of money, which she had acquired by singing, quitted the stage (1709), and was married to Mr. Joseph Smith, afterwards English consul at Venice. Here she lived in great state and magnificence, with her husband, for a time; but her disorder returning' (which, if true, upsets Burney's theory), 'she dwelt sequestered from the world in a remote part of the house, and had a large garden to range in, in which she would frequently walk, singing and giving way to that innocent frenzy which had seized her in the earlier part of her life.' She was still living about the year 1735.²

Her voice did not exceed in compass³ that of an ordinary soprano, and her execution, as shown by the *printed* airs which she sang, 'chiefly consisted in such passages as are comprised in the shake, as indeed did that of most other singers at this time.' It may be observed, however, that all singers 'at this time' added a good deal to that which was 'set down for them' to execute; and probably she did so too.

It is somewhat strange that, of a singer so much admired as Mrs. Tofts undoubtedly was, no portrait should be known to exist, either painted or engraved. [J.M.]

TOLBECQUE, a family of Belgian musicians, who settled in France after the Restoration. The original members were four brothers:—the eldest, ISIDORE JOSEPH (born at Hanzinne Ap. 17, 1794, died at Vichy May 10, 1871), was a good conductor of dance-music. JEAN BAPTISTE JOSEPH (born at Hanzinne in 1797, died in Paris, Oct. 23, 1869), violinist, composer, and excellent conductor, directed the music of the court balls during Louis Philippe's reign, and also those at Tivoli when those public gardens were the height of the fashion. He composed a quantity of dance-music—quadrilles, vases, and galops—above the average in merit; an opéra-comique in one act 'Charles V. et Duguesclin' (Odéon, 1827), with Gilbert and Guiraud; and with Deldevez, 'Vert-Vert' (Opéra, 1851), a 3-act ballet, his most important work. He was a member of the Société des Concerts du Conservatoire from its foundation in 1859. The third brother, AUGUSTE JOSEPH, also born at Hanzinne, Feb. 28, 1801, died in Paris, May 27, 1869. A pupil of Rudolph

Kreutzer, he took the first violin prize at the Conservatoire in 1821, made some mark as a virtuoso, was an original member of the Société des Concerts, and one of the best violinists at the Opéra, and for several seasons was well known in London, where he played first violin at Her Majesty's Theatre. The youngest, CHARLES JOSEPH, born May 27, 1806, in Paris, where he died Dec. 29, 1835, was also a pupil of R. Kreutzer, and an original member of the Société des Concerts. He took a prize at the Conservatoire in 1824, and became conductor at the Variétés in 1830. In this capacity he composed pretty songs and pieces for interpolation in the plays, several of which attained some amount of popularity.

The Tolbecque family is at this moment represented by AUGUSTE, son of Auguste Joseph, a distinguished cellist, born in Paris, March 30, 1830. He took the first cello prize at the Conservatoire in 1849, and has published some 15 works of various kinds for his instrument, including 'La Gymnastique du Violoncelle' (op. 14), an excellent collection of exercises and mechanical studies. He is also a clever restorer of old instruments, and formed a collection, which he sold to the Brussels Conservatoire in 1879. His son, JEAN, born at Niort, Oct. 7, 1857, took the first cello prize at the Paris Conservatoire in 1873, and has studied the organ with César Franck. [G.C.]

TOLLET, THOMAS, composed and published about 1694, in conjunction with John Lenton, 'A Consort of Musick in three parts,' and was author of 'Directions to play on the French flageolet.' He was also a composer of act tunes for the theatre, but is best known as composer of 'Tollet's Ground,' printed in the Appendix to Hawkins's History. [W.H.H.]

TOMASCHEK, WENZEL, composer, born April 17, 1774, at Skutsch in Bohemia. He was the youngest of a large family, and his father, a well-to-do linen-weaver, having been suddenly reduced to poverty, two of his brothers, a priest and a public official, had him educated. He early showed talent for music, and was placed at Chrudim with Wolf, a well-known teacher, who taught him singing and the violin. He next wished to learn the piano and organ, and his brother the priest sent him a spinet, on which he practised day and night. The Minorite fathers of Iglan offered him a choristership, with instruction in theory. On the breaking of his voice in 1790, he went to Prague to study philosophy and law, supporting himself the while by giving lessons. All his spare time, even the hours of rest, was spent in studying the works of Marpurg, Kirnberger, Matheson, Türk, and Vogler, and he thus laid a solid foundation of scientific knowledge. Neither did he neglect practical music, but made himself familiar with the works of Mozart and Pleyel, and became acquainted with Winter, Kozeluch, and above all, Beethoven, who exercised a life-long influence over him. In his autobiography, published in a volume called 'Libussa' (1845, etc.), Tomaschek writes, 'It was in 1798, when I was studying

¹ Tatler, No. 20, May 28, 1709.

² Hawkins. Burney says (probably a misprint) in 1735.

³ Burney.

law, that Beethoven, that giant among players, came to Prague. At a crowded concert in the Convict-hall he played his Concerto in C (op. 15), the Adagio and Rondo grazioso from the Sonata in A (op. 2), and extemporised on a theme from Mozart's *Clemenza di Tito*, "Ah tu fosti il primo oggetto." His grand style of playing, and especially his bold improvisation, had an extraordinary effect upon me. I felt so shaken that for several days I could not bring myself to touch the piano; indeed it was only my inextinguishable love for the art, that, after much reasoning with myself, drove me back to the instrument with even increased industry. Before long, however, the critical faculty returned. After hearing Beethoven twice more, he says, 'This time I was able to listen with greater calmness of mind, and though I admired as much as ever the power and brilliancy of his playing, I could not help noticing the frequent jumps from subject to subject which destroyed the continuity and gradual development of his ideas. Defects of this kind often marred those most magnificent creations of his superabundant fancy.' 'Had Beethoven's compositions (only a few of which were then printed) claimed to be classical standard works as regards rhythm, harmony, and counterpoint, I should perhaps have been discouraged from carrying on my self-cultivation; but as it was, I felt nerved to further effort.' Three years later Tomaschek declared Beethoven to have still further perfected his playing. He himself about this time published some 'Ungarische Tänze' (without ever having heard a Hungarian air) and Hölty's 'Elegie auf eine Rose,' an early specimen of programme-music. Twelve waltzes had a great success at the Prague Carnival of 1797; but these he burnt. He was known as a pianist, and esteemed as a teacher by the principal nobility, but hesitated between the profession of music and an official career. Meantime Count Bucquoi von Longueval offered him the post of composer in his household, with such a salary as to place him at ease in money-matters; and this he accepted. Prague continued to be his home, but he made occasional journeys, especially to Vienna. In November 1814 he paid Beethoven a visit, of which he has left an account ('*Libussa*,' 1846) in the form of a conversation. He tells us that Meyerbeer and other artists had put themselves at Beethoven's disposal, for the performance of the 'Battle of Vittoria,' and that Meyerbeer played the big drum. 'Ha! ha! ha!' exclaims Beethoven, 'I was not at all pleased with him; he could not keep time, was always coming in too late, and I had to scold him well.' 'Ha! ha! ha! I dare say he was put out. He is no good. He has not pluck enough to keep time.' Pluck was a quality which Meyerbeer never possessed, even at the time of his greatest successes. A fortnight later Tomaschek repeated the visit, and describes it in even greater detail ('*Libussa*' 1847). Meyerbeer's 'Two Caliphs'

¹ This looks as if Beethoven, even in 1814, could hear pretty well on cochleons.

was then being performed, and on Tomaschek saying that it began with a Hallelujah and ended with a Requiem, Beethoven remarked, 'Yes, it is all up with his playing.' And again, 'He knows nothing of instrumental music; singing he does understand, and that he should stick to. Besides, he knows but little of composition. I tell you he will come to no good.' Beethoven's prophecy was not fulfilled; but these notes are interesting records of his opinions, and show a high esteem for Tomaschek.

Tomaschek's house became the centre of musical life in Prague, and the list of his pupils includes Dreyschock, Kittl, Kube, Schulhoff, Bocklet, Dessauer, Worzischek, and Würffel. In 1823 he married Wilhelmine Ebert, remaining in Count Bucquoi's service, though with a house of his own, where he was much visited by strangers, especially by English. He was hospitable and pleasant except on the subject of music, on which he was given to laying down the law. In person he was tall, and of a military carriage. The superficial was his abhorrence. Even in his smaller works there was a technical completeness, which procured him the title of the 'Schiller of music.' His church music includes a *Missa Solennis* in Eb, and several Requiems, but his predilection was for dramatic music, to which he was led by its connection with the Ballad and the Lied. He set several of Goethe's and Schiller's poems, and also old Czech songs from the *Königinhof MS.*²

Tomaschek played his setting of Goethe's poems before the poet himself at Eger, and was very kindly received. His opera 'Seraphine' (1811) was well received at the National Theatre in Prague, in spite of a poor libretto; but in spite of this success he declined to permit the appearance of two other operas, 'Alvara' and 'Sakuntala.' He left scenes from Goethe's 'Faust,' and from 'Wallenstein,' 'Maria Stuart,' and the 'Braut von Messina,' as well as other vocal compositions, which were presented with his other remains to the Bohemian National Museum in Prague, by his nephew Freiherr von Tomaschek.

Besides a quantity of smaller works, chiefly Lieder, Tomaschek published 110 with opus numbers, including the interesting 'Eklogues' (op. 35, 39, 47, 51, 53, 66 and 83) and 'Dithyramb' (op. 65, Prague, Berra), which would still repay the attention of pianists. It is unfortunate for Tomaschek's fame that his works were contemporaneous with Beethoven's, but they exercised a material influence on such an artist as Robert Schumann. Is it too much to hope that these lines may direct some musicians to an unjustly forgotten composer?

Tomaschek died April 3, 1850, and was buried in the churchyard of Koschir, near Prague. [F.G.]

TOMASINI, LUIGI (ALOYSIUS), eminent violinist, and distinguished member of Prince Esterhazy's band under Haydn, born 1741 at Pesaro. In 1757 he became a member of Prince Paul Anton's household at his palace of Eisenstadt in

² The authenticity of which has been disproved by Sombora, the great authority on Czech literature.

Hungary, and on Haydn's undertaking the Vice-Capellmeistership in 1761, was at once promoted by him to be first violin. He was afterwards leader, and director of the chamber-music, with a largely increased salary. Prince Nicholas (successor to Paul Anton) left him a pension in 1790, but Tomasini remained in the service till his death, April 25, 1808. He was on the most intimate terms with Haydn, who wrote all his quartets with a view to Tomasini's playing, and remarked to him, 'Nobody plays my quartets so much to my satisfaction as you do.' He only once appeared in public in Vienna, at a concert of the Tonkünstler-Societät (1775), of which he had been a member from its foundation in 1771. In all probability Haydn gave him instruction in composition. He published violin-concertos, quartets, duos, concertants (dedicated to Haydn), etc. For the Prince he wrote '24 Divertimenti per il Patidon (barytone), violino, e violoncello,' now in the archives of the Gesellschaft der Musikfreunde in Vienna. A few of Haydn's violin-concertos were written expressly for Tomasini ('fatto per il Luigi'). Besides two daughters, who sang in the church and opera at Eisenstadt, Tomasini had two talented sons. The eldest,

LUIGI, born 1779, at Esterhaz, an excellent violinist, was received into the chapel in 1796, dismissed several times for incorrigible levity, but as often readmitted at Haydn's request. The latter speaks of his 'rare genius,' and so did Hummel. He played in Vienna in 1796 and 1801 at the Tonkünstler-Societät, and in 1806 at the Augarten concerts. In 1808 he had to fly, for having married, without the Prince's leave, Sophie Groll, a singer in the chapel, but he secured an appointment as Concertmeister to the Duke of Mecklenburg-Strelitz. In 1812 he and his wife gave a concert in Berlin, when Luigi played Beethoven's concerto, and his wife, a pupil of Righini's, was much applauded. In 1814 he gave a concert in the court theatre in Vienna, after which he wholly disappears. His brother,

ANTON, born 1775 at Eisenstadt, played in the chapel as an amateur from 1791 to 96, when he became a regular member. His instrument was the viola. He married the daughter of a Polish General in 1803, in which year he also became a member of the Tonkünstler-Societät. He resembled his brother both in talent and disposition, and, like him, was several times dismissed, and taken on again with increased salary. In 1820 he became leader of the band, and died at Eisenstadt June 12, 1824. [G.F.P.]

TOMKINS. A family which, in the 16th and 17th centuries, produced many good musicians.

Rev. THOMAS TOMKINS was chanter and minor canon of Gloucester Cathedral in the latter part of the 16th century. He contributed to 'The Triumphes of Oriana,' 1600, the madrigal 'The faunes and satirs tripping,' commonly attributed to his more celebrated son and namesake.

JOHN TOMKINS, Mus. Bac., one of his sons, was probably a chorister of Gloucester Cathedral. He afterwards became a scholar of King's College, Cambridge, of which in 1606 he was appointed

organist. He resigned in 1622 upon being chosen organist of St. Paul's Cathedral. In 1625 he was appointed gentleman extraordinary of the Chapel Royal 'for the next place of an organist there,' and in 1625 became Gospeller. He died Sept. 27, 1638, and was buried at St. Paul's. Some anthems by him are contained in Barnard's MS. collection. His son, ROBERT, was in 1641 one of the King's musicians.

THOMAS TOMKINS, Mus. Bac., another son of Thomas, was a pupil of Byrd, and graduated at Oxford, July 11, 1607. He soon afterwards became organist of Worcester Cathedral. On Aug. 2, 1621, he was sworn in as one of the organists of the Chapel Royal upon the death of Edmond Hooper. In 1622 he published 'Songs of 3, 4, 5 and 6 parts,' containing 28 madrigals and anthems of a high degree of excellence. He died in June, 1656, and was buried at Martin Hammingtree, Worcestershire. A collection of his church music, comprising 5 services and 68 anthems, was published in 1664 under the title of 'Musica Deo Sacra & Ecclesie Anglicanæ; or, Musick dedicated to the Honor and Service of God, and to the Use of Cathedral and other Churches of England, especially to the Chappel Royal of King Charles the First.' A second impression appeared in 1668.

Many MSS. of his music are found in the Tudway collection, at Ely, Ch. Ch. Oxford, etc. At St. John's Coll. Oxford, there is a volume written by him and Este, containing, among other remarkable things, the bass part of a Service by Tallis for 5 voices, otherwise unknown. [See TALLIS, vol. iv. p. 54 a.]

GILES TOMKINS, a third son, succeeded his brother, John, as organist of King's College, Cambridge, in 1622. He afterwards became organist of Salisbury Cathedral, which appointment he held at the time of his death in 1668.

NATHANIEL TOMKINS, born 1584, son of a gentleman of Northampton, chorister of Magdalen College, Oxford, from 1596 to 1604, clerk there from 1604 to 1606, and usher of the College School from 1606 to 1610, and ABRAHAM TOMKINS, chorister of the same College from 1611 to 1617, were probably members of another branch of the same family. [W.H.H.]

TONAL FUGUE (Fr. *Fugue du Ton*; Germ. *Einfache Fuge*, *Fuge des Tones*). A form of Fugue, in which the Answer (*Comes*), instead of following the Subject (*Dux*) exactly, Interval for Interval, sacrifices the closeness of its Imitation to a more important necessity—that of exact conformity with the organic constitution of the Mode in which it is written; in other words, to the Tonality of its Scale. [See SUBJECT.]

This definition, however, though sufficient to distinguish a Tonal Fugue from a Real one of the same period and form, gives no idea whatever of the sweeping revolution which followed the substitution of the later for the earlier method. A technical history of this revolution, though giving no more than a sketch of the phases through which it passed, between the death of Palestrina and the maturity of Handel

and Sebastian Bach, would fill a volume. We can here only give the ultimate results of the movement; pausing first to describe the position from which the earliest modern Fugue took their departure.

The Real Fugue of the Polyphonic Composers, as perfected in the 16th century, was of two kinds—Limited, and Unlimited. With the Limited form—now called Canon—we have, here, no concern.¹ The Unlimited Real Fugue started with a very short Subject, adapted to the opening phrase of the verbal text—for it was always vocal—and this was repeated note for note in the Answer, but only for a very short distance. The Answer always began before the end of the Subject; but, after the exact Imitation carried on through the first few notes, the part in which it appeared became 'free,' and proceeded whither it would. The Imitation took place generally in the Fifth above or the Fourth below; sometimes in the Fourth above, or Fifth below, or in the Octave; rarely, in Unlimited Real Fugue, in any less natural Interval than these. There was no Counter-Subject; and, whenever a new verbal phrase appeared in the text, a new musical phrase was adapted to it, in the guise of a Second Subject. But it was neither necessary that the opening Subject should be heard simultaneously with the later ones; nor, that it should reappear, after a later one had been introduced. Indeed, the cases in which these two conditions—both indispensable, in a modern Fugue—were observed, even in the slightest degree, are so rare, that they may be considered as infringements of a very strict rule.

The form we have here described was brought to absolute perfection in the so-called 'School of Palestrina,' in the latter half of the 16th century. The first departure from it—rendered inevitable by the substitution of the modern Scale for the older Tonality—consisted in the adaptation of the Answer to the newer law, in place of its subjugation, by aid of the Hexachord, to the Ecclesiastical Modes. [See HEXACHORD.] The change was crucial. But it was manifest that matters could not rest here. No sooner was the transformation of the Answer recognised as an unavoidable necessity, than the whole conduct of the Fugue was revolutionised. In order to make the modifications through which it passed intelligible, we must first consider the change in the Answer, and then that which took place in the construction of the Fugue founded upon it—the modern Tonal Fugue.

The elements which enter into the composition of this noble Art-form are of two classes; the one, comprising materials essential to its existence; the other consisting of accessories only. The essential elements are (1) The Subject, (2) The Answer, (3) The Counter-Subject, (4) The Codetta, (5) The Free Part, (6) The Episode, (7) The

Stretto, and (8) The Pedal-Point, or Organ-Point. The accessories are, Inversions of all kinds, in Double, Triple, or Quadruple Counterpoint; Imitations of all kinds, and in all possible Intervals, treated in Direct, Contrary, or Retrograde Motion, in Augmentation, or Diminution; Modulations; Canonic passages; and other devices too numerous to mention.

Among the essential elements, the first place is, of course, accorded to the Subject; which is not merely the Theme upon which the Composition is formed, but is nothing less than an epitome of the entire Fugue, which must contain absolutely nothing that is not either directly derived from, or at least more or less naturally suggested by it.

The qualities necessary for a good Subject are both numerous and important. Cherubini has been laughed at for informing his readers that 'the Subject of a Fugue ought neither to be too long, nor too short': but, the apparent Hibernianism veils a valuable piece of advice. The great point is, that the Subject should be complete enough to serve as the text of the discourse, without becoming wearisome by repetition. For this purpose, it is sometimes made to consist of two members, strongly contrasted together, and adapted for separate treatment; as in the following Subject, by Telemann, in which the first member keeps up the dignity of the Fugue, while the second provides perpetual animation.

Sometimes the construction of the Subject is homogeneous, as in the following by Kirnberger; and the contrast is then produced by means of varied Counterpoint.

Many very fine Subjects—perhaps, the finest of all—combine both qualities; affording sufficient variety of figure when they appear in complete form; and, when separated into fragments, serving all necessary purposes, for Episodes, Stretti, etc., as in the following examples—

'Preserve him for the glory of Thy name.' HANDEL.

From the Sonata in A. PADERE MARTINI.

¹ Those who wish to trace the relation between the two will do well to study the 'Missa Canonica,' edited by La Fage, and by him attributed to Palestrina, or the 'Missa Canonica' of Fux, side by side with Palestrina's 'Missa ad Fugam'; taking the two first-named works as examples of Limited, and the third of Unlimited Real Fugue.

MENDELSSOHN (Op. 35, No. 4).

Sometimes, the introduction of a Sequence, or the figure called ROSALIA, affords opportunities for very effective treatment.

FEBERLIN.

Sebastian Bach constantly made use of this device in his Pedal Fugues, the Subjects of which are among the longest on record. There are few Subjects in which this peculiarity is carried to greater excess than in that of his Pedal-Fugue in E Major.

Very different from these are the Subjects designed by learned Contrapuntists for the express purpose of complicated devices. These are short, massive, characterised by extremely concordant Intervals, and built upon a very simple rhythmic foundation. Two fine examples are to be found in Bach's 'Art of Fugue'; and the 'Et vitam' of Cherubini's 'Credo' in G for 8 voices.

J. S. BACH.

CHERUBINI.

Next in importance to the Subject is the Answer; which, indeed, is neither more nor less than the Subject itself, presented from a different point of view. We have already said that the Tonal Answer must accommodate itself, not to the Intervals of the Subject, but, to the organic constitution of the Scale. The essence of this accommodation consists in answering the Tonic by the Dominant, and the Dominant by the Tonic: not in every unimportant member of the Subject—for this would neither be possible nor desirable—but in its more prominent divisions. The first thing is to ascertain the exact place at which the change from Real to Tonal Imitation must be introduced. For this process there are certain laws. The most important are—

(1) When the Tonic appears in a prominent position in the Subject, it must be answered by the Dominant; all prominent exhibitions of the Dominant being answered in like manner by the Tonic. The most prominent positions possible are those in which the Tonic passes directly to the Dominant, or the Dominant to the Tonic, without the interpolation of any other note between the two; and, in these cases, the rule is absolute.

Subject. Answer. Subject. Answer.

(2) When the Tonic and Dominant appear in less prominent positions, the extent to which Rule 1 can be observed must be decided by the Composer's musical instinct. Beginners, who have not yet acquired this faculty, must carefully observe the places in which the Tonic and Dominant occur; and, in approaching or quitting those notes, must treat them as fixed points to which it is indispensable that the general contour of the passage should accommodate itself.

(a) Dominant, answered by Tonic, at (c).

(b) Dominant, answered by Supertonic, at (d).

(3) The observance of Rules 1 and 2 will ensure compliance with the next, which ordains that all passages formed on a Tonic Harmony, in the Subject, shall be formed upon a Dominant Harmony in the Answer, and *vice versa*.

Subject.

Answer.

Tonic Dominant Dominant Tonic
Harmony. Harmony. Harmony. Harmony.

(4) The Third, Fourth, and Sixth of the Scale should be answered by the Third, Fourth, and Sixth of the Dominant, respectively.

Subject.

Answer.

(a) Sixth of Tonic. (b) Third of Tonic. (c) Fourth of Tonic.
(d) Sixth of Dominant (e) Third of Dominant.
(f) Fourth of Dominant.

(5) The Interval of the Diminished Seventh, whether ascending or descending, should be answered by a Diminished Seventh.

Subject.

Answer.

Subject.

Answer.

(6) As a general rule, all Sevenths should be answered by Sevenths; but a Minor Seventh, ascending from the Dominant, is frequently answered by an ascending Octave; in which case, its subsequent descent will ensure conformity with Rule 4, by making the Third of the Dominant answer the Third of the Tonic.

(7) The most difficult note of the Scale to answer is the Supertonic. It is frequently necessary to reply to this by the Dominant; and when the Tonic is immediately followed by the Supertonic, in the Subject, it is often expedient to reiterate, in the Answer, a note, which, in the original idea, was represented by two distinct Intervals; or, on the other hand, to answer, by two different Intervals, a note which, in the Subject, was struck twice. The best safeguard is careful attention to Rule 3, neglect of which will always throw the whole Fugue out of gear.

(a) Tonic, answered by Dominant, at (c).
(b) Supertonic, answered by Dominant, at (d).

Simple as are the foregoing Rules, great judgment is necessary in applying them. Of all the qualities needed in a good Tonal Subject, that of suggesting a natural and logical Tonal Answer is the most indispensable. But some Subjects are so difficult to manage that nothing but the insight of genius can make the connection between the two sufficiently obvious to ensure its recognition. The Answer is nothing more than the pure Subject, presented under another aspect: and, unless its effect shall exactly correspond with that produced by the Subject itself, it is a bad answer, and the Fugue in which it appears a bad Fugue. A painter may introduce into his picture two horses, one crossing the foreground, exactly in front of the spectator, and the other in such a position that its figure can only be truly represented by much foreshortening. An ignorant observer might believe that the proportions of the two animals were entirely different; but they are not. True, their actual measurements differ; yet, if they be correctly drawn, we shall recognise them as a well-matched pair. The Subject and its Answer offer a parallel case. Their measurement (by Intervals) is different, because they are placed in a different aspect; yet, they must be so arranged as to produce an exactly similar effect. We have shown the principle upon which the arrangement is based to be simply that of answering the Tonic by the Dominant, and the Dominant by the Tonic, whenever these two notes follow each other in direct succession; with the farther proviso, that all passages of Melody formed upon the Tonic Harmony shall be represented by passages formed upon the Dominant Harmony, and *vice versa*. Still, great difficulties arise, when the two characteristic notes do not succeed each other directly, or, when the Harmonies are not indicated with inevitable clearness. The Subject of Handel's Chorus, 'Tremble, guilt,' shows how the whole swing of the Answer sometimes depends on the

change of a single note. In this case, a perfectly natural reply is produced, by making the Answer proceed to its second note by the ascent of a Minor Third, instead of a Minor Second, as in the Subject—i.e. by observing Rule 4, with regard to the Sixth of the Tonic.

The Great Masters frequently answered their Subjects in Contrary Motion, giving rise to an apparently new Theme, described as the Inverted Subject (*Inversio*; *Rivolta*, *Rivolzimento*; *Umkehrung*). This device is usually employed to keep up the interest of the Composition, after the Subject has been discussed in its original form: but some Masters bring in the Inverted Answer at once. This was a favourite device with Handel, whose Inverted Answers are so natural, as to be easily mistaken for regular ones. The following example is from Cherubini's 'Credo' already mentioned.

Inversion; or Answer in Contrary Motion.

Another method of answering is by Diminution, in which each note in the Answer is made half the length of that in the Subject. This, when cleverly done, produces the effect of a new Subject, and adds immensely to the spirit of the Fugue; as in Bach's Fugue in E, No. 33 of the XLVIII, bars 26-30; in the Fugue in C minor, No. 27 of the same set; and, most especially, in Handel's Chorus, 'Let all the Angels.'

Answer, by ¹diminution.

Allied to this, though in the opposite direction, is a highly effective form of treatment by Augmentation, in which each note in the Answer is twice the length of that in the Subject, or in Double Augmentation, four times its length. The object of this is, to give weight to massive passages, in which the lengthened notes produce the effect of a *Canto fermo*. See Bach's Fugue

¹ The 'Answer' here might with equal propriety be considered as the 'Subject'; in which case the answer would be by Augmentation.

in D \sharp minor, no. 8, in the XLVIII, and many other celebrated instances.

By these and similar expedients, the one Subject is made to produce the effect of several new ones; though the new *Motivo* is simply a modified form of the original.

But a good Subject must not only suggest a good Answer: it must also suggest one or more subsidiary Themes so constructed as to move against it, in Double Counterpoint, as often as it may appear.¹ These secondary Themes are called Counter-Subjects (*Contra-Subjectum*; *Contra-Tema*; *Contra-subjekt*; *Contre-sujet*). The Counter-Subject or Counter-Subjects, however numerous they may be, must not only move in Double Counterpoint with the Subject, but all must be capable of moving together, in Triple, Quadruple, or Quintuple Counterpoint, as the case may be. Moreover, after the Subject has once been proposed, it must nevermore be heard, except in company with at least one of its Counter-Subjects. The Counter-Subjects usually appear, one by one, as the Fugue develops; as in Bach's Fugue in C \sharp Minor—No. 4 of the XLVIII. Less frequently, one, two, or even three Counter-Subjects appear with the Subject, when first proposed, the Composition leading off, in two, three, or four Parts, at once. It was an old custom, in these cases, to describe the Fugue as written upon two, three, or four Subjects. These names have sometimes been erroneously applied even to Fugues in which the Counter-Subjects do not appear until the middle of the Composition, or even later. For instance, in Wealey and Horn's edition of Bach's XLVIII, the Fugue in C \sharp minor is called a 'Fugue on 3 Subjects,' although the real Subject starts quite alone, the entrance of the first Counter-Subject taking place at bar 35, and that of the second at bar 49. Cherubini very justly condemns this nomenclature, even when the Subject and Counter-Subjects begin together. 'A Fugue,' he says, 'neither can nor ought to have more than one principal Subject for its exposition. All that accompanies this Subject is but accessory, and neither can nor ought to bear any other name than that of Counter-Subject. A Fugue which is called a Fugue on two Subjects, ought to be called a Fugue on one Subject, with one Counter-Subject,' etc. etc. It is highly desirable that the nomenclature thus recommended should be adopted: but there is no objection to the terms Single and Double Fugue, as applied respectively to Fugues in which the principal Counter-Subject appears after or simultaneously with the Subject; for, when the two *Motivi* begin together, the term 'Double' is surely not out of place. When two Counter-Subjects

¹ See *COUNTER-SUBJECT*, vol. I. p. 428.

begin together with the Subject, the Fugue may fairly be called Triple; when three begin with it, it may be called Quadruple; the number of possible Counter-Subjects being only limited by that of the Parts, with, of course, the necessary reservation of one Part for the Subject. A Septuple Fugue, therefore, is a Fugue in seven Parts, written upon a Subject, and six Counter-Subjects, all beginning together.

The Old Masters never introduced a Counter-Subject into their Real Fugues. Each Part, after it had replied to the Subject, was free to move wherever it pleased, on the appearance of the Subject in another Part. But this is not the case in the modern Tonal Fugue. Wherever the Subject appears, one Part, at least, must accompany it with a Counter-Subject; and those Parts only which have already performed this duty become free—that is to say, are permitted, for the moment, to fill up the Harmony by unfettered Counterpoint.

When the Subject and Counter-Subject start together, the Theme is called a Double-Subject; as in the last Chorus of Handel's 'Triumph of Time and Truth,' based on the Subject of an Organ Concerto of which it originally² formed the concluding Movement; in the 'Christe' of Mozart's Requiem; and in the following from Haydn's 'Creation.'

It is very important that the Subject and Counter-Subject should move in different figures. A Subject in long-sustained notes will frequently stand out in quite a new aspect, when contrasted with a Counter-Subject in Quavers or Semi-quavers. In Choral Fugues the character of the Counter-Subject is usually suggested by a change in the feeling of the words. For instance, the words of the Chorus, 'Let old Timotheus,' in 'Alexander's Feast,' consist of four lines of Poetry each sung to a separate *Motivo*.

In order that the Subject may be more naturally connected with its first Counter-Subject, it is common to join the two by a Codetta (*Fr. Queue*; Germ. *Nachsatz*), which facilitates the entrance of the Answer, by carrying the leading Part to a note in harmonious continuity with it. The following Codetta is from the celebrated Fugue called 'The Cat's Fugue,' by D. Scarlatti.

² See the original MS., in the British Museum, George III. MSS. 210 (274. d.)

The alternation of the Subject with the Answer—called its *Repercussion* (Lat. *Repercussio*; Ital. *Repercussione*; Germ. *Wiederschlag*)—is governed by necessary, though somewhat elastic laws. Albrechtsberger gives twenty-four different schemes for a Fugue in four Parts only, showing the various order in which the Voices may consistently enter, one after the other. The great desideratum is, that the Answer should follow the Subject, directly; and be followed, in its turn, by an immediate repetition of the Subject, in some other Part: the process being continued, until all the Parts have entered, in turn, with Subject and Counter-Subject, alternately, and thus become entitled to continue, for a time, as *Free Parts*. But the regularity of this alternation is not always possible, in Choral Fugues, the management of which must necessarily conform to the compass of the Voices employed. For instance, in Brahms's 'Deutsche Requiem,' there are two Subjects, each embracing a range of no less than eleven notes—a fatal hindrance to orthodox fugal management.

When the Subject has been thus clearly set forth, so as to form what is called the *Exposition* of the Fugue, the order of its *Repercussion* may be reversed; the Answer being assigned to the Parts which began with the Subject, and *vice versa*: after which the Fugue may modulate at pleasure. But, in common language, the term Subject is always applied, whether accurately or not, to the transposed Theme, even though it may appear in the aspect proper to the Answer.

As the Fugue proceeds, the alternation of Subject and Answer is frequently interrupted by *Episodes* (Ital. *Andamenti*; Fr. *Divertissements*), founded on fragments of the Subject, or its Counter-Subjects, broken up, in the manner explained on page 135; on fragments of contrapuntal passages, already presented, or on passages naturally suggested by these. Great freedom is permitted in these accessory sections of the Fugue, during the continuance of which almost all the Parts may be considered as *Free*, to a certain extent. Nevertheless, the great Fugueists are always most careful to introduce no irrelevant idea into their Compositions; and every idea not naturally suggested by the Subject, or by the contrapuntal matter with which it is treated, must necessarily be irrelevant. It is indeed neither possible nor desirable, that every Part should be continuously occupied by the Subject. When it has proposed this, or the Answer, or one of the Counter-Subjects deduced from them, it may proceed in Single or Double Counterpoint with some other Part. But, after a long rest, it must always re-enter with the Subject, or a Counter-Subject; or, at least, with a contrapuntal fragment with which one or the other of them has been previously accompanied, and which

may, therefore, be fairly said to have been suggested by the Subject, in the first instance. And thus it is, that even the Episodes introduced into a really good Fugue form consistent elements of the argument it sets forth. In no Fugue of the highest order is a Part ever permitted to enter, without having something important to say.

After the Exposition has been fully carried out, either with or without the introduction of Episodes, the subsequent conduct of the Fugue depends more on the imagination of the Composer than on any very stringent rule of construction; though the great Fugueists have always arranged their plans in accordance with certain well-recognised devices, which are universally regarded as common property, even when traceable to known Masters. And here it is that the ingenious Devices (Fr. *Artifices*; Germ. *Kunststücken*) described at page 135 as accessory elements of the Fugue, are first seriously called into play. The Composer may modulate at will, though only to the Attendant Keys of the Scale in which his Subject stands. He may present his Subject, or Counter-Subject, upside-down—i.e. inverted by Contrary Motion; or backwards, in 'Imitatio cancrizans'; or, 'Per recte et retro'—half running one way, and half the other; or, by single or double Augmentation, in notes twice, or four times, as long as those in the original; or by Diminution, in notes half the length. Or, he may introduce a new Counter-Subject, or even a *Canto fermo*. In short, he may exercise his ingenuity in any way most congenial to his taste, provided only that he never forgets his Subject. The only thing to be desired is, that the Artifices should be well chosen: not only suggested by the Subject, but in close accordance with its character and meaning. It is quite possible to introduce too many Devices; and the Fugue then becomes a mere dry exhibition of learning and ingenuity. But the Great Masters never fall into this error. Being themselves intensely interested in the progress of their work, they never fail to interest the listener. Among the most elaborate Fugues on record are those in Sebastian Bach's 'Art of Fugue,' in which the Subject given on page 136 is treated with truly marvellous ingenuity and erudition. Yet, even these are in some respects surpassed by the 'Et vitam venturi,' which forms the conclusion of Cherubini's Credo, *Alla Capella*, for eight Voices, in Double Choir, with a Thorough-Bass. The Subject (quoted on page 136) is developed by the aid of five distinct Counter-Subjects, three of which enter simultaneously with the Subject itself; the First after a Minim-rest; the Second after three Minims; the Third after two bars: the Subject itself occupying three bars and one note of *Alla Breve* Time. It may therefore justly be called a Quadruple Fugue. The two remaining Counter-Subjects enter at the fifth and sixth bars, respectively; and, because the first proposal of the Subject comes to an end before their appearance, Cherubini, though giving them the title of Counter-Subjects, does not number them, as he did the

first three, but calls one *l'autre*; and the other *le nouveau contre-sujet*. The *Artifices* begin at the fourth bar, with an Imitation of the Third Counter-Subject in the Unison, and continue thence to the end of the Fugue, which embodies 243 bars of the finest contrapuntal writing to be found within the entire range of modern Music.

When the capabilities of the Subject have been demonstrated, and its various Counter-Subjects discussed, it is time to bind the various members of the Fugue more closely together, in the form of a *Stretto*¹ (Lat. *Restrictio*; Ital. *Stretto*, *Restretto*; Germ. *Engführung*; Fr. *Rapprochement*), or passage in which the Subject, Answer, and Counter-Subjects, are woven together, as closely as possible, so as to bind the whole into a knot. Aptitude for the formation of an artful *Stretto* is one of the most desirable qualities in a good Fugal Subject. Some Subjects will weave together, with marvellous ductility, at several different distances. Others can with difficulty be tortured into any kind of *Stretto* at all. Sebastian Bach's power of intertwining his Subject and Counter-Subjects seems little short of miraculous. The first Fugue of the XLVIII, in C major, contains seven distinct *Stretti*, all differently treated, and all remarkable for the closeness of their involutions. Yet, there is nothing in the Subject which would lead us to suppose it capable of any very extraordinary treatment. The secret lies rather in Bach's power over it. He just chose a few simple Intervals, which would work well together; and, this done, his Subject became his slave. Almost all other Fugues contain a certain number of Episodes; but here there is no Episode at all: not one single bar in which the Subject, or some portion of it, does not appear. Yet, one never tires of it, for a moment; though, as the Answer is in Real Fugue, it presents no change at all, except that of Key, at any of its numerous recurrences. Some wonderfully close *Stretti* will also be found in Bach's 'Art of Fugue'; in Handel's 'Amen Chorus'; in Cherubini's 'Et vitam,' already described; in the 'Et vitam' of Sarti's 'Credo,' for eight Voices, in D; and in many other great Choral Fugues by Masters of the 18th century, and the first half of the 19th, including Mendelssohn and Spohr. Some of these *Stretti* are found on a Dominant, and some on a Tonic Pedal. In all, the Subject is made the principal feature in the contrapuntal labyrinth. The following example, from the 'Gloria' of Purcell's English 'Jubilate,' composed for S. Cecilia's Day, 1694, is exceptionally interesting. In the first place, it introduces a new Subject—a not uncommon custom with the earlier Fugueists, when new words were to be treated—and, without pausing to develop its powers by the usual process of Repercussion, presents it in *Stretto* at once. Secondly, it gives the Answer, by Inversion, with such easy grace, that one forgets all about its ingenuity, though it really blends the learning of

¹ From *stringere*, to bind.

Polyphony with the symmetry of modern Form in a way which ought to make us very proud of our great Master, and the School of which he was so bright an ornament. For, when Purcell's 'Te Deum' and 'Jubilate' were written, Sebastian Bach was just nine years old.

The image displays musical notation for a fugue subject and its inversion. The top staff shows the 'Subject' and its 'Inversion' on a single staff. Below this, two more staves show the 'Subject' and 'Inversion' on separate staves, with the 'Inversion' staff starting at a lower pitch. The bottom staff shows a more complex arrangement with multiple instances of the 'Subject' and 'Inversion' woven together, labeled 'Inversion.' and 'etc.'.

With the *Stretto* or Organ-Point the Fugue is generally brought to a conclusion, and, in many examples, by means of a Plagal Cadence.

Having now traced the course of a fully developed modern Tonal Fugue, from its Exposition to its final Chord, it remains only to say a few words concerning some well-recognised exceptions to the general form.

We have said that the modern Fugue sprang into existence through the recognition of its Tonal Answer, as an inevitable necessity. Yet there are Subjects—and very good ones too—which, admitting of no natural Tonal Answer at all, must necessarily be treated in Real Fugue: not the old Real Fugue, formed upon a few slow notes treated in close Imitation; but, a form of Composition corresponding with the modern Tonal Fugue in every respect except its Tonality. Such a case is Mendelssohn's Fugue in E minor (op. 35, no. 1), in which the Answer is the Subject exactly a fifth higher.

The image shows musical notation for a 'Subject' and its 'Answer'. The 'Subject' is on a single staff, and the 'Answer' is on a separate staff, starting at a higher pitch, illustrating the concept of a Real Answer.

Again, a Fugue is sometimes written upon, or combined with, a *Canto fermo*; and the resulting conditions very nearly resemble those prevailing on board a Flag-Ship in the British Navy; the functions of the Subject being typified by those of the Captain, who commands the ship, and the privileges of the *Canto fermo*, by those of the Admiral, who commands the Captain. Sometimes the Subject is made to resemble the *Canto fermo* very closely only in notes of shorter duration; sometimes it is so constructed as to move in Double Counterpoint against it. In neither case is it always easy to determine which

is the real Subject; but attention to the Exposition will generally decide the point. Should the *Canto fermo* pass through a regular Exposition, in the alternate aspects of Dux and Comes, it may be fairly considered as the true Subject, and the ostensible Subject must be accepted as the principal Counter-Subject. Should any other Theme than the *Canto fermo* pass through a more or less regular Exposition, that Theme is the true Subject, and the *Canto fermo* merely an adjunct. Examples of the first method are comparatively rare in Music later than the 17th century. Instances of the second will be found in Handel's 'Utrecht Te Deum and Jubilate,' 'Hallelujah Chorus,' 'The horse and his rider,' Funeral, and Foundling Anthems; and in J. S. Bach's 'Choral Vorspiele.'

Other exceptional forms are found in the 'Fugue of Imitation,' in which the Answer is neither an exact reproduction of the Subject, nor necessarily confined to Imitation in any particular Interval; the Fughetta, or Little Fugue, which terminates at the close of the Exposition; and the Fugato, or Pezzo Fugato, which is not really a Fugue, but only a piece written in the style of one. But these forms are not of sufficient importance to need a detailed description. [W.S.R.]

TONALITY is the element of key, which in modern music is of the very greatest importance. Upon the clearness of its definition the existence of instrumental music in harmonic forms of the Sonata order depends. It is defined by the consistent maintenance for appreciable periods of harmonies, or passages of melody, which are characteristic of individual keys. Unless the tonality is made intelligible, a work which has no words becomes obscure. Thus in the binary or duplex form of movement the earlier portion must have the tonality of the principal key well defined; in the portion which follows and supplies the contrast of a new and complementary key, the tonality of that key, whether dominant or mediant or other relative, must be equally clear. In the development portion of the movement various keys succeed each other more freely, but it is still important that each change shall be tonally comprehensible, and that chords belonging to distinct keys shall not be so recklessly mixed up together as to be undecipherable by any process of analysis—while in the latter portion of the movement the principal key again requires to be clearly insisted on, especially at the conclusion, in such a way as to give the clearest and most unmistakeable impression of the tonality; and this is commonly done at most important points by the use of the simplest and clearest successions of harmony. Chords which are derived from such roots as dominant, subdominant, and tonic, define the tonality most obviously and certainly; and popular dance-tunes, of all times, have been generally based upon successions of such harmonies. In works which are developed upon a larger scale a much greater variety of chords is used, and even chords belonging to closely related keys are commonly interlaced without producing obscurity, or weak-

ening the structural outlines of the work; but if chords are closely mixed up together without system, whose roots are only referable to keys which are remote from one another, the result is to make the abstract form of the passage unintelligible. In dramatic music, or such music as depends for its coherence upon words, the laws which apply to pure instrumental music are frequently violated without ill effects, inasmuch as the form of art then depends upon different conditions, and the text may often successfully supply the solution for a passage which in pure instrumental music would be unintelligible. [C.H.H.P.]

TONE, in the sense of Quality, the French *timbre*, is distinguished as harsh, mild, thin, full, hollow, round, nasal, metallic or woody; and most persons agree in assigning these epithets to varieties of tone as usually heard. No valid reason was forthcoming for the cause of these varieties until Helmholtz, in 'Die Lehre der Tonempfindungen,' settled its physical basis, demonstrating and explaining it by his theory of tone sensations. Since the publication of that great work the why and wherefore of differences of quality may be learned by all enquirers, without any preliminary knowledge of mathematics; and as there are admirable translations of Helmholtz's great work, in French by M. Guérault, and in English by Mr. A. J. Ellis, those who wish to pursue the study of the subject will find no insurmountable hindrance to doing so.

If, as Helmholtz points out, the same note is sounded successively on a pianoforte, a violin, clarinet, oboe or trumpet, or by the human voice, though the pitch be the same and the force equal, the musical tone of each is different and may be at once recognised without seeing the instrument or singer. These varieties of quality are infinitely numerous, and we can easily distinguish one voice from another in singing or speaking even by memory, at distances of time and space; and by the delicate shades of quality in vowel tone we perceive that each individual is furnished with a distinct vocal instrument. This infinite gradation of tone is due to the fact that simple tones are very rarely heard, but that in nearly every musical sound, though accepted by the ear as one note, several notes are really heard in combination, and it is the different relative numbers and intensities of the notes combined that cause the sensation of different quality. In the analysis of the combination the lowest tone is called the 'Prime' or 'Fundamental,' and the higher ones, the 'Upper Partial.' The running off into upper partial tones is to be attributed, as Mr. Hermann Smith discovered, to the energy with which the sounding medium, whatever it may be, is agitated. The Æolian Harp is a beautiful instance of the influence of varying energy. In it several strings are tuned to one pitch, but they are not equally sub-

¹ We abstain from reference to the much-debated combination of differential tones which the ear can perceive lower in pitch than the fundamental.

mitted to the force of the wind, and in consequence we hear lower or higher notes in combinations of concord or dissonance, as the strings vibrate in longer or shorter sections due to the less or greater power of the wind, and its point of impact on the string.¹ The pulsations known as Beats, which may be heard by touching and holding down almost any key of a pianoforte not recently tuned, affect the ear by their frequency. If unapparent or nearly so, Helmholtz characterises the sound as 'continuous,' if perceptibly apparent as 'discontinuous,' and while continuity is harmonious and gratifies the ear, discontinuity is discordant and more or less pains the ear according to the frequency of the disconnection. Now the prime and upper partials which in strings, narrow tubes, reeds and the human voice form a musical note, proceed in a regular succession, the Arithmetical Progression of 1, 2, 3, 4, 5, 6, etc. This succession may also be expressed in ratios which show by fractions the vibrating divisions of the string. We express the same succession by Unison, Octave, Twelfth, Double Octave, etc. Up to 8, which is the Third Octave from the Prime or Fundamental, the successive combination of these increasing divisions of the string (or of the air column) is sufficiently continuous or free from prominent beats to satisfy the ear as harmonious, but that point passed, the greater frequency of beats caused by the increasing nearness of the successive partials causes a disagreeable sensation which is extreme when a string vibrating in 12 sections and another vibrating in 13, are sounding together. The reader must take for granted that for simple tones the particles vibrate like the bob of a pendulum. For compound tones the form of the vibration is very different. The particular form in any case depends upon the number and intensity of the partials or simple tones of which it is compounded, and produces the effect called quality of tone. There is another circumstance called 'phase,' depending upon the points of their vibrations in which two partials coincide, when compounded; this alters the form of vibration in the compound tone, but has no perceptible effect on its quality.

We have so far touched upon the voice, and those instruments of strings, reeds, and narrow pipes which may have a regular series of harmonic proper tones; there are however irregular causes of musical or partially musical sound with inharmonic proper tones, not following an arithmetical order of succession: among these are wide pipes, stretched membranes (as drums), plates (as gongs), elastic rods (as tuning-forks), and the various metal and wooden harmonicas. The use of nearly all these varieties is in consequence much restricted in our modern European music. As to Resonance, any elastic body fastened so as to be permitted to vibrate will have its own proper tones, and will respond sympathetically to

¹ The peculiar, touching, character of the *Æolian* harp harmony is determined by the frequent presence of the Harmonic Seventh, an interval rejected in our music and replaced by sharper dissonant sevenths of an entirely different tone character.

the influence of other periodic vibrations, as may be commonly observed with violins, pianofortes, harps, and other stringed instruments, where the comparatively faint sound of the strings is materially reinforced by the responsive sound-board.

In many wind instruments the phenomena of Harmonics become of the first importance. In these they are caused by increase of pressure or force of blowing; and, in point of fact, as each higher note is gained by the rejection of a lower factor of sound, the quality of each note changes and gains in brilliancy as it ascends in pitch. In stringed instruments it is sufficient to touch the vibrating string gently with the finger, to damp all those simple vibrations which have segmental curves or loops at the point touched; while at the apparent resting-places from vibration which are called nodes, the simple vibrations meeting there continue to sound with undiminished loudness. The quality is changed from the full sounding note; the vibrating complex being simpler, sounds sweeter and purer, until in the very highest harmonics the difference to the ear between string and wind seems almost lost. The greater consistency of metal assists the maintenance of a state of vibrating motion once assumed, and from this what we characterise as metallic tone is the comparatively steady lasting of the high upper partial tones, but with the possible fault of becoming tinkling. In the less elastic mass of wood, the upper partials rapidly die away. Unless this decrease be too rapid the ear delights in the greater prominence gained for the prime and its nearer upper partials. If too rapid we characterise the tone as woody.

In the Pianoforte we meet with the readiest application of the terms 'metallic' and 'woody.' Modern pianos, where the framing which holds the strings and bears their draught is of iron, frequently have a 'metallic' tone from the higher elasticity of the framing, which being metal does not allow the high upper partials of the string to die away so soon as they did in the older pianos of iron and wood or of wood alone, the inferior elasticity of which permitted them to become extinct sooner and the string to pass more quickly into longer segments of vibration. The extreme influence of metal may be to maintain a 'ringing' or even a 'tinkling' tone; from the wood we get a 'dull' or 'woody' quality. There are however other conditions to be presently referred to. To show the strength of the octave harmonic in a good pianoforte you will rarely find the tuner adjust the pitch note C (a) to its corresponding tuning-fork. He prefers the middle C (b) an octave lower, because its first upper partial (c) beats, for a certain space of time, more

distinctly with the fork than the fundamental with which it is in unison. The scheme of strengthening the octave harmonic by an additional octave string is certainly a work of supererogation! But one

very important factor in pianoforte tone is the hammer, both in its covering and in its striking place against the string. Helmholtz shows that a soft hammer causes softer or rounder tone because the greater continuity of contact of the soft material damps the very high upper partials, while the less continuity of contact of a hard-surfaced hammer allows small sections of the string to sound on. Strength of blow causes loudness by increasing the amplitude or greater vibrating excursion of the string, while it also expends more energy and increases the number of upper partials in the tone. Weakness of blow is, of course, of reverse influence. The striking-place, or point of contact of hammer and string, affects the tone variously. Experience teaches that it should be upon a nodal point, although many pianoforte makers neglect an accurate adjustment of the striking line, to the detriment of purity of tone. If the string could be struck exactly at the half of its length between the bridges, a kind of clarinet tone of great beauty would be obtained. On the other hand, by striking very near the wrestplank bridge, and thus favouring the very high partials at the expense of the lower ones, an approximation to the oboe tone would be gained. The so-called 'Lute' stop, in the harpsichord, is a practical illustration of this change of quality. The best fundamental tone in combination with the best sounding partials is obtained at the eighth of the string; at the ninth the tone hardens by diminution of the power of the prime, which is proved by the hammer requiring more 'toning' or softening. The high upper partials continue to come into greater prominence as we ascend to the tenth and higher, for which reason, to get brighter trebles, pianoforte makers have adopted the device of bringing the striking-place inwards as they ascend, with a loss of equality of tone. In the old keyboard instruments which preceded the pianoforte, and indeed in the early pianofortes, no attention was paid to accuracy of striking-place. In Harpsichords and spinets the strings were usually touched somewhere between the half and the tenth of the length; but the small diameter of the strings favoured the due formation of agreeable upper partials.¹

The framing and weight of stringing have much to do with the bars attached to the under side of the belly or soundboard of a pianoforte. These bars cross the direction of the grain of the Spruce Fir of which the belly is made, and promote the elasticity of this most important tone reinforcer. Without the Resonance table the strings would offer scarcely any sound, and without the elasticity gained by the bars their high upper partials would be imperfectly reflected, or immediately lost. The hard wood bridge carries the complete pulsations of the strings to the soundboard by alternating greater and less pressures. On the whole no other musical instru-

ment is capable of the infinite variety of the tone qualities of the pianoforte, as various as the wonderfully nervous touch of the ends of the fingers of the player, which differs in every individual so that no two persons produce quite the same tone from the pianoforte unless they may be said to agree in the bad tone obtained by inelastic thumping.

We can compare, although remotely, the violin with the pianoforte in some of the fundamental principles of tone-production, but in many respects these instruments are very different. For instance, in the tone-production, the string clings to the bow until it is suddenly detached, when it rebounds and is caught by the bow again. Thus a peculiar vibrational form ensues, in which, according to Helmholtz, the prime or fundamental tone is stronger than in the pianoforte, while the first upper partials are comparatively weak. The sixth to the tenth are much stronger, which gives the bowed instruments their cutting character—the 'scolding violins,' as old Thomas Mace called them when they were beginning to supersede the viols and lutes. Any scratching of the bow is immediately shown by sudden jumps or displacements of the compound figure of vibration. The form of this figure is however tolerably independent of the place of bowing, usually at about one-tenth of the length of the string. The quality becomes somewhat duller as we approach the fingerboard, and brighter as we approach the bridge, at least for forte passages. We have resemblances to the pianoforte in the pressure of stopping in the violin by the finger, in the pianoforte by a firm wrestplank bearing; by this power the production and continuity of the upper partials is assisted and maintained. The 'bass bar' in the violin answers to the more complex barring of the piano, by screwing the belly up to the required pitch of elasticity for the reinforcement of the upper partials. Lastly, the bowing has some analogy to the touch of the pianoforte player; in that quality of individuality which extinguishes or subordinates the mechanical in performance.

Recent researches have proved that the orchestral division of wood and brass in wind instruments is nominal, or nearly nominal, only. The material affects the tone of those instruments by the rigidity or elasticity which it offers for enclosing columns of air. The cause of the difference of the quality of tone is the shape of the air column as it approximates to a cylindrical or conical form, and is wide or narrow for the production of the proper tones; the upper partials as determining the quality, and in combinations as harmonics. The production of the tone—whether by double reed (as in the oboe), by single reed (as in the clarinet), or by *embouchure* (as in the flute); the hypothetical air reed in flue organ pipes, and the action of the lips as vibrating membranes in the cupped mouthpieces of horns, trumpets, trombones, etc.—has its place in the determination of quality; so much so, that to preserve the colour of tone in the orchestra, clarinets and oboes have not been improved, as the flute

¹ The effect of the striking is due, generally, to the intensity of motion of the simple vibrations, and the corresponding increase or decrease of the partials, at the point of excitement by the hammer, thus affecting the composition of the musical tone. Helmholtz (Ella) p. 122.

has been, lest their distinctive qualities of tone should be destroyed. But orchestral qualities, considered as a whole, do slowly change. It would not now be possible to restore the orchestral colouring of Handel or Bach.

The most strident reed-tone is heard in the harmonium. In that variety called the American organ, the force of the high upper partials engendered by the action of the reed, is qualified by altering its position and form. It is impossible in a dictionary article to carry out the discussion of various qualities of tone, even as far as the subject is already known; the writer can only refer the inquirer to the best existing sources of our knowledge: to the great work of Helmholtz already referred to—especially in Mr. Ellis's translation, which contains appendices of great importance; to the writings of Dr. Stone and M. Mahillon on wind instruments; to Mr. Walter Broadwood's translation of an essay by Theobald Boehm, on the flute, and to some interesting articles 'In the Organ and in the Orchestra,' written by Mr. Hermann Smith, and published in 'Musical Opinion.' The writer can only lay claim to independent investigation as regards the piano-forte and its congeners. [See TIMBRE.] [A.J.H.]

TONES or TUNES, GREGORIAN. The most typical examples of the Church MODES, which are described at p. 340*b* of vol. ii. [See also GREGORIAN TONES, in Appendix.] [G.]

TONIC SOL-FA is the name of a method of teaching singing which has become popular in England during the last thirty years. It is the method now most generally used in primary schools, and is adopted widely for the training of popular choirs. Its leading principle is that of 'key relationship' (expressed in the word 'Tonic'), and it enforces this by the use of the ancient sound-names, *do*, *re*, *mi*, etc., as visible, as well as oral, symbols. These names are first put before a class of beginners in the form of a printed picture of the scale, called a 'Modulator.' For simplicity's sake they are spelt English-wise, and *si* is called *te* to avoid having two names with the same initial letter. In the first lessons the teacher practises the class in the singing of the sounds as he points to the name of each, first taking the *do*, *me*, *soh*, of the common chord,

making his pupils feel the special character of each sound, its distinguishing melodic effect, and afterwards training them to recognise the intermediate sounds in the same way. It is on this 'feeling' of the different character of each

sound, the difference due to its place in the scale, that the greatest stress is laid. When the pupil has caught the perception of these differences, and has learnt to associate the difference of the feeling with the difference of the name, he has grasped, in its essential principle, the secret of singing at sight.—The central column only of the modulator is used at first. The lateral columns are for teaching and explaining change of key. The *fe*, *se*, etc. represent the occasionally used 'chromatic' sounds, i. e. 'flats' and 'sharps' not involving modulation into a new key. The names of the sounds are so placed on the modulator as to show, accurately, the true positions of the sounds in the natural (untempered) scale. When the class can, with some readiness, sing the sounds as the teacher points to them on the modulator, they are introduced to exercises printed in a notation formed out of the initials of the scale-names; *d* standing for *doh*, *r* for *ray*, etc. The duration of each sound is indicated by the linear space it occupies, each line of print being spaced out into divisions by bars and dots. A 'rest' is shown by a blank space, the prolongation of a sound by a line (—) occupying the space. Sounds in upper and lower octaves are distinguished by small figures: thus, *d'*, *r'*, etc. signify an upper octave; *d*, *r*, etc. a lower. The following is an example of a vocal score:—

<i>d'</i>	<i>f'</i>	
<i>t</i>	— <i>m'</i>	— <i>l</i>
<i>l</i>	= <i>r'</i>	— <i>s</i>
<i>s</i>	— <i>DOH'</i>	— <i>f</i>
<i>f</i>	<i>ta</i>	<i>lo</i>
<i>m</i>	— <i>LAH</i>	= <i>r</i>
<i>r</i>	— <i>SOH</i>	— <i>d</i>
<i>d</i>	— <i>FAH</i>	
<i>t</i>	— <i>ME</i>	— <i>l</i>

The method is, it will be seen, identical in principle with the old system known by the name of the 'MOVEABLE DO,' and the notation is only so far new in that symbols are written down which have been used, orally, for some eight centuries. The syllables attributed to Guido, *circa* 1024 [see HEXACHORD], were a notation, not of absolute pitch, but of tonic relation; his *ut*, *re*, *mi*, etc., meaning sometimes

and so on, according as the tonic changed its pitch; and this ancient use of the syllables to represent, not fixed sounds, but the sounds of the scale, has been always of the greatest service in helping the singer, by association of name with melodic effect, to imagine the sound. The modern innovation of a 'fixed Do' is one of the many symptoms (and effects) of the domination of instruments over voices in the world of modern music.¹

The Tonic Sol-fa method, indeed, though spoken of as a novelty, is really a reversion to ancient practice, to a principle many centuries old. Its novelty of aspect, which is undeniable, results from its making this principle more prominent, by giving it visual, as well as oral, expression; that is, by using the old sound-names as written symbols. Those who follow the old Italian and old English practice of the

¹ Sir John Herschel said in 1868 (Quarterly Journal of Science, art. 'Musical Scales')—'I adhere throughout to the good old system of representing by Do, Re, Mi, Fa, etc., the scale of natural notes in any key whatever, taking Do for the key-note, whatever that may be, in opposition to the practice lately introduced (and soon I hope to be exploded), of taking Do to represent one fixed tone C,—the greatest retrograde step, in my opinion, ever taken in teaching music, or any other branch of knowledge.'

'Moveable Do' are, in effect, Tonic Sol-faists. The question of notation is a distinct one, and turns on considerations of practical convenience. The argument for adhering to the old tonic use of the syllables rests broadly on the ground that the same thing should be called by the same name; that, for example, if

is to be called *do*, *do*, *re* | *si*, *do*, *re*, it is not reasonable that

the essential effect of which on the ear is the same—for the tune is the same, and the tune is all that the ear feels and remembers—should be called by another set of names, *si*, *si*, *do* | *la*, *si*, *do*. And, conversely, it is not reasonable that if, for example, in the passage

the last two sounds are called *do*, *la*,—the same sounds should be also called *do*, *la*, in the passage

where they sound wholly different; the identity of pitch being as nothing compared to the change of melodic effect—a change, in this case, from the plaintive to the joyous. It is on this perception of the 'mental effect' of the sounds of the scale that the Tonic Sol-fa teacher relies as the means of making the learner remember and reproduce the sounds. And it is this that constitutes the novelty of the system as an instrument of teaching,

To make the beginner feel these effects for himself is the teacher's first object. As a help to such perception a set of descriptive names are used in the earliest lessons. The pupil is told he may think of the *do* as the 'strong' tone, of the *me* as the 'steady' or 'calm' tone, of the *lah* as the 'sad' tone, and so on; these epithets giving, in a rough way of course, some indication of the 'mental effect.' When in this way the pupil has learnt to associate the names with the several sounds, he refers the letters on the printed page to a mental picture of the modulator, and though the music does not 'move up and down,' as in the Staff notation, the syllable-initials suggest to him the names; he sees these names, mentally, in their places on the scale, and with the remembrance of the name comes the remembrance of the sound.

This constant insistence on the scale and

the 'm1 meaning that the singer is to sing the sound which is the *me* of the scale in which he began, but to call it *lah* while singing it, and sing onwards accordingly. When the key changes again to the original tonic he is informed of it by the 'd s', which means that he is to sing again the sound he has just sung as *doh*, but to think of it and sing it as *soh*. These indications of change of key give the singer direct notice of what, in the Staff notation, he is left to find out inferentially from the occurrence of a sharp or flat in one of the parts, or by comparing his own part with the others. To make these inferences with any certainty requires a considerable knowledge of music, and if they are not made with certainty the 'reading' must be mere guess-work. Remembering that in music of ordinary difficulty—say in Handel's choruses—the key changes at an average every eight or ten bars, one can easily see what an advantage the Tonic Sol-faist has in thus being made at every moment sure of the key he is singing in. The method thus sweeps out of the beginner's way various complications which would puzzle him in the Staff notation—'signatures,' 'sharps and flats,' varieties of clef. To transpose, for instance, the above chant into the key of F, all that is needed is to write 'Key F' in place of 'Key E♭.' Thus the singer finds all keys equally easy. 'Accidentals' are wholly unknown to him, except in the comparatively rare case of the accidental properly so called, that is, a 'chromatic' sound, one not signifying change of key.¹

These advantages can, it is true, be in part secured by a discreet use of the 'tonic' principle, —a 'moveable *do*'—with the staff notation. But the advocates of the letter notation urge that the

¹ In the Soprano part, for instance, of the Messiah choruses there are but three real 'accidentals.'

nothing but the scale carries the singer with ease over the critical difficulties of modulation. He has been taught to follow with his voice the teacher's pointer as it moves up and down the modulator. When it touches *soh* (see the modulator above) he sings *soh*. It moves to the *doh* on the same level to the right, and he sings the same sound to this new name. As he follows the pointer up and down the new scale he is soon taught to understand that a new sound is wanted to be the *te* of the new *doh*, and thus learns, by the 'feeling' of the sounds, not by any mere machinery of symbols, what modulation is. When he has been made familiar with the change from scale to scale on the modulator, he finds in the printed music a sign to indicate every change of key. Thus the changes between tonic and dominant in the following chant are shown as follows (taking the soprano part only):—

old notation hampers both teacher and learner with difficulties which keep the principle out of view: that the notes of the staff give only a fictitious view of interval. To the eye, for instance, a major third (a) looks the same as a minor third (b); which of the two is meant can

only be determined by a process of reasoning on the 'signature.' A like process is needed before the reader can settle which sound of the scale any note represents. In the above chant, for example, before the singer can sing the opening phrase he must know that the first sound is the *soh* of the key. The staff notation shows him a mark on a particular line, but it is only after he has made certain inferences from the three 'flats' on the left that he can tell where the sound is in the scale. How much better, the Sol-faists say, to let him know this at once, by simply printing the sound as *soh*. Why impede the singer by troubling him with a set of signs which add nothing to his knowledge of the facts of music, and which are only wanted when it is desired to indicate absolute pitch, a thing which the sight-reader is not directly concerned with?

The question of the utility of a new notation is thus narrowed to a practical issue: one which may be well left to be determined by teachers themselves. It is of course chimerical to suppose that the ancient written language of music could be now 'disestablished,' but musicians need not object to, they will rather welcome, any means of removing difficulties out of the learner's way. The universal language of music—and we are apt to forget how much we owe to the fact that it is universal—may well be said to be almost a miracle of adaptation to its varied uses; but it is

worth observing that there is an essential difference between the sight-reader's and the player's use of any system of musical signs. The player has not to think of the sounds he makes before he makes them. When he sees, say, the symbol

its meaning to him is not, in practice,

'imagine such and such a sound,' but 'do something on your instrument which will make the sound.' To the pianist it means 'touch a certain white key lying between two black keys'; to the violoncellist, 'put the middle finger down on the first string,' and so on. The player's mental judgment of the sound only comes in after it has been produced. By this he 'checks' the accuracy of the result. The singer, on the contrary, knows nothing of the mechanical action of his own throat: it would be useless to say to him, 'make your vocal chords perform 256 vibrations in a second.' He has to think of the sound first; when he has thought of it, he utters it spontaneously. The imagination of the sound is all

If God be for us, who can be a -

gainst us? who can be a -

gainst us? who can be a - gainst us?

Experience appears to show that, for sight-reading purposes, this is the simplest way of treating the minor mode. Some musicians object to it on the ground that, as in a minor scale the lowest (and highest) sound is essentially a tonic, in the sense that it plays a part analogous to that of the *do* in a major scale, calling it *la* seems an inconsistency. But this seems a shadowy objection. The only important question is, what sign, for oral and ocular use, will best help the singer to recognise, by association with mental effect, one sound as distinguished from another? Experience shows that the Tonic Sol-fa plan does this effectually. The method is also theoretically sound. It proceeds on the principle that similarity of name should accord with similarity of musical effect. Now as a fact the scale of A minor is far more closely allied to the scale of C major than it is to the scale of A major. The identity of 'signature' itself shows that the substantial identity of the two first-named scales has always been recognised. But a proof more effective than any inference from signs and names is that given by the practice of composers in the matter of modulation. The scales most nearly related must evidently be those between which modulation is most frequent; and changes between tonic major and *relative* minor (type, C major to and from A minor) are many times more frequent than the changes between tonic

in all. An indication of absolute pitch only is useless to him, because the melodic effect, the only effect the memory can recall, depends not on absolute but on relative pitch. Hence a 'tonic' notation, or a notation which can be used tonically, can alone serve his purpose.

An exposition of the details of the method would be here out of place, but one or two points of special interest may be noticed.¹ One is the treatment of the minor scale — a crux of all Sol-fa systems, if not of musical theory generally. Tonic Sol-faists are taught to regard a minor scale as a variant of the *relative* major, not of the tonic major, and to sol-fa the sounds accordingly. The learner is made to feel that the special 'minor' character results from the dominance of the *lah*, which he already knows as the plaintive sound of the scale. The 'sharpened sixth' (reckoning from the *lah*), when it occurs, is called *ba* (the only wholly new sound-name used (see the modulator, above), and the 'leading' tone is called *se*, by analogy with *te* (Italian *si*) of the major mode. Thus the air is written and sung as follows:—

Key Bb. Lah is C.

l, | d : t | : l, | m : m : l | s : - . l : f
If God be for us, who can be a -

m : l | : | : | : l, | m : - . r : d

gainst us? who can be a - gainst us?

major and *tonic* minor (type, C major to and from C minor). In Handel's music, for instance, the proportion is some nine or ten to one.² If therefore the Tonic Sol-faist, in passing from C major to A minor, changed his *doh*, he would be adopting a new set of names for what is, as near as may be, the same set of sounds.

The examples above given show the notation as applied to simple passages; the following will show how peculiar or difficult modulations may be rendered in it:—

¹ The best summary account of this system for the musician is given in 'Tonic Sol Fa,' one of the 'Music Primers' edited by Dr. Stainer (Novello).

² In 'Judas' the transitions from major to relative minor, and from minor to relative major, are, as reckoned by the writer, 67 in number; the transitions from major to tonic minor, and from minor to tonic major, being only 7. The practices of centuries in points of technical nomenclature cannot, of course, be reversed, but it is plain that the phrase 'relative' minor is deceptive. The scale called 'A minor' would be more reasonably called (as its signature in effect calls it) O minor. It has not been sufficiently noticed that the different kinds of change from minor to major are used by composers to produce strikingly different effects. The change to relative major (e.g. A minor to C major) is the ordinary means of passing, say, from the dim to the bright—from pathetic to cheerful. But the change to tonic major (A minor to A major) is a change to the intensely bright—to jubilation or triumph. A good instance is the beginning of the great fugue in 'Judas.' 'We worship God'—a point of extraordinary force. Another is the well-known choral finale in 'Moses in Egypt.' 'Dal tuo stellato soglio,' where, after the repetition in three successive verses of the change from G minor to Bb major, giving an effect of reposeful serenity, the culminating effect, the great burst of triumph in the last verse, is given by the change from G minor to G major. Other instances are the passage in 'Elijah'—'His mercies on thousands fall'—and the long prepared change to the tonic major which begins the finale of Beethoven's O minor Symphony.

In the teaching of Harmony the Tonic Sol-fa method puts forward no new theory, but it uses a chord-nomenclature which makes the expression of the facts of harmony very simple. Each chord is represented by the initial letter, printed in capitals, of the sol-fa name of its essential root, thus—

the various positions of the same chord being distinguished by small letters appended to the capital, thus—

Harmony being wholly a matter of relative, not absolute pitch, a notation based on key-relationship has obvious advantages as a means of indicating chord-movements. The learner has from the first been used to think and speak of every sound by its place in a scale, and the familiar symbols m, f, etc. convey to him at once all that is expressed by the generalising terms 'mediant,' 'subdominant,' etc. Another point in the method, as applied to Harmony teaching, is the prominence given to training the ear, as well as the eye, to recognise chords. Pupils are taught, in class, to observe for themselves how the various consonances and dissonances sound; and they are practised at naming chords when sung to them.

The Tonic Sol-fa method began to attract public notice about the year 1850. Its great success has been mainly due to the energy and enthusiasm of Mr. John Curwen, who died in June 1880, after devoting the best part of his life to the work of spreading knowledge of music among the people. Mr. Curwen [see CURWEN, Appendix], born in 1816, was a Nonconformist minister, and it was from his interest in school and congregational singing that he was led to take up the subject of teaching to sing at sight.

His system grew out of his adoption of a plan of Sol-fa-ing from a modulator with a letter notation, which was being used with success for teaching children some forty years ago, by a benevolent lady living at Norwich. He always spoke of this lady, Miss Elizabeth Glover (d. 1867), as the originator of the method. Her rough idea developed under his hand into a complete method of teaching. He had a remarkable gift for explaining principles in a simple way, and his books strike the reader throughout by their strong flavour of common sense and incessant appeal to the intelligence of the pupil. They abound with acute and suggestive hints on the art of teaching: and nothing, perhaps, has more contributed to the great success of the method than the power which it has shown of making teachers easily. A wide system of examinations and graduated 'certificates,' a college for training teachers, and the direction of a large organisation were Mr. Curwen's special work. [See TONIC SOL-FA COLLEGE.] For some time the system was looked on with suspicion and disfavour by musicians, chiefly on account of the novel look of the printed music, but the growing importance of its practical results secured the adhesion of musicians of authority. Helmholtz, viewing it from the scientific as well as the practical side, remarked in his great work on Sound (1863) on the value of the notation as 'giving prominence to what is of the greatest importance to the singer, the relation of each tone to the tonic,' and described how he had been astonished—'mich in Erstaunen setzen'—by the 'certainty' with which 'a class of 40 children, between 8 and 12 in a British and Foreign school, read the notes, and by the accuracy of their intonation.'¹ The critical objection which the Tonic Sol-faists have to meet is, that the pupil on turning to the use of the Staff notation has to learn a fresh set of signs. Their reply to this is, that as a fact two-thirds of those who become sight-singers from the letter notation, spontaneously learn to read from the staff. They have learnt, it is said, 'the thing music,' something which is independent of any system of marks on paper; and the transition to a set of new symbols is a matter which costs hardly any trouble. With their habitual de-

¹ *Tonempfindung*, App. XVIII. (Ellis p. 639). Professor Helmholtz confirmed this experience in conversation with the writer in 1881.

pendence on the scale they have only to be told that such a line of the staff is *doh*, and hence that the next two lines above are *me* and *soh*, and they are at home on the staff as they were on the modulator. The testimony of musicians and choirmasters confirms this.¹ Dr. Stainer, for instance, says (in advocating the use of the method in schools): 'I find that those who have a talent for music soon master the Staff notation after they have learnt the Tonic Sol-fa, and become in time good musicians. It is therefore quite a mistake to suppose that by teaching the Tonic Sol-fa system you are discouraging the acquisition (the future acquisition) of Staff music, and so doing a damage to high art. It may be said, if the systems so complement one another, Why do you not teach both? But from the time that can be devoted to musical instruction in schools it is absurd to think of trying to teach two systems at once. That being so, then you must choose one, and your choice should be governed by the consideration of which is the simpler for young persons, and there cannot be a doubt which is the simpler.' This testimony is supported by a general consensus of practical teachers. The London School Board find that 'all the teachers prefer to teach by the Tonic Sol-fa method,' and have accordingly adopted it throughout their schools; and it now appears that of the children in English primary schools who are taught to sing by note at all, a very large proportion (some 80 per cent) learn on this plan. In far too many schools still, the children only learn tunes by memory, but the practicability of a real teaching of music has been proved, and there is now fair hope that ere long the mass of the population may learn to sing. The following figures, from a parliamentary return of the 'Number of Departments' in primary schools in which singing is taught (1880-1), is interesting. They tell a tale of lamentable deficiency, but show in what direction progress may be hoped for:—

	By Ear.	Hullah's System.	Tonic Sol-fa.	Old Notation: Moveable Do.	More than one System.
School Board Schools (England and Wales) .	4681	86	1414	84	2
Other Schools (England and Wales) .	17470	628	1278	607	31
Schools in Scotland ..	1280	8	1648	111	19

Writing down a tune sung by a teacher has now become a familiar school exercise for English children, a thing once thought only possible to advanced musicians; and it has become common to see a choir two or three thousand strong singing in public, at first sight, an anthem or part-song fresh from the printer's hands. Such things were unknown not many years back. In the great spread of musical knowledge among the people this method has

¹ It is stated that of 2025 pupils who took the 'Intermediate Certificate' in a particular year, 1827 did so with the optional requirement of singing a hymn-tune at sight from the Staff-notation.

played a foremost part, and the teaching of the elements is far from being all that is done. Some of the best choral singing now to be heard in England is that of Tonic Sol-fa choirs. The music so printed includes not only an immense quantity of part-songs, madrigals, and class-pieces, but all or nearly all the music of the highest class fit for choral use—the oratorios of Handel, masses by Haydn and Mozart, cantatas of Bach, etc. One firm alone has printed, it is stated, more than 16,000 pages of music. Leading English music-publishers find it desirable to issue Tonic Sol-fa editions of choral works, as do the publishers of the most popular hymn-books. Of a Tonic Sol-fa edition of the 'Messiah,' in vocal score, 39,000 copies have been sold.

To the pushing forward of this great and beneficent work of spreading the love and knowledge of music, Mr. Curwen devoted his whole life, and seldom has a life been spent more nobly for the general good. He was a man of singularly generous nature, and in controversy, of which he naturally had much, he was remarkable for the perfect candour and good temper with which he met attack. If the worth of a man is to be measured by the amount of delight he is the means of giving to the world, few would be ranked higher than Mr. Curwen. His was a far-reaching work. Not only has it been, in England, the great moving force in helping on the revival of music as a popular enjoyment, but it has had a like effect in other great communities. We read of the forming of choral classes, in numbers unknown before, in New Zealand, Canada, Australia, India, the United States. Even from savage and semi-savage regions—Zululand or Madagascar—come accounts of choral concerts. When one thinks of what all this means, of the many hard-working people all over the world who have thus been taught, in a simple way, to enter into the enjoyment of the music of Handel or Mendelssohn, of the thousands of lives brightened by the possession of a new delight, one might write on the monument of this modest and unselfish worker the words of the Greek poet: 'The joys that he hath given to others—who shall declare the tale thereof.'²

Of the 'Galin-Chev ' method of teaching sight-reading, which is based, broadly speaking, on the same principle as the Tonic Sol-fa method, a notice is given under CHEV , in the Appendix. [R.B.L.]

TONIC SOL-FA COLLEGE, THE, is one of the few public institutions in England wholly devoted to promoting the knowledge of music. It was founded by Mr. Curwen (see preceding article) in 1869, in order to give stability and permanence to the Tonic Sol-fa system of teaching, and was definitely established in its present form in 1875 by incorporation under the Companies Act 1862. The College is chiefly an

² ἐπεὶ ψάμμος ἀριθμὸν περιπέφηναι
ἑκείνος ὅσα χάματα ἄλλοις ἔθηκεν,
τίς ἂν φράσαι δύναιτο; ΠΙΝΔΑΡ.

examining body, but it also carries on the teaching of music (mainly directed to the training of teachers) by means of lectures and correspondence classes. The buildings, lecture-rooms, offices, etc., are at Forest Gate, E., an eastern suburb of London, some twenty minutes' railway journey from the City.

The examinations are based on a system of graded certificates, arranged so as to test the progress of pupils from the earliest stage. From the elementary certificate upwards the power to sing at sight is demanded. The higher certificates are granted upon a paper examination combined with vocal tests, on the rendering of which the local examiner has to report to the College. The official report gives the number of certificates granted in the year 1879-80 at 15,755, which was 964 more than in the previous year. The number of persons entered in correspondence classes was 4729. The subjects of these were Harmony-Analysis, Musical Composition (four stages), Staff Notation, Musical Form, Musical and Verbal Expression, Counterpoint, English Composition, Organ-fingering and Chord-naming. Students from all parts of the world enter these correspondence classes. The College further organises a summer term of study, lasting for six weeks in vacation time, which is attended by young teachers and students from Great Britain, the Colonies, etc. A great point is made of the art of presenting facts to the learner, and of cultivating the intelligence as well as the ear and voice. The students give model lessons, which their teachers criticise. The total number of certificates issued by the College up to the present time (September 1884) is stated to be as follows:—junior, 51,500; elementary, 163,850; intermediate, 44,073; matriculation, 3,367; advanced, 525. The receipts for the year 1883-84 were £1398, the payments £904. The total payments for the new buildings were £3635. Altogether the published reports of the College give an impression of a vast amount of useful work carried on with thoroughness and spirit.

The College has 1465 shareholders, and is governed by a council, in the election of which every holder of a 'Matriculation' certificate has a vote. The constitution of the council is somewhat curious. It is composed of 48 members elected in eight classes of six members each, and drawn from the following classes of society:—(a) handworkers, (b) clerks and employés, (c) masters in commercial or professional occupations, (d) schoolmasters, (e) professional musicians, (f) clergymen and ministers, (g) persons of literary and other qualifications, and (h) honorary members. The object of this arrangement is to prevent the College getting into the hands of any one interest or party. The present president is Mr. J. Spencer Curwen, A.R.A.M., who succeeded his father, the founder, in 1880. [R.B.L.]

TONKÜNSTLERVEREIN. A society founded in Dresden in 1854 for the popularisation of good chamber-music. It took its rise from Richard Pohl's evenings for the practice of chamber-music, and its first and present presi-

dent is Herr Fürstenau. The following musicians are, or have been, honorary members:—Von Bülow, Chrysander, Hauptmann, Otto Jahn, Joachim, Lauterbach, Julius Rietz, Clara Schumann, and Ferdinand David. By degrees orchestral works were introduced into the practices and performances. Out of 992 works played between 1854 and 1879, 116 were in MS., 95 being by members and 21 by non-members. These figures show the liberality of the society in producing the work of modern artists. Furthermore, it possesses a considerable library, has provided lectures on the science of music by such men as Fürstenau, F. Heine, Rühlmann, and Schneider (author of the 'History of the Lied'), and in all respects amply fulfilled its professed object, the promotion of the art of music. After an existence of 25 years, it musters 195 ordinary members (practical musicians) and 164 extraordinary ones. For further details see the Festival prospectus of 1879. [F.G.]

TONNERRE, GROSSE CAISSE EN, i.e. bass drum as thunder. This direction occurs in Hérolde's overture to 'Zampa,' and a few other works, and means a roll. But as the bass drum

is played with one stick only, the roll is best executed with a two-headed stick (*Tampon* or *Mailloche double*), as made in Paris, by Tournier, Boulevard St. Martin. It is held in the middle, where it is $1\frac{3}{8}$ inch in diameter, so that the roll is easily made by an alternate motion of the wrist. The stick, ending in a round knob at each end, is turned out of a piece of ash; the knobs are thickly covered with tow and a cap of chamois

leather, and are both of the same size. When finished the heads are about $2\frac{1}{2}$ inches in diameter, and the same in length. The length of the whole stick is $12\frac{1}{2}$ inches. [V. de P.]

TONOMETER. [See SCHEIBLER, vol. iii. p. 243 b. Also TUNING-FORK.]

TORCULUS, or CEPHALICUS. A Neume, indicating a group of three notes, of which the second was the highest; as C, D, C. [See vol. ii. pp. 467 b, 468 a]. [W.S.R.]

TORELLI, GIUSEPPE, violinist and composer, was born about the middle of the 17th century. He lived for many years in Bologna as leader of a church orchestra, but in 1701 accepted the post of leader of the band of the Markgraf of Brandenburg-Anspach at Anspach in Germany, where he died in 1708. To him is generally ascribed the invention of the 'Concerto'—or, more correctly speaking, the application of the sonata-form to concerted music. His most important work, the *Concerti grossi*, op. 8, were published at Bologna, 1709, three years earlier than Corelli's *Concerti grossi*. They are written for 2 obligato violins and stringed orchestra, and are said clearly to present the main features of the concerto-form, as used by Corelli, Handel, and others. According to Fétis, eight works of his have been published—all in concerted style, for 2, 3, or 4 stringed instruments. [P.D.]

TORQUATO TASSO. Lyric drama in 4 acts; libretto by Ferretti, music by Donizetti. Produced at the Teatro Valle, Rome, in the autumn of 1833; at H. M. Theatre, London, Mar. 3, 1840. [G.]

TORRANCE, Rev. GEORGE WILLIAM, M.A., Mus.D. University of Dublin, born at Rathmines, Dublin, in 1835. Educated as a chorister in Christ Church Cathedral, he afterwards became successively organist of Blackrock, Dublin, and of the city churches of St. Andrew and St. Anne. Among his earlier compositions was a 'Te Deum' and 'Jubilate,' sung in Christ Church Cathedral. At 19 he composed his first oratorio, 'Abraham,' which was performed in 1855 at the Ancient Concert Rooms, Dublin, by all the leading musicians of the city, Sir Robert Stewart presiding at the organ and the composer conducting. 'Abraham' was performed four times in two years. It was rightly deemed a wonderful work for a mere lad to produce; the airs were written after the manner of Beethoven, the choruses followed that of Handel: of plagiarism there was none, and if the work was lacking in experience, it was yet a bold and successful effort for a boy in his teens. In 1856 Mr. Torrance visited Leipsic, and during his studies in that city became acquainted with Moscheles and other eminent musicians. Upon his return he produced an opera 'William of Normandy,' and several minor works, some of which have since been published. In 1859 Mr. Torrance entered the University of Dublin, with a view to studying for the ministry of the Church of England; here he graduated in Arts in 1864, and produced the same year a second oratorio, 'The Captivity,' to Goldsmith's words. He took the degree of M.A. at the University in 1867, was ordained deacon in 1865, and priest in 1866.

In 1869 he emigrated to Melbourne, Victoria. In 1879 he obtained the degrees of Mus. B. and Mus. D. from Dublin University, on the recommendation of Sir Robert Stewart, Professor of Music in the University, the 'Acts' publicly performed for the degree being, for Mus.B. a *Te Deum* and *Jubilate* (composed 1878), for Mus.D. a selection from his oratorio 'The Captivity.' He received an honorary degree of Mus. D. *ad eundem* from the Melbourne University, the first and only degree yet conferred in Music by that University.

In 1882 Dr. Torrance produced a third oratorio, 'The Revelation'; this was performed with great success in Melbourne, the composer conducting. He was elected president of the Fine Arts section of the 'Social Science Congress' held in Melbourne in 1880, when he delivered the opening address on Music, since published. In 1883 he was appointed by the Governor of Victoria to be one of the Examiners for the 'Clarke Scholarship' in the Royal College of Music.

He is also the author of a paper on 'Cathedrals, their constitution and functions,' and is at present Incumbent of Holy Trinity Church, Balaclava, near Melbourne, a handsome new church recently built, with a fine 3-manual organ constructed specially to be played by himself during service.

We believe Dr. Torrance to be the only Doctor of Music in the southern hemisphere—although many able musicians are settled in the principal cities. [R.P.S.]

TORVALDO E DORLISKA. Opera in 2 acts; libretto by Sterbini, music by Rossini. Produced at the Teatro Valle, Rome, Dec. 26, 1815; and reproduced at Paris, Nov. 21, 1820. The piece was a failure. [G.]

TOSI, PIER FRANCESCO, the son of a musician of Bologna, must have been born about 1650, since we learn from the translator of his book that he died soon after the beginning of George II's reign (1730) above eighty years old.¹ In the early part of his life he travelled a great deal, but in 1693 we find him in London, giving regular concerts,² and from that time forward he resided there almost entirely till his death, in great consideration as a singing-master and a composer. A volume in the Harleian Collection of the British Museum (no. 1272) contains seven songs or cantatas for voice and harpsichord, with his name to them. Galliard praises his music for its exquisite taste, and especially mentions the pathos and expression of the recitatives. When more than seventy Tosi published the work by which his name is still known, under the modest title of '*Opinioni de' cantori antichi e moderni, o sieno osservazioni sopra il canto figurato. . . .*' (Bologna 1723), which was translated after his death into English by GALLIARD—'*Observations on the Florid Song, or sentiments of the ancient and modern singers,*' London, 1742—second edition, 1743; and into German by AGRICOLA—'*Anleitung zur Singkunst,*' Berlin, 1757. It is a practical treatise on singing, in which the aged teacher embodies his own experience and that of his contemporaries, at a time when the art was probably more thoroughly taught than it has ever been since. Many of its remarks would still be highly useful. [G.M.]

TOSTI, FRANCESCO PAOLO, an Italian composer, born April 7, 1847, at Ortona sul mare, in the Abruzzi. In 1858 his parents sent him to the Royal College of St. Pietro a Majella at Naples, where he studied the violin under Pinto, and composition under Conti and the venerable Mercadante. The young pupil made wonderful progress, and was by Mercadante appointed *maestrino* or pupil teacher, with the not too liberal salary of 60 francs a month. He remained in Naples until the end of 1869, when, feeling that his health had been much impaired by overwork, he went back to Ortona with the hope of regaining strength. However, as soon as he got home he was taken seriously ill with bronchitis, and only after seven months recovered sufficiently to go to Rome and resume work. During his illness he wrote '*Non m'ama più*' and '*Lamento d'amore*'; but it was with difficulty that the young composer could induce a publisher to print these songs, which have since become so popular, and it was not till a considerable time after they

¹ Galliard's Prefatory Discourse, p. viii.

² Hawkins, 'History,' v. 6.

sold well that he disposed of the copyright for the insignificant sum of £20 each. Sigr. Sgambati, the well-known composer, and leader of the new musical school in Rome, was among the first to recognise Tosti's talent, and in order to give his friend a fair start in the fashionable and artistic world, he assisted him to give a concert at the 'Sala Dante,' the St. James's Hall of Rome, where he achieved a great success, singing several of his own compositions, and a ballad purposely written for him by Sgambati, 'Eravi un vecchio sene.' The Queen of Italy, then Princess Margherita di Savoia, honoured the concert with her presence, and showed her appreciation by immediately appointing him as her teacher of singing. Shortly afterwards he was entrusted with the care of the Musical Archives of the Italian Court. It was in 1875 that M. Tosti first visited London, where he was well received in the best circles, both as an artist and as a man. Since then he has paid a yearly visit to the English capital, and in 1880 was called in as teacher of singing to the Royal Family of England.

M. Tosti has written Italian, French, and English songs: and though the Italian outnumber by far both the English and French, his popularity rests mainly on his English ballads. The wind and tide of fashion are fully in his favour, yet it would be unsafe to determine what place he will ultimately hold amongst song composers. What can even now be said of him is that he has an elegant, simple and facile inspiration, a style of his own, a genuine Italian flow of melody, and great skill in finding the most appropriate and never-failing effects for drawing-room songs. He is still in the full strength of intellectual power and life, and each new composition shows a higher artistic aim and a nobler and more vigorous expression of thought than the last. There is therefore good ground to hope that his future works may win for him from critics of all nations the high estimation in which he is now held by English and Italian amateurs.

He has published, up to the end of 1883, 35 songs, in addition to 4 Vocal Albums, and 15 duets, 'Canti Popolari Abruzzesi.' Of his songs the most popular in London are 'For ever,' 'Good-bye,' 'Mother,' 'At Vespers,' 'Amore,' 'Aprile,' 'Vorrei morire,' and 'That Day.' [G.M.]

TOSTO. Più tosto¹ (*plutôt*) is an expression occasionally used by Beethoven, as in the second of the Sonatas for PF. and cello (op. 5)—'Allegro molto, più tosto presto'; or the second of the three Sonatas for PF. and violin (op. 12)—'Andante, più tosto Allegretto.' The meaning in these cases is 'Allegro molto, or rather presto,' and 'Andante, or rather Allegretto.' It has the same force with 'quasi'—'Andante quasi Allegretto' (op. 9, no. 2.) i.e. 'Andante, as if Allegretto.' [G.]

TOUCH (Ger. *Anschlag*). This term is used to express the manner in which the keys of the

pianoforte or organ are struck or pressed by the fingers. It is a subject of the greatest importance, since it is only by means of a good touch that a satisfactory musical effect can be produced. Touch on a keyed instrument is therefore analogous to a good production of the voice on the part of a singer, or to good bowing on that of a violinist.

I. *Pianoforte*. To the student of the pianoforte, cultivation of touch is not less necessary than the acquirement of rapidity of finger, since the manner in which the keys are struck exercises a very considerable influence on the quality of the sounds produced, and therefore on the effect of the whole passage. A really good touch implies absolute equality of the fingers and a perfect control over all possible gradations of tone, together with the power of producing different qualities of sound at the same time, as in the playing of fugues, and polyphonic music generally. In fact all the higher qualities of pianoforte *technique*, such as crispness, delicacy, expression, sonority, etc., depend entirely upon touch.

Generally speaking, pianoforte music demands two distinct kinds of touch, the one adapted for the performance of brilliant passages, the other for sustained melodies. These two kinds are in many respects opposed to each other, the first requiring the fingers to be considerably raised above the keys, which are then struck with firmness and rapidity, while in the other the keys are closely pressed, not struck, with more or less of weight according to the amount of tone desired. This quality of *percussion* in brilliant passages is to some extent a characteristic of modern pianoforte-playing, the great players of former times having certainly used it far more sparingly than at present. Thus Hummel (*Pianoforte School*) says that the fingers must not be lifted too high from the keys; and going back to the time of Bach, we read that he moved only the end joint of the fingers, drawing them gently inwards 'as if taking up coin from a table.' [See vol. ii. p. 736 b.] But the action of the clavichords, and after them of the Viennese pianos, was extremely light, the slightest pressure producing a sound, and there is no doubt that the increase of percussion has become necessary in order to overcome the greater resistance offered by the modern keyboard, a resistance caused by the greater size of the instruments, and consequent weight of the hammers, which had increased in the lowest octave of Broadwood pianos from 2½ oz. in 1817 to 4 oz. in 1874, and which, although now somewhat less, being in 1884, 3 oz., is still considerably in excess of the key-weights of the earliest pianos.

It seems possible that the great improvement manifested by modern pianofortes in the direction of sonority and sustaining power may have given rise to a certain danger that the cultivation of the second kind of touch, that which has for its object the production of beautiful tone in *cantabile*, may be neglected. This, if it were so, would be very much to be regretted. The very fact that the pianoforte is at its best unable to sustain tone equably, renders the acquirement of a 'singing' touch at once the more arduous and the more

¹ 'Rather than the Madonna del Granduca shall leave Florence,' said Cavour, 'Piu tosto mi faccio fare la guerra.' (Times of June 12, 1854. p. 8a.)

necessary, and this was recognised and insisted upon by Emanuel Bach. For an expressive melody to be hammered out with unsympathetic fingers of steel is far worse than for a passage to lose somewhat of its sparkle through lack of percussion. Beethoven is reported to have said that in *adagio* the fingers should feel 'as if glued to the keys,' and Thalberg, who himself possessed an extraordinarily rich and full tone, writes¹ that a melody should be played 'without forcibly striking the keys, but attacking them closely, and nervously, and pressing them with energy and vigour.' 'When,' he adds, 'the melody is of a tender and graceful character the notes should be *kneaded*, the keys being pressed as though with a boneless hand (*main désossée*) and fingers of velvet; the keys should be felt rather than struck.' In an interesting paper on 'Beauty of touch and tone,' communicated to the Musical Association by Mr. Orlando Steed, the opinion is maintained that it is impossible to produce any difference of *quality*, apart from greater or less intensity of sound, in a single note, no matter how the blow may be struck (though the author admits that the excessive blow will produce a disagreeable sound). But it is shown by Helmholtz² that the *timbre* or sound-quality of pianoforte strings, variation in which is caused by greater or less intensity of the upper partial tones, depends upon two conditions among others, namely, upon the length of time the hammer remains in contact with the string, and upon the hardness of the hammer itself, and it is a question whether the nature of the blow may not be slightly affected in both these respects by differences of touch. It would seem possible that the greater rebound of the hammer which would be the consequence of a sharp blow upon the key might render the actual contact with the string shorter, while the greater force of the blow might compress and so slightly harden the soft surface of the felt with which the hammer is covered; and the natural result of both these supposed changes would be to increase the intensity of the partial tones, and thus render the sound thinner and harder. Moreover when the key is struck from any considerable distance a certain amount of noise is always occasioned by the impact of the finger upon the surface of the key, and this gives a certain *attack* to the commencement of the sound, like a hard consonant before a vowel, which conduces to brilliancy of effect rather than smoothness. The fact is, that Touch depends on so many and such various conditions, that though its diversities can be felt and recognised by any ordinarily attentive listener, they are by no means easy to analyse satisfactorily.

In relation to phrasing, touch is of two kinds, *legato* and *staccato*: in the first kind each finger is kept upon its key until the moment of striking the next; in the second the notes are made short and detached, the hand being rapidly raised from the wrist, or the fingers snatched inwards from the keys. Both kinds of touch are fully described

in the articles on *LEGATO*, *STACCATO*, *DASH*, and *PHRASING*.

Sometimes two different kinds of touch are required at the same time from one hand. Ex. 1, from Thalberg's *Don Giovanni Fantasia*, op. 42, is an instance of the combination of *legato* and *staccato* touch, and Ex. 2. is an exercise recommended by Thalberg for the cultivation of different degrees of *cantabile* tone, in which the large notes have to be played with full tone, the others *piano*, without in the least spreading the chords.

An excellent study on the same subject has been published by Saint-Saens, op. 52, no. 2. [F.T.]

II. *Organ*. Until recent times Touch was an impossibility upon large organs. Burney, in his *Tour*, in 1772, speaks of a touch so heavy that 'each key requires a foot instead of a finger to press it down; again of a performance by a M. Binder, at Dresden, who at the conclusion was in as violent a heat with fatigue and exertion as if he had run eight or ten miles full speed over ploughed fields in the dog days! Of an organ in Amsterdam he reports that each key required almost a two pound weight to put it down! The mechanism of English organs was probably never so bad as this, but it is said that Mendelssohn, after playing at Christ Church, Newgate Street, was covered with perspiration. The pneumatic action has solved this difficulty. Still the question of organ touch is complicated by the peculiarities of the instrument and the varieties of mechanism. Many organs exist with four keyboards (even five may be met with), and the necessarily different levels of these make it almost impossible to keep the hand in a uniform position for all of them. It is rare to find any two of these manuals with a similar touch, and the amount of force required to press down the key varies within wide limits. Even on the same keyboard the touch is appreciably heavier in the bass, and inequalities occur between adjacent notes. A recently regulated mechanism is sometime in a state of adjustment so nice, that the slightest pressure upon the key produces a squeak or wail. This same mechanism after a time will be so changed by use and variations of temperature as to allow of the key being pressed almost to its limit without producing any sound.

These considerations will show that the delicate differences which are characteristic of the pianoforte touch are impossible with the organ. Fortunately they are not needed, but it must

¹ *L'art du chant appliqué au piano*.

² *The Sensations of Tone*, translated by A. J. Ellis, p. 121.

not be supposed that touch on the organ is of no importance. The keys must be pressed rather than struck, but still with such decision that their inequalities may be neutralised, otherwise the player will find that some notes do not speak at all. Perhaps the most important part of organ touch is the release of the key, which can hardly be too decided. The organ punishes laxity in this direction more severely than any instrument. Shakes on the organ should not be too quick; with the pneumatic action they are sometimes almost impossible. Care should be taken in playing staccato passages on slow speaking stops of the Gamba kind, especially in the lower part of the keyboard. The crispness should be not in the stroke but in the release of the key. It is generally said that the hand should be held rather higher above the keys than in the case of the piano, but as has been before pointed out, it is difficult to keep the same position towards keys so differently placed in relation to the performer as the upper and lower of four or even three manuals.

Modern key makers have invented a new danger by lessening the space between the black keys, so that in a chord where the white keys must be played between the black, it is impossible for some fingers to avoid depressing the adjacent notes.

Pedal touch has within recent times become a possibility, and passages for the feet are now as carefully phrased as those for the fingers. Mendelssohn's organ sonatas afford the earliest important examples. Freedom in the ankle joint is the chief condition of success in this. The player must be warned that large pipes will not speak quickly, and that a staccato must be produced by allowing the pedal key to rise quickly rather than by a sharp stroke. [W.Pa.]

TOUCH in bell-ringing denotes any number of changes less than a peal, the latter term being properly used only for 'the performance of the full number of changes which may be rung on a given number of bells.' By old writers the word *touch* is used as equivalent to sound, in which sense it occurs in Massinger's 'Guardian' (Act ii. Sc. 4), where Severino says 'I'll *touch* my horn —(blows his horn).' An earlier example will be found in the Romance of Sir Gawayne and the Green Knight (c. 1320) line 120, p. 4 of the edition of 1864. The word appears also to have been used in English music during two centuries for a Toccata. 'A touche by Mr. Byrd' is found in the MS. of a virginal piece in the British Museum; and 'Mr. Kelway's touches,' as a heading to several passages of a florid character, appears in a MS., probably in the handwriting of Dr. B. Cooke, in the Library of the Royal College of Music. [W.B.S.]

TOURDION, or TORDION. 'A turning, or winding about; also, a tricke, or pranke; also, the daunce tearmed a Round.' (Cotgrave.) The early French dances were divided into two classes, 'Dances Basses' or 'Dances Nobles,' and 'Dances par haut.' The former of these included all regular

dances, the latter were mere improvised romps or 'baladinages.' The regular Basse Dance consisted of two parts, the first was twice repeated, and the last, or 'Tourdion,' was probably something like our modern round dances. The Tourdion was therefore the French equivalent for the German *Nachtanz*, *Proportio*, or *Hoppeltanz*, and the Italian *Saltarello*. [See vol. iii. p. 221 b.] Tabourot says that the Tourdion was nearly the same as the Galliard, but the former was more rapid and smooth than the latter. [See vol. i. p. 578 a.] Hence he defines it as a 'Gaillarde par terre,' i. e. a galliard deprived of its characteristic jumps and springs. Both dances were in 3-time. The following is the tune of the Tourdion given in the 'Orchésographie':

Further particulars as to these dances may be found in the 'Provinciales' of Antonio de Arena (1537). [See TRIHORIS.] [W.B.S.]

TOURJÉE, EBEN, Mus. Doc., father of the Conservatory or class system of musical instruction in America, was born at Warwick, Rhode Island, June 1, 1834. His family being in humble circumstances it became necessary to put him to work at the early age of eight; but his thirst for knowledge was so great, that he soon became a laborious student at the East Greenwich seminary. Having a good alto voice he sang in the choir of the Methodist Church, learning his part by rote. But it chanced that the organist was about to withdraw, and young Tourjée was invited to fill her place. He was at that time but thirteen, and knew absolutely nothing of the instrument; but he managed to pick out the tunes required for the following Sunday, and played them with such success that he was appointed to the position. He at once began to study with a teacher in Providence, often walking thirteen miles each way. At the age of fifteen he became clerk in a music store in Providence, and thus had opportunities for study which he did not fail to improve. At the age of seventeen he opened a music store in Fall River, where he also taught music in the public schools and formed classes in piano, voice, and organ, charging the moderate sum of one dollar to each pupil for twenty lessons. This was in 1851, and was really the beginning of the class-system, which he has since so largely developed. He also edited and published a musical paper with much ability. He afterwards removed to Newport, and continued his work as organist and choirmaster of Old Trinity Church there, and as Director of the local Choral Society. In 1859 he founded a Musical Institute at East Greenwich, where

he had an opportunity of carrying out his ideas regarding class-teaching under more favourable auspices than before. In 1863 he visited Europe, in order to gain information regarding the methods employed in France, Germany, and Italy in conservatory teaching. He took this opportunity of studying with many eminent masters, amongst others August Haupt, of Berlin. On his return to America he removed to Providence, and established the 'Providence Conservatory of Music,' which had great success. In 1867 he extended his work by founding 'The New England Conservatory of Music,' in Boston, and continued for a time to keep both schools in operation. He drew round him the most eminent teachers in Boston, and placed a good musical education within the reach of the poorest students. In 1869 his executive and organising abilities were made use of by the projectors of the great 'Peace Jubilee,' and there is no doubt that the success of that enterprise was largely due to his efforts. During the same year the degree of Doctor of Music was conferred upon him by Middletown University. Since the foundation of Boston University he has been the highly honoured Dean of the College of Music attached thereto. But his greatest work has been the establishment of the great Conservatory just mentioned, from which have graduated thousands of pupils, filling honourable positions as teachers, pianists, organists, and vocalists, and proving themselves able musicians.

Dr. Tourjée has not accumulated wealth, for the needs of others have always been more prominent with him than his own. Many are the charitable enterprises in which he has been active, and the persons who have been aided by his bounty. Among the positions which he has filled may be named that of President of the 'Boston Young Men's Christian Association,' 'City Missionary Society,' and 'National Music Teachers' Association.' He is ever genial in manner, and untiring in work. He is at present in robust health, and it is to be hoped that his useful life may be spared for long. [G.]

TOURS, BERTHOLD, born Dec. 17, 1838, at Rotterdam. His early instruction was derived from his father, who was organist of the St. Laurence church, and from Verhulst. He afterwards studied at the Conservatoires of Brussels and Leipzig, and then accompanied Prince George Galitzin to Russia, and remained there for two years. Since 1861 he has resided in London, writing, teaching, and playing in the band of the Royal Italian Opera, and other good orchestras. In 1878 he became musical adviser and editor to Messrs. Novello, Ewer, & Co., and in that capacity has arranged several important works from the orchestral scores, such as Beethoven's Mass in C, four of Schubert's Masses, 'Elijah,' Gounod's 'Redemption,' etc. etc., besides writing the 'Primer of the Violin' in the series of that firm. Mr. Tours's compositions are numerous. He has written for the piano and other instruments, and a large number of songs, some of which have been very popular.

But his best work is to be found in his Hymn-tunes, Anthems, and Services, for the Anglican Church, particularly a Service in F and an Easter Anthem, 'God hath appointed a day,' which are greatly in demand. [G.]

TOURTE, FRANÇOIS, the most famous of violin-bow-makers, born in Paris 1747, died there 1835. His father and elder brother were bow-makers also; and the reputation which attaches to the family name is not due to François alone. Xavier Tourte, the elder brother, known in France as 'Tourte l'aîné,' was also an excellent workman: tradition says that the brothers commenced business in partnership, François making the sticks, and Xavier the nuts and fittings. They quarrelled and dissolved partnership, and each then set up for himself, Xavier reproducing as well as he could the improvements in the stick which had been introduced by François. The latter has been denominated the Stradivari of the bow: and there is some truth in this; for as Stradivari finally settled the model and fittings of the violin, so Tourte finally settled the model and fittings of the bow. But he had more to do for the bow than Stradivari for the fiddle. The Cremona makers before Stradivari had nearly perfected the model of the violin: it only remained for him to give it certain finishing touches. But Tourte, properly speaking, had no predecessors. He found bow-making in a state of chaos, and he reduced it to a science; and he may be said to have invented the modern bow. Perhaps the best idea of the bows which were in use in Tourte's youth may be gained from the accompanying illustration, which is copied from the first edition of Leopold Mozart's 'Violin School,' 1756. (Fig. 1.) For this fearful imple-

FIG. 1.

FIG. 2.

ment Tourte substituted the bow now in use. (Fig. 2.) The service which he thus rendered to music appears greater the more we think of it: for the Tourte bow greatly facilitated the new development of violin music which began with Viotti, Rode, and Kreutzer. Before his time

all the modern forms of staccato must have been impossible, and the nuances of piano and forte extremely limited; a rawness, especially on the treble strings, and a monotony which to our ears would be intolerable, must have deformed the performances of the best of violinists. The violin, under Tourte's bow, became a different instrument: and subsequent bow-makers have exclusively copied him, the value of their productions depending on the success with which they have applied his principles.

Setting aside for the moment the actual modelling of the Tourte stick, an examination of Tourte's own bows proves that his first care was to select wood of fine but strong texture, and perfectly straight grain, and his second to give it a permanent and regular bend. This was effected by subjecting it in a state of flexion to a moderate heat for a considerable time. To apply a sufficient degree of heat to the very marrow of the stick without rendering the exterior brittle, is the most difficult part of the bow-maker's art: cheap and bad bows have never been thoroughly heated, and their curvature is therefore not permanent. Tourte's first experiments are said to have been made on the staves of old sugar hogsheads from Brazil. This is not unlikely: probably the bent slabs of Brazil wood employed for this purpose had acquired a certain additional elasticity from the combined effect of exposure to tropical heat and the absorption of the saccharine juices: and in connection with the latter it has been suggested that the dark colour of the Tourte sticks is not wholly attributable to age, but partly to some preparation applied to them in the process of heating. The writer cannot agree with this suggestion, especially as some of Tourte's finest bows are extremely pale in colour. Be this as it may, it is certain that the greater elasticity which he secured in the stick by the choice and preparation of the wood enabled him to carry out to the fullest extent the method of bending the stick of the bow the reverse way, that is, inwards, and thus to realise what had long been the desideratum of violinists, a bow which should be strong and elastic without being heavy. By thus increasing and economising the resistance of the stick he liberated the player's thumb and fingers from much useless weight. By a series, no doubt, of patient experiments, he determined the right curvature for the stick, and the rule for tapering it gradually towards the point,¹ so as to have the centre of gravity in the right place, or in other words to 'balance' properly over the string in the hand of the player. He determined the true length of the stick, and the height of the point and the nut, in all which particulars the bow-makers of his time seem to have erred on the side of excess. Lastly, he invented the method of spreading the hairs and fixing them on the face of the nut by means of a moveable

¹ Mathematically investigated, Tourte's bow, when unstrung, is found to form a logarithmic curve, the ordinates of which increase in arithmetical proportion, and the abscissas in geometrical proportion.

band of metal fitting on a slide of mother-of-pearl. The bow, as we have it, is therefore the creation of the genius of Tourte.

Tourte's improvements in the bow were effected after 1775. Tradition says that he was materially assisted in his work by the advice of Viotti, who arrived in Paris in 1782. Nothing is more likely; for only an accomplished violinist could have formulated the demands which the Tourte bow was constructed to satisfy. Viotti no doubt contributed to bring the Tourte bow into general use, and it is certain that it quickly drove the old barbarous bows completely from the field, and that in Paris there at once arose a school of bow-makers which has never been excelled.

For the excellent bows which thus became for the first time obtainable, violinists were willing to pay considerable sums. Tourte charged 12 louis d'or for his best bows mounted in gold. As the makers increased in number the prices fell; but the extreme rarity of fine Pernambuco wood perfectly straight in grain has always contributed to keep up the price of the very best bows. Tourte's bows, of which during a long life he made an immense number, are common enough; but owing to the great number of almost equally good ones which were made by his successors, only extraordinary specimens fetch very high prices. A very fine Tourte has been recently sold for £30: common ones vary in price from £5 to £10. It is a singular fact that there is no difference of opinion among violinists as to Tourte's merits. His bows are universally preferred to all others: and they show no signs of wearing out. Tourte never stamped his bows. Genuine ones are sometimes found stamped with the name, but this is the work of some other hand. His original nuts are usually of tortoise shell, finely mounted in gold, but wanting the metallic slide on the stick, which was introduced by Lupot.

Like Stradivari and Nicholas Amati, Tourte continued to work to within a very few years of his death, at an advanced age. His atelier was on the fourth floor of No. 10, Quai de l'Ecole: after making bows all day he would descend in the evening, and recreate himself by angling for gudgeon in the Seine. His peaceful career came to an end in April 1835, in his 88th year—nearly the same age as that attained by the two famous violin-makers of Cremona above mentioned. [E.J.P.]

TOWER DRUMS, THE. Handel frequently borrowed a pair of kettledrums from the Master-General of the Ordnance for his own performances of his oratorios; and as they were kept in the Tower of London, they were usually called 'the Tower Drums.' They were in frequent request after his death, including the Commemoration Festival in Westminster Abbey in 1784. Dr. Burney, in his account of this Festival, says they were taken by Marlborough at the battle of Malplaquet in 1709.

A much larger pair, 39 and 35 inches in diameter, were made expressly for that Festival

from the design of a Mr. Asbridge, of Drury Lane orchestra, and have since obtained the name of 'Tower Drums,' from a notion that the head of one of them was made from the skin of a lion in the Tower menagerie. These drums came into the possession of the late T. P. Chipp, the well-known kettledrummer, and on the sale of his instruments were bought by H. Potter & Co., military musical instrument makers. They added a brass T-shaped key to each tuning-screw, and presented them (1884) to the Crystal Palace Company, who have placed them in their large orchestra.

Larger drums were made for the Sacred Harmonic Society (47 and 43 inches in diameter), but no tone can be got from such overgrown instruments. [V. de P.]

TOWERS, JOHN, born at Salford Feb. 18, 1836, was for six years choir-boy in Manchester Cathedral, in 1856 entered the Royal Academy of Music, London, and in the following year became pupil of A. B. Marx in Berlin, where he remained for more than two years, at the same time with J. K. Paine and A. W. Thayer. He then returned to England, and after a residence of two years in Brighton, settled at Manchester, where he has since remained as choirmaster, conductor, and organist. He conducts the Alderley Edge, Fallowfield, and Rochdale Orpheus Glee Societies, the last-named being one of the most successful choirs in Lancashire, and is now organist to St. Stephen's Conell, Manchester. Besides a few musical trifles, Mr. Towers has published a chronological list of Beethoven's works (Musical Directory, 1871), an interesting pamphlet on the 'Mortality of Musicians,' a 'List of Eminent Musicians,' etc., etc. He is also a more or less regular contributor to the press. [G.]

TRACKER. A thin flat strip of wood used in the mechanism of an organ for the purpose of conveying leverage from one portion of the instrument to another. A tracker differs from a sticker in the fact that a tracker pulls, while a sticker pushes; while therefore a tracker can be flat and thin, a sticker is round and rigid. For example, if, when one end of a key is pressed down it raises a sticker at its other end, it is clear that the sticker will push up a lever at a higher level; but the other end of the lever at the higher level will of course descend, and to this therefore must be attached a tracker. It will be evident also that a sticker, having only to remain in an upright position, can be kept in its place simply by means of a bit of wire inserted at each end and passing loosely through holes in the ends of the levers. But a tracker having to pull and be pulled is provided at each end with a tap-wire (or wire like a screw) which when passed through the hole in the lever is secured by a leather button. In all cases noisy action is prevented by the insertion of a layer of cloth or some other soft material. Trackers are generally made of pine-wood about one eighth of an inch in thickness and from one third to a half of an inch in width. The length of trackers varies of

course according to circumstances; in long 'actions' or extended 'movements' (as for example, when mechanism is taken under a floor or up a wall) they are sometimes twelve or more feet in length; in such cases they are formed of two or more parts joined together by wire. In order to prevent long trackers from swinging about laterally when in use they are often made to pass through a register or thin board containing holes of suitable size lined with cloth. A tracker may convey leverage from any part of an instrument to another, but its final function is to lower the pull-down and let air pass through the pallet into the pipe. [J.S.]

TRAETTA, TOMMASO MICHELE FRANCESCO SAVERIO, an Italian composer of the 18th century. Until recently it was believed that his name was Trajetta, and the date of his birth May 19, 1727; but the certificate of birth published by the 'Gazetta Musicale di Milano' of 1879, No. 30, settles beyond question that he was the legitimate son of Filippo Traetta and Anna Teresa Piasanti, and was born in the year 1727, on March 30, 'ad hore 16' in the morning, at Bitonto (Terra di Bari). At eleven years of age he became pupil of Durante at the 'Conservatorio di Santa Maria di Loreto' at Naples, to which institution he belonged until the autumn of 1748, when we find him teaching singing, and occasionally writing some sacred music for several churches of Naples. Two years afterwards he tried his hand at the stage, and his first opera, 'Farnace,' produced at the San Carlo at Naples in 1750, met with such success that he was forthwith commissioned to compose six more operas for the same house. Of these nothing is known, except the title of one, 'I pastori felici,' 1753; yet they were probably not less successful than 'Farnace,' since his name spread rapidly, and he received engagements at Florence, Venice, Rome, Turin, Verona, Parma, etc. Goldoni and Metastasio did not disdain to write librettos for him; Goldoni a comic opera 'Buovo d'Antona' (Florence, 1756); and Metastasio 'L'Olimpiade' (Verona, 1758). Towards the end of 1759 Traetta accepted the appointment of Maestro di Cappella and teacher of singing to the Princesses, offered to him by Don Filippo, Infanta of Spain, and Duke of Parma. The first opera he composed for the Ducal Theatre of Parma was 'Solimano' (Carnival, 1759), followed in the spring by 'Ippolito ed Aricia.' This appears to have been a masterpiece, as both the Duke and the audience were exceedingly pleased with it; and on its reproduction six years later for the wedding of the Princess Maria Luisa with Charles III. King of Spain, a life pension was granted to the composer. In 1759 and 1760 Traetta went twice to Vienna to witness the performance of two operas purposely written for the Austrian capital, 'Ifigenia in Aulide' (1759), and 'Armida' (1760).

In 1765, after the death of the Duke, Traetta left Parma and settled in Venice, as principal of the 'Conservatorio dell' Ospedaletto.' He held

the appointment for nearly three years, and resigned it on the invitation of Catherine II. of Russia, to succeed Galuppi as 'Maestro di Corte.' The severe climate of Russia however did not agree with the Italian maestro; in 1775 he gave up his position, and in 1776 accepted an engagement in London, where however he was not very successful, owing chiefly to the firm hold which Sacchini had taken of the English public. He accordingly returned to Naples, but the climate of Russia and the anxieties of London had impaired both his health and his genius, and the few operas he wrote before his death show that the spring of his imagination was dried up. He died in Venice on April 6, 1779, and was buried in the church of Santa Maria Assunta, where the following epitaph is engraved on his tomb:

THOMAE TRAJETTA
BITUNTI NATO
SUBLIMIORIS MUSICES PERITISSIMO
HUIUS CHORI
AD AMPLITUDINEM ARTIS SUAE
INSTAURATORI MODERATORI
OPTIME MERITO
ANNO SALUTIS MDCCLXXIX
AETATIS SUAE LII
VITA FUNCTO
MONUMENTUM POSITUM.

Though Traetta was gifted with great intelligence, and his music is full of vigour and not wanting in a certain dramatic power, yet his works are now entirely forgotten.¹ Burney, Galvani, Grossi, Florimo, and Clément all praise him, and Florimo even finds in him a tendency towards the same dramatic expression and dignity in the musical treatment of the *libretto* that a few years afterwards made the name of Gluck immortal. However this may be, nobody can deny that Traetta had, as a man, a very peculiar character, an extraordinary estimation of his own talent, and an unusual readiness in making it clear to everybody: 'Traetta,' says Florimo, 'at the first performance of his operas, when presiding at the *clavicembalo*, as was customary at that time, convinced of the worth of his works, and persuaded of the special importance of some pieces, —was in the habit of turning towards the audience and saying: *Ladies and gentlemen, look sharp, and pay attention to this piece.*'

Subjoined is a catalogue of his works.

OPERAS.	
Farnace. Napoli, 1751.	Armida. Do. 1760.
I pastori felici. Do. 1753.	Sofonisba. Parma, 1760.
Ezio. Rome, 1754.	Enée nel Lazio. Torino, 1760.
Lenozze contrastate. Do. 1754.	I Tindaridi. Parma, 1760.
L'Incredulo. Napoli, 1755.	Enée e Lavinia. Do. 1761.
La fante furba. Do. 1756.	Antigono. Padova, 1764.
Buovo d'Antona. Firenze, 1756.	La francese a Malghera. Venezia, 1764.
Nitteti. Reggio, 1757.	La buona figliuola maritata. Parma, 1765.
Didone abbandonata. Venezia, 1757.	Semiramide. Venezia, 1765.
Olimpiade. Verona, 1758.	Le Serve rivali. Do. 1766.
Solimano. Parma, 1759.	Amor in trappola. Do. 1768.
Ippolito ad Aricia. Do. 1759.	Ifigenia in Tauride. Milano, 1768.
Ifigenia in Aulide. Vienna, 1759.	L'Isola disabitata. Bologna, 1768.

¹ His name does not occur once in the programmes of the Philharmonic Society, and only once in all the three indexes of the Allg. Musikalische Zeitung.

Germundo. London, 1778.
Merope. Milano, 1778.
La disfatta di Dario. Venezia, 1778.
Il cavaliere errante. Do. 1778.
Artanoe. Do. 1778.
Gli Eroi del Campi Elisi. Do. 1779. Written on the composer's deathbed, and finished by Genaro Astaritta.
Le feste d'Imeneo, a prologue and trilogy, viz. Il trionfo d'Amore, Trionfo Saffo, and Egli, for the wedding of the Archduke Joseph of Austria with the Infanta Doña Isabella di Borbone, at Parma, Sept. 1761.
Il Tributo Campestre, 'compiimento pastorale,' on the occasion of Maria Carolina of Austria, wife to Ferdinand IV. King of Sicily, passing through Mantua in 1768.
In the same year he wrote an Oratorio Salomone, for the 'Conservatorio dell' Ospedaletto' in Venice; and about 1770 he wrote

a 'divertimento for four orchestras' with the title 'Le quattro stagioni ei dodici mesi dell'anno' (the four seasons, and the twelve months of the year).²
A Stabat Mater of his for four voices and accompaniment of several instruments is known, and the Archives of the 'Real Collegio di Napoli,' contain the following compositions:—
Lezione terza for soprano.
39 Arie (some with accompaniment of violin and basso, and some with accompaniment of several instruments).
7 Duetti.
Aria 'Terrore m'inspirava,' with pianoforte accompaniment.
Aria 'Ah! consola il tuo dolore,' arranged for two violins, viola, and basso.
A Canon 'Sogno, ma te non miro' for two sopranos and basso.
A Solfeggio, with pianoforte accompaniment. [G.M.]

TRAINING SCHOOL FOR MUSIC, THE NATIONAL, was founded by the Society of Arts. The subject had been in the air since the year 1866, a Musical Committee had been appointed, and in 1873 a meeting was held at Clarence House, the Duke of Edinburgh in the chair, at which it was resolved that it is desirable to erect a building at a cost not exceeding £20,000 for the purposes of a Training School for Music at Kensington, in connexion with the Society of Arts. A site on the immediate west side of the Albert Hall was granted by the Commissioners of 1851, the construction of the building, on the design of Captain F. Cole, R.E., was undertaken by Mr. (now Sir) Charles J. Freaque, at his own cost; the first stone was laid on Dec. 18, 1873, and the School was opened at Easter 1876, with 82 free scholarships, of which 4 were founded by the Society of Arts, 2 by members of the Society, 5 by Mr. Freaque, 10 by the Corporation of London, 14 by City Guilds, 33 by provincial towns, and the remainder by private donors. The scholarships were of the value of £40 a year each, and were founded for five years, by subscription renewable at the end of that term; they carried free instruction for the same period, and were obtainable 'by competitive examination alone.' The Duke of Edinburgh was chairman of the Council, Mr. (now Sir Arthur) Sullivan was appointed Principal, with a staff of Teachers; in 1881 he was succeeded by Dr. Stainer as Principal, and the School continued to flourish till Easter 1882, when it came to an end owing to the determination arrived at to establish the Royal College of Music on a wider and more permanent basis. The College, on its formation, took over the building, furniture and fittings, organ and music, and a balance at the banker's of £1100. The instruction in the Training School was systematic and thorough, and in proof of its efficiency during the short period of its existence it is sufficient to name Eugene D'Albert, Frederic Cliffe, Annie Marriott, and Frederic King, as having received their education there.

² This composition is only mentioned in a letter bearing the date 2-13 Dec. 1770, written by Catherine II. of Russia to Voltaire.

THE ROYAL COLLEGE OF MUSIC, which thus became the successor of the Training School, was founded by the Prince of Wales at a meeting held at St. James's Palace Feb. 28, 1882, and was opened by H.R.H. on May 7 of the following year. Negotiations took place with the ROYAL ACADEMY OF MUSIC with the object of a union with the two bodies; but these have hitherto unfortunately come to nothing. Like its predecessor, the College rests on the basis of endowed scholarships lasting not less than three years; but the funds for these are in this case provided by the interest of money subscribed throughout the country and permanently invested. The College opened with 50 Scholars elected by competition, of whom 15 receive maintenance in addition, and 42 Paying Students. It was incorporated by Royal Charter on May 23, 1883, and is governed by a Council, presided over by the Prince of Wales, and divided into a Finance Committee, and an Executive Committee. The staff are as follows:—Director, Sir George Grove, D.C.L.; Principal Teachers, forming the Board of Professors, J. F. Bridge, Mus.D.; H. C. Deacon; Henry Holmes; Mad. Lind-Goldschmidt; Walter Parratt; C. Hubert H. Parry, Mus.D.; Ernst Pauer; C. V. Stanford, Mus.D.; Franklin Taylor; A. Visetti. Other principal teachers:—Mme. A. Goddard; John F. Barnett; G. C. Martin, Mus.D.; R. Gompertz; C. H. Howell; F. E. Gladstone, Mus.D.; J. Higgs, Mus.B.; G. Garcia, etc. Registrar, G. Watson, jun. The College possesses the extensive, rare, and valuable library of the late Sacred Harmonic Society, presented through the exertions of Sir P. Cunliffe Owen, and that of the Concerts of Antient Music, given by the Queen. The Examiners at the end of the first year were Dr. Joachim, Manuel Garcia, Otto Goldschmidt, Joseph Barnby, and Dr. Stainer. [G.]

TRAMIDAMENTE. This strange direction, with *ängstlich* below it as its German equivalent, is found at the Recitative with the Trumpets in the 'Agnus' of Beethoven's Mass in D, in the old score (Schotts). In the new edition of Breitkopf & Härtel it appears as 'timidamente,' which is correct Italian, and is the translation of 'ängstlich'—with distress. [G.]

TRANQUILLO, an Italian term, meaning 'calmly,' 'quietly.' The nocturno in Mendelssohn's Midsummer Night's Dream music is marked 'Con moto tranquillo.' [G.]

TRANSITION is a word which has several different senses. It is most commonly used in a vague way as synonymous with modulation. Some writers, wishing to limit it more strictly, use it for the actual moment of passage from one key to another; and again it is sometimes used to distinguish those short subordinate flights out of one key into another, which are so often met with in modern music, from the more prominent and deliberate changes of key which form an important feature in the structure of a movement. The following example from Beethoven's Sonata in B \flat , op. 106, is an illustration of the process

defined by this latter meaning of the term; the transition being from F \sharp minor to G major and back:—

[See MODULATION.]

[C.H.H.P.]

TRANSPOSING INSTRUMENTS. Before pianoforte accompaniments were set in full notation, the practice of which, as Mr. W. H. Cummings has shown,¹ was first due, about 1780–90, to Domenico Corri of Edinburgh, the entire accompaniment, at that time the most important study in keyboard playing, was from the figured bass stave, known as 'Figured,' 'Through' or 'Thorough' bass. From the varying natural pitch of voices, transposition was a necessary and much cultivated resource, and if the chromatic keyboard had been originally contrived to restore the chromatic *genus* of the Greeks, it was certainly very soon after permanently adopted to facilitate the practice of transposition. But the difficulties of the process seem to have very early prompted the alternative of a shifting keyboard, applied in the first instance to the diatonic arrangement of the keys, which in the 16th century was still to be met with in old organs: in other words, whatever the key might be, to play apparently in C. The oldest authority on the organ extant is the blind organist of Heidelberg, Arnold Schlick, who in 1511 published the 'Spiegel der Orgelmacher und Organisten,' of which only one copy is now known to exist.² Schlick is quoted by Sebastian Virdung, who also published his book in 1511, and (2nd cap. p. 19, Berlin reprint p. 87) has an interesting passage on transposing organs, which we will freely translate.

When an organ in itself tuned to the right pitch can be shifted a tone higher or lower, it is a great advantage to both organist and singers. I have heard years ago of a Positive so made, but I only know of one complete organ, and that one I use daily, which together with its positive, two back manuals, pedals, and all its many and rare registers, may be shifted higher and back again as often as necessity requires. For some chapels and singers *ad Cantum Mensurabilem* such a contrivance is specially useful. Two masses or Magnificats may be in the same tone, and set in the same notation of line and space, and yet it may be desirable to sing the one a note higher than the other. Say both masses are in the Sixth Tone, with Clef C; the counter bass going an octave lower³—in the other the counter bass goes a note or more lower, to B or A \sharp , which are too low for bass singers, and their voices heard against others would be

¹ Vide Proceedings of the Musical Association 1880–81, pp. 19–22.

² Reprinted in the Monatshefte für Musik-geschichte, Berlin 1889; edited with explanatory notes by Herr Robert Eitner.

³ To the C, second space of the bass clef, but evidently, as will be obvious, sounding the F lower.

⁴ In our pitch the double E and D.

too weak, if it were not possible to sing the part a note higher. Now in the first mass the counter bass in C can be played on an organ as set, but the other demands transposition to D, with the semitones F♯ and C♯, which to those who have not practised it, is hard and impossible. So therefore, with an organ, as described, the organist may go on playing in C (E-sol-fa-ut) on the keyboard, although the pipes are in D (D-la-sol-re).

We may assume that in course of time the increasing skill of organists rendered mechanical transpositions unnecessary, since for the organ we hear no more about them; but for the harpsichord they were to be met with in the 16th and following centuries. Prætorius (A.D. 1619) speaks of transposing clavicymbals (harpsichords) which by shifting the keyboard could be set two notes higher or lower, and describes a 'Universal-Clavicymbal' capable of gradual transposition by semitones to the extent of a fifth. Burney in his musical tour met with two transposing harpsichords; one a German one, made under the direction of Frederick the Great, at Venice; the other (a Spanish one, also with moveable keys) at Bologna, belonging to Farinelli.

Considering the musical knowledge and skill required to transpose with facility beyond a supposititious change of signature and corresponding alteration in reading the accidentals, as from C to C♯ or C♭; it might appear strange that mechanical contrivances for transposition have not been permanently adopted, but it finds its explanation in the disturbance of the co-ordination of hand and ear. Those who have the gift of absolute pitch are at once upset by it, while those who have not that gift and are the more numerous, find a latent cause of irritation which, somehow or other, is a stumblingblock to the player. In the present day it is not a question of Temperament, equal or unequal, so much as of position in the scale of pitch, of which, if the ear is not absolutely conscious, it is yet conscious to a certain extent.

The transposing harpsichord mentioned by Burney, as belonging to Count Torre Taxis of Venice, had also a Pianoforte stop, a combination in vogue at the time it was made, 1760. A German pianoforte with moveable keyboard was made for the Prince of Prussia in 1786, and about the same period Sebastien Erard constructed an organised pianoforte, another favoured combination of the latter half of the 18th century, which transposed a semitone, whole tone, or minor third each way, to suit the limited voice of Marie Antoinette. Roller of Paris is also said to have made transposing pianos.

The most prominent instances of transposing pianofortes made in England in the present century are the following:—(1) The square piano of Edward Ryley, patented in 1801, and acting by a false keyboard, which was placed above the true one, and could be shifted to any semitone in the octave. Ryley's idea as stated in his specification went back to the original one of playing everything in the so-called natural scale of C. The patent for this complete trans-

poser was bought by John and James Broadwood, and an instrument so made is in the possession of the present firm. (2) The Royal Albert Transposing piano, brought out by Messrs. Addison & Co. soon after the marriage of Her Majesty the Queen, a piccolo or cottage instrument, is described by Rimbault in his History, as having the keys divided at half their length, the front and back ends being capable of moving independently of each other. (3) Messrs. Broadwoods' transposing Boudoir Cottage pianos, made about 1845, displayed the novel feature of the instrument itself moving while the keyboard and action were stationary. In some of their pianos made in this way, the instrument was suspended between two pivoted metal supporters which allowed the gradual movement, semitone by semitone, effected by turning a pin at the side with an ordinary tuning-hammer. Subsequently the instrument was moved in a groove at the top and on two wheels at the bottom of the outer fixed case, but neither contrivance was patented, nor was long continued to be made. (4) The latest attempt at transposing by the keyboard has been brought forward in the present year (1884) by Hermann Wagner of Stuttgart. He names his invention 'Transponir-Pianino.' We gather from the description and drawings in the 'Zeitschrift für Instrumentenbau,' Band 4, No. 12 (Leipzig, Jan. 12, 1884) that the keyboard moves bodily, there being a preliminary movement for protecting the action cranks or rockers by raising them together while the keyboard is being shifted. (5) The last transposing contrivance to be mentioned is the 'Transpositeur' of Messrs. Pleyel, Wolff, & Co. of Paris, invented by M. Auguste Wolff in 1873. The Transpositeur being an independent false keyboard can be applied to any pianoforte by any maker. It has therefore the great merits of adaptability and convenience. It can be placed upon the proper keyboard of an instrument, and by touching a spring to the right hand of the player and a button which permits the keyboard to be shifted through all the semitones of an octave, the transposition desired is effected. The Transpositeur is patented and is sold by the Pleyel firm in Paris, or their agent, Mr. Berrow, in London, at a moderate price. It is of course open to the same natural objection which we have already noticed in speaking of the transposing clavicymbals of Prætorius. [A.J.H.]

TRANSPOSITION, change of key, the notation or performance of a musical composition in a different key from that in which it is written. When it is said that a piece of music is in a certain key, it is understood that it consists of the notes of a certain scale, and that, except chromatic passing-notes and suchlike melodic changes, no note can be employed which is not a part of that scale. Each note of the composition therefore occupies a definite position as a degree of the scale in which it is written, and in order to transpose a phrase, each note must be written, sung, or played a certain fixed distance higher or lower,

¹ This very difficult passage in the quaint original has been rendered from an elucidatory footnote by the Editor, Herr Eitner.

that it may occupy the same position in the new scale that it held at first in the original one. Thus Exs. 2 and 3 are transpositions of Ex. 1, one being a major second higher, and the other a major second lower; and the notes of the original phrase being numbered, to show their position as degrees of the scale, it will be seen that this position remains unchanged in the transpositions.

1. Original Key C.

2. Transposed into D.

3. Transposed into Bb.

It is, however, not necessary that a transposition should be fully written out, as above. By sufficient knowledge and practice a performer is enabled to transpose a piece of music into any required key, while still reading from the original notation. To the singer such a proceeding offers no particular difficulty, since the relation of the various notes to the key-note being understood, the absolute pitch of the latter, which is all that has to be kept in mind, does not matter. But to the instrumental performer the task is by no means an easy one, since the transposition frequently requires a totally different position of the fingers. This arises from the fact that in transposition it often happens that a natural has to be represented by a sharp or flat, and *vice versa*, as may be seen in the above examples, where the B \natural of Ex. 1, bar 2, being the 7th degree of the scale, becomes C \sharp , which is the 7th degree of the scale of D, in Ex. 2; and again in bar 3, where F \natural , the 4th degree, becomes E \flat in Ex. 3. The change of a flat to a sharp, though possible, is scarcely practical. It could only occur in an extreme key, and even then could always be avoided by making an enharmonic change, so that the transposed key should be more nearly related to the original, for example—

In D. In C \flat . In B \natural (enharmonic change).

Hence it will not suffice to read each note of a phrase so many degrees higher or lower on the staff; in addition to this, the relation which every note bears to the scale must be thoroughly understood, and reproduced in the transposition by means of the necessary sharps, flats, or naturals; while the pianist or organist, who has to deal with many sounds at once, must be able also instantly to recognise the various harmonies and modulations, and to construct the same in the new key.

The faculty of transposition is extremely valuable to the practical musician. To the conductor, or to any one desiring to play from orchestral

score, it is essential, as the parts for the so-called 'transposing instruments'—horns, trumpets, clarinet, drums—being written in a different key from that in which they are to sound, have to be transposed back into the key of the piece, so as to agree with the strings and other non-transposing instruments. [See SCORE, PLAYING FROM, vol. iii. p. 436.] Orchestral players and accompanists are frequently called upon to transpose, in order to accommodate the singer, for whose voice the written pitch of the song may be too high or too low, but it is probably extremely seldom that transposition takes place on so grand a scale as when Beethoven, having to play his Concerto in C major, and finding the piano half a tone too flat, transposed the whole into C \sharp major!

Transposed editions of songs are frequently published, that the same compositions may be made available for voices of different compass, but transpositions of instrumental music more rarely. In Kroll's edition of Bach's Preludes and Fugues, however, the Fugue in C \sharp major in vol. i. appears transposed into D \flat . This is merely an enharmonic change, of questionable practical value, the sounds remaining the same though the notation is altered, and is only made to facilitate reading, but the change into G of Schubert's Impromptu, op. 90, no. 3, which was written in G \flat , and altered by the publisher, was doubtless designed to render it easier of execution. [F.T.]

TRANSPOSITION OF THE ECCLESIASTICAL MODES. Composers of the Polyphonic School permitted the transposition of the Ecclesiastical Modes to the Fourth above or Fifth below their true pitch; effecting the process by means of a B \flat placed at the Signature, and thereby substituting for the absolute pitch of a Plagal Mode that of its Authentic original. Transposition to other Intervals than these was utterly forbidden, in writing: but Singers were permitted to change the pitch, at the moment of performance, to any extent convenient to themselves.

During the transitional period—but very rarely earlier than that—a double Transposition was effected, in a few exceptional cases, by means of two Flats; B \flat raising the pitch a Fourth, and E \flat lowering it, from thence, by a Fifth—thus really depressing the original pitch by a Tone. As usual in all cases of progressive innovation, this practice was well known in England long before it found favour on the continent. A beautiful example will be found in Wilbye's 'Flora gave me fairest flowers,' composed in 1598; yet Morley, writing in 1597, severely condemns the practice. It will be seen, from these remarks, that, in Compositions of the Polyphonic æra, the absence of a B \flat at the Signature proves the Mode to stand at its true pitch; while the presence of a B \flat proves the Composition to be quite certainly written in a Transposed Mode.¹ In modern reprints, the presence at the Signature of one or more Sharps, or of more than two Flats, shows that the pitch of the piece has been changed, or its Mode reduced to a modern Scale, by an editor of the present century. [W.S.R.]

¹ See vol. II. p. 474 a.

TRASUNTINO, VITO, a Venetian harpsichord-maker, who made an enharmonic (quarter-tone) archicembalo or large harpsichord for Camillo Gonzaga, Conte di Novellara, in 1606, now preserved in the Museum of the Liceo Communale at Bologna. It was made after the invention of Don Nicola Vicentino, an enthusiast who tried to restore Greek music according to its three genera, the diatonic, chromatic and enharmonic, and published the results of his attempt at Rome in 1555, under the title of 'L'Antica Musica ridotta alla Moderna Pratica.' From engravings in this work illustrating a keyboard invented to include the three systems, Trasuntino contrived his instrument. A photograph of it is in the South Kensington Museum. It had one keyboard of four octaves C—C, with white naturals; the upper or usual sharps and flats being divided into four alternately black and white, each division being an independent key. There are short upper keys also between the natural semitones, once divided, which makes thirty-two keys in the octave; 125 in all. Trasuntino made a Tetracorda, also preserved at Bologna, with intervals marked off to tune the archicembalo by—an old pitch-measurer or quadruple monochord. When Fétis noticed Trasuntino (*Biographie Universelle*, 1865, p. 250), the archicembalo was in the possession of Baini. It was not the first keyboard instrument with enharmonic intervals; Vicentino had an organ built, about 1561, by Messer Vincenzo Colombo of Venice. There is a broadsheet describing it quoted by Fétis as obtained by him from Signor Gaspari of Bologna: 'Descrizione dell' arciorghano, nel quale si possono eseguire i tri generi della musica, diatonica, cromatica, ed enarmonica, in Venetia, appresso Niccolo Bevil' acqua, 1561, a di 25 ottobre.'

A harpsichord dated 1559, made by a Trasuntini, is cited by Giordano Riccati ('Delle corde ovvero fibre elastiche'), and was probably by Vito's father, perhaps the Messer Giulio Trasuntino referred to by Thomas Garzoni ('Piazza universale di tutte le professioni del mondo,' *Discorso* 136) as excellent in all 'instrumenti da penna'—quilled instruments, such as harpsichords, manichords, clavicembalos and others. Of Vito, Fioravanti says (*Specchio di Scienza Universale*, fol. 273), 'Guido [or Vito] Trasuntino was a man of much and learned experience in the art of making harpsichords, clavicembalos, organs and regals, so that his instruments were admired by every one before all others, and other instruments he improved, as might be seen in many places in Venice.' These citations are rendered from Fétis. 'Manicordo,' as in the original, is the clavicord. It is doubtful whether 'arpicordi' and 'clavicembali' here distinguish upright and horizontal harpsichords, or harpsichords and spinets. [A.J.H.]

TRAUER-WALTZER, i.e. Mourning-waltz, a composition of Schubert's (op. 9, no. 2), dating from the year 1816,

which would not be noticed here but for the fact that it is often attributed to Beethoven, under whose name a 'Sehnsuchts-waltzer' (or Longing waltz), best known as 'Le Désir' (first of a set of 10 all with romantic titles), compounded from Schubert's waltz and Himmel's 'Favoritwaltzer,' was published by Schotts in 1826. Schubert's op. 9 was issued by Cappi and Diabelli, Nov. 29, 1821, so that there is no doubt to whom it belongs. The waltz was much played before publication, and got its title independently of Schubert. In fact, on one occasion, hearing it so spoken of, he said, 'Who could be such an ass as to write a *mourning-waltz*?' (Spaun's *Memoir*, MS.) Except for its extraordinary beauty Schubert's Waltz is a perfect type of a German 'Deutsch.' [See TEUTSCH.] [G.]

TRAVENOL, LOUIS, a violin-player, born in Paris in 1698, might be allowed to go down to oblivion in his native obscurity but for his accidental connection with Voltaire. He entered the opera band in April 1739, and remained there till 1759, when he retired on a pension of 300 francs a year. In 1783 he died. The title of one of his numerous pamphlets (all more or less of the same querulous ill-natured bilious tone), 'Complainte d'un musicien opprimé par ses camarades'—complaint of an ill-used musician—throws much light on his temper, and justifies Voltaire in suspecting him of having had a hand in circulating some of the lampoons in which his election to the Académie Française (May 9, 1746) was attacked. Voltaire, however, seems to have made the double mistake of having Travenol arrested without being able to prove anything against him, and of causing his father, an old man of 80, to be imprisoned with him. The affair was brought before the Parlement, and after a year's delay, Voltaire was fined 500 francs. A shower of bitter pamphlets against him followed this result. (See Fétis; and Carlyle's 'Friedrich,' Bk. xvi. chap. 2.) [G.]

TRAVERS, JOHN, commenced his musical education as a chorister of St. George's Chapel, Windsor, where he attracted the attention of Dr. Godolphin, Dean of St. Paul's Cathedral and Provost of Eton College, by whom he was placed with Maurice Greene as an articled pupil. He soon afterwards made the acquaintance of Dr. Pepusch, who assisted him in his studies to his

great advantage. About 1725 he was appointed organist of St. Paul's, Covent Garden, and subsequently organist of Fulham Church. On May 10, 1737, he was sworn in organist of the Chapel Royal in the room of Jonathan Martin, deceased, upon which he relinquished his place at Fulham. He composed much church music: his well-known Service in F, a Te Deum in D, and two anthems were printed by Arnold, and another anthem by Page; others are in MS. in the books of the Chapel Royal. He published 'The Whole Book of Psalms for one, two, three, four and five voices, with a thorough bass for the harpsichord,' 2 vols. fol. But the work by which he is best known is his 'Eighteen Canzonets for two and three voices, the words chiefly by Matthew Prior,' which enjoyed a long career of popularity, and two of which—'Haste, my Nanette,' and 'I, my dear, was born to-day'—are still occasionally heard. An autograph MS. by him, containing 4 melodies in some of the ancient Greek modes, for 4 voices with instrumental accompaniments, the fruit, doubtless, of his association with Pepusch, is amongst Dr. Cooke's MS. collections now in the library of the Royal College of Music. Upon the death of Dr. Pepusch he became the possessor, by bequest, of one half of the Doctor's valuable library. He died 1758. [W.H.H.]

TRAVERSO (Ger. *Querflöte*), the present form of flute, held *square* or *across* (*à travers*) the performer, in distinction to the flute à bec, or flageolet with a beak or mouthpiece, which was held straight out, as the clarinet and oboe are. It came in early in the 18th century, and was called the 'German flute' by Handel and others in this country. In Bach's scores it is called Flauto traverso, Traverso, and Traversiere. [See FLUTE.] [G.]

TRAVIATA, LA ('The misguided one'). Opera in 3 acts; libretto by Piave, music by Verdi. Produced at Teatro Fenice, Venice, March 6, 1853; at the Théâtre Italien, Paris, Dec. 6, 1856; at Her Majesty's Theatre, London (début of Mlle. Piccolomini), May 24, 1856; in English at Surrey Theatre, June 8, 1857. The opera was written in a single month, as is proved by the autograph in possession of Ricordi. [G.]

TREATMENT OF THE ORGAN. The organ, as the most powerful, complicated, and artificial instrument, is naturally the most difficult to manage. The pleasure of producing large volumes of sound is a snare to almost all players; the ability to use the pedals with freedom tempts many to their excessive employment; the bitter brilliance of the compound stops has a surprising fascination for some. Draw all the stops of a large organ and play the three notes in the bass stave (a). At least one pipe speaks each note of the bunch of sounds placed over the chord. If this cacophony is the result of the simplest chord, some idea, though faint, may be formed of the effect produced by the complex combinations

of modern music. Of course no sound-producing instrument is free from these overtones, but their intensity does not approach that of their artificial imitations. We have all grown up with these noises in our ears, and it would be impossible to catch a first-rate musician and make him listen for the first time to an elaborate fugue played through upon a full organ; if we could, his opinions would probably surprise us.

The reserve with which great musicians speak of the organ, and the unwillingness to write music for it (the latter, no doubt, to be accounted for partly on other grounds) are noticeable; but we meet occasionally with expressions of opinion which probably represent the unspoken judgment of many and the half-conscious feeling of more.

The mechanical soulless material of the organ. (Spitta, *Life of Bach*, vol. i. p. 284.)

Another day he (Mendelssohn) played on the organ at St. Catherine's Church, but I confess that even Mendelssohn's famous talent, like that of many other eminent organists, left me quite cold, though I am far from attributing this to any want in their playing. I find it immensely interesting to stand by an organist and watch the motions of his hands and feet whilst I follow on the music, but the excessive resonance in churches makes it more pain than pleasure to me to listen from below to any of those wonderful creations with their manifold intricacies and brilliant passages. (F. Hiller, 'Mendelssohn,' *Transl.* p. 185.)

With reference to compound stops, Berlioz says (*Traité d'Instrumentation*, p. 168):—

Les facteurs d'orgues et les organistes s'accordent à trouver excellent l'effet produit par cette résonnance multiple. En tout cas ce singulier procédé tendrait toujours à donner à l'orgue la résonnance harmonique qu'on cherche inutilement à éviter sur les grands pianos à queue.

In the same connexion Helmholtz (*Sensations of Tone*, Ellis's translation) writes:—

The latter (compound stops) are artificial imitations of the natural composition of all musical tones, each key bringing a series of pipes into action which correspond to the first three or six partial tones of the corresponding note. They can be used only to accompany congregational singing. When employed alone they produce insupportable noise and horrible confusion. But when the singing of the congregation gives overpowering force to the prime tones in the notes of the melody, the proper relation of quality of tone is restored, and the result is a powerful well-proportioned mass of sound.

It may be well then, without writing an organ tutor, which is beyond the scope of such a work as this, to give a few hints on the management of the organ.

The selection and combination of stops is a matter of considerable difficulty, partly because stops of the same name do not produce the same effect. Undoubtedly much larger use should be made of single stops. The most important stop of all—the open Diapason—is very seldom heard alone, being nearly always muffled by a stopped Diapason, and yet when used by itself it has a clear distinctive tone very pleasant to listen to. Reeds too, when good, are much brighter when unclouded by Diapason tone, and this is especially the case with a Clarinet or Cremona, though both are coupled almost always with a stopped Diapason. Organ-builders seem to have a craze on this point. The writer has often noticed that they ask for the two to be drawn together. The

employment of single stops has this further advantage in an instrument of such sustained sound, and which it is almost impossible to keep quite in tune, that the unison beats are then not heard. Families of stops should be oftener heard alone. These are chiefly (1) stops with open pipes, such as the open Diapason, Principal, Fifteenth; (2) stops with closed pipes, such as the stopped Diapason, Flute and Piccolo; (3) Harmonic stops; (4) Reeds. Stops of the Gamba type nearly always spoil Diapason tone. 16-foot stops on the manuals should be used sparingly, and never when giving out the subject of a fugue, unless the bass begins. The proper place for the mixture work has already been indicated in the extract from Helmholtz. It would be well if organs possessed composition pedals, drawing classes of stops, rather than, or in addition to, those which pile up the tone from soft to loud.

Couplers are kept drawn much more than they ought to be, with the effect of half depriving the player of the contrast between the different manuals. The writer knew a cathedral organist who commenced his service by coupling Swell to Great, and Swell to Choir, often leaving them to the end in this condition. Another evil result of much coupling is that the pipes of different manuals are scarcely ever affected equally by variations of temperature, and the Swell of course being enclosed in a box is often scarcely moved, so that at the end of an evening the heat of gas and of a crowd will cause a difference of almost a quarter of a tone between the pitch of the Great and Swell Organs. On this account every important instrument ought to have a balanced Great Organ which does not need supplementing by the Swell Reeds for full effect.

The Pedal Organ is now used far too frequently. The boom of a pedal Open, or the indistinct murmur of the Bourdon, become very irritating when heard for long. There is no finer effect than the entrance of a weighty pedal at important points in an organ-piece, but there are players who scarcely take their feet from the pedal-board, and so discount the impression. Care should be taken to keep the pedal part fairly near the hands. The upper part of the pedal-board is still too much neglected, and it is common to hear a player extemporising with a humming Bourdon some two octaves away from the hand parts.

The old habit of pumping the Swell Pedal with the right foot, and hopping on the pedals with the left, has now probably retired to remote country churches, but the Swell Pedal is still treated too convulsively, and it should be remembered in putting it down that the first inch makes more difference than all the rest put together.

In changing stops it is important to choose the moment between the phrases, or when few keys are down. One finds still a lingering belief that repeated notes should never be struck on the organ. Nothing can be further from the truth. These repercussions are a great relief from the otherwise constant grind of sound.

Again, the great aim of the old organist was to put down as many notes as possible, not merely those belonging to the chord, but as many semitones as could conveniently be held below each. This at all events does not suit the modern organ, and now one occasionally detects with pleasure even an incomplete chord. Few organists have the courage to leave in its thin state the chord which is to be found on the

last page of J. S. Bach's 'Passacaglia' (a), and yet the effect is obviously intentional. In Wesley's

Anthem 'All go to one place,' at the end of the phrase 'eternal in the heavens,' we find a beautiful chord which would be ruined by filling up, or by a pedal (b). Here, as in management of stops, contrast and variety

are the things to be aimed at. Thus trio-playing, such as we see in the 6 Sonatas of J. S. Bach, gives some of the keenest enjoyment the instrument can afford. The article PHRASING should be read by the student. [Vol. ii. p. 706.] Much of it applies with almost greater force to the organ than to the piano. Extemporising on the organ will frequently become an aimless, barless, rhythmless wandering among the keys to which no change of stops can give any interest.

So much oratorio music is now sung in churches and in other places, where on account of the expense or from other reasons, an orchestra is unattainable, that the organ is often called upon to supply the place of a full band. It cannot be said that the artistic outcome of this treatment of the instrument is good. The string tone, in spite of stops named Violin-Diapason, Gamba-Violoncello, and others, has no equivalent in the organ. The wind is susceptible of closer imitation, but the attempt to produce with two hands and feet the independent life and movement of so many instruments is obviously absurd. The organist does his best by giving the background of the picture, so to speak, upon one manual and picking out the important features upon another. Doubtless clever feats may be performed with a thumb upon a third keyboard, but in this case phrasing is usually sacrificed. The string tone is best given by stops of the Gamba type, but of these no organ possesses enough to furnish the proper amount, and Diapasons coupled even to Swell Reeds have to be called into requisition. Some stops of the small open kind fairly give the horn-tone. Flutes, oboes, clarinets, bassoons, and trumpets have all been copied by the organ builder, with more or less success, but their hard unvarying tone contrasts unfavourably with that of their orchestral prototypes. Moreover the instrument itself varies the quality with the intensity; the Swell-box, though regulating the intensity, leaves the quality untouched.

On this point an almost complete analogy may be found in the case of painting, engraving, and chromo-lithographs. The piano may be said to give the engraving of an orchestral work, the organ the chromo-lithograph with all its defects of hard outline and want of delicate shading. There can be no doubt that this treatment of the organ has had a mischievous effect upon organ building, organ music, and organ playing.

The employment of the organ with the orchestra is not without its dangers, but the main principles are clear. Never use imitation stops or mixtures and hardly ever 4-ft. or 2-ft. work. The Diapasons and the pedal stops are the only effects which can be used without clash and harshness. A pedal alone has often a wonderfully fine effect. Instances in Mendelssohn's organ parts (which are models) will readily occur. There is a long D at the end of the first chorus of Sullivan's 'Martyr of Antioch,' again another in Brahms's Requiem, at the end of No. 3, where the pedal may be introduced with the happiest results. [See REGISTRATION, vol. iii. p. 94.] [W.Pa.]

TREBELLI, ZELIA, an operatic singer who took the public by storm, and stepped into the high position which she maintains to the present day.

Zelia Gilbert¹ was born in Paris in 1838. So early was her talent recognised that she was taught the piano at the age of six. Guided by her German teacher, she learnt to reverence and enjoy the works of Bach and Beethoven. After ten years her wish for instruction in singing was encouraged by her parents, who only thought thereby to add one other graceful accomplishment to those which were to render their daughter useful and acceptable in society. The services of Herr Wartel were secured, and so delighted was he with his clever pupil that he never rested until he had persuaded her parents to allow of his training her for the lyric stage. Five years of close study prepared for her début, which was made at Madrid as Mlle. Trebelli, under the most favourable circumstances and with complete success, Mario playing Almaviva to her Rosina, in 'Il Barbiere.'

Trebelli's appearances in the opera-houses of Germany were a series of brilliant triumphs. Public and critics were alike carried away by enthusiasm when they heard her rendering of the parts of Rosina, Arsace, Orsini, Urbano, Azucena and others. No member of Merelli's Italian troupe was gifted with so brilliant a voice and so much executive power. Nor could the audiences fail to be impressed by the actress's varied powers so rarely at the command of one individual, Trebelli expressing at one time the fire of an almost manly vigour, and at another the charm of womanly tenderness and delicacy. The German criticisms which declared the voice a contralto, comparing it with Alboni's in quality and with Schechner's in power, were not supported by English opinions. As a mezzo-soprano, its brilliancy, power and flexibility were appreciatively noticed; the artist's control over voice and action

enthusiastically praised. Trebelli appeared first in London at her Majesty's Theatre, May 9th, 1862, as Orsini in 'Lucrezia.' 'A more encouraging reception has seldom been awarded to a débutante.' Since then, she has been a recognised favourite with our opera and concert audiences. Those who have long been familiar with her appearances in frequent co-operation with Mlle. Titiens in the chief Italian operas, will not easily forget the performances of Oberon, where Trebelli's impersonation of the captive, Fatima, was invested with peculiar charm. More recent and more widely known is her rendering of the very opposite character of the heroine in 'Carmen.'

At the present time (1884) Madame Trebelli is making a tour through the United States with Mr. Abbey's troupe.

Madame Trebelli's marriage to Signor Bettini, about 1863, was, in a few years, followed by a separation. [L.M.M.]

TREBLE (*Canto; Diskant; Dessus*). A general term applied to the highest voices in a chorus or other concerted vocal piece, and to the upper parts in concerted instrumental music; also to soprano voices generally. The treble clef is the G clef on the second line of the upper (our treble) staff; the eighth line of the great staff of eleven lines (*Chiave di sol, chiave di violino; Clef de Sol*).

Its etymology does not refer it to any special class of voice. It has been said to be a corruption of Triplum, a third part superadded to the Altus and Bassus (high and low). In this case it will have been sung by boys, who till then will have joined instinctively in congregational singing in unison with, or an octave above, the tenor. Another derivation is Thurible, the vessel in which incense is burnt in the services of the Roman Catholic Church, from the Latin *Thuribulum*. The portable thurible or censer was carried and swung by boys. But there is very strong doubt whether the thurible boys ever had any share in the vocal part of the church services; and if they did not, this theory is overturned. The thurible-bearers would surely be called, in describing a religious procession, 'the thurifers.' The derivation from Triplum seems therefore the more probable. At what time 'treble' may have found its way into English it is difficult to say. 'Childish treble,' as the voice of old age, appears in Shakespeare, and 'faint treble' used to be applied to what is commonly known as falsetto. English amateur pianists frequently call the right hand the treble hand. The word Triplum as a third part was of course introduced at a very early date, and marks a most important step in the progress of part-music.

The treble clef is a modification of the letter G. [CLEF.] It is used for the violin, flute, hautboy, clarinet, horn, and trumpet; also in very high passages on the viola, violoncello, and bassoon. The double G clef has been used for tenor parts in choruses, the music being sung an octave lower than written; also for the horn in low keys. [TENOR.] [H.C.D.]

¹ 'Trebelli' is obviously intended as the reverse of Gilbert.

TREITSCHKE, GEORG FRIEDRICH, author and entomologist, deserves a place in a Dictionary of Music, as the adapter of Joseph Sonnleithner's libretto for Beethoven's 'Fidelio,' for its revival in 1814. He was born at Leipzig, Aug. 29, 1776, died at Vienna, June 4, 1842. In 1793 his father sent him for further education to Switzerland, and there he became acquainted with Gessner of Zurich, who inspired him with a love of literature. In 1802 he went to Vienna, and fell in with Baron Braun who made him manager and librettist of the Court theatre, of which he himself was director. In 1809 he became vice-director of the theatre an-der-Wien, but in 1814 returned to his former post. In 1822 the whole of the financial arrangements of the Court theatre were placed in his hands, and remained there till his death. He adapted a host of French librettos (Cherubini's 'Deux Journées,' 'Médée,' 'Aline,' etc.) for the German stage, not always, it must be owned, with the skill shown in 'Fidelio.' His connexion with Beethoven was considerable. Besides the revision of 'Fidelio' in 1813-14, a letter of Beethoven to him, dated June 6, 1811, seems to speak of a 'proposed opera book; another, of July 3, of a melodrama. Beethoven supplied music to a chorus of his, 'Germania,' à propos to the Fall of Paris (March 31, 1814), and to another chorus, 'Es ist vollbracht,' celebrating the entry of the Allies into Paris, July 15, 1815. Treitschke made a collection of 2,582 species of butterflies, now in the National Museum in Pesth, and was the author of several books on entomology. His first wife,

MAGDALENE, née de Caro, a celebrated dancer—born at Civita Vecchia, April 25, 1788, died at Vienna, Aug. 24, 1816—was brought up in London and Dublin, and became thoroughly English. Introduced on the stage by Noverre, her grace and charm created a perfect *furor*. She afterwards studied under Duport, made several tours, and on her return to London appeared with Vestris in the 'Caliph of Bagdad.' There in 1815 she closed her artistic career, went back to her husband in Vienna, died, and was buried near Haydn's grave. [F.G.]

TREMOLO. A figure consisting, in the case of bowed instruments, of reiterated notes played as rapidly as possible with up and down bow, expressed thus with the word *tremolo* or *tremolando* added (without which the passage would be played according to the rhythmical value of the notes), producing a very fine effect, if judiciously used, both in fortissimo and pianissimo passages. On the pianoforte it is a rapid alternation of the parts of divided chords, reproducing to a great extent the above-mentioned effect. Good examples of *Tremolo* are to be found in various branches of music—for the Piano in the Introduction to Weber's Solo Sonata in A♭, and in the Finale to Schubert's Rhapsodie Hongroise, where it gives the effect of the cymbalum or zither in the Hungarian bands; for

the Piano and Violin, in the Introduction to Schubert's Phantasie in C (op. 159); for the Orchestra, in Weber's Overtures, and Schubert's Overture to Fierabras. For the PF. and Voice a good example is Schubert's song 'Am Meer.' Beethoven uses it in the Funeral March of the Solo Sonata, op. 26; in the Sonata Appassionata, and that in C minor, op. 111. The strictly classical PF. writers evidently did not consider *tremolo* without rhythm legitimate in original piano words—another example (if such were needed) of the purity with which they wrote. The *tremolo* on the PF. is therefore a reproduction of the effect of other instruments, as in Beethoven's Funeral March just mentioned. This, though written rhythmically, is, by common consent, played as a real *tremolo*, being clearly a representation of the roll of muffled drums. Some of the best of the Romantic school, as Weber and Schumann, have used the real *Tremolo*. Beethoven ends a droll note to Steiner² on the dedication of the Sonata, op. 106, as follows:—

2. In vocal music the term is applied to the abuse of a means of expression or effect, legitimate if used only at the right time and place, and in the right way. It assumed the character of a vocal vice about forty years ago, and is supposed to have had its origin in the *vibrato* of Rubini, first assuming formidable proportions in France, and thence quickly spreading throughout the musical world.

The Vibrato and the Tremolo are almost equally reprehensible as mannerisms. Mannerisms express nothing but carelessness or self-sufficiency, and the constant tremolo and vibrato are therefore nauseous in the extreme. Their constant use as a means of expression is simply false, for if they are to represent a moral or physical state, it is that of extreme weakness or of a nervous agitation which must soon wear out the unfortunate victim of its influence. The tremolo is said to be frequently the result of forcing the voice. It may be so in some cases, but it is almost exclusively an acquired habit in this age of 'intensity.' It is a great mistake to say that it is never to be used, but it must only be so when the dramatic situation actually warrants or requires it. If its use is to be banished entirely from vocal music, then it should equally disappear from instrumental music, though, by the way, the instrumental tremolo is more nearly allied to the vocal vibrato. Indeed, what is called 'vibrato' on bowed instruments is what would be 'tremolo' in vocal music. [VIBRATO.] What is it that produces its fine effect in instrumental music? In loud passages it expresses sometimes joy and exultation; in others, agitation or terror; in all cases, tension or emotion of some

¹ Unless this refers to Fidelio.

² See Thayer, III. 501.

kind. In soft passages it has a beautifully weird and ethereal effect of half-light when not spun out. In vocal music it is to be used in the first-named situations. The human voice loses its steadiness in every-day life under the influence of joy, sorrow, eagerness, fear, rage, or despair, and as subjects for vocal treatment usually have their fair share of these emotions, we must expect to hear both the vibrato and the tremolo in their places, and are very much disappointed if we do not. Reason, judgment, and taste must be brought to bear with the same kind of philosophical and critical study by means of which an actor arrives at the full significance of his part, and it will be found that a big vocal piece like 'Ah perfido,' 'Infelice,' or 'Non più di fiori,' requires more psychological research than is generally supposed. Singers, and those of this country especially, are very little (in too many cases not at all) alive to the fact, that the moment singing is touched, we enter upon the region of the dramatic. In speaking generally of dramatic singing, the operatic or theatrical is understood. But the smallest ballad has its share of the dramatic, and if this were more widely felt, we should have better singing and a better use of the tremolo and vibrato, which can hardly fail to place themselves rightly if the import of the piece to be sung be rightly felt and understood. By tremolo is usually understood an undulation of the notes, that is to say, more or less quickly reiterated departure from true intonation. In some cases this has been cultivated (evidently) to such an extent as to be utterly ludicrous. Ferri, a baritone, who flourished about thirty-five years ago, gave four or five beats in the second, of a good quarter-tone, and this incessantly, and yet he possessed a strong voice and sustaining power to carry him well through his operas. But there is a thrill heard at times upon the voice which amounts to neither tremolo nor vibrato. If it is the result of pure emotion, occurring consequently only in the right place, its effect is very great.

The vibrato is an alternate partial extinction and re-enforcement of the note. This seems to have been a legitimate figure, used rhythmically, of the *fiortura* of the Farinelli and Caffarelli period, and it was introduced in modern times with wonderful effect by Jenny Lind in 'La Figlia del Reggimento.' In the midst of a flood of vocalisation these groups of notes occurred—

executed with the same brilliancy and precision as they would be on the pianoforte, thus—

[See SINGING, iii. 496; also VIBRATO.] [H.C.D.]

TREMULANT. A contrivance in an organ producing the same effect as *tremolando* in singing.

Its action practically amounts to this:—the air before reaching the pipes is admitted into a box containing a pallet to the end of which is attached a thin arm of metal with a weight on the end of it; when the air on its admission raises the pallet the metal arm begins to swing up and down, thus producing alternately an increase and diminution of wind-pressure. Its use is generally limited to such stops as the *Vox humana* and a few other stops chiefly of the reed family. The tremulant is happily much less in vogue in this country than on the continent, where its abuse is simply offensive. It is difficult to conceive how good taste can tolerate these rhythmical pulsations of a purely mechanical pathos. [J.S.]

TRENCHMORE, an old English country dance, frequently mentioned by writers of the 16th and 17th century. According to Mr. Chappell ('Popular Music') the earliest mention of it is in a Morality by William Bulleyn, published in 1564. The character of the dance may be gathered from the following amusing quotation from Selden's 'Table Talk' (1689): 'The Court of England is much altered. At a solemn Dancing, first you had the grave Measures, then the Corrantoes and the Galliards, and this is kept up with Ceremony; at length to *Trenchmore*, and the Cushion-Dance, and then all the Company dance, Lord and Groom, Lady and Kitchen-Maid, no distinction. So in our Court, in Queen Elizabeth's time, Gravity and State were kept up. In King James's time things were pretty well. But in King Charles's time, there has been nothing but *Trenchmore*, and the Cushion-Dance, *omnium gatherum* tolly-polly, hoite come toite.' Trenchmore appears first in the Dancing Master in the fifth edition (1675), where it is directed to be danced 'longways for as many as will.' The tune there given (which we reprint) occurs in 'Deuteromelia' (1609), where it is called 'Tomorrow the fox will come to town.'

[W.B.S.]

TRENTO, VITTORIO, composer, born in Venice, 1761 (or 1765), date of death unknown, pupil of Bertoni, and composer of ballets. His first, 'Mastino della Scala' (1785), was successful enough to procure him commissions from various towns. He was induced by Dragonetti to come to London, and there he composed the immensely popular 'Triumph of Love' (Drury Lane, 1797). His first opera buffa, 'Teresa Vedova,' succeeded, and was followed by many others. In 1804 he composed 'Ifigenia in Aulide.' In 1806 he became impresario in Amsterdam, and there produced with great success an oratorio 'The Deluge' (1808). Soon afterwards he went to Lisbon, also as impresario. In 1824 he returned to Venice, and after that his name disappears. He composed about 10 ballets, 20 operas, and a

few oratorios, one being the 'Maccabees.' His scores are in the collection of Messrs. Ricordi of Milan. [F.G.]

TRESOR DES PIANISTES, LE. A remarkable collection of ancient and modern pianoforte music, made and edited by Madame Farrenc, and published part by part by Leduc of Paris, from June 1861 to 1872. M. Farrenc contributed some of the biographical notices to the work, but his death in 1865 prevented his having any large share in it; the rest of the biographies were written by Fétis jun. The collection has been since superseded by separate publications and more thorough editing, but it will always remain a remarkable work. Its contents are as follows. The reduction that has taken place in the price of music during the last twenty years may be realised when we recollect that this edition, which boasts of being the cheapest then published, was issued at 25 francs or £1 per part.

PART I.
History of the Piano; and treatise on Ornament.
C. P. E. Bach. 6 Sonatas.
Do. 6 do.
J. P. Rameau. 1st Book of Pieces.
Do. 2nd do.
Durante. 6 Sonatas.
Porpora. 6 Fugues.

PART II.
C. P. E. Bach. 6 Sonatas.
Kuhnau. 7 Sonatas.
H. Purcell. Collection of Pieces.
D. Scarlatti. Pieces 1 to 26.
Hummel. Opa. 8, 9, 10, 15.
Lindemann. Pieces.
Schwanenberg. 2 minuets.

PART III.
Fad. Martini. 12 Sonatas.
F. Couperin. 1st Book of Pieces.
Hummel. Opa. 21, 40, 57, 75.

PART IV.
C. P. E. Bach. 6 Sonatas.
Do. 6 do.
Handel. Suites de Pièces, Book I.
Do. Do. Book II.
Do. Do. Book III.
Do. 6 Fugues.

PART V.
Chambonnières. 1st Bk. of Pieces.
Do. 2nd do.
D. Scarlatti. Pieces 27 to 49.
Beethoven. Sonatas, Opa. 2, 7, 10.

PART VI.
Parthenia. Byrd, Bull, Gibbons.
Pieces by English writers of 16th and 17th centuries. First Collection.
Friedemann Bach. 12 Polonaises and Sonata.
C. P. E. Bach. 6 Sonatas.
Beethoven. Opa. 12, 14, 22, 25, 27, 28.

PART VII.
Th. Muffat. Pieces.
G. Benda. 6 Sonatas.
C. P. E. Bach. 6 Sonatas.
Beethoven. Sonatas, Opa. 31, 49.

PART VIII.
Couperin. 2nd Book of Pieces.
D. Scarlatti. Pieces 50 to 77.
C. P. E. Bach. 6 Sonatas.
Do. 6 do.

PART IX.
Fried. Bach. 8 Fugues.
J. W. Haessler. 2 Fantasies, 6 Sonatas, 4 Solos.
G. Muffat. 12 Toccatas.
Beethoven. Sonatas, Opa. 53, 54, 57, 72, 79, 81, 90.

PART X.
Albrechtsberger. 12 Fugues.
Kuhnau. Exercises, Parts I and 2.
W. A. Mozart. 6 Sonatas.
M. Clementi. 3 Sonatas, Op. 2.
2 do. Op. 7.
J. P. Kirnberger. 6 Fugues.
Do. Collection of Pieces.

PART XI.
C. P. E. Bach. 5 Sonatas, 4 Rondaux.
Ch. Nichelmann. 5 Sonatas; 6 Sonatas, Op. 2.
D. Scarlatti. Pieces 78 to 94.
Froberger. 5 Caprices, 6 Suites.
J. S. Bach. 6 Suites.

PART XII.
Couperin. 3rd Book of Pieces.
Kuhnau. Toccatas.
Hummel. Introduction and Rondeau, Op. 19.
Kirnberger. Collection of Pieces, No. 2.
Do. Do. No. 3.
F. V. Buttstedt. 2 Sonatas.
J. E. Eberlin. 6 Preludes and Fugues.
Beethoven. Sonatas, Opa. 101, 106.

PART XIII.
Frescobaldi. 3 Fugues, 6 Canzone.
Fried. Bach. 1 Suite, 4 Fantasies.
W. A. Mozart. 3 Sonatas.
D. Scarlatti. Pieces 95 to 110.
Jos. Haydn. 5 Sonatas.
C. P. E. Bach. 6 Sonatas.

PART XIV.
Mattheson. Pieces.
Beethoven. Sonatas, Opa. 109, 110, 111.
Froberger. 8 Toccatas, 6 Suites.
Albrechtsberger. 18 Fugues.
Hummel. Rondeau brillant, Op. 109; Sonata, Op. 12.
Fasch. 2 Sonatas, 1 Piece.
Goldberg. Prelude and Fugue.

PART XV.
Couperin. 4th Book of Pieces.
W. A. Mozart. 4 Sonatas.
J. S. Bach. 6 English Suites.
Hummel. Sonata, Op. 20.
D. Zippel. Pieces for Organ and for Clavecin.

PART XVI.
C. M. von Weber. 4 Sonatas, Opa. 24, 39, 49, 70.
D. Scarlatti. Pieces 111 to 130.
L. Claude Daquin. Pieces for Clavecin.
J. W. Haessler. 3 Sonatas.
F. Chopin. 9 Nocturnes.

PART XVII.
P. D. Paradis. 10 Sonatas.
Hummel. Adagio; Sonata, Op. 12.
J. C. F. Bach. Sonatas and Pieces.

J. L. Dussek. 3 Sonatas, Op. 35; Sonata, Op. 64.
Frescobaldi. Pieces.
J. L. Krebs. 3 Fugues.

PART XVIII.
J. Christian Bach. 7 Sonatas.
Beethoven. 6 Aires with variations.
J. Christ. Smith. 9 Suites de pieces.
Clementi. 3 Sonatas, Op. 8; 4 Sonatas and 1 Toccatas.

PART XIX.
H. d'Anglebert. Pieces for Clavecin.
W. A. Mozart. 3 Sonatas.
D. Scarlatti. Pieces 131 to 152.
Hummel. Fantasia, Op. 18.

Duphy. Piece for Clavecin.
F. Ries. Sonata, Op. 24.
Haydn. 5 Sonatas.

PART XX.
Various authors. 17th century. Pieces for Clavecin.
Do. 18th century. Do.
Claudio Merulo. Toccatas for organ.
J. B. Cramer. 3 Sonatas.
W. A. Mozart. Romance.
D. Steibelt. Sonata, Op. 64.
Chr. Schaffrath. 2 Sonatas, Op. 2.
J. G. Wernicke. 5 Pieces.
F. Mendelssohn. Rondo capriccioso, Op. 14; 3 Fantasias, Op. 16. [G.]

TRIAD is a chord of three notes standing in the relation to one another of bottom note, third, and fifth. It is of no consequence what the quality of the combination is, whether consonant or dissonant, major or minor. The following are specimens:—

[C.H.H.P.]

TRIAL, JEAN CLAUDE, French composer, born at Avignon, Dec. 13, 1732, was educated at the Maitrise, and early studied the violin, for which his first compositions were intended. Settling in Paris he became intimate with Rameau, and was taken up by the Prince de Conti, who made him conductor of his own music, and procured him the joint-directorship with Berton of the Opéra (1767). He composed 'Esopé à Cythère' (1766), and 'La Fête de Flore' (1771), each in one act, and with Berton 'Sylvie,' 3 acts (1766), and 'Théonis,' 1 act (1767); also short overtures, orchestral divertissements, cantatas, and the music for 'La Chercheuse d'esprit.' He died of apoplexy June 23, 1771. His brother,

ANTOINE, his junior by four years, was also born at Avignon, and educated at the Maitrise, but forsook ecclesiastical plainsong for stage ariettas. Having appeared with success as a comedy-tenor in several provincial towns, he went to Paris in 1764, and there quickly rose into favour as a singer of considerable musical attainments, and an actor possessing real wit and originality. For 30 years composers eagerly vied with each other in writing parts for him, and he left permanent traces at the Opéra Comique, where the comedy-tenor part is still called by his name. Like Dugazon, Antoine Trial embraced with fervour the doctrines of the Revolution, and on the fall of Robespierre was constrained by the mob to atone for his previous exploits by singing the 'Réveil du Peuple' on his knees. Forced to give up his post in the municipality, and subjected to many cruel humiliations, his mind gave way, and he poisoned himself Feb. 5, 1795. His wife, Marie Jeanne Milon, sang under the name of Mme. Mandeville, and having a voice of remarkable compass and flexibility, brought into fashion airs full of roulades and vocalises. Their son,

ARMAND EMMANUEL, born in Paris, March 1, 1771, began early to compose, and produced at the Comédie Italienne 'Julien et Colette' (1788), 'Adelaide et Mirval' (1791); 'Les deux petits

Avengles, and *'Le Siège de Lille'* (1792); *'La Cause et les Effets, ou le Réveil du Peuple en 1789'* (1793), besides taking part in the celebrated revolutionary piece *'Le Congrès des Rois.'* A first-rate accompanist, Armand Trial might have made both name and money, but though he married Jeanne Méon, a charming artist at the Théâtre Favart, he plunged into dissipation, and died in Paris, from its effects, Sept. 9, 1803. [G.C.]

TRIAL BY JURY. A very extravagant extravaganza; words by W. S. Gilbert, music by Arthur Sullivan. Produced at the Royalty Theatre, London, March 25, 1875. It owes its great success to the remarkable drollery of words and music, the English character of the institution caricatured, and the great humour thrown into the part of the Judge by the composer's brother, Frederick, who died with a great career before him. [G.]

TRIANGLE. This is a steel rod bent in a triangular form, but open at one angle. The beater is of the same metal, and should be somewhat of a spindle shape, so as to give a heavier or lighter stroke at the performer's discretion. It is hung by a string at the upper angle, held in the performer's hand, or more frequently attached to his desk or to one of his drums, as it is seldom that a man has nothing else to play besides this little instrument, except in military bands. It suits all keys, as besides the fundamental tone there are many subordinate ones, *not* harmonics. The woodcut is from an instrument of the pattern used at the Grand Opéra in Paris. It is an isosceles triangle, the longest side $7\frac{1}{2}$ inches, and the short side or base 7 inches. Thickness $\frac{1}{8}$ of an inch. Rossini and his followers make frequent use of it, and Brahms has introduced it in the Finale of his Variations on a theme of Haydn's. Beethoven has a few strokes of it in his 9th Symphony. [V. de P.]

TRIBUT DE ZAMORA, LE. A grand opera in 4 acts; words by MM. d'Ennery and Brésil, music by Gounod. Produced at the Grand Opéra, Paris, April 1, 1881. The story is a Moorish one, the scene is laid in Spain, and the action includes a ballet on the largest scale. The principal parts were taken by Mad. Krauss and M. Lassalle. [G.]

TRIÉBERT, CHARLES LOUIS, French oboist, son of a wind-instrument maker, born in Paris Oct. 31, 1810. He was well educated at the Conservatoire, and took the first oboe prize in Vogt's class in 1829. He had an excellent tone, great execution, and good style, and is still remembered at the Théâtre des Italiens, and the Société des Concerts. Although much occupied with instrument-making, he carried on his artistic cultivation with earnestness, and composed much for the oboe—original pieces, arrangements of operatic airs, and (in conjunction with M. Jan-court) fantasies-concertantes for oboe and bassoon. At the Paris Exhibition of 1855 Triébert obtained a medal for his adaptation of Boehm's contriv-

ances to the oboe, and for improved bassoons. This skilled manufacturer and eminent artist succeeded Verroust as professor of the oboe at the Conservatoire in April 1863, and retained the post till his death, July 18, 1867. His brother FRÉDÉRIC (died in Paris March 1878, aged 65) was his partner, and showed considerable inventive genius. He constructed bassoons after Boehm's system, a specimen of which may be seen in the Museum of the Conservatoire. Frédéric Triébert was devoted to his art, and conversed on it with much learning and intelligence. He left a son, also named FRÉDÉRIC, who is one of the best oboists of the French school. [G.C.]

TRIHORIS, TRIORI, TRIHORY, TRIORY, an old Breton dance, long obsolete. Cotgrave describes it as 'a kind of British and peasantry daunce, consisting of three steps, and performed, by three hobbling youths, commonly in a round.' It is mentioned by Rabelais (*'Pantagruel,'* bk. iv. ch. xxxviii.) and by his imitator, Noël du Fail, Seigneur de la Herrisaye, in chapter xix. of his *'Contes et Discours d'Eutrapel'* (1585). From this passage it would seem that it was a 'Basse Danse,' and was followed by a 'Carole'—a low Breton name for a dance in a round, or according to Cotgrave 'a kind of daunce wherein many daunce together.' [See TOURDION.] (Compare the Italian 'Carola,' described in Symonds' *'Renaissance in Italy,'* vol. iv. p. 261, note.) Du Fail says the dance was 'trois fois plus magistrale et gaillarde que nulle autre.' It was the special dance of Basse Bretagne, as the PASSEPIED (vol. ii. p. 662) was of Haute Bretagne. Jehan Tabourot, in his *'Orchésographie'* [see vol. ii. p. 560a], says the Trihoris was a kind of Branle, and that he learnt it at Poitiers from one of his scholars. He gives the following as the air to which it was danced:

According to Littré, the name is allied to the Burgundian 'Trigori,' a joyful tumult. [W.B.S.]

TRILL (Ital. *Trillo*; Fr. *Trille*; Germ. *Triller*). An ornament consisting of the rapid alternation of a note with its major or minor second, generally known in English by the name of SHAKE, under which head it is fully described. [See vol. iii. p. 479.] The ornament itself dates from about the end of the 16th century, but it received the name of Trill at a somewhat later date, not to be exactly ascertained. It is described in the *'Nuove Musiche'* of Caccini, published in Florence in 1601, under the name of *Gruppo*, a name which is now used to express a turn-like group of four notes, also called *Groppa*, thus:—

Caccini also makes use of the term *trillo*, but as indicating a pulsation or rapid repetition of a single sound sung upon a single vowel, an effect expressed in modern terminology by *vibrato*. [VIBRATO.] [F.T.]

TRILLO DEL DIAVOLO, IL. A famous sonata by Tartini, for violin solo with bass accompaniment, which is so called from its being an attempt to recollect the playing of the devil in a dream. [See TARTINI; vol. iv. p. 62 a.] The Sonata consists of Larghetto affettuoso, Allegro, and Finale—Andante and Allegro intermixed. All the movements are in G minor. It is in the Allegro of the Finale that the Trill occurs, a long shake with a second syncopated part going on at the same time.

TRINITY COLLEGE, DUBLIN. An University was founded in Dublin by Alexander de Bicknor, Archbishop of Dublin, in 1320, but died out in the early part of the 16th century. After a lapse of 60 or 70 years the present University of Dublin was founded in 1591 by Queen Elizabeth, and with it the 'College of the Holy and Undivided Trinity, near Dublin.' The College alone was incorporated by charter, and its governing body or Board was entrusted with the management of the University. On this account, as well as from a mistaken interpretation of the original charter, an idea obtained currency that the University of Dublin did not acquire an independent existence, and that Trinity was a College endowed with the powers of an University. This is, however, quite erroneous. The University and the College were both founded at the same time, but as the former possessed no distinct property, and had no share in directing the education of the students, its sole function consisted in conferring degrees. (See the Rev. Dr. Todd's preface to the Catalogue of Graduates of the University of Dublin, 1869, and Sir Joseph Napier's 'Opinion,' prefixed to vol. ii. of the same work, 1884, where the whole question is fully elucidated.) Any possible doubt was removed by the revised charter granted in 1857, by which the Senate of the University was formally incorporated.¹

In the 17th century two or three minor Colleges or Halls were founded, but without success, and Trinity still remains the single College in the University of Dublin.²

To obtain a regular degree at the University of Dublin, the candidate must matriculate at Trinity College, and complete the prescribed course of study, when a Grace is passed by the Board of the College and submitted for ratification to the Senate of the University,

¹ According to precedent this was not necessary. The University of Paris never had a charter, nor was one granted to Oxford until the 15th century, and then for special reasons. Sir Joseph Napier shows that a recognised University is in its own nature a distinct corporation.

² A similar instance is afforded in the United States of America, where Harvard is the only College in Cambridge University.

but the degree may be withheld either by the veto of any member of the University Caput, or, subsequently, by a majority of the Senate.

A few degrees in Music seem to have been conferred in the 17th century, and Thomas Bateson³ and Randolph, or Randal, Jewitt⁴ are said to have received the degree of Mus.B. [See vol. i. p. 155.]

In the latter part of the 18th century several musical degrees were given, and we find the names of *Garret Wesley, Earl of Mornington⁵, Mus.D. (1764); *the Rt. Hon. Charles Gardiner, Mus.D. causa honoris (1764); *Richard Woodward (organist of Christ Church, 1765-1777), Mus.B. 1768, Mus.D. 1771; Sampson Carter (elder brother of Thomas Carter)⁶, Mus.D.; Samuel Murphy (organist of St. Patrick's, 1773, and Christ Church, 1777), Mus.D.; Langrishe Doyle (organist of Armagh 1776, and then of Christ Church, Dublin, 1780), Mus.D.; Philip Cogan (organist of St. Patrick's, 1780), Mus.D.; Sir John Stevenson⁷, Mus.D. (1791, per diploma); and John Clarke⁸ (afterwards Clarke-Whitfield), Mus.D. (1795). From 1800 to 1861 the degree of Doctor was conferred on John Spray; William Warren (organist of Christ Church, 1814, and of St. Patrick's, 1827), 1827; John Smith, 1827⁹; *Sir Robert P. Stewart¹⁰ (organist of Christ Church, 1844, and of St. Patrick's, 1852-1861), 1851, and *Francis Robinson, honoris causa, 1852. The degree of Bachelor was also taken by Nicholas H. Stack, 1845, and William Murphy.

The names marked with an asterisk appear in the Catalogue of Graduates, and in these cases the degrees were taken regularly; but most of the other musical degrees seem to have been merely honorary, and, conferring no University privileges, are not found in the University registers.

The Professorship of Music was founded in 1764, when Lord Mornington was appointed the first professor; but on his retirement in 1774 the chair remained vacant until 1847, when it was filled by Dr. John Smith, and on his death in 1861, Dr., afterwards Sir Robert, Stewart was appointed to the office, which he still holds.

Since his appointment, and, as it is understood, mainly through his exertions, the conditions on

³ The date, 1631, ordinarily given as that of Bateson's removal from Ochester to Dublin, is incorrect. From the Chapter books of Christ Church it appears that he was appointed a Vicar Choral of that Cathedral on March 24, 1608-9, and Organist soon afterwards.

⁴ Hawkins's account of this musician is confused. Jewitt, who became organist of both Christ Church and St. Patrick's Cathedrals in 1631, and was succeeded in the former post by Dr. Rogers in 1638, held at the same time a choral vicarage in St. Patrick's, of which he was deprived by the Archbishop (also in 1638) for not being in priest's orders, but was restored in 1641. He became a Vicar Choral of Christ Church in 1646, and probably returned to England on the suppression of the Cathedral establishments under the Commonwealth. Jewitt seems to have afterwards taken Holy Orders, was admitted a Minor Canon of St. Paul's in 1661, and finally became Organist of Winchester, where he died July 4, 1675, and was succeeded by John Reading.

⁵ See vol. i. p. 317.

⁶ Organist of Armagh 1764-1777; Master of the choristers of Christ Church and St. Patrick's, 1768. He was never organist of either of the Dublin Cathedrals, as is sometimes stated. He graduated Mus. B. at Oxford in 1793, but his Cambridge degree of Doctor in 1799 was granted ad eundem from Dublin. See vol. i. p. 305.

⁷ See vol. iii. p. 540. The Grace passed by the Board for conferring the degree of Doctor on Warren and Smith is dated July 7, 1827.

¹⁰ See vol. iii. p. 712.

which a degree in music is conferred by the University of Dublin have been considerably remodelled, by the addition of an examination in Arts to that in Music only. The existing regulations require the candidate for the degree of Bachelor to pass the ordinary examination for entrance into Trinity College, except that any modern foreign language may be substituted for Greek. He must have studied or practised music for seven years, and must pass such examination and perform such exercises as may be prescribed. A Doctor in Music must have taken the Degree of Bachelor and have studied music for twelve years. He also must pass such further examinations and perform such acts as may be prescribed.

Trinity College was opened for the reception of students on the 9th January, 1593. On the centenary of that day a solemn commemoration was held within the College, for which an Ode, 'Great Parent, hail!' was written by Tate,¹ then poet laureate, and set to music by Henry Purcell. [See vol. iii. p. 49.]

The edition of this Ode, published by Goodison, states that it was performed in Christ Church Cathedral on the 9th Jan. 1693, but this is certainly an error, and the registers of Christ Church make no reference to the subject. The General Register of Trinity College, however, does contain a full account of the proceedings within the College walls. After morning prayers in the Chapel came 'Musicus instrumentorum concentus.' Then followed sundry orations, after which we read 'Ode Eucharistica vocum et instrumentorum Symphonia decantatur,' which no doubt is 'Great Parent, hail!' The College Register states that the several exercises were laid up in the manuscript library, but a recent search for these papers has proved fruitless.

In 1837 the 'University Choral Society' was founded for the cultivation of vocal music in Trinity College. Membership is restricted to students of the College and Graduates of the Universities of Oxford, Cambridge, and Dublin. The Society meets weekly for practice from November to June, and usually gives three concerts during the season. At these concerts many important works have been performed for the first time in Dublin. Mr. Joseph Robinson² held the office of Conductor from the foundation of the Society until 1847, when he resigned, and was succeeded by the present Conductor, Sir Robert Stewart.

To encourage the study and practice of sacred music in Trinity College, musical exhibitions have been lately founded. The exhibitioners are elected by examination held annually, and retain their places for two years with a power of re-election. They assist in the Choral Service of the College Chapel. [G.A.C.]

TRINITY COLLEGE, LONDON. This institution is the development of a Musical Society founded in 1872, under the title of the Church

Choral Society, with the object of promoting the improvement of church music and church singing. In the following year examinations of a practical and theoretical character were established for admission to the position of Fellow of the Society, and in 1874 to that of Associate, diplomas or certificates being granted to the successful candidates, who were subsequently classed as 'Licentiates,' 'Associates,' and 'Students.'

In 1875 the Society was incorporated under the Companies' Act, and in 1881 reincorporated on a wider basis, under the name of Trinity College, London; lectures and classes were organised for musical and general instruction; examinations for diplomas and prizes were held; and a library was opened. In 1876 women were admitted to the classes then instituted, and soon afterwards the local examinations throughout the United Kingdom, which had been for some years held by the Society of Arts, but had lately been discontinued, were resumed and carried on by Trinity College.

As at present constituted the College is under the direction of a Council, an Academical Board, and a Senate, and the studies, musical and literary, are conducted by a Warden and a staff of professors.

The first Warden of the College was the Rev. H. G. Bonavia Hunt, who still holds the office, and to whose exertions the present position of the College is due. Among the professors and lecturers are Sir Julius Benedict; Mr. Carrodus; Mr. Dubrucq; Mr. James Higgs, Mus.B.; Mr. W. S. Hoyte; Mr. Lazarus; Mr. George Mount; Dr. W. H. Stone; Mr. E. H. Turpin; Mr. Bradbury Turner, Mus.B.; Mr. A. Visetti; and Mr. C. E. Willing.

The College has about 300 students at present on its books, and holds examinations at nearly 200 local centres. A scholarship and two exhibitions, open to all comers, have been instituted, and prizes are awarded amongst the students of the College. A class for the practice of orchestral music meets weekly during Term, and instruction is given in French, German, and Italian.

The College publishes a Calendar annually, from which, or from the Secretary at the College, 13 Mandeville Place, Manchester Square, London, all information respecting examinations, courses of study, and fees, can be obtained. [G.A.C.]

TRIO. A composition for three voices or instruments. [See TERZETTO.] The term is also applied to the secondary movement of a march, minuet, and many other kinds of dance music.

I. The Trio proper was originally called *Sonata a tre*, being in fact a sonata for three instruments, such as Bach affords us specimens of in a sonata for flute, violin and figured bass, and another for 2 violins and ditto (Bachgesellschaft, vol. ix. 1859). Handel also left several trios for strings, besides one for oboe, violin, and viola. These compositions are all for two more or less florid parts in contrapuntal style upon a ground bass, and gradually paved the way for the string quartet. When the pianoforte

¹ See 'The Gentleman's Journal' or 'The Monthly Miscellany,' Jan. and Feb. 1694, p. 25. Tate was educated at Trinity College, where he obtained a Scholarship in 1672.

² See vol. III. p. 140.

came to form a part of the combination, Pianoforte trios, as they are called, caused all others to retire into the background, instances of modern string trios being rare. Trios for three stringed instruments are felt to labour under the disadvantage of producing an insufficient body of tone, and a free use of double stops is necessary if complete chords are desired. The string trio therefore demands music of a florid, polyphonic, Bachish character (if we may use such an expression), rather than matter built on a harmonic basis, and Beethoven has turned his appreciation of this fact to the best account in the three trios op. 9, while on the other hand the greater number of Haydn's string trios are very thin and poor. Mozart's only composition of this kind is the interesting *Divertimento* in Eb, which is in six movements. Beethoven also composed a little-known Trio for 2 oboes and cor anglais, which he afterwards rewrote for 2 violins and viola (op. 87). Other unusual combinations of instruments are shown in the trios of Reicha for 3 cellos and for 3 horns, of Haydn for 2 flutes and cello, of Kuhlau and Quantz for 3 flutes. One especial kind of trio demands mention here, the Organ trio, a composition in which the three parts are furnished by the two hands on separate manuals and the pedals. Such are the 6 well-known Organ sonatas of J. S. Bach, and in more modern times those of J. G. Schneider, Henry Smart, and Rheinberger.

As regards the large and important class of trios into which the pianoforte enters, it should be noticed that that instrument takes sometimes too prominent and sometimes too unworthy a part. Some of the early Haydn trios, for instance, are entitled *Sonatas for Piano with accompaniments of Violin and Cello*, and that in C, which stands first in the collections (probably a very early work) is purely a solo sonata, the two stringed instruments scarcely ever doing more than double the melody or bass. The cello indeed constantly performs this ignoble office in the Haydn trios, which are therefore scarcely more worthy of the name than the mass of sonatas and divertissements for piano 'with ad libitum accompaniment for flute or violin and cello' which continued to be written up to the end of the first half of the present century.¹ Mozart, whose genius inclined more towards polyphony than Haydn's, naturally succeeded better. His Trio in Eb for piano, clarinet, and viola is the best, those with violin being unpretentious. Of Beethoven's six well-known pianoforte trios that in Bb (op. 97), being the latest in date (1810), is also the finest. Here we see the most perfect union of the three instruments possible. There is also a trio of his for piano, clarinet, and cello, a not over effective combination, for which he also arranged his Septet. Schubert characteristically² contented himself with the ordinary means at hand, and his two great works in Bb and Eb (both 1827) are well known. The modern trio, which begins with Mendels-

sohn's two in D minor and C minor, is scarcely a legitimate development of the old. The resources and technique of the pianoforte have greatly increased with the improvement of the instrument, but the violin remains where it was. Thus the balance is destroyed, the piano becomes almost equal to an orchestra, and the strings are its humble servants. To compensate them for their want of power it becomes necessary to confine them to the principal melodies, while the piano adds an ever-increasing exuberance in the way of arpeggio accompaniments. In spite of the great beauty of Mendelssohn's two primal types the precedent was a dangerous one, as the too-brilliant trios of Rubinstein, Raff, and others amply demonstrate. On the other hand, Schumann, in his two fine trios in D minor and F major (ops. 63 and 80), in steering clear of this bravura style for the piano—as indeed he always did—has sometimes given the string parts rather the air of orchestral accompaniments; but against this slight defect must be set a wealth of new treatment and many beauties, as in the slow movement of the D minor, a long-drawn melody treated in canon, with an indescribably original effect. There is also the set of four pieces (*Mährchenerzählungen*, op. 132) for pianoforte, clarinet, and viola; a late work, and less striking than the trios. It would be unfair to omit mention of Spohr as a trio writer, though in this department, as in most others, he left the art as he found it: and of his five trios the melodious op. 119, in E minor, is the only one now played. Mention should also be made of Sterndale Bennett's solitary specimen in A major, were it only for the original 'Serenade,' in which a melody on the piano is accompanied *pizzicato* by the strings. Of Raff's four trios, the second (op. 112), in G, is most attractive from the melodious character of its subjects, otherwise it is open to the objection hinted above. Brahms has written three PF. trios, of which the latest (op. 87 in C) one of his most recent works, has been highly admired; the second also (for horn or cello, op. 40) is a fine and most individual work. He at least cannot be accused of treating either of the instruments with undue favouritism.

II. In the Minuet the short extent of the piece and the necessity of its constant repetition, besides perhaps an unconscious feeling of formal requirements, gave rise to the custom of writing a second minuet to be played alternately with the first. This was usually of a broader, quieter character, for the sake of contrast, and though it was at first in the same key, in accordance with the custom of the Suite, there is an example in one of Bach's Clavier Suites where the second minuet is in the tonic minor, and in at least two other cases is in the relative minor, both practices which afterwards, under Haydn and Mozart, became established rules. How the second minuet acquired the name of Trio is not quite clear. Bach only calls it so in the few instances in which it is written in three parts—as opposed to the minuet in two—such as that in the third French Suite. This parti-

¹ See for example the list of Dussek's works in the article on his name, vol. I. p. 447.

² See vol. III. p. 363a.

cular case, by the way, is perhaps the earliest instance of the occurrence of the always-misunderstood direction, 'Minuetto Da Capo.' By the time of Haydn the term Trio is firmly established, and even in his earliest works (such as the first quartets) there are two minuets, each with a trio. Haydn also experimented in using keys for the trio a little more remote from the tonic than those already mentioned, even anticipating Beethoven's favourite use of the major key a third below. These innovations become almost necessary in the modern striving for new forms of contrast. Beethoven affords perhaps the only instances (in Symphonies Nos. 4 and 7) of a scherzo and trio twice repeated, but Schumann was fond of writing two trios to his, having adopted the device in three of his symphonies, besides his Pianoforte Quintet and Quartet. Not that he was the first to write a second trio—a plan which has since found many followers; there is at least one instance in Bach (Concerto in F for strings and wind) where the minuet has three trios, and another in Mozart (Divertimento in D for ditto) of two minuets, one with three trios and another with two. Schumann was so given to dividing his pieces up and enclosing the several sections in double bars, that he seems occasionally in the pianoforte works to lose himself in a chain of trios, as for instance, in the 'Blumenstück,' 'Humoreske,' and 'Novelletten.' In his six Intermezzi (op. 4), he adopted the more rational term 'Alternativo' for his subordinate sections, while in the F♯ minor Sonata the middle part of the Scherzo is itself called an Intermezzo, this title signifying its entire want of relationship to the rest of the movement, which is no small part of its charm. A trio, as well as a subordinate section in a rondo, etc., which presents a change from tonic major to minor or the reverse, is sometimes simply headed 'Minore' or 'Maggiore' as the case may be. This is common in Haydn and not infrequent in Beethoven (PF. Sonata in E♭, op. 7; in E major, op. 15, etc). Schumann, Raff, and other modern composers, have also occasionally given this heading. In modern music, though the trio exists, it is often taken as an understood thing and not specially so entitled. (Chopin, Sonata in B minor, Grieg in E minor, etc., and see Beethoven, 9th Symphony.)

Speaking generally we may say that the most obvious key for the trio of a minuet, scherzo, march, etc., written in a major key, is the subdominant, as it stands in place of a third subject, the main movement having appropriated the tonic and dominant keys. But where, as in modern marches, there are more trios than one, and still another key has to be sought, the relationship of the key a third above or below—distant but still real—is turned to account. Military marches and most dances intended to be danced to are written with a separate trio, or trios, so that they can be repeated as often as necessary, but in concert pieces (such as Weber's Invitation à la Valse, the marches by Mendelssohn and others) the sections answering to trio are not often

so designated, the piece being written out in *extenso*. [F.C.]

TRIPLET (Fr. *Triolet*; Ital. *Terzina*; Ger. *Triole*). In modern notation each note is equal to two of the next lower denomination, and the division of a note into three is not provided for, although in the ancient 'measured music' it was the rule. [See *Dot*, vol. i. p. 455.] On this account notes worth one third of the next longer kind have to be written as halves, and are then grouped in threes by means of curved lines, with the figure 3 usually placed over the middle note as an additional distinction. Such a group is called a Triplet, and is executed at a slightly increased speed, so that the three triplet-notes are equal to two ordinary notes of the same species: for example—

BEETHOVEN. Sonata, op. 2, no. 1.

Triplets may be formed of notes of any kind, and also of rests, or of notes and rests together.

BEETHOVEN. Sonata, op. 22.

So also a group of two notes, one twice the length of the other, is read as the equivalent of a triplet, provided it is marked with the distinctive figure 3.

SCHUMANN. Trio, op. 63.

In instrumental music, when the fingering is marked, there is some risk of the figure 3 of a triplet being confounded with the indication for the third finger. To obviate this, the two figures are always printed in different type, or, better still, the triplet figure is enclosed in brackets, thus (3). This plan, which has recently been rather extensively adopted, appears to have been first introduced by Moscheles, in his edition of Beethoven, published by Cramer & Co.

Groups of a similar nature to triplets, but consisting of an arbitrary number of notes, are also frequently met with in instrumental music. These groups, which are sometimes called *quintolets*, *sextiolets*, etc., according to the number of notes they contain, always have their number written above them, as an indication that they are played at a different (usually a quicker) rate from ordinary notes of the same form. Their proper speed is found by referring them to ordinary groups of the same kind of notes; thus,

if the general rhythm of the bar indicates four semiquavers to a beat, as in common time, a group of 5, 6, or 7 semiquavers would be made equal to 4 semiquavers, while a group of 8 notes of the value of one beat would of course be written as demisemiquavers; if however the natural grouping of the bar were in threes, as in 9-16 time, a group of 4 or 5 (or sometimes 2) semiquavers would be equal to 3, while a group of 6 would require to be written as demisemiquavers. [F.T.]

TRIPLE TIME (Fr. *Mesure à trois temps*; Ger. *Tripeltakt*). The rhythm of three beats in a bar, the accent falling on the first beat. In quick tempo this single accent is sufficient, but in slow and expressive movements a second weaker accent is generally required to avoid monotony. This second accent is variously placed by different writers, some assigning it to the second beat (see Hauptmann 'Harmonik und Metrik,' p. 226) while others place it on the third. [ACCENT, vol. i. p. 12.] The truth appears to be that it may occupy either position according to the requirements of the phrasing. A comparison of the following examples will serve as a proof of this.

BEETHOVEN. Trio, op. 70, no. 2.

BEETHOVEN. Quartet, op. 130 (*Alla danza tedesca*).

When a bar of triple time consists of two notes only the accent is always on the longer note. Compare the first and last bars of the following example:—

SCHUMANN. Estrella (Carneval, op. 9).

The kinds of triple time in general use are marked with the figures 3-8, 3-4, and 3-2, indicating respectively three quavers, crotchets, or minims in a bar. A time of three semiquavers, marked 3-16, is also occasionally met with (Schumann, 'Versteckens,' op. 85); and in old music a time of three semibreves, called *trippla major*, and indicated by a large figure 3. [For an example of this see vol. iii. p. 766.] When three bars of triple time are united in one, as in 9-8, etc., the time is called 'compound triple.' [See COMPOUND TIME.] [F.T.]

TRISTAN UND ISOLDE. An opera; words and music by R. Wagner; completed in 1859, i. e. after the completion of the 'Rheingold' and 'Walküre,' but before that of the other two pieces of the Nibelungen Ring. It was produced at Munich, June 10, 1865; in London, at Drury Lane (Franke & Pollini's German Opera), June

20, 1882. Wagner's title for it is 'Tristan und Isolde. Eine Handlung'—an action. [G.]

TROCHEE (Lat. *Trochæus Chorus*). A metrical foot, consisting of a long syllable followed by a short one—the exact opposite of the Iambus:—

'Trochee trips from long to short.'

Trochaic Metres are very common, both in Hymnody and Lyric Poetry; and, in both, a pleasing variety is sometimes produced by the occasional substitution of a Trochee for a Spondee, an Iambus, or even a Pyrrhic foot. A charming instance of the employment of Trochaic Rhythm, both in Music and Poetry, will be found in the Melody and Verses of Dowland's air, 'Now, oh, now, I needs must part,' the rhythmic Ictus of the Poetry being, of course, dependent upon Accent, and not upon Quantity.

Now, oh, now, I needs must part, etc.

[W.S.R.]

TROMBA. The Italian word for Trumpet, by which the instrument is usually designated in orchestral scores—Trombe in F, Trombe in D, etc. The part is usually written in C, and transposed accordingly by the player. In the scores of Bach, the term *Trombe da tirarsi*, i. e. 'Slide Trumpets,' is found. [See TIRARSI.] [G.]

TROMBA MARINA (TRUMMSCHIEDT, BRUMMSCHIEDT, TYMPANISCHIZA, NONNEN-GEIGE, MARINE TRUMPET). A portable monochord played with the bow, probably the oldest bowed instrument known, and the archetype of all others. [See VIOLIN.] The country of its origin is uncertain, but is probably Germany. Once extensively employed in Germany and France as a popular instrument, and even used in the service of the church, it was almost disused early in the last century: but it figured in the 'Musique des Escuries' of the French monarchs, down to the year 1767: and L. Mozart, in his Violin-school (1756), describes it as then in use. It was in use later still in German nunneries, and is still played in at least two, those of Marienstern, near Camenz, and Marienthal near Ostritz, both in Ober Lausitz (kingdom of Saxony).¹

Most existing specimens date from the latter half of the 17th century. In its latest form the instrument has a fiddle head fitted with an iron screw. Some heads have rack-wheels to facilitate tuning: others have iron screw button tops, a double iron ring working on the screw, into the outer ring of which the string is knotted. It has a round neck or handle about the size of a broomstick, dove-tailed into a top block or shoulder which forms the end of the body. The latter is a resonant box or drum (whence the name *Trummscheidt*) broadening towards the bottom, where it rests on the ground, and having a thin pine belly, quite flat. The back or shell of the drum is polygonal, being built up of very thin straight staves of maple.

¹ Bähmann. Geschichte der Bogeninstrumente, pp. 29, 31.

The number of staves in the shell is usually either five or seven: the joints are fortified internally, and sometimes externally also, with slips of cartridge paper or vellum.¹ Three pine bars are glued transversely across the belly before it is glued to the outer edges of the shell. The belly is sometimes pierced with a rose. In some specimens the drum is constructed in two separate portions. In others, of later date, the bottom of the drum spreads out at the edges like the bell of a trumpet. The total length is usually somewhat less than six feet; some specimens are a few inches over that length.

The string is a very thick violoncello string, stretched over a peculiar bridge. This is of hard and close-grained wood, and rests firmly on the belly with the right foot only, upon which side the string bears with its whole weight. Properly, the bridge should be shaped something like a shoe, the heel being the right foot, the toe, the left. The left foot touches the belly lightly: and when the string is put in vibration this foot rattles rapidly on the belly, like an organ reed. To increase the tone, a thin metallic plate is sometimes attached to the foot, and some bridges have a mechanical apparatus for adjusting its tension.

The marine trumpet is played with a heavy violoncello bow, plentifully roined. The open string is ordinarily tuned to C₂: and when sounded with the bow, it yields a powerful note, of harsh and nasal character, something like an 8 ft. wooden organ reed-pipe. Played by stopping in the ordinary way, the marine trumpet produces tones far less melodious than the bray of an ass. But this is not its legitimate use. It is properly played wholly in natural harmonics, and by reference to the article HARMONICS, it will be seen how the following scale arises.

¹ In Marcenno's time, and doubtless in the original instrument, the drum was merely a shallow triangular wooden box, tapering like a sword-bush, and open at the lower end: hence the name *schield* (shield).

Rühlmann omits the three last notes from the scale: but the writer has seen them marked on several specimens. The facility with which the marine trumpet yields the natural harmonics is due to its single string and its lopsided bridge. Paganini's extraordinary effects in harmonics on a single string, were in fact produced by temporarily converting his violin into a small marine trumpet. As is well known, that clever player placed his single fourth string on the treble side of the bridge, screwing it up to a very high pitch, and leaving the bass foot of the bridge comparatively loose. He thus produced a powerful reedy tone, and obtained unlimited command over the harmonics.² According to information procured by Rühlmann from Marienthal, the Trummscheidt will bear lowering to B_b and raising to E_b, but no more. According to him, it can also be made to yield the notes D and F in the lower octave, though less distinctly. The nuns use the instrument in their choral singing. On the festivals of the church, and sometimes as a special compliment to a new-comer on her matriculation they jubilate upon four marine trumpets accompanied by drums; one takes a principal part, the others are seconds.³

An inspection of the scale will explain how the marine trumpet became *par excellence* the Nonnen-geige: its scale corresponds with the female voice, with which its tone, resembling that of a clarinet, but more piercing and nasal, has something in common. Added to this it is extremely easy to play: the neck being rested on the breast or shoulder, and the string lightly touched with the thumb where the letters are marked on the neck, it yields its few notes with absolute accuracy. It was anciently used as a street instrument by mendicant musicians: and those who have heard it will agree with an ancient author that it sounds best at a distance. M. Jourdain, in a well-known passage in the comedy of the 'Bourgeois Gentilhomme' (1670), expresses a preference for it, thereby proclaiming his uncultivated taste.⁴ About the end of the 17th century the acoustical peculiarities of the Trummscheidt were the object of much investigation by the learned societies of England and France: the reader who desires to pursue the subject will find the necessary clues in Vidal and Hawkins. The name 'marine trumpet' (tromba marina) was probably given to the Trummscheidt on its introduction into Italy, on account of its external resemblance to the

² The interesting experiments of Dr. Huggins, printed in a recent number of the Transactions of the Royal Society, tend to show that the principle of the violin bridge is radically identical with that of the marine trumpet bridge, one foot serving as a *point d'appui*, the other as the conductor of vibration.

³ The quartet of marine trumpets appears to be of ancient date. Hawkins (ch. 106) quotes from the London Gazette, Feb. 4, 1674, an advertisement of 'A rare Concert of four Trumpets Marine, never heard of before in England,' to be heard daily at the Fleets Tavern near St. James's.

⁴ The music-master recommends the citizen to have a concert at his house every Wednesday or Thursday, and thus describes the requirements: 'Il vous faudra trois voix, un dessus, une haute-contre, et une basse, qui seront accompagnées d'une basse de viole, d'un théorbe, et d'un clavicin pour les basses continues, avec deux dessus de violon pour jouer les ritournelles.' M. Jourdain: 'Il y faudra mettre aussi une trompette marine. La trompette marine est un instrument qui ne plaît, et qui est harmonique.'

large speaking-trumpet used on board Italian vessels, which is of the same length and tapering shape. Little doubt on this point can remain in the mind of any one who compares the figures of the two objects in old pictures and engravings, or the objects themselves as they stand side by side in the Munich museum. The name was perhaps confirmed by the character of the tone, and by the circumstance that both instruments have the same harmonic scale.

Specimens are not uncommon: several will be found in the museums of Bologna, Munich, Salzburg, Nuremberg, etc., and there are two good ones in the collection of the Conservatoire in Paris, one of which has sympathetic strings attached to the belly internally. The South Kensington Museum possesses a handsome but rather undersized French specimen (oddly described in the Catalogue as 'probably Dutch') also having sympathetic strings inside. A specimen was some years since exposed for sale in the window of Cramer's music shop in Regent Street, but the writer cannot learn what has become of it.

The Trummscheidt, in the middle ages, was sometimes fitted with two, three, and even four strings, one or more of which were Bourdons or drones. In this form it undoubtedly became the parent of the German 'Geige,' whence the viol and violin are derived. [See VIOLIN.] [E.J.P.]

TROMBONCINO, BARTHOLOMÆUS, a fertile composer of FROTTOLE—the popular songs of that day—belonged to Verona, and was probably born in the latter half of the 15th century, since his works are contained in publications dating from 1504 to 1510. The lists given in Eitner's 'Bibliographie,' pp. 879–882, contain 107 of these compositions to secular, and 2 to sacred words, all for 4 voices, as well as 9 Lamentations and one Benedictus for 3 voices. [G.]

TROMBONE (Eng., Fr., Ital.; Germ. *Posaune*). The name, originally Italian, given to the graver forms of the Tromba or Trumpet, exactly corresponding with that of Violone as the bass of the Viola. Its other name, Sacbut or Sackbut, though English in sound, seems really to come from a Spanish or Moorish root *Sacabuche*, which is the name of a pump. In the Spanish dictionary of Velasquez de la Cadena this word has three meanings assigned to it; two as above, and the third a term of reproach for a contemptible person. The Italians also name this instrument the Tromba Spezzata or Broken Trumpet, under which title it is figured in Bonanni. The Trumpet in its many forms is one of the oldest of existing instruments; certainly the least changed, as will be shown under that heading. But the special individuality of the two instruments, and the peculiar character of the Trombone in particular, is derived from the method by which a complete chromatic scale has been evolved from the open notes of a simple tube; namely, by means of what is termed the slide. There is much reason to believe that this contrivance is also very ancient, having far greater antiquity than

crooks, stoppers, or valves. In the preface to Neumann's Tutor for the Trombone its invention is claimed for Tyrtæus, 685 B.C. Others award the merit of its discovery to Osiris. In paintings and sculptures it is difficult to identify the distinguishing slide. But the writer has from several sources a circumstantial account of the finding of one or even two such instruments at Pompeii in the year 1738. Neumann states that the mouthpieces were of gold, and the other parts of bronze. 'The king of Naples,' he continues, 'gave this instrument to king George III. of England,' who was present at the digging. Mr. William Chappell, in a note made by him more than fifty years ago, confirms this statement, and adds that the instrument so found is in the collection at Windsor. The present librarian, however, denies all knowledge of it. Nor is it in the British Museum. Dr. C. T. Newton has, however, furnished the writer with an unexpected reference, which is singularly to the point. It occurs in a work on Greek Accents, by a writer named Arcadius, who, according to Dr. Scott, may be attributed to about A.D. 200, when the familiar use of spoken Greek was dying out, and prosodiocal rules, like the accents, became necessary. It is as a prosodiocal simile that the reference occurs: 'Just as those who on flutes (αὐλοῖς) feeling for the holes, to stop and open them when they may wish, have contrived subsidiary projections and bombyxes (ὀφθαλμοὶς lege ὀφθαλμοῖς), moving them up and down (ἀνω καὶ κάτω), as well as backwards and forwards.' It is difficult to refuse a belief that the framer of this figure, which is meant to explain the use of accents as aids to modulation, had not seen some sort of Trombone in use.

Mersenne gives a passage, which he attributes to Apuleius, to the effect that 'dexterâ extendente vel retrahente tubæ canales, musicales soni ab eâ edebantur.'

It is certain that in A.D. 1520 there was a well-known *Posaunenmacher* named Hans Menschel, who made slide Trombones as good as, or perhaps better, than those of the present time. More than 200 years later, Dr. Burney says of the Sackbut that neither instruments nor players of it could be found for the Handel commemoration! There is an excellent representation of an angel playing a slide Trombone in a ceiling-picture given in the appendix to Lacroix (*Arts de la Renaissance*), and in one replica of Paolo Veronese's great Marriage of Cana in Galilee (not that in the Salon Carré in the Louvre) a negro is performing on the same instrument. Michael Prætorius, in the 'Theatrum seu Sciagraphia instrumentorum,' dated 1620, gives excellent figures of the Octav-Posaun, the Quart-Posaun, the Rechtgemeine Posaun, and the Alt-posaun.

It is not therefore surprising to find the instrument freely used in Bach's cantatas; though it is probably less known that the familiar air of the Messiah, 'The Trumpet shall sound,' was formerly played on a small Alto Trombone, and that its German title was *Sie tönt die Posaune*.

The Trombone is a very simple but perfect instrument. It consists of a tube bent twice upon itself, ending in a bell, and in the middle section double, so that the two outer portions can slide upon the inner ones.

Tenor Trombone in its normal position, sounding

Extended so as to produce

The mouthpiece is held steadily to the player's lips by the left hand, while the right controls the lower segment by more or less extension of the arm. As the usual length of a man's arm is not sufficient for the intervals required by the larger bass instruments, it is, in their case, increased by means of a jointed handle. The same result has also been obtained by doubling the slides, but at a great loss of simplicity in construction. It is therefore obvious that the Trombone alone of all the wind-family has the accuracy and modulative power of stringed instruments. Its notes are not fixed, but made by ear and judgment. It is competent to produce at will a major or minor tone, or any one of the three different semitones. The three Trombones, therefore, with the Trumpet, their natural treble, form the only complete enharmonic wind quartet in the orchestra. And yet no instrument has been so misused and neglected by modern composers and conductors.

The parallel between the Trombone and the Violin family may be carried even farther without loss of correctness; for whereas they have seven 'shifts,' the Trombone has seven 'positions.' These may be easily described as successive elongations of the sounding tube, each of which produces its own harmonic series. The seven positions may be said in a general way to be each a semitone lower than the last. The first is with the slide entirely undrawn. But in the hands of a good player, the length of slide used for each successive position is not the same. By means of a proportional scale, the writer has found that the 2nd, 5th, and 6th shifts are represented by twice 26, or 52; the 3rd and 7th by twice 15, or 30; and the 4th shift by twice 20, or 40. The reason for thus doubling the indications of the scale is the duplicity of the sliding tube, and the doubled length of vibration. The reasons for the variable length of the positions lie too deep in the theory of the scale for our present purpose. They are also, to a certain extent, due to unavoidable imperfections of manufacture, which cause it, for constructive reasons, to vary considerably from a true mathematical figure. But a judicious player, with a sensitive ear, has the remedy in his own power; and the mechanism as well as the mental sensa-

tion of Trombone-playing, when thoroughly learned, more nearly approaches that of good voice production than does that of any other instrument. Unfortunately, the quiet smooth legato method of using it is almost a lost art; having been nearly discarded for the coarse blare of the military player. For his use also modern instruments are made of too large a bore.

Like so many other instruments, the Trombone has been made in every key, from A to B \sharp ; and in every octave, from the two-foot to the sixteen-foot. But whereas the former kind has been very properly distanced by the brighter tone of the long small-bored Trumpet, playing in its higher registers; the latter has also been much encroached on by Tubas, Euphoniums, and Ophicleides, which often, though really in the eight-foot octave, are made to produce a spurious effect of depth by largeness of bore and looseness of embouchure.

The three which chiefly survive are the Alto, Tenor, and Bass; usually in the keys of F or E \flat , B \flat , and G respectively. A bass in F is far more suited to the two upper members of the group, and has been used without break in Germany, notably by Weber in 'Der Freischütz.' It will be sufficient to work out these in detail in a table.

TABLE OF TROMBONE POSITIONS.

	Alto.	Tenor.	G Bass.	F Bass.
First position	E \flat	E \flat	G	F
Second position	D	A	F \sharp	E
Third position	D \flat	A \flat	F	E \flat
Fourth position	C	G	E	D
Fifth position	B	F \sharp	E \flat	D \flat
Sixth position	B \flat	F	D	C
Seventh position	A	E	C \sharp	B

It is here seen that the player has in use the equivalent of seven different instruments, either of which can be converted into any other by a single movement of the right arm; though some sequences involve more change, and are consequently of greater difficulty than others.

The harmonic series is the same as that of the Horn and other cupped instruments. The lowest tones or fundamentals are somewhat difficult to produce, and, owing to the long distance of an octave which separates them from the first upper partial tone, are usually termed pedal notes. The available scale therefore commences with the first upper partial, runs without break to the sixth, omits the dissonant seventh harmonic, and may be considered to end with the eighth, though some higher notes are possible, especially on the longer positions.

There is one case, however, where even the harmonic seventh may be employed with wonderful effect, and that is in an unaccompanied quartet of Trombones (reinforced if necessary in the bass or in the octave below by an instrument of fixed pitch, such as a Bass Tuba or Bombardon). This combination, however, is so rare that the writer knows of no

instance of it, although it is the only way in which wind instruments can produce perfect harmony free from the errors of temperament. It is obvious from theory that the planting of a fixed or pedal bass, and the building up on it flexible chords, is far more consistent with the harmonic law than the ordinary method. The writer of this article was requested to lead the singing of hymns and chants in the open air some years ago, at the laying of the foundation-stone of a new church; he used a quartet consisting of Slide Trumpet, Alto and Tenor Trombones, with Euphonium and Contrabassoon in octaves for the positive bass. With good players the result was striking, and is perhaps deserving of imitation. In the older music the Trombones were often thus used; and indeed did much of the work more recently assigned to the French Horn. The effect survives in Mozart's Requiem, and the solemn, peculiar tone-colour of that great work is usually spoiled by transposing the Corni di bassetto parts, and by employing Tenor Trombones to the exclusion of the Alto and Bass. Even the fine and characteristic Trombone Solo of the 'Tuba Mirum' is often handed over to the Bassoon. Of the three Trombones, the Tenor, though the most noisy and self-assertive, is decidedly the least musical, and its present predominance is much to be regretted.

It is to be noted that the Trombone is not usually played from transposed parts, as the Clarinet, Horn, and other instruments are, the real notes being written. The Alto clef is generally used for the Trombone of that name, and the Tenor clef for the corresponding instrument: but the practice of different writers varies somewhat in this respect.

A band composed exclusively of Trombones has indeed been formed, and is stated to have been extremely fine. It was attached to the elder Wombwell's show of wild beasts.

As regards the musical use of this instrument, there is little more to be added. It flourished under Bach and Handel—whose trombone parts to 'Israel in Egypt,' not contained in the autograph score at Buckingham Palace, escaped Mendelssohn's attention and were first printed by Chrysander in the German Händel-Gesellschaft edition. It then became forgotten, as Dr. Burney records. Perhaps it was pushed aside by the improved French Horn. Gluck however uses it in 'Alceste,' and Mozart, who seems to have known the capabilities of every instrument better than any musician that ever lived, fully appreciated it, as the great chords which occur in the overture and the opera (between the Priests' March and Sarastro's solo) and form the only direct link between the two, amply show. In 'Don Giovanni' he reserved them for the statue scene; but so little is this reticence understood that a favourite modern conductor introduced them even into the overture. In the Requiem he has employed it to represent the Trump of Doom (in 'Tuba Mirum'), and it is a proof of the disuse of the Trombone just mentioned that until recently the passage was given to the Bassoon. The

passionate and dramatic genius of Weber did full justice to the instrument.

Beethoven has employed Trombones to perfection. When at Linz in 1812, he wrote three *Equali* for four Trombones, two of which were adapted to words from the Miserere by Seyfried, and performed at Beethoven's funeral. The third (still in MS.) was replaced by a composition of Seyfried's own. As a later instance we may quote the Benedictus in the Mass in D, where the effect of the trombone chords *pianissimo* is astonishingly beautiful, and so original that the eminent modern conductor just mentioned, in the performances by the Sacred Harmonic Society, is said to have indignantly erased them from the score. Another instance of its use by Beethoven is the high D given by the Bass Trombone *ff*, at the beginning of the Trio in the 9th Symphony. In an interesting letter signed X,¹ in the 'Harmonicon' for Jan. 1824, Beethoven is described as having seized on a Trombone-player who visited him, and eagerly enquired as to the upward compass of the instrument. The day in question was Sept. 23, 1823. At that time he was finishing the 9th Symphony, in the Finale of which Trombones are much used. In vol. ii, p. 331 b of this Dictionary we have quoted a droll note for Trombones from a letter of the great composer's.

Schubert was attached to the instrument at a very early period. In his juvenile overture to the 'Teufels Lustschloß' (May 1814) the three Trombones are used in a very remarkable way. His early Symphonies all afford interesting examples of their use, and in his great Symphony in C (No. 10) there is not a movement which does not contain some immortal passage for them. His Masses are full of instances of their masterly use.² But on the other hand, in the Fugues, they accompany the three lower voices in unison with an effect which is often very monotonous.

Mendelssohn gives the instrument one of the grandest phrases he ever wrote, the opening and closing sentences of the 'Hymn of Praise.' [See QUEISSER, vol. iii. p. 60 b]. Its effect in the overture to 'Ruy Blas,' contrasted with the delicate tracery of the strings, lingers in every musician's memory. He had very distinct ideas as to its use. It is too solemn an instrument, he said once, to be used except on very special occasions; and in a letter written³ during the composition of 'St. Paul' he says 'if I proceed slowly it is at least without Trombones.'

Schumann produces a noble effect with the three Trombones in the Finale to his first Symphony, probably suggested by the Introduction to Schubert's Symphony in C—and another, entirely different, in the overture to 'Manfred.'

[W.H.S.]

TROMPETTE, LA. A musical institution in Paris, for the performance of chamber music,

¹ By the late Edward Scholz.

² We gladly refer our readers for these to Mr. Prout's admirable analyses of the Masses in the 'Monthly Musical Record' for 1870. The wind parts are shamefully inaccurate in the score of the Mass in Ab.

³ To Mr. Horsley, 'Goethe and Mendelssohn,' Letter 8.

founded by M. Emile Lemoine in Jan. 1861, and now (1884) holding its meetings at 84 Rue de Grenelle-St. Germain. In some respects it differs from all other institutions of similar object. Having sprung from the strictly private meetings of its founder and a handful of friends, then students of the École Polytechnique, it retains the traces of its original domestic character. M. Lemoine is careful to announce that he is not a manager or director, but a host; by a pleasant but transparent fiction the audience are not subscribers (though the amount they pay is fixed, and they are constantly reminded of it); they are the friends of the host, and are invited to *réunions* at his house. The communications between M. Lemoine and his friends, in the programmes, are all couched in the tone, often almost a brusque one, of personal intimacy.—As Mr. Ella adopted for the motto of the late 'Musical Union' the words 'Il più gran omaggio alla musica sta nel silenzio,' so M. Lemoine's most frequent and earnest injunctions are directed towards silence during the performances. The name of 'Trompette' arose from a phrase of the École Polytechnique, and the flavour of that famous school is maintained in the 'heure militaire'—military time—which is observed in the hour of commencement.

The meetings began, as already said, in a room at the École. As the number of invitations increased, the locale was changed, until it arrived at its present one, where the audience often reaches 1000. The number of concerts appears to vary from fifteen to twenty, on alternate Fridays and Saturdays, from the beginning of the year onwards. The hour of meeting is 8.30 p.m. The amount of annual contribution invited from each guest is 35 francs. The 'Quatuor de la Trompette' consists of MM. Marsick, Rémy, Van Waefelghem, and Delsart, with solo singers and players. We give one of the programmes of 1882 as a specimen:—

Quartet, No. 5 (A major)	Beethoven.
Air and Gavotte for Cello	Bach.
a. Polonaise in B	(Chopin.
b. Gavotte in G minor	Handel.
Trio, No. 2, in F	Schumann.
'A la bien aimée,' op. 98	Beethoven.

PIANO, M. Raoul Pugno. VOCALIST, M. Lauwers.

But they are not always so severely classical, and extra concerts are given for the works of living composers. [G.]

TROPPO, i.e. 'too much'; a term of the same force as TANTO; as in the finale of Beethoven's Symphony no. 4, or the first movement of his Violin Concerto—'Allegro ma non troppo'—'Allegro; but not too much so.' In the second movement of Mendelssohn's Scotch Symphony the direction at the head of the movement in the printed score is 'Vivace non troppo,' which looks like a caution inserted after trying the speed named in the preface on the opening fly-leaf of the same score—'Vivace assai.' It is as if he were saying 'Quick: but mind you don't go too quick, as you will inevitably be tempted to do.' [G.]

TROUPENAS, EUGÈNE, French music-publisher, born in Paris, 1799, died there April 11, 1850. As a child he showed decided taste for music, but his family intended him for an engineer, and put him to study mathematics with Wronsky, a Polish professor, who however dissuaded him from entering the École Polytechnique and indoctrinated him with his own misty transcendentalism. The results of this early training came out when, left in easy circumstances by the death of his parents, he became a music-publisher, for to the last it was the metaphysical side of the art which interested him. He never gave his ideas in full to the world, but a couple of letters which originally came out in the 'Revue Musicale,' were published in pamphlet form with the title 'Essai sur la théorie de la Musique, déduite du principe Métaphysique sur lequel se fonde la réalité de cette science' (1832). Troupenas took up the brothers Escudier when they came to seek their fortune in Paris, and it was with his assistance that they founded their journal 'La France Musicale.' A man of the world, a good musician, and a fascinating talker, his friendship was sought by many artists of eminence. Rossini, Auber, and de Beriot were sincerely attached to him, and found him always devoted to their interests. He also published Halévy's operas, Donizetti's 'La Favorita,' and all Henri Herz's pianoforte pieces at the time of his greatest popularity; indeed it is not too much to say that from 1825 to 1850 his stock was one of the largest and best selected of all the publishing houses in Paris. At his death it was purchased entire by MM. Brandus, and the larger part still remains in their hands. [G.C.]

TROUTBECK, the Rev. JOHN, a well-known translator of librettos into English, was born Nov. 12, 1832, at Blencowe, Cumberland, and educated at Rugby and Oxford, where he graduated B.A. 1856, and M.A. 1858. He took orders in 1855, and has risen through various dignities to be Precentor of Manchester 1865-9, and minor canon of Westminster 1869. He has translated the following for Novello, Ewer, & Co.'s 8vo series:—

Bach. St. John Passion; Christmas Oratorio.	Graun. Der Tod Jesu.
Beethoven. Mount of Olives.	Hiller. Song of Victory.
Brahms. Song of Destiny.	Jensen. Feast of Adonis.
David. Le Désert.	Mozart. Seraglio.
Gade. Crusaders; Comala; Psyche.	Reinecke. Little Snowdrop.
Gluck. Iphigenia in Aulis; Iphigenia in Tauris; Orphée.	Romberg. Lay of the Bell.
Goetz. Taming of the Shrew.	Schumann. Advent Song; the King's Son.
Gounod. Redemption.	Wagner. Flying Dutchman.
	Weber. Jubilee Cantata.

besides many minor works. Mr. Troutbeck has also published 'A Music Primer for Schools,' and 'A Primer for Church Choir Training,' and has compiled the 'Hymnbook in use at Westminster Abbey.' [G.]

TROVATORE, IL (the Troubadour). Opera in 4 acts; libretto by Cammarano, music by Verdi. Produced at the Teatro Apollo, Rome, Jan. 19, 1853; at the Théâtre des Italiens, Paris, Dec. 23, 1854; at the Grand Opera, Paris, as 'Le Trouvère,' Jan. 12, 1857; at Covent Garden, London, N 2

May 17, 1855; in English, 'The Gipsy's Vengeance,' Drury Lane, March 24, 1856. [G.]

TROYENS, LES. A 'lyric poem,' words and music by Berlioz; originally forming one long opera, but afterwards divided into two—(1) 'La prise de Troie'; (2) 'Les Troyens à Carthage.' No. 1 was never performed, and is still in MS. No. 2 was produced at the Théâtre Lyrique, Nov. 4, 1863, and published in PF. score by Choudens. See Berlioz's 'Memoires,' Postface (Transl. vol. ii. Supplement). [G.]

TROYERS, FERDINAND, COUNT VON, Imperial councillor, and chief officer of the household to the Cardinal Archduke Rudolph (Beethoven's pupil), was an amateur clarinet player, and distinguished pupil of Friedlowsky (Professor at the Conservatorium from 1821 to 47). He is mentioned as one of the executants at a Gesellschaft concert in 1816. Troyers is stated, on the authority of Doppler (manager for Diabelli & Co.) to have given Schubert the commission for his well-known Octet, op. 166, composed in 1824. [See vol. iii. p. 339 b.¹] [C.F.P.]

TROYTE, ARTHUR HENRY DYKE, second son of Sir Thomas Dyke Acland, Bart., of Killerton, Devon, born May 3, 1811, graduated at Christchurch, Oxford, 1832, assumed the name of Troyte in 1852, and died June 19, 1857,² was the author of two favourite Chants, known as Troyte No. 1 and Troyte No. 2, much used as hymn tunes. The latter however is a mere modification of a chant by Dr. W. Hayes. [G.]

TRUHN, FRIEDRICH HIERONYMUS, born at Elbing, Oct. 14, 1811, became scholar of Klein and Dehn, and also had a few lessons from Mendelssohn. Has lived chiefly in Berlin and Dantzic, but with many intervals of travelling. One of his tours was made with Bülow. His opera 'Trilby' was produced in Berlin, 1835; but he is chiefly known by his songs—amongst them 'The Three Chafers.' He also contributes to the 'Neue Zeitschrift für Musik,' and the 'Neue Berliner Musikzeitung.' [G.]

TRUMPET (Fr. *Trompette*; Ger. *Trompete*, *Trummet*, *Tarantara*; Ital. *Tromba*, *Tr. doppia*, *Clarino*). It is unnecessary to seek for the origin of an instrument which was already familiar when the Mosaic books were written; at Jericho performed one of the earliest miracles; figured in the Hebrew ritual; preluded to the battles around Troy; is carved on the stone chronicles of Nineveh and Egypt; and for which China claims, in the form of the 'Golden Horn' a far greater antiquity than these.

If, instead of following the vertical ordinate history, we move along the horizontal line of ethnology, we find its gradual development from the shell, the cow, buffalo or ram's horn through the root³ hollowed by fire, to the

wooden Alpenhorn bound with birch bark; thence to the Zinckes and Cornets of ancient Germany, up to the Tuba and Lituus of Rome. Both of these, which were real Trumpets, Rome borrowed, inherited, or stole; the former from Etruscan, the latter from Oscan, originals. One of the Etruscan Tubas in the British Museum has a mouthpiece perfectly characteristic, and capable of being played on; two spare mouthpieces standing beside it as perfect as though just turned.

In the typical shapes above named we have evidence of an early subdivision into two forms of the sounding tube which has now become fruitful of musical results. For whereas the large-bored conical TUBA still keeps its name, and is the mother of Bugles, Serpents, Horns, Cornets à piston, Euphoniums, Bombardons and the like; the Lituus, which Forcellini derives from the Greek *λῦρος*, *tennis*, is the small-bored cylindrical Trumpet, and the father of all Trombones. It was early seen that two distinct varieties of tone quality could thus be obtained; the large cone and bell favouring the production of the fundamental note and the lower partial tones; whereas the long contracted pipe broke easily into harmonics, and spoke freely in its upper octaves. Hence the Orchestral Trumpet, as now used, is really an 8-foot pipe overblown, like a Harmonic stop on the Organ; to this it owes its keenness, pungency, power of travelling, and its marvellous superiority in timbre over the 4-foot Cornet.

That the distinction between the Roman Tuba and Lituus is real, needs for proof no more scholarship than is contained in Horace's First Ode to Mæcenæ:

Multos castra juvant, et lituo tubæ
Permixtus sonitus.

On this passage Forcellini comments, 'Sunt qui lituum a tubâ distinguunt, ex eo quod ille equitum sit, hæc vero peditum.' The distinction is good to-day. The Tuba was the 'Infantry Bugle'; the Lituus the 'Cavalry Trumpet.'

The derivation of lituus may indeed be originally Greek; certainly it is proximately from the hooked augur's staff of the Oscans, which had been Mercury's wand, and has become the bishop's crozier. Cicero sets the etymology hind-side foremost. 'Bacillum,' he says of the staff, 'quod ab ejus litui quo canitur similitudine nomen invenit.' It might as well be said that the horse was made with four legs and a round body to fit the forked shafts of the cart.

Both Tuba and Lituus figure on Trajan's column, in the triumphal procession. Vegetius defines the former: 'Tuba—quæ directa est, appellatur.' This straight form reappears even in more recent times, as in a fine picture by Baltazarini; by comparing it with the average height of the players, it may be estimated at about seven feet long. The Lituus is figured by Bartolini from a marble Roman tombstone with the inscription

M. JULIUS VICTOR
ex collegi
Liticinum Cornicinum.

¹ Where the name is wrongly spelt as Troyer.

² From the excellent 'Biographical Index' to the 'Church Hymnal' (Dublin, 1878) by Major Crawford.

³ A good example of this, with a cupped mouthpiece scooped in the wood, which could be played on, was shown at the Loan Exhibition of Scientific Instruments by Mr. Bassett, from Africa.

which is perhaps the first mention of a society of professional musicians.

A farther development of the two types above named involved the means of bridging over the harmonic gaps. For this purpose the slide was obviously the first in date. [See TROMBONE.] Its application to the Trumpet itself came later, from the reason named above, that in its upper part the harmonic series closes in upon itself so that at a certain point the open notes become all but consecutive and form a natural scale. This can be accomplished by a good lip, unassisted by mechanism, and is probably one of the reasons why Bach, Handel, and the older musicians write such extremely high parts for the instrument.¹ The Bugle type, on the other hand, developed early into hand-stopped side holes, as in the Serpent, followed by the same, key-stopped in the Key-Bugle, keyed Serpent, and the identical instrument with the mongrel Greek appellation of Ophicleide. Considerably later the prodigious brood of Valve or 'Ventil' contrivances allied itself to the Bugles with fair success. On the Trumpet² and Trombones they are a complete failure, as they obscure the upper harmonics, the main source of the characteristic tone.

In the following description of the modern Trumpet the writer has been materially assisted by an excellent monograph published by Breitkopf & Härtel of Leipzig in 1881, and named 'Die Trompete in Alter und neuer Zeit, von Hermann Eichborn.' In acknowledging his obligations to the work he can heartily advise its study by those who wish for more detail than can be given in a dictionary.

The simple or Field Trumpet is merely a tube twice bent on itself, ending in a bell. Hence its Italian name Tromba doppia. The modern orchestral or slide Trumpet, according to the description of our greatest living player,³ is made of brass, mixed metal, or silver, the two latter materials being generally preferred. It consists of a tube sixty-six inches and three quarters in length, and three eighths of an inch in

diameter. It is twice turned or curved, thus forming three lengths; the first and third lying close together, and the second about two inches apart. The last fifteen inches form a bell. The slide is connected with the second curve. It is a double tube five inches in length on each side,

¹ A Trumpet capable of producing the high notes in Bach's Trumpet parts has been made in Berlin, and was used in the performance of the B minor Mass under Joachim at the unveiling of the statue at Eisenach in Sept. 1884.

² In the Monatshefte für Musik-Gesch. for 1881, No. III. is a long and interesting article by Kitner, investigating the facts as to the inventor of the 'Ventil trompete,' which is said to date from 1802 or 1803. The writer seems however to confuse entirely the key-system or 'Klappen Trompete' with the ventil or valve. Valves render the harmonic system of the Trumpet entirely false, besides deadening its tone. Kitner's error is exposed in the preface to Eichborn's 'Die Trompete.'

³ Harper's School for the Trumpet. Rudall, Carte & Co.

by which the length of the whole instrument can be extended. It is worked from the centre by the second and third fingers of the right hand, and after being pulled back is drawn forward to its original position by a spring fixed in a small tube occupying the centre of the instrument. There are five additional pieces called crooks, a tuning bit, and the mouthpiece.

The first crook and mouthpiece increase the length of the whole tube to 72 inches, and give the key of F. The second gives E, the third, Eb, the fourth, D. The fifth or largest crook in general use is 25½ inches long, making the total length of the instrument 96 inches, and giving the key of C. A Db, Bb, and Bb crook may be used, but are not often required. The mouthpiece is turned from solid brass or silver, and its exact shape is of greater importance than is generally supposed. The cup is hemispherical, the rim not less than an eighth of an inch in breadth, level in surface, with slightly rounded edges. The diameter of the cup differs with the individual player and the pitch of the notes required. It should be somewhat less for the high parts of the older scores.

The natural notes begin with 8-foot C, which is not used, and follow the harmonic series, up to the C above the soprano clef. Pedal notes seem to be unknown on the Trumpet.⁴

Practically the useful compass begins with the Clarinet E and ends with the G in alt.

The Natural notes of the Trumpet.

Not used

* Scale of the Slide Trumpet. (Harper).

The slide is used—(1) To bring the F and A of the fourth octave into tune. (2) To produce a semitone below the natural note. (3) To lower the pitch a whole tone. (4) To correct the seventh or natural harmonic, at all times too flat for tempered harmony. For the first purpose it is drawn back about an inch and a half. For the second about halfway, or 2½ inches in keys above D; and two-thirds, or rather over 3 inches, in keys lower than D. For

⁴ Eichborn names 'Das kontra Register' or 'Posaunen Register,' but says 'es spricht sehr schwer an.'

the third it is drawn to its full extent or 5 inches. In the upper part of the scale above treble C all the natural harmonics are consecutive, and the slide is not required for producing intervals of a whole tone. It is in constant use in this part of the register for the production of chromatic intervals involving the notes

The semitones do not become consecutive as open notes until above C in alt; but such a compass is practically unattainable. It will be seen from the table that this consecutive series really begins a tone lower, with Bb. But as this is the well-known harmonic seventh not used in music, it is commonly replaced by the C depressed a tone with the whole length of the slide drawn out.

A number of alternative notes are given in good instruction books, such as that already quoted, by which, on the same principle, other notes may be tempered to suit the harmony, and Mr. Harper very judiciously sums up his directions by saying: 'It will therefore be seen that the required length of slide for certain notes varies with each change of crook, consequently when it is necessary to extend the slide, the ear must assist the fingers.' This fact has already been noted in regard to the Trombone, and exists to a certain extent in the Bassoon and Ophicleide. It is quite impossible on the Valve Trumpet.

The mediæval use of the Trumpet is well given in Eichborn's book already named; but somewhat exceeds our present limits. He states however that Henry VIII of England had 14 Trumpeters, one 'Dudelsack' (or bagpipe), and 10 Trombones in his band, and Elizabeth, in 1587, 10 Trumpets and 6 Trombones. Indeed, it is in the 16th century, according to him, that the 'building up of the art of sound' made a great advance. He divides the band of that day, 'the day of Palestrina and of Giovanni Gabrieli' into seven groups, of which group 3, Zinken or Cornets, Quart-Zinken, Krumm-horns, Quint-Zinken, Bass-Zinken and Serpents of the Bugle type, group 6, Trumpets, 'Klarinen,' and 'Principal or Field-Trumpets,' with group 7, the Trombones, from soprano to bass, most concern us.

At this period falls in Baltazarini's picture, named before, of the marriage of Margaret of Lorraine with the Duke of Joyeuse, of which we have the music as well as the pictorial representation. Claudio Monteverde, about 1610, has 1 Clarino, 3 Trombe and 4 Tromboni, in his orchestra; and Benevoli in a mass at Salzburg Cathedral in 1628 has 'Klarinen, Trompeten, Posaunen'; Prætorius in 1620, already quoted under TROMBONE (p. 176) waxes enthusiastic, and says 'Trummet ist ein herrlich Instrument, wenn ein gute Meister, der es wohl und künstlich zwingen kann, darüber kömmt.'

About this time began the curious distinction into Clarini and Principale which is found in Handel's scores, and especially in the Dettingen Te Deum. The Principale was obviously a large-bored bold-toned instrument resembling our modern Trumpet. It was apparently of 8-foot tone as now used. To the Clarino I and II of the score were allotted florid, but less fundamental passages, chiefly in the octave above those of the Principale. They were probably of smaller bore, and entirely subordinate to the 'herrlich' Principale, both in subject and in dominance of tone. A like arrangement for three Trumpets occurs in J. S. Bach's Choralgesang 'Lobe den Herrn,' though the Principale is not definitely named. The mode of scoring is an exact parallel to that for the three Trombones. A good example of it also occurs in Haydn's Imperial Mass, where, besides the 1st and 2nd Trumpets, there is a completely independent 3rd part of Principale character.

Beethoven's use of the Trumpet is in strong contrast to his use of the Horn. The Horn he delights to honour (and tease), the Trumpet he seldom employs except as a *tutti* instrument, for reinforcing, or marking rhythms. He takes it so high as to produce an effect not always agreeable; see the *forte* in the *Allegretto* of Symphony No. 7 (bar 75) and in the *Allegro assai* of the Choral Symphony (Theme of the Finale, bar 73). In the Finale of the 8th Symphony however there is an F \sharp prolonged through 17 bars, with masterly ingenuity and very striking effect. An instance of more individual treatment will be found in the Recitative passage in the Agnus of the Mass in D; and the long flourish in the overtures to Leonora, nos. 2 and 3, (in the no. 2 an Eb Trumpet and in triplets, in the no. 3 a Bb one and duple figures,) can never be forgotten. But on the whole the Trumpet was not a *pet* of Beethoven's.

Schubert uses it beautifully in the slow movement of the great Symphony in C as an accompaniment *planissimo* to the principal theme.

Mendelssohn wrote a 'Trumpet overture,' but the instrument has no special prominence, and it is probable that the name is merely used as a general term for the Brass.

The only successful attempt to apply valves to this instrument is the 'Univalve Trumpet' of Mr. Bassett, who brought it under the notice of the Musical Association in 1876. It is the ordinary Slide Trumpet, with the addition of a single valve tuned in unison with the open D, or harmonic ninth—in other words, lowering the pitch a minor tone. This valve—worked by the first finger of the left hand, the instrument being held exactly in the usual manner—does not injure in the slightest degree the pure tone of the old Trumpet, the bore of the main tube remaining perfectly straight. By the use of this single valve and the slide, it is possible to produce a complete scale, major or minor, with a perfection of intonation only limited by the skill of the player, as it is essentially a slide instrument. The valve not only supplies those notes which

are false or entirely wanting in the ordinary Slide Trumpet (including even the low Ab and Eb when playing on the higher crooks), but greatly facilitates transposition and rapid passages, while comparatively little practice is required to become familiar with its use. [W.H.S.]

TSCHAIKOWSKY, PETER ILTITSON, one of the most remarkable Russian composers of the day, was born April 25, 1840, at Wotkinsk in the government of Wiatka (Ural District), where his father was engineer to the Imperial mines. In 1850 the father was appointed Director of the Technological Institute at St. Petersburg, and there the boy entered the School of Jurisprudence, into which only the sons of high-class government officials are admitted. Having completed the prescribed course in 1859, he was appointed to a post in the ministry of Justice. In 1862, however, when the Conservatoire of Music was founded at St. Petersburg, he left the service of the state, and entered the new school as a student of music. He remained there till 1865, studying harmony and counterpoint under Prof. Zarembo, and composition under Anton Rubinstein. In 1865 he took his diploma as a musician, together with a prize medal for the composition of a cantata on Schiller's ode, 'An die Freude.' In 1866 Nicholas Rubinstein invited him to take the post of Professor of Harmony, Composition, and the History of Music at the new Conservatoire of Moscow; he held this post, doing good service as a teacher, for twelve years. Since 1878 he has devoted himself entirely to composition, and has been living in St. Petersburg, Italy, Switzerland, and Kiew. M. Tchaikowsky makes frequent use of the rhythm and tunes of Russian People's-songs and dances, occasionally also of certain quaint harmonic sequences peculiar to Russian church music. His compositions, more or less, bear the impress of the Slavonic temperament—fiery exaltation on a basis of languid melancholy. He is fond of huge and fantastic outlines, of bold modulations and strongly marked rhythms, of subtle melodic turns and exuberant figuration, and he delights in gorgeous effects of orchestration. His music everywhere makes the impression of genuine spontaneous originality. [E.D.]

The following is a list¹ of his works:—

- Op. 1. Scherzo Russ and Impromptu, for PF. solo.
- 2. Souvenir de Hespel. 3 morceaux. PF. solo.
- 3. Overture and Ballet airs from Opera 'Volevoda.'
- 4. Valse Caprice in D. PF. solo.
- 5. Romance, F minor. PF. solo.
- 6. 6 Lieder for one voice with PF. accompaniment.
- 7. Valse Scherzo in A. PF. Solo.
- 8. Capriccio, Gb. PF. solo.
- 9. 3 Morceaux. Reverie, Polka, Mazurka. PF. solo.
- 10. Nocturne in F, and Humoresque in G. PF. solo.
- 11. String-Quartet in D.
- 12.
- 13. Symphony for Orchestra, No. 1.

- 14.
- 15. Overture Triomphale (sur l'hymne national Danais).
- 16. 6 Lieder (with Russian text).
- 17.
- 18. Fantasia for Orchestra, 'The Tempest.'
- 19. 6 Morceaux. PF. solo.
- 20.
- 21. 6 Clavierstücke über ein Thema.
- 22. String-Quartet in F.
- 23. Concerto Pianoforte and Orchestra, in Eb minor.
- 24.
- 25. 6 Lieder.
- 26. Serenade mélancolique for Violin and Orchestra.
- 27. 6 Lieder.
- 28. 6 Lieder.
- 29. Symphony for Orchestra, No. 3 in D.
- 30. String-Quartet in Eb minor.

¹ The vacant Nos. are reserved for the Operas.

- Op. 31. Marche Slave for Orchestra.
- 32. Symphonic Poem, 'Francesca von Rimini.'
- 33. Variations on a Thème ro-coco for Violoncello and Orchestra.
- 34. Scherzo, Viola and Orchestra.
- 35. Concerto for Violin and Orchestra in D.
- 36. Symphony for Orchestra, No. 4, in F minor.
- 37. Sonata for PF. in G.
- 38. 6 Lieder.
- 39. Album d'enfants, 24 little pieces for PF. solo.
- 40. 12 Stücke. PF. solo.
- 41. Russian Liturgy for four voices.
- 42. 3 Pieces for Violin, with PF. accompaniment.
- 43. Suite for Orchestra, No. 1.
- 44. Concerto for PF. and Orchestra, No. 2, in G.
- 45. Caprice Italien for Orchestra.
- 46. 6 Vocal Duets.
- 47. 7 Lieder.
- 48. Serenade for String-Orchestra.
- 49. '1812' Overture solennelle for Orchestra.
- 50. Trio for PF., Violin, and Violoncello in A minor.
- 51. 6 Morceaux. PF. solo.
- 52. Vesper service, 4 voices.

- 53. Suite for Orchestra, No. 2.
- 54. 16 Kinderlieder.
- 55. Suite for Orchestra No. 3.
- 56. Fantaisie, PF. and Orch.

Operas and Ballets:—

- 1. Volevoda. Represented 1868.
- 2. Opritschnik. Represented 1874.
- 3. Wakula the Smith. 1876.
- 4. Schwanensee. Ballet.
- 5. Snegourotska. Drama with Incidental Music.
- 6. Eugeny Onegin.
- 7. The Maid of Orleans, 1881.
- 8. Mazeppa. 1884.

Works without opus number:—

- Overture to Romeo and Juliet.
- 50 Russian Volksmelodien, arranged for PF. 4 hands.
- 'Die Jahreszeiten,' 12 PF. pieces.
- Weber's Perpetuum mobile, for left hand only.
- Coronation march for Orch.
- Coronation Cantata, soli, chorus and Orch.

Literary works:—

- Harmonie-Lehre. Do. for Schools.
- Gevaert's Instrumentations-Lehre, translated and edited.

[J.R.M.]

TSCHUDI, BURKHARDT, founder of the house of Broadwood. [See SHUDI.]

TUA, MARIA FELICITA, known as **TERESINA**, was born May 22, 1867, at Turin. She completed her musical education at the Paris 'Conservatoire,' where she received instruction on the violin from M. Massart, and obtained in 1880 a 'premium' or first prize. She afterwards played with brilliant success in concert tours over the greater part of the continent. On May 5, 1883, she made her first appearance in England at the Crystal Palace, and played with so much success that she was re-engaged for the concert of the following week. She played at the Philharmonic on May 9 and 30; at the Floral Hall Concerts June 9; at Mr. Cusins's concert, with whom she was heard in Beethoven's 'Kreutzer' Sonata; and at other concerts. She returned to the continent, and did not re-appear for the season of 1884 as was expected. Apropos to her first appearance in London, May 9, the critic of the 'Daily Telegraph' mentioned that 'she was heard under more favourable circumstances. Yet even St. James's Hall is too large for an artist whose delicacy of style and small volume of tone suit the narrow limits of a "chamber." Her playing was marked by very high qualities, such as exquisite phrasing, refinement, with power of expression and executive skill equal to almost every call upon it.' It was also marked by an obvious tendency to caricature the style of a great living artist, which though amusing, hardly added to the artistic qualities of Signora Tua's performances. [A.C.]

TUBA. A generic and somewhat vague title given to the Bass instruments of the Saxhorn family, also termed Bombardons. All of them are furnished with valves, and are liable to the usual defects inherent in this mode of construction.

But as they have a large mouthpiece, and require a very loose embouchure, more can be done towards correcting harmonic imperfections of the scale by the player than in acuter instruments of the same character. Tubas are made in many keys, in F in Germany, in Eb and Bb in this country: as however they usually read from the real notes, their parts require no special transposition. Their introduction into the stringed orchestra is entirely due to later composers, and pre-eminently to Wagner, who often obtains fine effects through their instrumentality. [W.H.S.]

TUBA, TUBA MIRABILIS, or TUBA MAJOR, TROMBA, OPHICLEIDE, are names given to a high-pressure reed-stop of 8 ft. pitch on an organ. In some instruments, especially if there are only three manuals, such high-pressure reeds are connected with the Great Organ manual; but inasmuch as the pipes are of necessity placed on a separate soundboard supplied by a different bellows to that which supplies the ordinary flue-work, high-pressure reeds are more often found on the fourth or Solo Organ. The pipes of the Tuba are sometimes arranged in a horizontal position, but whether arranged horizontally or vertically, they are, as a rule, placed high up in the framework of the instrument. The wind-pressure of a Tuba, as measured by an ordinary wind-gauge, varies considerably; in some cases it does not exceed 7 inches, but in St. Paul's Cathedral the pressure reaches 17½ inches, and in the Albert Hall 23 inches or more. The pipes are of 'large scale,' and the tongues of the reeds are, of course, thicker than in the common Trumpet-stop. The Tuba is not solely used as a Solo stop; on large instruments, when coupled to the full Great Organ, it produces a most brilliant effect. [J.S.]

TUBBS, JAMES, a violin-bow maker, residing in Wardour Street, London. His father and grandfather followed the same occupation, their style being founded on that of Dodd, whose work that of the present Mr. Tubbs also resembles. The Tubbs bows, though not equal to those of the best French makers, are esteemed by many players for their lightness and handiness. [E.J.P.]

TUCKER, REV. WILLIAM, was admitted priest and gentleman of the Chapel Royal and minor canon and precentor of Westminster Abbey in 1660. He composed some excellent church music, some of which is still extant. An anthem, 'O give thanks,' is printed in Page's 'Harmonia Sacra,' and is also included (with another) in the Tudway Collection (Harl. MS. 7339). A 'Benedicite' is in MS. in the library of the Royal College of Music, and a service and 6 anthems at Ely Cathedral. He appears also to have been copyist at the Chapel Royal. He died Feb. 28, 1678-9, and was buried March 1, in Westminster Abbey cloisters. [W.H.H.]

TUCKERMAN, SAMUEL PARKMAN, Mus.D., born at Boston, Mass., U.S., Feb. 17, 1819.

At an early age he received instruction in church music and organ-playing from Charles Zeuner. From 1840, and for some years after, he was organist and director of the choir in St. Paul's Church, Boston, and during that time published two collections of Hymn Tunes and Anthems, 'The Episcopal Harp' (chiefly original compositions) and 'The National Lyre,' the latter with S. A. Bancroft, and Henry K. Oliver. In 1849 he went to England, to make himself thoroughly acquainted with the English cathedral school of church music, both ancient and modern. For the first two years he pursued his studies in London, and afterwards resided in Canterbury, York, Durham, Winchester and Salisbury, in each of them devoting himself to his favourite study. For about two years Dr. Tuckerman lived at Windsor, and enjoyed the advantage of daily attendance at the services in St. George's Chapel. In 1853 he took the Lambeth degree of Doctor of Music, and then returned to the United States, and resumed his connection with St. Paul's Church in his native city. He lectured upon 'Church Music in the Old World and the New,' and gave several public performances of cathedral and church music from the 4th to the 19th century. In 1856 he returned to England, and remained four years. During this interval he made large additions to his musical library, which at present contains about 2000 volumes, many of them rare and valuable works. It includes many full scores and a large and valuable collection of motets, anthems, and services, both ancient and modern, of the Italian and English schools.

Dr. Tuckerman's compositions will be found in Novello's catalogues. They comprise several services, a festival anthem, 'I was glad,' six short anthems, and the anthem (or cantata) 'I looked and behold a door was opened in heaven,' the latter written (though not required) as an exercise for his Doctor's degree. He also compiled and edited 'Cathedral Chants' for use in the choirs of the Episcopal Church, in the United States. This work, published in 1858, has had a large circulation. In 1864 he edited the 'Trinity Collection of Church Music,' consisting of hymn tunes, selected, arranged, and composed for the choir of Trinity Church, New York, by Edward Hodges, Mus. Doc., formerly of Bristol, adding to it many of his own compositions. His MS. works contain a Burial Service, two anthems, 'Hear my prayer,' and 'Blow ye the trumpet in Zion,' carols, chants and part-songs. In 1852 he received a diploma from The Academy of St. Cecilia, Rome. [G.]

TUCKET, TUCK. Tucket is the name of a trumpet¹ sound, of frequent occurrence in the works of the Elizabethan dramatists. Shakespeare (Henry V, Act iv, Sc. 2) has, 'Then let the trumpets sound The tucket-sonance, and the note to mount'; and in 'The Devil's Law Case' (1623) is a stage direction, 'Two tuckets by several trumpets.' The word is clearly derived from the

¹ Johnson says 'a musical instrument', but this is inaccurate.

Italian *Toccata*, which Florio ('A Worlde of Wordes,' 1598) translates 'a touch, a touching.'

Like most early musical signals, the tucket came to England from Italy, and though it is always mentioned by English writers as a trumpet sound, the derivation of the word shows that in all probability it was originally applied to a drum signal. [See vol. iii. p. 642, etc.] Francis Markham ('Five Decades of Epistles of Warre,' 1622) says that a 'Tucquet' was a signal for marching used by cavalry troops. The word still survives in the French 'Doquet' or 'Toquet,' which Larousse explains as 'nom que l'on donne à la quatrième partie de Trompette d'une fanfare de cavallerie.' There are no musical examples extant of the notes which were played.

Closely allied with the word Tucket is the Scotch term 'Tuck' or 'Touk,' usually applied to the beating of a drum, but by early writers used as the equivalent of a stroke or blow. Thus Gawin Douglas's 'Virgil' has (line 249) 'Hercules it smytis with ane mychty *touk*.' The word is also occasionally used as a verb, both active and neuter. In Spalding's 'History of the Troubles in Scotland' (vol. ii. p. 166) is the following: 'Aberdeen caused *tuck* drums through the town,' and in Battle Harlaw, Evergreen (i. 85) the word is used thus: 'The dandring drums alloud did *touk*.' 'Tuck of Drum' is of frequent occurrence in Scotch writers of the present century (see Scott's 'Rokeby,' canto iii. stanza 17); Carlyle's Life of Schiller; Stevenson's 'Inland Voyage,' etc.; also Jamieson's Dictionary of the Scottish Language, s.v. 'Tuck' and 'Touk'. [TUSCH.] [W.B.S.]

TUCZEK, a Bohemian family of artists—the same name as Duschek or Dussek. The compilers of dictionaries have fallen into much confusion between the different members, of whom the first,

(1) FRANZ, was choirmaster of S. Peter's at Prague in 1771, and died about 1780. His son and pupil,

(2) VINCENT FRANZ, a singer in Count Sweert's theatre, became accompanist to the theatre at Prague in 1796, Capellmeister at Sagan to the Duke of Courland in 1798, conductor of the theatre at Breslau in 1800, of the Leopoldstadt theatre in Vienna in 1801, and died about 1820 at Pesth. He was a versatile composer, writing masses, cantatas (one was performed at Sagan in 1798, on the recovery of the King of Prussia), oratorios ('Moses in Egypt,' and 'Samson'), operettas (second-rate), in German and Czech, and music for a tragedy, 'Lanasse,' his best work. His only printed work is the PF. score of 'Dämona,' a fairy opera in 3 acts. Another,

(3) FRANZ, born at Königgratz, Jan. 29, 1782, died at Charlottenburg near Berlin, Aug. 4, 1850, a musician first in Vienna, and afterwards in Berlin, had two daughters, of whom one married Rott the well-known actor, and the other,

(4) LEOPOLDINE, a pupil of Fräulein Fröhlich's at the Vienna Conservatorium from 1829-34, played little parts at the Court theatre with Unger, Garcia, and Moriani, from the time she

was 13, and thus formed herself as an actress. She was also thoroughly trained as a singer by Mozatti, Gentiluomo, and Curzi, and made her first appearance in Weigl's 'Nachtigall und Rabi.' In 1841, on the recommendation of Franz Wild, Count Redern offered her a star-engagement in Berlin, as successor to Sophie Löwe in *ingénue* parts. Her Susanna, Zerlina, Sonnambula, Madeleine, etc., pleased so much as to lead to an offer of engagement on liberal terms, which she accepted on her release from the Court theatre at Vienna. She sang at the unveiling of the Beethoven memorial in Bonn (1845). She made her farewell appearance in Berlin, Dec. 6, 1861, when the king himself threw her a laurel-wreath, and sent her a miniature laurel-tree in silver, bearing 65 leaves, on which were written the names of her parts, including Mrs. Ford in 'The Merry Wives of Windsor.' Her voice had a compass of 2½ octaves, and her refined and piquant acting made her a model *soubrette*. She married an official of some position at Herrenburg. She was afflicted with partial paralysis during her later years, and frequently resorted to Baden near Vienna, where she died Sept. 1883. [F.G.]

TUDWAY, THOMAS, Mus. Doc., was admitted a chorister of the Chapel Royal in or soon after 1660. On April 22, 1664, he was elected a lay vicar (tenor) of St. George's Chapel, Windsor. About Michaelmas, 1670, he became organist of King's College, Cambridge, in succession to Henry Loosemore (whose name disappears from the College accounts after Midsummer, 1670), and received the quarter's pay at Christmas, and an allowance for seven weeks' commons. He obtained the post of instructor of the choristers at King's College at Christmas, 1679, and retained it until Midsummer, 1680. He was also organist at Pembroke College. In 1681 he graduated as Mus. Bac. at Cambridge. On Jan. 30, 1704-5, he was chosen as Professor of Music in the University on the death of Dr. Staggins. Shortly afterwards he proceeded Mus. Doc., his exercise for which—an anthem, 'Thou, O God, hast heard our desire'—was performed in King's College Chapel on April 16, in the presence of Queen Anne, who bestowed upon the composer the honorary title of Composer and Organist extraordinary to her. On July 22, 1706, he was suspended from his offices for, it is said, in the exercise of his inveterate habit of punning, having given utterance to a pun which was considered to be a libel on the University authorities.¹ His suspension continued until March 10, 1707. He resigned his organistship at King's College at Christmas, 1726, when he was paid £10 in addition to his stipend. He then repaired to London, where he passed the remainder of his life. He was employed by Edward, Lord Harley, afterwards Earl of Oxford,

¹ Burney, Hist. of Music, iii. 459 n., relates the following anecdote, which may possibly include the obnoxious pun. 'In the time of the Duke of Somerset's Chancellorship at Cambridge, during the discontents of several members of the University at the rigours of his government and paucity of his patronage, Tudway, himself a mal-content, and joining in the clamour, said, "The Chancellor rides us all, without a bit in our mouths."'

to collect musical compositions for him, and, amongst others, transcribed, between 1715 and 1720, an important collection of Cathedral Music in 6 thick 4to. vols., now in the British Museum (Harl. MSS. 7337-7342), an Evening Service, 18 anthems, and a Latin motet by Tudway himself being included in it. Another Service by him is in a MS. at Ely Cathedral, and some songs and catches were printed in the collections of the period. He died in 1730. His portrait is in the Music School at Oxford. For his Collection see p. 198 of this volume. [W.H.H.]

TÜRK, DANIEL THEOPHIL, writer on theory, born at Clausswitz near Ohemnitz in Saxony, son of a musician in the service of Count Schönburg, learned first from his father, and afterwards from Homilius at the Kreuzschule in Dresden. In 1772 he went to the University of Leipzig, where he became the pupil and friend of J. A. Hiller, who procured his admittance to the opera, and the 'Grosses Concert.' About this period he produced two symphonies and a cantata. In 1776, owing to Hiller's influence, he became Cantor of S. Ulrich at Halle, and Musikdirector of the University. In 1779 he was made organist of the Frauenkirche. Türk was the author of several books on the theory of music which have become recognised text-books: 'The chief duties of an Organist' (1787); 'Clavierschule' (1789), and a Method for beginners compiled from it (1792); and 'Short Instructions for playing from figured basses' (1791); all of which passed through several editions. In 1808 he was made Doctor and Professor of Musical Theory by the University. He died after a long illness, Aug. 26, 1813. His compositions—PF. sonatas and pieces, and a cantata 'The Shepherds of Bethlehem,'—once popular, have wholly disappeared. [F.G.]

TULOU, JEAN LOUIS, eminent French flute-player and composer, born in Paris, Sept. 12, 1786, son of a good bassoon-player named Jean Pierre Tulou (born in Paris 1749, died 1799); entered the Conservatoire very young, studied the flute with Wunderlich, and took the first prize in 1801. He first made his mark at the Théâtre Italien, and in 1813 succeeded his master at the Opéra. In 1816 the production of 'Le Rossignol,' an insignificant opera by Lebrun, gave him an opportunity of showing his powers in a series of passages *à deux* with the singer Mme. Albert, and proving himself the first flute-player in the world. Drouet himself acknowledged the superiority of a rival whose style was so pure, whose intonation was so perfect, and who drew so excellent a tone from his 4-keyed wooden flute. Very popular in society, both on account of his talent, and for his inexhaustible spirits, Tulou was prompt at repartee, and had a fund of sarcastic humour which he uttered freely on anything he disliked. His droll comments on the *régime* of the Restoration were resented by the Ministry in a practical form, for he was passed over in the appointment of flute-player to the Chapelle du Roi, and also in the professorship at the Conservatoire on Wunderlich's death. In consequence of this slight he

left the Opéra in 1822, but returned in 1826 with the title of first flute solo. On Jan. 1, 1829, he became professor at the Conservatoire, where his class was well attended. Among his pupils may be mentioned V. Coche, Rémusat, Forestier, Donjon, Brunot, Altès, and Demersseman. Tulou frequently played at the Société des Concerts, and wrote much for his instrument, especially during the time he was teaching. His works include innumerable airs with variations, fantasias on operatic airs, concertos, and grand solos with orchestra, a few duets for two flutes, a grand trio for three flutes, solos for the Conservatoire examinations, etc. This music is all well-written for the instrument, and the accompaniments show the conscientious artist. Several pieces are still standard works. In 1856 Tulou retired from the Conservatoire and the flute-making business. His trade-mark was a nightingale, doubtless in allusion to the opera in which he made his first success. Both as performer and manufacturer he opposed Boehm's system, and would neither make nor play on any other flute than the wooden one with 5 keys. Nevertheless he took medals at the Exhibitions of 1834, 39, 44, and 49, was honourably mentioned at that of 1851 in London, and gained a medal of the first class at the Paris Exhibition of 1855. After his retirement he lived at Nantes, where he died July 23, 1865. [G.C.]

TUMA, FRANZ, distinguished church-composer, and player on the viol da gamba, born Oct. 2, 1704, at Kosteletz in Bohemia, was a pupil of Czernohorsky (Regenschori at Prague, with whom he also fulfilled an engagement as tenor-singer), and of J. J. Fux in Vienna. In 1741 he became Capellmeister to the Dowager Empress Elisabeth, on whose death in 1750 he devoted himself entirely to his muse. In 1760 he retired to the monastery of Geras, but after some years returned to Vienna, where he died, Feb. 4, 1774, in the convent of the Barmherzigen Brüder. Tuma was greatly respected by connoisseurs of music amongst the court and nobility, and received many proofs of esteem from Maria Theresa. His numerous church-compositions, still, unfortunately, in MS., are distinguished by a complete mastery of construction, and a singular appropriateness between the harmony and the words, besides striking the hearer as the emanations of a sincerely devout mind. Especially celebrated are his grand masses in D minor and E minor, which are masterpieces in the line of Bach. As a chorister in the cathedral of Vienna, Haydn had the opportunity of becoming practically acquainted with the works of this solid master. [C.F.P.]

TUNE appears to be really the same word as Tone, but in course of a long period of familiar usage it has come to have a conventional meaning which is quite different. The meaning of both forms was at first no more than 'sound,' but Tune has come to mean not only a series of sounds, but a series which appears to have a definite form of some kind, either through the balance of phrases or periods, or the regular distribution of groups of bars or cadences. It may

be fairly defined as formalised melody: for whereas melody is a general term which is applicable to any fragment of music consisting of single notes which has a contour—whether it is found in inner parts or outer, in a motet of Palestrina or a fugue of Bach,—tune is more specially restricted to a strongly outlined part which predominates over its accompaniment or other parts sounding with it, and has a certain completeness of its own. Tune is most familiarly illustrated in settings of short and simple verses of poetry, or in dances, where the outlines of structure are always exceptionally obvious. In modern music of higher artistic value it is less frequently met with than a freer kind of melody, as the improvement in quickness of musical perception which results from the great cultivation of the art in the past century or so, frequently makes the old and familiar methods of defining ideas and subjects superfluous. For fuller discussion of the subject see MELODY.

[C.H.H.P.]

TUNE. ACT-TUNE (Fr. *Entr'acte*, Germ. *Zwischenspiel*), sometimes also called **CURTAIN TUNE**. A piece of instrumental music performed while the curtain or act-drop is down between the acts of a play. In the latter half of the 17th century and first quarter of the 18th century act-tunes were composed specially for every play. The compositions so called comprised, besides the act-tunes proper, the 'first and second music,' tunes played at intervals to beguile the tedium of waiting for the commencement of the play,—for it must be remembered that the doors of the theatre were then opened an hour and a half, or two hours before the play commenced—and the overture. The act-tunes and previous music were principally in dance measures. Examples may be seen in Matthew Lock's 'Instrumental Music used in The Tempest,' appended to his 'Psyche,' 1675; in Henry Purcell's 'Dioclesian,' 1691; and his 'Collection of Ayres composed for the Theatre,' 1697; and in two collections of 'Theatre Music,' published early in the 18th century; as well as in several MS. collections. During the greater part of the last century movements from the sonatas of Corelli, Handel, Boyce, and others were used as act-tunes, and at present the popular dance music of the day is so employed. But act-tunes, now styled 'Entr'actes,' have been occasionally composed in modern times; the finest specimens are those composed by Beethoven for Goethe's 'Egmont,' by Schubert for 'Rosamunde,' by Weber for 'Preciosa,' by Schumann for 'Manfred,' and by Mendelssohn for Shakspeare's 'Midsummer Night's Dream,' including the Scherzo, the Allegro appassionato, the Andante tranquillo and the world-renowned Wedding March, which serves the double purpose of act-tune and accompaniment to the wedding procession of Theseus and Hippolyta, the act-drop rising during its progress. Sir A. Sullivan has also written Entr'actes for 'The Tempest,' 'The Merchant of Venice,' and 'Henry VIII'—some of which will be remembered when his operettas

have necessarily yielded to the changes of fashion.

[W.H.H.]

TUNING (To tune; Fr. *accorder*; Ital. *accordare*; Germ. *stimmen*). The adjustment to a recognised scale of any musical instrument capable of alteration in the pitch of the notes composing it. The violin family, the harp, piano, organ, and harmonium, are examples of instruments capable of being tuned. The accordances of the violin, viola, and violoncello, as is well known, is in fifths which are tuned by the player.¹ The harpist also tunes his harp. But the tuning of the piano, organ, and harmonium, is effected by tuners who acquire their art, in the piano especially, by long practice, and adopt tuning, particularly in this country, as an independent calling, having little to do with the mechanical processes of making the instrument. At Antwerp, as early as the first half of the 17th century, there were harpsichord-tuners who were employed in that vocation only; for instance, in *De Liggeren der Antwerpsche Sint Lucasgilde*, p. 24, edited by Rombouts and Van Lierus (the Hague) we find named as a master Michiel Colyns, *Clacersingelstelder Wynmeester*, i.e. harpsichord-tuner and son of a master (in modern Flemish Clavecimbel-steller).

In all keyboard instruments the chief difficulty has been found in what is known as 'laying the scale, bearings, or groundwork,' of the tuning; an adjustment of a portion of the compass, at most equal in extent to the stave

with the Alto clef , from which the

remainder can be tuned by means of simple octaves and unisons. We have records of these groundworks by which we are enabled to trace the progress of tuning for nearly four hundred years. The earliest are by Schlick (1511), Ammerbach (1571), and Mersenne (1636). It is not however by the first of these in order of time that we discover the earliest method of laying the scale or groundwork, but the second. Ammerbach published at Leipzig in 1571 an 'Orgel oder Instrument Tabulatur,' in which he gives the following directions for the groundwork. We will render this and the examples which follow into modern notation, each pair of notes being tuned together.

For the Naturals (*das gelbe Clavier*).

For the Sharps (*Oberlasten*).

must be Major Thirds (*müssen grosse Terzen sein*).

are Minor Thirds (*nieder erklingen*).

There is not a word about temperament!

¹ The accordances of the guitar, lute, theorbo, and similar instruments tuned by fifths, fourths, and thirds will be found in the descriptions of them.

By the stave for the naturals we may restore the tuning of the Guido scale of the earliest organs and clavichords which had only the B \flat as an upper key in two octaves. These would be provided for either by tuning up from the G (a minor third) or down from the F (a fifth), all the intervals employed being approximately just. We may also suppose that from the introduction of the full chromatic scale in organs before 1426, to the date of Schlick's publication 1511, and indeed afterwards, such a groundwork as Ammerbach's may have sufficed. There was a difference in clavichords arising from the fretting, to which we will refer later. Now, in 1511, Arnolt Schlick, a blind organist alluded to by Virdung, in his 'Spiegel der Orgelmacher' (Mirror of Organbuilders)—a work which the present writer, aided by its republication in Berlin in 1869, has brought under the notice of writers on music—came out as a reformer of tuning. He had combatted the utter subordination of the sharps or upper keys to the natural notes, and by the invention of a system of tuning of fifths and octaves had introduced a groundwork which afforded a kind of rough-and-ready unequal temperament and gave the sharps a quasi-independence. This is his scale which he gives out for organs, clavicymbals, clavichords, lutes, harps, intending it for wherever it could be applied.

He gives directions that ascending fifths should be made flat to accommodate the major thirds, particularly F—A, G—B \flat , and C—E,—excepting G \sharp , which should be so tuned to E \flat , as to get a tolerable cadence or dominant chord, the common chord of E, to A. The G \sharp to the E \flat , he calls the 'wolf,' and says it is not used as a dominant chord to cadence C \sharp . Indeed, from the dissonance attending the use of C \sharp and A \flat , they being also out of tune with each other, he recommends the player to avoid using them as keynotes, by the artifice of transposition.

The fact of Ammerbach's publication of the older groundwork 60 years later proves that Schlick's was slow to commend itself to practice. However, we find Schlick's principle adopted and published by Mersenne (*Harmonie Universelle*, Paris, 1636) and it was doubtless by that time established to the exclusion of the earlier system. With this groundwork Mersenne adopted, at least in theory, Equal Temperament [see TEMPERAMENT], of which in Liv. 2, Prop. xi. p. 132, of the before-named work, he gives the correct figures, and in the next volume, Prop. xii, goes on to say that equal temperament is the most used and the most convenient, and that all practical musicians allow that the division of the octave into twelve half-tones is the

easiest for performance. Mr. Ellis, in his exhaustive Lecture on the History of Musical Pitch (*Journal of the Society of Arts*, Appendix of April 2, 1880), considers corroboration of this statement necessary. We certainly do not find it in Mersenne's notation of the tuning scale which we here transpose from the baritone clef.

Les Feintes. The Sharps and Flats.

For the tuner's guidance the ascending fifths are marked as flat, the descending as sharp, but the last fifth, G \sharp —E \flat , is excepted as being the 'defect of the accord.' With this recognition of the 'wolf' it is clear that Mersenne was not thinking of equal temperament. But Schlick's principle of fifths and octaves had become paramount.

We will now go back to the interesting 'gebunden' or fretted clavichord. [See CLAVICHORD and TANGENT.] The octave open scale of this instrument is F G A B \flat C D E \flat F, or C D E \flat F G A B \flat C, according to the note which may be accepted as the starting-point. Both of these are analogous to church modes, but may be taken as favourite popular scales, before harmony had fixed the present major and minor, and the feeling had arisen for the leading note. We derive the fretted clavichord tuning from Ammerbach thus:

Later on, no doubt, four fifths up, F C G D A and two fifths down F B \flat E \flat , would be used with octaves inserted to keep the tuning for the groundwork, in the best part of the keyboard for hearing. We have found the fretted or stopped semitones which included the natural B and E, adjusted by a kind of rough temperament, intended to give equal semi-mean-tones and resembling the lute and guitar semitones.

When J. Sebastian Bach had under his hands the 'bundfrei' or fret-free clavichord, each key having its own strings, he could adopt the tuning by which he might compose in all the twenty-four keys, from which we have the 48 Preludes and Fugues.¹

Emanuel Bach ('Versuch,' etc., Berlin 1753) gives, p. 10, very clear testimony as to his own preference for equal temperament tuning. He says we can go farther with this new kind of tuning

¹ He did not get this tuning on the organ, it would appear, although his preference for it is shown in Mr. Ellis's 'History of Musical Pitch' already referred to. (See the 'Journal of the Society of Arts,' March 5, 1880).

although the old kind had chords better than could be found in musical instruments generally. He does not allude to his father, but brings in a hitherto unused interval in keyboard instrument tuning—the Fourth. Not, it is true, in place of the Fifth; but as one of the trials to test the accuracy of the tuning. At the present time beginners in tuning find the Fourth a difficult interval when struck simultaneously with the note to which it makes the interval: there is a feeling of dissonance not at all perceptible in the Fifth. It is therefore not strange that for centuries we do not find it used for instruments capable of more or less sustained harmony. The introduction of a short groundwork for the piano, confined to the simple

chromatic scale between 

is traditionally attributed to Robert Wornum, early in the present century. In this now universally adopted system for the piano, the Fourth is regarded and treated as the inversion of the Fifth; and for the intentional 'Meantone' system [see TEMPERAMENT] employed almost universally up to about 1840-50, the following groundwork came into use:—

—the wolf being, as of old, at the meeting of G♯ and E♭. The advantages of the short system were in the greater resemblance of vibration between notes so near, and the facilities offered for using common chords as trials. It will be observed that the pitch-note has changed from F to the treble C; possibly from the introduction of the TUNING-FORK in 1711. In Great Britain and Italy a C-fork has been nearly always adhered to since that date for keyboard instruments; but for the violins, A (on account of the violin open string), which in France and Germany has been also adopted as the keyboard tuning-note. But the pitchpipe may have also had to do with the change of pitch-note.

The long tuning scale did not at once go out of use; it was adhered to for organs, and for pianos by tuners of the old school. It went out in Messrs. Broadwood's establishment with the last tuner who used it, about the year 1869. The change to intentional equal temperament in pianos in 1846, in England, which preceded by some years the change in the organ, was ushered in by an inclination to sharper major thirds: examples differing as different tuners were inclined to more or less 'sweet' common chords of C, G, and F. The wolf ceasing to howl so loudly, another short groundwork, which went through the chain of fourths and fifths without break, became by degrees more

general with the piano until it prevailed entirely. It is as follows:—

and is also the groundwork for tuning the harmonium.

The organ no longer remains with the groundwork of fifths and octaves; the modern tuners use fourths and fifths in the treble C—C, of the Principal; entirely disregarding the thirds. Like the harmonium the organ is tuned entirely by beats. Organ pipes are tuned by cutting them down shorter, or piecing them out longer, when much alteration has to be made. When they are nearly of the right pitch, (1) metal pipes are 'coned in' by putting on and pressing down the 'tuning horn,' to turn the edges in for flattening, or 'coned out' by inserting and pressing down the tuning horn to turn the edges out for sharpening; (2) stopped pipes, wooden or metal, are sharpened by screwing or pushing the stopper down, or flattened by pulling it up; (3) reed pipes by a tuning wire which lengthens or shortens the vibrating portion of the tongue. Harmoniums are tuned by scraping the metal tongue of the reed near the free end to sharpen the tone, and near the attached end to flatten it.

The old way of tuning pianos by the Tuning Hammer (or a Tuning Lever) remains in vogue, notwithstanding the ever-recurring attempts to introduce mechanical contrivances of screws etc., which profess to make tuning easy and to bring it more or less within the immediate control of the player. Feasible as such an improvement appears to be, it has not yet come into the domain of the practical. The co-ordination of hand and ear, possessed by a skilled tuner, still prevails, and the difficulty of getting the wire to pass over the bridge, continuously and equally without the governed strain of the tuner's hand, is still to be overcome before a mechanical system can rival a tuner's dexterity.

In considering practical tuning we must at once dismiss the idea that the ear of a musician is capable of distinguishing small fractions of a complete vibration in a second. Professor Preyer of Jena limits the power of perception of the difference of pitch of two notes heard in succession by the best ears to about one third of a double vibration in a second in any part of the scale. By the phenomena of beats between two notes heard at the same time we can make much finer distinctions, which are of great use in tuning the organ and harmonium; but with the piano we may not entirely depend upon them, and a good musical ear for melodic succession has the advantage. In fact the rapid beats of the upper partial tones frequently prevent the recognition of the slower beats of the fundamental tones of the notes themselves until they become too

faint to count by. The tuner also finds difficulty in tuning the treble of a piano by beats only.

Still, to tune the groundwork of a piano to a carefully measured set of chromatic tuning-forks, such as Scheibler formerly provided, would ensure a nearer approach to a perfect equal temperament than the existing system of fourths and fifths, with the slight flattening upwards of fifths and downwards of fourths, to bring all within the perfect octave. But to achieve this, a normal pitch admitting of no variation is a *sine qua non*, because no tuner would or could give the time to work by a set of forks making beats with the pitch wanted.

The wind and fretted stringed instruments, although seemingly of fixed tones, are yet capable of modification by the player, and their exact scale relation cannot be defined without him. In Asiatic countries, as India, Persia, and Arabia, and sometimes in European, this play of interval is used as a melodic grace, and from the ancient Greeks to the present day, the quarter-tone has been a recognised means of expression. Georges Sand, writing in her delightful novel 'La Mare au Diable' about the Musette (a kind of Bagpipe) of her country people, says—'La note finale de chaque phrase, tenue et tremblée avec une longueur et une puissance d'haleine incroyable, monte d'un quart de ton en faussant systématiquement.' Whitley Stokes (Life of Dr. Petrie, p. 339) has noticed such a licence in his native Irish music. But we are led away here from Harmonic Scales. [A.J.H.]

TUNING-FORK (Fr. *Diapason*; Ital. *Corista*; Germ. *Stimmgabel*). This familiar and valuable pitch-carrier was invented by John Shore, Handel's famous Trumpeter. From a musical instrument it has become a philosophical one, chiefly from its great permanence in retaining a pitch; since it is flattened by heat and sharpened by cold to an amount which is determinable for any particular observations. A fork is tuned by filing the ends of the prongs to sharpen, and between them at the base, to flatten; and after this it should stand for some weeks and be tested again, owing to the fact that filing disturbs the molecular structure. Rust affects a fork but very little: the effect being to slightly flatten it. Tuning-forks have been used to construct a keyboard instrument, but the paucity of harmonic upper partial tones causes a monotonous quality of tone. An account of the combination of tuning-forks into a Tonometer for the accurate measurement of pitch will be found under SCHEIBLER, the inventor. [A.J.H.]

TURANDOT is a 5-act play of Schiller's, founded on a Chinese subject, orchestral music to which was composed by Weber in 1809. His music consists of an Overture and 6 numbers, 3 of them marches, all more or less founded on a Chinese melody, which Weber took from Rousseau's Dictionary of Music (vol. ii. plate N), and which opens the overture exactly as Rousseau gives it.

etc.

The Overture was originally composed as an 'Overtura Chinesa' in 1806, and afterwards revised. The first performance of the Overture in its present shape was at Strassburg, Dec. 31, 1814. It is doubtful if the rest has ever been performed. The play has been also treated by Blumenroeder, Reissiger, and Hoven. It has been 'freely translated' into English by Sabilla Novello (1872). [G.]

TURCA, ALLA, i. e. in Turkish style; the accepted meaning of which is a spirited simple melody, with a lively accentuated accompaniment. The two best examples of this are the finale to Mozart's PF. Sonata in A (Köchel. 331), which is inscribed by the composer 'Alla Turca,' and the theme of Beethoven's variations in D (op. 76), which he afterwards took for the 'Marcia alla Turca,' which follows the Dervish chorus in the 'Ruins of Athens.' [G.]

TURCO IN ITALIA, IL. Opera by Rossini. Produced at the Scala at Milan, Aug. 14, 1814; in London at His Majesty's, May 19, 1820. [G.]

TURINI, FRANCESCO, learned contrapuntist, born at Prague, 1590, died at Brescia, 1656, son of Gregorio Turini, cornet-player to the Emperor Rudolph II, and author of 'Teutsche Lieder' a 4, in imitation of the Italian Villanelli (Frankfort, 1610). His father dying early, the Emperor took up the young Francesco, had him trained in Venice and Rome, and made him his chamber-organist. Later he became organist of the cathedral at Brescia. He published 'Missa a 4 e 5 voci a Capella,' op. 1 (Gardano); 'Mottetti a voce sola,' for all four kinds of voices; 'Madrigali a 1, 2, e 3, con sonate a 2 e 3'; and 'Motetti commodi.' A canon of his is quoted by Burney, the theme of which—

was a favourite with Handel, who employs it in his Organ Fugue in Bb, and in his Oboe Concerto, No. 2, in the same key. It had been previously borrowed by Thomas Morley, who begins his canzonet, 'Cruel, you pull away too soon your dainty lips,' with the same theme. It is probably founded on the old ecclesiastical phrase with which Palestrina begins his 'Tu es Petrus,' and which was employed by Bach in his well-known Pedal Fugue in Eb, and by Dr. Croft in his Psalm-tune, 'St. Anne's.' [F.G.]

TURK, a dog, who by his connexion with a great singer and a still greater composer, has attained nearly the rank of a person. He be-

longed to Signor RAUZZINI, and after his death his master put up a memorial to him in his garden at Bath, in which he was spoken of as his master's 'best friend.' Haydn and Burney

visited Rauzzini at Bath in 1794, and Haydn was so much struck by the memorial as to set a part of the inscription—apparently the concluding words—as a canon or round for 4 voices.

Canon a quattro.

1 Turk was a faith - ful dog; a faith - ful dog. and not a man. And not a

2 man. Turk was a faith - ful dog. a faith - ful dog. And not a man, and not a

3 man. Turk was a faith - ful dog, and not, and not a man, and not a man; Turk, Turk.

4 Turk! Turk was a faith - ful dog a faith - ful

The house was then known as 'Perrymead' (not 'The Pyramids,' as Pohl¹ gives it), but now as 'Warner's,' and is situated in the south-east part of Bath. All trace of the memorial seems to have disappeared.² [G.]

TURKISH MUSIC (*Türkische*, or *Janitscharen musik*; Ital. *Banda turca*). The accepted term for the noisy percussion instruments—big-drum, cymbals, triangle—in the orchestra. The most classical instance of its use is in the brilliant second number of the Finale to the Choral Symphony, *alla marcia*. There, and in the last chorus of all, Beethoven has added 'Triangolo,' 'Cinelli,' and 'Gran Tamburo,' to the score; and these noisy additions were evidently part of his original conception, since they are mentioned in an early memorandum, long before the vocal part of the symphony had assumed at all its present shape. In the autograph of the Dervish Chorus in the Ruins of Athens, which is scored for horns, trumpets, and alto and bass trombone, in addition to the usual strings, he has made a memorandum that 'all possible noisy instruments, such as castanets, bells, etc.,' should be added. [G.]

TURLE, JAMES, born at Taunton, March 5, 1802, was a chorister at Wells Cathedral, under Dodd Perkins, from July 1810 to Dec. 1813. He was organist of Christ Church, Surrey, from 1819 to 1829, and from the latter date to 1831 organist of St. James, Bermondsey. From 1819 to 1831 he was assistant to Thomas Greatorex as organist and master of the choristers of Westminster Abbey, and upon Greatorex's death in 1831 was appointed his successor. In 1875 he was released from active duty by the appointment of Dr. J. F. Bridge as his assistant. From 1829 to 1856 he was music master at the School for the Indigent Blind. He composed and edited many services, anthems, and chants, and

edited, with Professor E. Taylor, 'The People's Music Book.' He also composed many glees, which yet remain in MS. His remarkable skill and ability as a teacher were strikingly manifested by the number of those who received their early training from him, and rose to eminence in their profession. He died June 28, 1882.

ROBERT TURLE, his brother, born March 19, 1804, was a chorister at Westminster Abbey from 1814 to Aug. 1821, was organist of Armagh Cathedral from 1823 to 1872, and died March 26, 1877.

WILLIAM TURLE, first cousin of the preceding two, born at Taunton in 1795, a chorister of Wells Cathedral from 1804 to 1810. After quitting the choir he paid a short visit to America, and on his return to England in 1812 became organist of St. James's, Taunton, which he quitted upon being appointed organist of St. Mary Magdalen's in the same town. [W.H.H.]

TURN (Fr. *Brisée*; Germ. *Doppelschlag*; Ital. *Grupetto*). An ornament much used in both ancient and modern music, instrumental as well as vocal. Its sign is a curve ~ placed above or below the note, and it is rendered by four notes—namely, the note next above the written note, the written note itself, the note below, and the written note again (Ex. 1). It is thus identical with a figure frequently employed in composition, and known as the *half-circle* (*Halbzirkel*, *Circolo mezzo*). The written note is called the principal note of the turn, and the others are termed respectively the upper and lower auxiliary notes.

1. *Written.* *Played.*

On account of its gracefulness, and also no doubt in consequence of its presenting little difficulty of execution, the turn has always been a very favourite ornament, so much so that Emmanuel Bach says of it, 'This beautiful grace is

¹ 'Haydn in London,' p. 275.

² I am much indebted to Mr. C. T. Payne and Mr. Jerom Murch for their kindness in ascertaining that nothing further is to be found.

³ That is, 'Jenny's.'

as it were too complaisant, it suits well everywhere, and on this account is often abused, for many players imagine that the whole grace and beauty of pianoforte-playing consist in making a turn every moment.' Properly introduced, however, it is of the greatest value, both in slow movements, in which it serves to connect and fill up long notes in a melody, and also in rapid tempo and on short notes, where it lends brightness and accent to the phrase.

When the sign stands directly above a note, the four notes of the turn are played rapidly, and, if the written note is a long one, the last of the four is sustained until its duration is completed (Ex. 2); if, however, the written note is too short to admit of this difference, the four notes are made equal (Ex. 3).

2. MOZART, Violin Sonata in G minor.

3. MOZART, Rondo in A minor.

When the sign is placed a little to the right of the note, the written note is played first, and the four notes of the turn follow it, all four being of equal length. The exact moment for the commencement of the turn is not fixed; it may be soon after the written note, the four turn-notes being then rather slow (Ex. 4), or later, in which case the turn will be more rapid (Ex. 5). The former rendering is best suited to a slow movement, the latter to one of a livelier character.

4. BEETHOVEN, Sonata, Op. 10, No. 1.

5. BEETHOVEN, Sonata, Op. 2, No. 1.

Both the turn upon the written note and that which follows it may be expressed in small grace-notes, instead of by the sign. For this purpose the turn upon the note will require three small notes, which are placed before the principal note though played within its value, and the turn after the note will require four (Ex. 6). This

method of writing the turn is usually employed in modern music in preference to the sign.

MOZART, Sonata in F. Turn on the note.

MOZART, Tema con Variazioni.

The upper auxiliary note of a turn is always the next degree of the scale above the principal note, and is therefore either a tone or a semitone distant from it, according to the position in the scale held by the written note. Thus, in a turn on the first degree, the upper note is a tone above (Ex. 7), while a turn on the third degree is made with the semitone (Ex. 8). The lower auxiliary note may likewise follow the scale, and may therefore be also either a tone or a semitone from its principal note; but the effect of the smaller distance is as a rule the more agreeable, and it is therefore customary to raise the lower note chromatically, in those cases in which it would naturally be a tone distant from its principal note (Ex. 9).

This alteration of the lower note is in accordance with a rule which governs the use of auxiliary notes in general, but in the construction of both the ordinary turn and the turn of the shake [SHAKE, vol. iii. p. 483. Ex. 40] the rule is not invariably followed. The case in which it is most strictly observed is when the principal note of the turn is the fifth degree of the scale, yet even here, when it is accompanied by the tonic harmony, an exception is occasionally met with, as in Ex. 10. That Bach did not object to the use of a lower auxiliary note a tone below the principal note is proved by the four semiquavers in the subject of the C \sharp major fugue in the Well-tempered Clavier, and by other similar instances. Another and more frequent exception occurs when the *upper* note is only a semitone above the principal note, in which case the lower note is generally made a tone below (Ex. 11). In the case of a turn on the fifth degree of the *minor* scale the rule is always observed, and both notes are a semitone distant (Ex. 12). A turn of this kind is termed a chromatic turn, because its notes form part of a chromatic scale.

MOZART, Sonata in A.

MOZART, Violin Sonata in G.

MOZART, Clarinet Trio in E♭.

All chromatic alterations in a turn can be indicated by means of accidentals placed above or below the sign, although they frequently have to be made without any such indication. An accidental above the sign refers to the upper auxiliary note, and one underneath it to the lower, as in the following examples from Haydn:—

Sonata in E♭.

Sonata in C minor.

Sonata in C.

When the note which bears a turn is dotted, and is followed by a note of half its own length, the last note of the turn falls in the place of the dot, the other three notes being either quick or slow, according to the character of the movement (Ex. 14). When however the dotted note is followed by two short notes (Ex. 15), or when it represents a full bar of 3-4 or a half-bar of 6-8 or 6-4 time (Ex. 16), the rule does not apply, and the note is treated simply as a long note. A turn on a note followed by two dots is played so that the last note falls in the place of the first dot (Ex. 17).

MOZART, Sonata in D.

Played.

BEETHOVEN, Sonata, Op. 13, Adagio.

16. BEETHOVEN, Sonata, Op. 10, No. 1.

Played.

MOZART, Sonata in C minor.

Played.

The turn on the dotted note was frequently written by Mozart in a somewhat ambiguous fashion, by means of four small notes (Ex. 18), the fourth of which has in performance to be made longer than the other three, although written of the same length, in order that it may represent the dot, according to rule.

MOZART, Sonata in F. Adagio.

Played.

An apparent exception to the rule that a turn is played during some portion of the value of its written note occurs when the sign is placed over the second of two notes of the same name, whether connected by a tie or not (Ex. 19).

HAYDN, Trio in G.

Played.

In this case the turn is played *before* the note over which the sign stands, so that the written note forms the *last* note of the turn. This apparently exceptional rendering may be explained by the assumption that the second of the two notes stands in the place of a dot to the first, and this is supported by the fact that any such example might be written without the second note, but with a dot in its stead, as in Ex. 20, when the rendering would be precisely the same. If, however, the first of two notes of the same name is already dotted, the second cannot be said to bear to it the relation of a dot, and accordingly a turn in such a case would be treated simply as a turn over the note (Ex. 21).

When the order of the notes of a turn is reversed, so as to begin with the lower note instead of the upper, the turn is said to be inverted, and its sign is either placed on end thus, \sim , or drawn down in the contrary direction to the ordinary sign, thus, \sim (Ex. 22). The earlier writers generally employed the latter form, but Hummel and others prefer the vertical sign. The inverted turn is however more frequently written in small notes than indicated by a sign (Ex. 23).

In certain cases, particularly at the commencement of a phrase, the effect of the ordinary turn beginning with the upper note is unsatisfactory and deficient in accent. The perception of this fact led to the invention of a particular form of turn (called by Emmanuel Bach the *Geschnellte Doppelschlag*), in which the four notes of the ordinary turn were preceded by a short principal note, written as a small grace-note (Ex. 24). This kind of turn, consisting of five equal notes, is better adapted to modern music and to modern taste than the simple turn of four notes, and it is therefore frequently introduced in older music, even when not specially indicated. The cases in which it is most suitable are precisely those in which Emmanuel Bach allowed the use of the 'geschnellte Doppelschlag,' namely, after a staccato note (Ex. 25), or a rest (Ex. 26), or when preceded by a note one degree lower (Ex. 27).

A similar turn of five notes (instead of four), also frequently met with, is indicated by the compound sign \approx , and called the *Prallende Doppelschlag*. The difference of name is unimportant, since it merely means the same ornament introduced under different circumstances; but the sign has remained longer in use than the older mode of writing shown in Ex. 24, and is still occasionally met with. (Ex. 28.)

When a note bearing a turn of either four or five notes is preceded by an appoggiatura (Ex. 29), or by a slurred note one degree higher than itself (Ex. 30), the entrance of the turn is slightly delayed, the preceding note being prolonged, precisely as the commencement of the 'bound trill' is delayed. [See SHAKK, vol. iii. p. 481, Ex. 11.]

C. P. E. BACH, Rondo in G.

Like the shake, the turn can occur in two parts at once, and Hummel indicates this by a double sign, \approx ; this is however rarely if ever met with in the works of other composers, the usual method being to write out the ornament in full, in ordinary notes. A strikingly effective instance of the employment of the double turn occurs in the first movement of Beethoven's Concerto in Eb,¹ and Schumann, in No. 4 of the 'Kreisleriana,' has a three-part turn, written in small notes. [F.T.]

TURNER, AUSTIN T., born at Bristol, 1823, was a chorister at the Cathedral there, and at the age of 20 was appointed vicar choral at Lincoln. He went to Australia in 1854, and was selected as singing master to the Government School at Ballarat, where he now resides. He was the pioneer of music in that place, being the first conductor of the Philharmonic Society, which among other oratorios has performed Mendelssohn's 'St. Paul' and Spohr's 'Last Judgment,' and, for the first time in Australia, Sullivan's 'Prodigal Son.' His sacred cantata 'Adoration,' for solos, chorus, and full orchestra, was produced by the Melbourne Philharmonic Society on Nov. 24, 1874. He is also the author of a choral song; two masses, sung with full orchestral accompaniments at St. Francis' Church, Melbourne; several glees, madrigals, and minor works. He has been organist of Christ Church, Ballarat, for many years. [G.]

TURNER, WILLIAM, Mus. Doc., born 1651, son of Charles Turner, cook of Pembroke College, Oxford, commenced his musical education as a chorister of Christ Church, Oxford, under Edward Lowe, and was afterwards admitted a chorister of the Chapel Royal under Captain Henry Cooke. Whilst in the latter capacity he joined his fellow choristers, John Blow and Pelham Humfrey in the composition of the 'Club Anthem.' After quitting the choir his voice settled into a fine countertenor, and he became a member of the choir of Lincoln Cathedral. On Oct. 11, 1669, he was sworn in as a gentleman of the Chapel Royal, and soon afterwards became a vicar choral of St. Paul's, and a lay vicar of Westminster Abbey. He graduated as Mus. Doc. at Cambridge in 1696. He composed much church music; 2 services and 6 anthems (including 'The king shall rejoice,' composed for St. Cecilia's Day, 1697, and 'The queen shall rejoice,' for

¹ In the subject which is accompanied by descending chromatic triplets in the bass.

the coronation of Queen Anne) are contained in the Tudway collection (Harl. MSS. 7339 and 7341). Eight more anthems are at Ely Cathedral, and others in the choir books of the Chapel Royal and Westminster Abbey. Boyce printed the anthem 'Lord, Thou hast been our refuge' in his Cathedral Music. Many of Turner's songs were printed in the collections of the period. He died at his house in Duke Street, Westminster, Jan. 13, 1739-40, aged 88, having survived his wife, with whom he had lived nearly 70 years, only 4 days, she dying on Jan. 9, aged 85. They were buried Jan. 16, in one grave in the west cloister of Westminster Abbey. Their youngest daughter, Anne, was the wife of John Robinson, organist of Westminster Abbey. [See ROBINSON, JOHN.] [W.H.H.]

TURPIN, EDMUND HART, distinguished organist, was born at Nottingham May 4, 1835; was local organist at the age of thirteen; also studied composition and piano, and became practically acquainted with the instruments of the orchestra and military band. In 1857 he came to London, and since 1869 has been fixed at St. George's, Bloomsbury, and is one of the most prominent of the London organists. In 1875 he became Hon. Secretary of the College of Organists, to which excellent institution he has devoted much attention, especially in developing the examinations. Mr. Turpin has been for long connected with the musical press of London, and since 1880 has edited the 'Musical Standard.' He conducts various societies, and in 1883 was conductor of the London orchestra at the Cardiff Eisteddfod. His published works embrace 'A Song of Faith,' produced in London, 1867; 'Jerusalem,' a cantata; anthems and services; pianoforte pieces; songs, hymn-tunes, and much organ music. He has also edited the 'Student's Edition' of classical pianoforte music (Weekes and Co.), with marginal analyses and directions. In MS. he has several masses, a Stabat Mater, etc., etc. [G.]

TUSCH, probably a form of *Touche*, that is, *Toccata*, and that again related to Tuck, Tucket. The German term for a flourish or ensemble-piece for trumpets, on state or convivial occasions. Weber has left one of 4 bars long for 20 trumpets, given in Jähns's Verzeichniss, 47 A. [See FANFARE.]

In Germany the term is also used for a thing unknown in this country, namely, for the sort of impromptu, spontaneous, acclamations of the wind instruments in the orchestra after some very great or successful performance. After the audience and the players have gone on for some time with ordinary applause, cries of 'Tusch, Tusch,' are gradually heard through the hall, and then the Trumpets, Horns, and Trombones begin a wild kind of greeting as if they could not help it, and were doing it independent of the players. To an Englishman on a special occasion, such as the Beethovenfest or Schumannfest at Bonn in 1870 and 1873, it is a very new and interesting experience. [G.]

TUTTI (Ital.), all. This word is used to designate those parts of a vocal or instrumental composition which are performed by the whole of the forces at once. In the scores, and more frequently in the chorus parts of masses, cantatas, etc., the parts for the solo quartet (where such is employed) are often written on the same set of staves as the chorus parts, in which case the words Solo and Tutti are used to distinguish the one from the other. The same thing is done in the solo part of a pianoforte concerto, and also in the band parts of concertos generally, so that the orchestra may know where to avoid overpowering the solo instrument. It is a frequent custom in large orchestras to allow only a portion of the strings (three desks or so) to accompany solos, though if the conductor understands how to keep the players well down this is not necessary. The term *Ripieno* was formerly applied to those violins which only play in the tutti. For this end in some modern scores (Hiller's cantata 'Die Nacht,' Liszt's 'Graner Messe,' etc.), the string parts are marked S and T or S and R where requisite.

The term Tutti has thence been applied to those portions of a concerto in which the orchestra—not necessarily the whole orchestra—plays while the solo instrument is silent. In the Mozartian form of the concerto the first movement has in particular two long tutti, one at the beginning, to present the whole of the subject-matter, and the second (rather shorter) in the middle to work it out. This arrangement is still in use, though the modern tendency is to bring the solo instrument and the orchestra into closer *rappor*t and consequently to shorten the pure solos and tutti. Beethoven introduced (PF. Concerto in G, No. 4) the innovation of allowing the soloist to open the proceedings, but though the doing so with a flourish, as in his Eb Concerto, has been frequently imitated since, no one has followed the extremely original and simple precedent afforded by the former work. Examples of unusually long tutti may be noticed in Beethoven's Eb and Violin Concertos, Liszt's 'Dutch' Concerto-symphonie, and Tchaikowsky's immense work in Bb minor. Mendelssohn, in his G minor, set the fashion of short tutti, which is followed by Hiller, Grieg, and others. Schumann's A minor Concerto has one of 32 short bars, another of 20, and none besides of more than 8. Brahms in D minor and Dvorák in Bb, however, return to the old fashion of a lengthy exordium.

In pure orchestral music, especially up to Beethoven's time, we speak of the forte passages as 'the tutti,' from the fact of their being the places where the full orchestra is used in a mass, but in modern music the tendency is to use nearly the whole orchestra everywhere, in soft or loud places, a custom which tends to render the general tone-colour dull and monotonous.

In military bands, where little difference of tone-colour is attainable, and volume of sound the prime consideration, the music is nearly all Tutti. [F.C.]

TYE, CHRISTOPHER, Mus. Doc., born in Westminster in the early part of the 16th century, was a chorister and afterwards a gentleman of the Chapel Royal. He graduated as Mus. Bac. at Cambridge in 1536. From 1541 to 1562 he was organist of Ely Cathedral. In 1545 he proceeded Mus. Doc. at Cambridge, and in 1548 was admitted *ad eundem* at Oxford. He translated the first 14 chapters of the Acts of the Apostles into metre, set them to music, and published them in 1553, with the curious title of 'The Actes of the Apostles, translated into Englyshe metre, and dedicated to the kynges moste excellent maiestye, by Christofer Tye, Doctor in musyke, and one of the gentylmen of hys graces most honourable Chappell, wyth notes to eche Chapter, to synge and also to play upon the Lute, very necessarye for studentes after theyr studye to fyle thyr wyttes, and alsoe for all Christians that cannot synge to reade the good and Godlye storyes of the lives of Christ hys Apostles.' Tye's verses are of the Sternhold and Hopkins order: his music for them most excellent. Hawkins printed the music for the beginning of the 14th chapter (a masterly canon), in his History, chap. xxv. the first stanza of which is a fair sample of Tye's versification:—

It chanced in Iconium
As they oft times dyd use,
Together they into dyd cum
The Sinagoge of Juea.

Some of the music of the Acts of the Apostles has been adapted by Oliphant and others to passages from the Psalms. Three anthems by Tye were printed in Barnard's Church Music, one of which was also printed in Boyce's Cathedral Music; another anthem was printed in Page's Harmonia Sacra, and his Evening Service in G minor in Rimbault's Cathedral Music. An anthem is in the Tudway collection (Harl. MS. 7341), and motets and anthems by him exist in MS. in the Music School and at Christ Church, Oxford. The Gloria of his mass 'Euge bone' is printed by Burney (Hist. ii. 589) and reprinted in Hullah's 'Vocal Scores.' It was sung by Hullah's Upper Schools at St. Martin's Hall, and proved both melodious and interesting. Tye taught Edward VI. music. He died about 1580. He was introduced as one of the characters of Samuel Rowley's play, 'When you see me you know me, or, The Famous Chronicle Historie of King Henry VIII. with the Birth and Virtuous Life of Edward, Prince of Wales,' 1605. In this play occurs the following curious anticipation of a phrase well known in reference to Farinelli:—

England one God, one truth, one doctor hath
For Musicke's art, and that is Doctor Tye,
Admired for skill in musicke's harmony.

Antony Wood attributes to him the recovery of English church music after it had been almost ruined by the dissolution of the monasteries. [See SCHOOLS OF COMPOSITION, iii. 272b.] [W.H.H.]

TYLMAN SUSATO, printer and composer of music, was born at or near Cologne probably towards the end of the fifteenth century. His name is regularly written by himself in the

full form given above, although the spelling of the first part of it is extremely irregular.¹ A document referred to by Fétis² describes Susato as 'son of Tylman.' It is therefore only through an inexplicable forgetfulness of diplomatic usage that Fétis and others³ have taken Tylman for a surname.⁴ These writers have also accepted a conjecture of Dehn⁵ that 'Susato' indicated the place of the composer's birth, namely the town of Soest (*Susatum*): in one of his books, however, he expressly describes himself as 'Agrippinensis,'⁶ which can only refer to Cologne.⁷ Consequently we have to consider 'Susato' (or 'de Susato'—as it once occurs, in a document⁸ of 1543) as a family-name, 'van (or 'von') Soest,' doubtless originally derived from the Westphalian town. By the year 1529 Tylman is found settled at Antwerp, where he maintained himself by transcribing music for the chapel of the Virgin in the cathedral; in 1531 he is mentioned as taking part, as trumpeter, in the performance of certain masses there. He was also one of the five musicians supported by the city ('stads-speellieden'), and as such possessed, according to a list of 1532, two trumpets, a 'velt-trompet,' and a 'teneur-pipe.' Losing his post on the arrival of Philip II in 1549, he appears, for some unexplained reason, never to have been again employed by the city. Before this date however he had found another occupation as a printer of music. For a short time⁹ he worked in company with some friends; but from 1543 onwards he published on his own account, bringing out between that year and 1561 more than fifty volumes of music, nearly every one of which contains some compositions of his own. He died before 1564.¹⁰

Susato's first publication is entitled 'Premier Livre de Chansons à quatre Parties, au quel sont contenues trente et une nouvelles Chansons convenables tant à la Voix comme aux Instrumetz.' Eight of these pieces are by himself. The rest of his publications, so far as they are now extant, include (1) in French, sixteen books of 'Chansons' in 3-8 parts; (2) Madrigali e Canzoni francesi a 5 voci' (1558); (3) in Latin 3 books of 'Carmina,' 3 of Masses, one of 'Evangelia Dominicarum,' 15 of 'Ecclesiasticæ Cantiones' or motets (1553-1560), 'Motecta quinis vocibus, auctore Clemente non Papa'

¹ In works with Latin titles Susato writes himself in a great majority of cases *Tilmannus*; *Tielmannus*, *Tilmannus*, *Tylmannus*, and *Tilmannus*, occurring but rarely. In Flemish his favourite form seems to have been *Tielman*. In French *Tylman*, the spelling adapted by Fétis and Mendel is found most frequently; *Tielman*, which is preferred by M. Goovaerts is less usual; while *Tilman*, the spelling which is adopted by M. vander Straeten and is now practically the accepted one in the Netherlands, is met with only twice.

⁵ See his letter in Fétis, l. c.

⁶ Goovaerts, p. 191.

⁷ At the same time, M. Goovaerts notes (pp. 26, 27), we are not to confound Susato, as Fétis and Mendel have done, with a contemporary Thielman van Oulen, who was a brewer, and whose father's name was Adolf.

(1546), and 5 books of 'Cantiones sacrae quae vulgo Moteta vocant' [sic] (1546). Finally (4) in Dutch there are his three books of songs, etc., entitled 'Musyck boexken,' and one book (1561), apparently the second of a series of 'Sauter-Liedekens' (Psalter-ditties), which are of peculiar interest. The third of the Musyck boexken contains some dances by Susato himself, which are described¹¹ as 'full of character' and excellently written. The souterliedekens, which Ambros further¹² states to be found in four more Musyck-boexken, are pieces from the Psalms according to the rhymed Flemish version, set without change to the popular song-tunes of the day ('gemeyne bekende liedekens.'¹³) The charm however of these compositions lies less in the airs adapted in them than in the independence and originality of the part-writing, an art in which Susato was so proficient that some of his three-part songs are composed in such a manner as to be suitable, he states, equally for three and for two voices with omission of the bass. Susato appears also to have co-operated with Clemens non Papa in some of his work, and not to have been merely his publisher. Still it is as a publisher¹⁴ that Susato has hitherto been almost exclusively known, the masters whose works he printed being very numerous, and including such names as Créquillon, Gombert, Goudimel, O. de Lassus, P. de Manchicourt, J. Mouton, C. de Rore, A. Willaert, etc. [R.L.P.]

TYNDALL, JOHN, LL.D., F.R.S. It is unnecessary in this Dictionary to say more about this eminent natural philosopher and lecturer than that he was born about 1820 at Leighlin Bridge, near Carlow, Ireland, that to a very varied education and experience in his native country and in England he added a course of study under Bunsen at Marburg and Magnus at Berlin; that he succeeded Faraday as Superintendent of the Royal Institution, London, and was President of the British Association at Belfast in 1874. His investigations into subjects connected with music are contained in a book entitled 'Sound,' published in 1867, and now in its 4th edition (1884). (See *Times*, Oct. 23, 1884; p. 100.) [G.]

TYROLIENNE, a modified form of Ländler. [See vol. ii. p. 83.] The 'Tyrolienne' never had any distinctive existence as a dance; the name was first applied to Ballet music, supposed more or less accurately to represent the naïve dances of the Austrian or Bavarian peasants. In a similar manner it was adopted by the compilers of trivial school-room pieces, with whom it is as much a rule to print their title-pages in French as their marks of time and expression in Italian. The fashion for Tyrolean music in England was first set by the visit of the Rainer family, in

¹¹ Vander Straeten, v. 251, who says that these dances have been reprinted by Eitner in the *Monatshefte für Musikgeschichte*, Jahrg. vii. No. 6.

¹² *Geschichte der Musik*, iii. 313 (Breslau, 1868). These however are not mentioned by M. Goovaerts, whose general accuracy may lead one to suspect a mistake on Ambros' part.

¹³ Ambros, iii. 313.

¹⁴ His publications are rarely found in England, the British Museum only possessing one volume of masses.

May 1827, since when several similar performances have been heard from time to time. Most of these companies of peasant musicians come from the Ziller Thal, where the peculiar forms of Tyrolean music may still be heard better than anywhere else. The best-known example of an artificial 'Tyrolienne' is the well-known 'Chœur Tyrolien' in Act iii. of Rossini's 'Guillaume Tell,' the first strain of which is given below. For examples of the genuine Ländler we must refer the reader to Ritter v. Spaun's 'Oesterreichischen Volksweisen' (Vienna, 1845), M. V. Süss's 'Salzburger Volkslieder' (Salzburg, 1865), or Von Kobell's 'Schnadahüpfeln' (Munich, 1845).

A characteristic feature of the original form of Ländler as sung in Austrian and Bavarian Tyrol is the *Jodel*. This term is applied to the abrupt

but not inharmonious changes from the chest voice to the falsetto, which are such a well-known feature in the performances of Tyrolean singers. The practice is not easy to acquire, unless the voice has been accustomed to it from early youth: it also requires a powerful organ and considerable compass. Jodels form an impromptu adornment to the simple country melodies sung by the peasants; they are also used as ritornels or refrains at the end of each verse of the song. They are not sung to words, but merely vocalized, although passages resembling them in form are of frequent occurrence in Tyrolean melodies. Examples of these will be found below in a dance song from von Spaun's collection. Moscheles (Tyrolean Melodies, 1827) tried to note down some of the Jodels sung by the Rainer family, but the result was neither accurate nor successful.

[W.B.S.]

THOMASSCHULE. Since the notice under LEIPSI, vol. ii. p. 114 b, was compiled, the following changes are to be mentioned. In 1877 the school was removed from its old building in the Thomaskirchhof to a new one near the Plagwitzerstrasse in the western suburb of Leipzig. In 1879 Wilhelm Rust succeeded to the post of Cantor, which he still holds. A minute account of the history of the school and of its condition in the time of Kuhnau and Bach will be found in Spitta's 'Bach,' vol. ii., especially pp. 11-35 and 483-494: compare the documents printed in Anhang B, I-IX and XI. [R.L.P.]

TUDWAY. [See ante, p. 186 a.] 'A collection' of the most celebrated Services and Anthems used in the Church of England from the Reformation to the Restoration of K. Charles II., composed by the best masters and collected by Thomas Tudway, D.M., Musick Professor in the University of Cambridge.' In 6 volumes 4to (1715-1720). Copied for Lord Harley. (British Museum, Harleian MSS. 7337-7342.)

U.

UBERTI, GIULIO, poet, patriot, and teacher of declamation, born 1805. Together with his friends, Modena and Mazzini, by the power of the pen he succeeded in raising the youth of Italy to action against the tyranny of a foreign domination, and to the establishment of the national independence. His poems are noticed at length by Cesare Cantù in his History of Italian Literature. Born at Milan, he lived there the greater portion of his life engaged as a teacher of declamation. He numbered Malibran and Grisi amongst his pupils, and was the last of the masters of declamation who still preserved the old traditions of classical tragic acting. He died by his own hand in 1876, a patriot, but a republican to the end. [J.C.G.]

U. C. (Ital. *una corda*; Fr. *petite pédale*; Germ. *mit Verschiebung*). An indication of the use of the left pedal of the pianoforte, by means of which the action is shifted a little to the right, and the hammers made to strike a single string (in modern instruments generally two strings), instead of the three which are ordinarily struck. The return to the use of three strings is indicated by the letters *t. c.*, *tre corde*, *tutte le corde*, or sometimes *tutto il cembalo*. The shifting pedal, the invention of which dates from about the end of the 18th century, is an improvement on the earlier *Céleste* pedal (also called *Sourdine*) in which the sound was deadened by the interposition of a strip of leather, or other material, between the hammers and the strings. This arrangement, which is now used only in upright pianos, where from lack of space or from the oblique direction of the strings the shifting action would not be available, gives a dull, muffled sound, which in small instruments is often so weak as to be practically useless; the shifting pedal, on the contrary, produces a beautiful and delicate quality of tone, arising from the sympathetic vibrations of the unused strings, which is by no means the same thing as the ordinary *pianissimo*, but is of the greatest service in producing certain special effects. Beethoven uses it frequently, in the later Sonatas (from op. 101), and in the Andante of the G major Concerto, op. 58, the whole of which movement is to be played *a una corda*, except the long shake in the middle, in which Beethoven requires the gradual addition of the other strings, and afterwards the gradual return from three strings to one. His directions are '*due, e poi tre corde*,' and afterwards '*due, poi una corda*,' but it is not possible to carry them out strictly on the modern pianoforte, as the shifting action now only reduces to two strings instead of one.

In music for string instruments, the direction *a una corda* is occasionally given, to denote that the passage is to be played upon a single string, instead of passing from one string to the next, in order to avoid any break in the quality of tone produced. [See also PEDALS, SORDINI, VERSCHIEBUNG.] [F.T.]

UGALDE, DELPHINE, *née* Beaucé, was born on Dec. 3, 1829, at Paris or at Larne. She received instruction in singing from Madame Moreau-Sainti, and in 1848 made her *début* as Angela in 'Le Domino Noir' at the Opéra Comique where she became a great favourite. Her repertoire included Henriette in Auber's 'L'Am-bassadrice,' and characters in many new operas by A. Thomas, Halévy, Massé, etc. On June 12, 1851, she made her *début* at Her Majesty's Theatre, London, as Nesté on the production, in England, of Auber's 'L'Enfant Prodigue,' and during the season also played Corilla in Gnecco's 'La Prova,' but though favourably received, did not appear to her usual advantage. According to the 'Musical World,' June 14, 1851, she could 'execute passages with a facility rarely ever heard equalled or surpassed—she sings like a musician and a thorough artist, and in her acting betokens singular *esprit* and fine comic powers.' Chorley considered that 'with all her vocal cleverness and audacity, and a dash of true dramatic instinct here and there, she was always an unattractive singer. A want of refinement as distinct from accuracy or finish ran through all her performances; she was too conscious, too emphatic and too audacious; she came with great ambitions to make her first appearance as Semiramide with not one solitary requisite, save command over any given number of notes in a roulade.' In 1853 she retired for a time from the Opéra Comique, through loss of voice, and played at the Variétés, but returned Jan. 26, 1857, as Erès on the production of Psyche (Thomas). In 1859–60 she sang at the Lyrique as Suzanne ('Le Nozze'), and in 'La Fée Carabosse' (Massé) and 'Gil Blas' (Smet) on their production. She afterwards sang in opera bouffe, and, with her second husband Varcollier, for a short time undertook the management of the Bouffes Parisiens. She is now living in retirement. She also devoted herself to teaching, among her pupils being Madame Marie Sass; also her daughter.

MARGUERITE, who made a successful *début* in 1880 at the Opéra Comique, in 'La Fille du Régiment,' and played Nicklausse on the production of 'Contes d'Hoffman' (Offenbach), and was recently singing at the Nouveautés. [A.C.]

ULIBISCHEW. The German mode of spelling the name which the author himself spells OULIBICHEF. [Vol. ii. p. 616.] [G.]

ULRICH, HUGO, a composer of great ability, whose life was wasted owing to adverse circumstances, and probably also to want of strength of character. He was born Nov. 26, 1827, at Oppeln in Silesia, where his father was schoolmaster. By twelve he had lost both his parents, and was thrown helpless on the world. He then got into the Gymnasium or Convict at Breslau; in 1846 went to Glogau, and lastly to Berlin. From Mosewius, the excellent director of the University of Breslau, he had an introduc-

tion to A. B. Marx; but poor Ulrich had no money to pay the fees. With Meyerbeer's help, however, he became a pupil of Dehn's for two years, and then produced his op. 1, a PF. trio, followed by two symphonies, all of which excited much attention. The B minor Symphony (1852) went the round of Germany, and the Sinfonie Triomphale obtained the prize of 1500 francs from the Royal Academy of Brussels in 1853, and was very much performed and applauded. In 1855 he went off to Italy and lived for long in the various great towns, but was driven back by want of means to Berlin. He brought with him an opera, 'Bertrand de Born' (still in MS.). He taught for a short time in the Conservatoire, but teaching was distasteful to him; he had not the strength to struggle against fate, and after attempting a third symphony (in G), he appears to have broken down, or at least to have relinquished his old high standard, and to have betaken himself to pot-boilers of various kinds. Amongst these his arrangements of symphonies and other orchestral works are prominent, and of first-rate merit. His wretched life brought on a most painful nervous illness, which carried him off on March 23, 1872, and thus ended a life which in happier circumstances might have produced great results. He left a quartet, two overtures, a cello sonata, and various PF. works. [G.]

UMLAUF, IGNAZ, popular dramatic composer in his day, born 1756, in Vienna, where he died June 8, 1796. In 1772 he entered the orchestra of the Court Theatre as violin-player, in 1778 became Capellmeister of the German Singspiel, in 1789 deputy Capellmeister (with Salieri as chief) at the Court Theatre, and later was associated with Weigl in a similar manner at the Opera. His first opera, 'I Rovinati,' was composed to Italian words by Boccherini (Court Theatre, 1772). When the Emperor Joseph instituted the national Singspiel (for which Mozart composed the 'Entführung') he pitched upon Umlauf to start it, and his 'Bergknapen' was the first German Singspiel produced at the Burgtheater (Feb. 17, 1778). This was succeeded by 'Die Apotheke'; 'Die pucefarbenen Schuhe,' or 'Die schöne Schusterin' (long a favourite with the charming singer Mme. Weiss in the principal part) (1779); 'Das Irrlicht,' comic opera in 3 acts, with Mme. Lange; and 'Der Oberamtmann und die Soldaten' (after Calderon), a 5-act play with airs and serenade (1782); 'Die glücklichen Jäger,' and 'Der Ring der Liebe,' both Singspiele (1786). These operas are all distinguished by a pleasing style, a fine flow of melody, and plenty of striking tunes. Umlauf never left Vienna but once, and that was in 1790, when he went with Salieri and a part of the Court band to the Coronation of the Emperor Leopold II. at Frankfort.¹ A set of variations on the favourite air from 'Das Irrlicht,' 'Zu Steffan sprach in Traume,' composed for the celebrated bass-singer Fischer, was long attributed to Mozart, but they were really

¹ Mozart was there too, but in a private capacity, and at his own expense; he gave a concert, at which he played himself.

written by Eberl (see Köchel's 'Mozart Catalogue,' Appendix V. No. 288). Pianoforte scores appeared of 'Die schöne Schusterin' and 'Das Irrlicht,' while several of the airs from the other Singspiele were published singly or in arrangements. Umlauf's son

MICHAEL, born 1781 in Vienna, died June 20, 1842, at Baden, near Vienna, was violinist at the opera, in 1804 began to compose ballets, was Capellmeister of the two Court Theatres from 1810 to 1825, and engaged again in 1840. He is said to have been a clever musician, published PF. sonatas, etc., and composed a Singspiel, 'Der Grenadier' (Kärnthnerthor Theatre, 1812). His chief interest however is the important part he took in the performance of Beethoven's works. On these occasions they both acted as conductors, Umlauf standing by the side of, or behind, Beethoven; but it was his beat only which the orchestra followed, as Beethoven, either carried away by his impetuosity went too fast, as at the performance of Fidelio in 1814, or, owing to his deafness, lost the time altogether, as at concerts in 1814, 1819, and 1824. At the first two performances of the 9th Symphony in May 1824, Beethoven merely gave the tempo at the commencement of each movement, an arrangement which the programme announced in the following diplomatic terms, 'Herr Schuppanzigh will lead the orchestra, and Herr Capellmeister Umlauf conducts the whole performance. Herr L. v. Beethoven will take part in conducting the whole performance.' [C.F.P.]

UN ANNO ED UN GIORNO (i.e. 'A year and a day'). An opera buffa in one act, by Sir Julius Benedict. Produced at the Teatro Fondo, Naples, in 1836, for the *début* of F. Lablache and Mlle. Bordogni. It was repeated at Stuttgart in 1837. [G.]

UNDA MARIS (The sea-wave), a name for the undulating organ stop more generally known as VOIX CÉLESTE. [G.]

UNDINE. A cantata for solos, chorus, and orchestra; words by John Oxenford, music by Sir Julius Benedict, composed for and produced at the Norwich Festival, Sept. 1860. [G.]

UNEQUAL. 'Equal voices' is the term to denote that the voices in a composition are of one class—female voices, as sopranos and contraltos; or male voices, as altos, tenors, and basses. When the two classes are combined, as in an ordinary chorus, the term 'Unequal Voices' is used. [G.]

UNGER, CAROLINE, a great singer of the last generation, was born Oct. 28, 1805, at Stuhlweissenburg, near Pesth, where her father was master of the household (*Wirtschaftsrath*) to Baron Hakelberg. Unger was one of Schubert's friends, and recommended him to Count Johann Esterhazy in 1818, so that his daughter must have been brought up in the midst of music. She was trained by no meaner singers than Aloysia Lange, Mozart's sister-in-law, and Vogl, Schubert's friend and best interpreter,² and is

² Her own statement, in Nohl's 'Beethoven,' III. 466.

said to have made her *début* at Vienna, Feb. 24, 1821, in 'Così fan tutte.' Early in 1824 Sontag and she came into contact with Beethoven in studying the soprano and contralto parts of his Mass in D and Choral Symphony. No efforts or representations could induce the master to alter the extreme range of their parts. 'I remember once saying to him,' writes Unger, 'that he did not know how to write for voices, since my part in the Symphony had one note too high for my voice.' His answer was, 'Learn away, and the note will soon come.' On the day of performance, May 7, the note did come; the excitement of the audience was enormous, and it was then, at the close of the Symphony, that the happy idea occurred to Unger of turning the deaf Beethoven round to the room, in order that he might see the applause which he could not hear, and of which he was therefore unaware. After this she took an engagement from Barbaja in Italy, and sung there for many years, during which Donizetti wrote for her 'Parisina,' 'Belisario,' and 'Maria di Rudenz'; Bellini, 'La Straniera'; Mercadante, 'Le due illustre Rivali'; Pacini, 'Niobe,' etc., etc. In October 1833 she sang in Paris at the Théâtre Italien for one season only. It was perhaps on this occasion that Rossini is said to have spoken of her as possessing 'the ardour of the South, the energy of the North, brazen lungs, a silver voice, and a golden talent.' She then returned to Italy, but in 1840 married M. Sabatier, a Florentine gentleman, and retired from the stage. In 1869 she was in London, and at one of the Saturday Concerts at the Crystal Palace confirmed to the writer of this article the anecdote above related of her turning Beethoven round. Her dramatic ability and intelligence, says Fétis, were great; she was large, good-looking, and attractive; the lower and middle parts of her voice were broad and fine, but in her upper notes there was much harshness, especially when they were at all forced. She died at her villa of 'La Concezione,' near Florence, March 23, 1877. Mad. Regan Schimon was one of her principal pupils. [G.]

UNISON. Simultaneous occurrence of two sounds of the same pitch. Passages in octaves are sometimes marked *Unis.*, but this is not strictly correct. [C.H.H.P.]

UNITED STATES. The means and opportunities presented in the United States for musical study and improvement have been, within the past two decades, largely amplified and greatly strengthened. It is now possible for students to find institutions where nothing necessary for a thorough musical education is omitted from the curriculum. It is the purpose of this article to indicate the extent and importance of these means, without, however, attempting to name all of the establishments in the Union where the instruction is in the hands of competent professors, or which have been recognised as worthy of patronage.

I. At Harvard University, Cambridge, Massachusetts, music is an 'elective' study. The in-

struction, which is purely theoretical, embraces a course of three years. The degrees of Master of Arts and Doctor of Philosophy are conferred on worthy graduates. JOHN K. PAINE [vol. ii. p. 632] has been in charge of this department since 1862—at first instructor, raised to a full professorship in 1876. The Boston University, Boston, Massachusetts, includes a College of Music, established 1872, with a faculty of thirteen professors and instructors, EBEN TOURJÉE, dean [see p. 154]. Instruction is both theoretical and practical, and is carried to the point that admits of the bestowal of the degree of Bachelor of Music, after a three years' course. Both sexes are admitted to the College. At Boston are several private schools, liberally patronised, with pupils from all parts of the Union. The largest, the New England Conservatory of Music, established in 1867, is under the direction of Eben Tourjée. This school has a staff of instructors in every branch, numbering 90, and had in the year 1883-4, 1971 pupils, with a valuable library and other resources in full. The establishment also includes dormitories and dining-rooms for 400 girl pupils. Over 33,000 pupils have been registered here since the opening of the institution. The Boston Conservatory of Music, also established in 1867, is under the care of Julius Eichberg. It has for several years enjoyed a high reputation for the thoroughness of its violin school. At each establishment the class system is rigidly adhered to, and instruction, beginning at the rudiments, is carried to a high point in both theory and practice.

In the public schools of the city of Boston instruction in music forms a part of each day's exercises. The schools are divided into three grades, Primary, Grammar, and High. In the lowest grade the pupils, five to eight years of age, are taught the major scales as far as four sharps and four flats, to fill measures in rhythm, and the signs and characters in common use; the vocal exercises consist of songs in unison, taught by rote. This work is reviewed in the lower classes of the next grade, which include children from eight to eleven years, and instruction is continued by written exercises in transposition and vocal exercises in three- and four-part harmony. In the higher classes of the grammar schools—pupils of from eleven to fourteen years—the triads and their inversions are learned; the written exercises include transpositions of themes; and the vocal exercises consist of songs and chorales in four-part harmony, all of greater difficulty than those set before the lower classes. With very few exceptions the sexes are separated. When, as has sometimes happened, there have been found boys with tenor and bass voices, a wider range in the selection of exercises for practice and songs has been possible. Diplomas are awarded, on graduation, to all who reach a given standard at a written examination. Still greater advance is made in the High Schools, the graduates being from eighteen to nineteen years old. The exercises are increased in difficulty, and the lessons include some of the principles of

harmony. All of the instruction in the primary and grammar schools is given by the regular teachers, who visit the schools in rotation, under the supervision of the special instructor in music. The lessons are mostly oral, with the aid of blackboard and charts. Four grades of text-books, especially prepared for the schools, are used, named first, second, third and fourth readers, respectively; the first being used in the primary schools, and so on. There is also an advanced reader—a collection of three-part songs—used in the girls' high school. The system is the outgrowth of seventeen years' study and experience. The department is (1880) in the charge of a musical director, Julius Eichberg, who has also the special care of the high schools; and three special instructors, Joseph B. Shadand, Henry E. Holt and J. Munroe Mason, who divide the care of the grammar and primary schools. Director and Instructors are under the control of a committee on music, consisting of five members of the school committee, appointed annually. The entire school committee serve without pay. There is an annual election to fill vacancies occurring by the expiration of the three years' term of a third of the number. Since 1879 women have been allowed to vote at this election, and women have served on the school committee since 1875. Both of these privileges have been secured to women throughout the state, by general statutes. From the official returns for 1884, it appears that the number of public schools in the city of Boston was 171; of teachers, male and female, nearly 1400; of pupils 58,788; and that the annual cost of musical instruction was about 11,000 dollars for the special instructors employed. The system herein set forth has been adopted, with modifications according to governing circumstances, in many of the cities and large towns throughout the Union.

II. The Peabody Institute, Baltimore, Maryland, was founded in 1857, by George Peabody. In pursuance of the design of the founder 'to furnish that sort of instruction, under able teachers, in the theory and higher branches of music, for which there has heretofore been no provision, and which students have been obliged to seek abroad,' a Conservatory of Music was organised, in 1868, substantially on the plan of the European conservatories. Mr. Lucian H. Southard, an American musician, was its first principal. In 1871, Mr. Asger Hamerik, a young Danish composer, was invited to become its head, a position still retained by him (1884). The Conservatory has had an average of 120 students, both sexes being represented. The requisites for admission are a knowledge of the rudiments of musical theory, to which must be allied, in the case of singers a voice, susceptible of cultivation; and the ability to play certain studies of Plaidy and Czerny and the easier sonatas of Haydn and Mozart, in the case of piano-students. The course of instruction is adapted to a high degree of musical culture, both theoretical and practical. Diplomas are granted to students

who, after a three years' course, pass a satisfactory examination before the government of the Conservatory. The staff of instructors numbers six, including the director. The library of the Institute contains 65,000 volumes, about 1000 of which are scores belonging to the musical department. About 50 lectures, on literary, scientific and art topics, by the best lecturers whose services can be procured, are given yearly. The Institute is situated in a fine marble building, occupying an entire square in the centre of the city. The Peabody Concerts are given under the auspices of the Institute.

III. The College of Music, Cincinnati, Ohio, was incorporated in 1878. The business affairs of the college are administered by a directory, composed as follows in 1880:—George Ward Nichols, president; P. R. Neff, treasurer; J. Burnet, jun., secretary; J. Shillito and R. R. Springer. It is to Mr. Springer's munificent generosity that the city is largely indebted for the great Music Hall in which the college is held. Thirty-four professors of music and modern languages made up the faculty, and at their head was Theodore THOMAS. The terms for instruction are very low, and students enjoy many advantages. Class instruction is pursued in theory, vocalisation, chorus-singing, and ensemble-playing, but not, as a rule, in the orchestral branches. There is a college choir of 200 voices and an orchestra of 65 musicians. During its first season the college gave, under Mr. Thomas's direction, twelve Symphony concerts and twelve Chamber concerts, the programmes being invariably of the highest order. The Music Hall contains one of the largest organs in the world (96 registers, 6,237 pipes; built by Hook & Hastings, Boston), and on this there were given two recitals in each week. The college doors were first opened for pupils Oct. 14, 1878. The enterprise has met with a success far beyond the anticipations of its projectors. During the first season (1878-79) over 500 pupils were enrolled, both sexes and nearly every portion of North America being represented. Mr. Thomas resigned his position in 1880.

IV. At Farmington, Connecticut, is found Miss Sarah Porter's school for girls, established about thirty years ago, which for a quarter of a century has been noted for the good training of its musical students. These, numbering 50 to 70, have been in the charge of Karl Klauser, who has edited over a thousand classical piano compositions in a manner which has won for him a high reputation among teachers for the critical care displayed by him. Pupils here are permitted frequent opportunities of hearing the best musicians in classical chamber-concerts.

V. Vassar College, Poughkeepsie, New York, for girls, was established in 1865. There are generally from 125 to 150 pupils enrolled. The musical department has been, since 1867, under the charge of Frederic Louis Ritter. Eight to ten concerts of classic music are given yearly. Wells College, Aurora, New York, for girls, was incorporated in 1868. During the academic

year 1878-79, the classes in music included 45 pupils, under the charge of Max Piutti. The Syracuse University, Syracuse, New York, for both sexes, was established in 1871; the musical department was formed in 1877. William Schultze is in charge of this department. The pupils numbered 127 in 1879, about five-sixths of whom were girls. The degree of Bachelor of Music is conferred on deserving graduates. Oberlin College, Oberlin, Ohio, has a Conservatory of Music. The College was established in 1834, the Conservatory was opened in 1865. Fenelon B. Rice is its musical director. The Conservatory is modelled, as nearly as practicable, on that at Leipzig. The average number of students at the College during the decade 1871-80, has been 120, some two-thirds of whom have entered the Conservatory, about 30 per cent of the latter being boys.

VI. As already intimated, it is not possible to name all of the reputable institutions, public or private, in the United States, where music is taught by trained and competent instructors. Neither has it been possible to do more than suggest the fullness of the means which, in each instance cited, are at the command of students, such as libraries, lectures and concerts. In addition to the collections of treatises and scores which are found at each of the institutions named, there exist several large and carefully made up libraries, which, being generally of a public or *quasi*-public character, present another means of education. At Boston there is the Public Library, open to every inhabitant of the city, without distinction, in which is a collection of rare text-books and scores. The library of the Harvard Musical Association is also of great value. At the library of Harvard University, and at the Astor Library, New York, collections of musical literature and works have been begun. The private library of Joseph W. Drexel, of New York, noted as the richest in the Union in old and rare musical works, will eventually form a part of the Lenox Library of that city.

A feature peculiar to the United States should also be noted—'Normal Musical Institutes,' held in the summer, at some seaside or mountain watering-place, by leading professors, for the purpose of giving advanced instruction to students who intend to fit themselves for teaching. Once a year, also in the summer, there is held at a place previously agreed upon, a meeting of music teachers from all parts of the Union, under the name 'The National Music Teachers' Association,' whereat matters of interest to the profession are discussed, and lectures delivered. From this has sprung (1884) an institution, The American College of Musicians, the purpose of which is to examine musicians who desire to become teachers, and to grant graded certificates of ability. The hope of the projectors is that by this means the standard of capacity among music teachers will be raised and maintained. [F.H.J.]

UNIVERSITY MUSICAL SOCIETIES. Of these there are four in the British Isles requiring notice.

I. CAMBRIDGE. The Cambridge University Musical Society (C.U.M.S.) was founded as the 'Peterhouse Musical Society,' in Peterhouse (now modernised into 'St. Peter's College') by a little body of amateurs in Michaelmas Term 1843. The earliest record which it possesses is the programme of a concert given at the Red Lion in Petty Cury on Friday, Dec. 8:—

PART I.

Symphony	No. 1.	Haydn.
Glee	'Ye breezes softly blowing'.	Mozart.
Solo Flute	Portuguese air with Variations.	Nicholson.
Song	'In native worth' (Creation).	Haydn.
Overture	Masaniello.	Auber.

PART II.

Overture	Semiramide.	Bozzini.
Ballad	'As down in the sunless retreats'.	Dikes.
Walzer	Elisabethen.	Strauss.
Song	'Fra poco a me.'	Donizetti.
Quadrille	Royal Irish.	Jullien.

In its early days the Society was mainly devoted to the practice of instrumental music, the few glees and songs introduced being of secondary interest. The Peterhouse Society had been in existence for about eighteen months, and had held eleven 'Public Performance Meetings,' when the name was changed to that of the Cambridge University Musical Society. The first concert given by the newly-named Society was held on May 1, 1844; it included Haydn's 'Surprise' Symphony, and 'Mr. Dykes of St. Catharine's College' sang John Parry's 'Nice young man' and (for an encore) the same composer's 'Berlin wool.' The Mr. Dykes who thus distinguished himself was afterwards well known as the Rev. J. B. Dykes, the composer of some of the best of modern hymn-tunes. There is not much variation in the programmes during the early years of the Society's existence. Two or three overtures, an occasional symphony or PF. trio, with songs and glees, formed the staple, but very little attention was given to choral works. The conductors were usually the Presidents of the Society. In 1846 Dr. Walmisley's name frequently appears, as in his charming trio for three trebles, 'The Mermaids,' and a duet concertante for piano and oboe. In 1850 the Dublin University Musical Society, having passed a resolution admitting the members of the C.U.M.S. as honorary members, the compliment was returned in a similar way, and the Cambridge Society subsequently entered into negotiations with the Oxford and Edinburgh University Musical Societies, by which the members of the different bodies received mutual recognition. In Dec. 1852 professional conductors began to be engaged. One of the earliest of these (Mr. Amps) turned his attention to the practice of choral works. The result was shown in the performance of a short selection from Mendelssohn's 'Elijah' (on March 15, 1853), 'Antigone' music (May 28, 1855), and 'Œdipus' (May 26, 1857), when Dr. Donaldson read his translation of the play. On the election of Sterndale Bennett to the professorial chair of Music, he undertook whenever time would allow to conduct one concert a year. In fulfilment of this promise, on Nov. 17, 1856, he conducted a concert and played his own Quintet for piano

and wind, the quartet being all professionals. In the next few years the Society made steady progress, the most notable performances being Mozart's Requiem; Bach's Concerto for 3 PF.s; Beethoven's 'Ruins of Athens'; the 'Antigone' again; a selection from Gluck's 'Iphigenia in Aulis'; Beethoven's Mass in C and Choral Fantasia; and a concert in memory of Spohr (Dec. 7, 1859).

In 1860 the Society gave its first chamber concert (Feb. 21). In the following year the Society gave a performance of the 'Œdipus' in the Hall of King's College, the dialogue being read by the Public Orator, the Rev. W. G. Clark. At a subsequent performance of the 'Antigone' in the Hall of Caius College (May 20, 1861) the verses were read by the Rev. Charles Kingsley. On March 9, 1862, the name of Schumann occurs for the first time to the beautiful Andante and Variations for two pianofortes (op. 46). In the following year the Society produced for the first time in England the same composer's Pianoforte Concerto (op. 54), played by Mr. J. R. Lunn. Other achievements worth mentioning were the performance in 1863 of the Finale to Act I. of 'Tannhäuser,' of Schumann's Adagio and Allegro (op. 70) for PF. and horn, his Fest-overture (op. 123, first time in England), and of the march and chorus from 'Tannhäuser.'

The concerts of the next nine years continued to keep up the previous reputation of the Society, and many standard works were during this period added to the repertory.

In 1870 Mr. Charles Villiers Stanford (then an undergraduate at Queen's) made his first appearance at a concert on Nov. 30, when he played a *Nachtstück* of Schumann's, and a Waltz of Heller's. In 1873 he succeeded Dr. Hopkins as conductor, and one of his first steps was to admit ladies to the chorus as associates. This was effected by amalgamating the C.U.M.S. with the Fitzwilliam Musical Society, a body which had existed since 1858. The first concert in which the newly-formed chorus took part was given on May 27, 1873, when Sterndale Bennett conducted 'The May Queen,' and the 'Tannhäuser' march and chorus was repeated. In the following year the Society performed Schumann's 'Paradise and the Peri' (June 3, 1874), and on May 2, 1875, his music to 'Faust' (Part III) for the first time in England. The custom of engaging an orchestra, consisting mainly of London professionals, now began, and enabled the C.U.M.S. to perform larger works than before. The number of concerts had gradually been diminished, and the whole efforts of the chorus were devoted to the practice of important compositions. By this means the Society has acquired a reputation as a pioneer amongst English musical societies, and within the last few years has produced many new and important compositions, besides reviving works which, like Handel's 'Semele' and 'Hercules,' or Purcell's 'Yorkshire Feast Song,' had fallen into undeserved oblivion. A glance at the summary of compositions performed, at the end of this article, will show the good work which it is doing for music in England.

In 1876 a series of Wednesday Popular Concerts was started, and has been continued without intermission in every Michaelmas and Lent Term to the present time. These are given in the small room of the Guildhall, and generally consist of one or two instrumental quartets or trios, one instrumental solo, and two or three songs. The performers consist of both amateur and professional instrumentalists. More important chamber concerts are also given in the Lent and Easter Terms; and to these, Professor Joachim—an honorary member of the Society—has often given his services. The Society, as at present (Nov. 1884) constituted, consists of a patron (the Duke of Devonshire), 16 vice-patrons, a president (the Rev. A. Austen Leigh), three vice-presidents, secretary, treasurer, librarian, committee of eight members, ladies' committee of six associates, conductor (Dr. C. V. Stanford), 280 performing, 130 non-performing members and associates, and 20 honorary members. The subscription is 21s. a year, or 10s. a term. Besides the popular concerts once a week in Michaelmas and Lent Terms, there is usually a choral concert every Term, and in Lent and Easter Terms a chamber concert of importance, and choral and instrumental practices once a week.

The following is a list of the most important works produced and performed by the C.U.M.S. Numerous overtures and symphonies and much chamber music, by Haydn, Mozart, Beethoven, Schubert, Brahms, Bennett, etc., have been omitted for want of space. The works marked with an asterisk were performed by the Society for the first time in England.

Astorga. Stabat Mater.	Muscle to Œdipus; Psalm XLII, Psalm CXV; 'To the Sons of Art'; Lauda Sion; Violin Concerto; Walpurgis Night; St. Paul.
Bach, C. P. E. Symphony, No. I.	Mozart. Jupiter Symphony; Requiem; Mass, No. I; Mass, No. XII; *Minuets for 2 Violins and Violoncello.
Bach, J. S. Concerto for 3 Pianos; Concerto for 2 Pianos; Suite for Orchestra, B minor; 'My spirit was in heaviness'; Violin Concerto; 'Now shall the Grace'; *Halt im Gedächtnis.	Palestrina. Hodie Christus; Selection. Missa Papae Marcelli.
Beethoven. Ruins of Athens; Mass in C; Choral Fantasia; Meerestille und glückliche Fahrt; Choral Symphony.	Parry, C. H. H. Scenes from Prometheus Unbound; *Symphony in F; PF. Trio in E ml.; PF. Quartet in A minor.
Bennett. Exhibition Ode; The May Queen; The Woman of Samaria.	Purcell. Yorkshire Feast Song.
Brahms. Requiem; Song of Destiny; *Symphony, No. I; Liebeslieder; *Rhapsodie, op. 63; Es ist das Heil; Concerto, Violin, op. 77; Tragic Overture, op. 81.	Romberg. Lay of the Bell.
Cherubini. *Marche Religieuse.	Schumann. Andante and Variations, op. 46; *PF. Concerto, op. 54; Adagio and Allegro, op. 70; *Fest Overture, op. 123; Paradise and the Peri; *Faust (Part III); The Pilgrimage of the Rose.
Garrett. *The Triumph of Love; *The Shunammite.	Spohr. Selection from The Last Judgment; Selection from Calvary; 'God Thou art great.'
Gluck. Selection from Iphigenia in Aulis.	Stanford. *Pianoforte Concerto; *Trio, Piano and Strings; *Resurrection Hymn; *Sonata, Piano and Violin; *Psalm xvi; *Elegiac Symphony; 'Awake, my heart.'
Goetz. *Sonata for Piano (4 hands); *Nenia; *PF. Sonata, 4 hands.	Steggall. *Festival Anthem.
Handel. Selection from The Messiah; Ode on St. Cecilia's Day; Dettingen Te Deum; Selection from Samson; Funeral Anthem; Coronation Do.; Selection from Alexander's Feast; Acta and Galatea; Semele; Israel in Egypt; Hercules; Concerto G minor.	Stewart. *Echo and the Lovers.
Haydn. Mass, No. I.	Volkmann. *Serenade for Strings, op. 63.
Joachim. *Elegiac Overture; Theme and Variations for Violin and Orchestra.	Wagner. Finale, Act I of Tannhäuser; March and Chorus, Do.; Kaiser-Marsch; Prelude to Die Meistersinger; Siegfried-Idyll.
Kiel. *Requiem.	Walmisley. *Trio, 'The Mermaids'; *Duet - Concertante, Oboe and Flute.
Leo. *Dixit Dominus.	
Mendelssohn. Selection from Elijah; Music to Antigone;	

II. OXFORD.—At the close of the last and the beginning of the present century, Oxford concerts were probably superior to any in England outside London. A performance was given once a week in Term-time, and the programmes in the Bodleian show that at least one symphony or concerto was played at each. But the old Oxford Musical Society disappeared, and the societies now existing are of comparatively recent date. There has been no Choral Society on a large scale confined to members of the University since the disappearance of the 'Männergesangverein' some seven years ago; but there are two important societies largely attended by members of the University, the Oxford Choral Society and the Oxford Philharmonic Society. The former was founded in 1819, but in its present shape may be said to date from 1869, when the late Mr. Allchin, Mus. B., St. John's, became conductor, a post which he held till the end of 1881. Under his direction the Society became exceedingly prosperous, and the following works, besides the usual *répertoire* of Choral Societies, were performed:—'Israel in Egypt,' the 'Reformation Symphony,' Schumann's 'Pilgrimage of the Rose,' and Wagner's 'Siegfried-Idyll.' The following English compositions were performed by it in Oxford almost as soon as they were brought out:—Barnett's 'Ancient Mariner,' Macfarren's 'St. John the Baptist' and 'Joseph,' Stainer's 'Daughter of Jairus,' and Sullivan's 'Martyr of Antioch.' Mr. Allchin was succeeded as conductor by Mr. Walter Parratt, Mus. B., organist of Magdalen, and on his departure from Oxford in 1882, Mr. C. H. Lloyd, M.A., Mus. B., organist of Christ Church, assumed the bâton. Amongst the most notable works given under their direction may be mentioned Schubert's B minor Symphony, Gounod's 'Redemption,' and Parry's 'Prometheus Unbound.' The president of the Society is Dr. Stainer, who was also the founder of the Philharmonic Society in 1865. He, however, conducted only one concert, and in October 1866 Mr. James Taylor, organist of New College, Mus. B. (1873), and organist of the University (1872), accepted the post of conductor, which he has held ever since. The compositions performed under his direction include the following:—Bach's 'God's time is the best,' Beethoven's Eb Concerto and Choral Fantasia, Cherubini's Requiem in C minor, Schubert's 'Song of Miriam,' Spohr's 'Fall of Babylon,' Schumann's 'Paradise and the Peri,' Bennett's 'Woman of Samaria,' Benedict's 'St. Peter,' and Ouseley's 'Hagar.'

The attempt to establish Symphony Concerts in Oxford has so far proved a failure, but the Orchestral Association, which meets weekly under Mr. C. H. Lloyd's direction, boasts about fifty members, many of them belonging to the University. Chamber music owns two strictly academic associations. The older of these, the University Musical Club, originated in the gatherings of some musical friends in the rooms of the present Choragus of the University, Dr. Hubert Parry, during his undergraduate days. After him, Mr. C. H. Lloyd, then a Scholar of what is now

Hertford College, took up the meetings, and in 1871 they developed into a public institution. The number of members rose rapidly, reaching as high as 138 in 1880. In the following year the Club, then under the presidency of Mr. Franklin Harvey, M.A., of Magdalen, celebrated its tenth year by a great *réunion* of past and present members. During the last few years the tendency of the Club has been to give good performances of chamber music by professional players, and it occurred to some, including the writer of this notice, that it would be desirable to establish an association for the development of amateur playing. The scheme was floated in the summer of 1884, and the 'University Musical Union' met with a success far exceeding its promoters' hopes. Over a hundred members were speedily enrolled, and regular professional instruction in quartet-playing, etc., has been provided every week, so that any amateur player who will work may, during residence, make himself conversant with a large amount of chamber music.

No account of University music in Oxford can be considered complete without some notice of the College concerts. The first college that ventured on the experiment of replacing a miscellaneous programme of part-songs, etc., with a complete cantata was Queen's. In 1873 Bennett's 'May Queen' was given in the College Hall, with a band, and since then the following works have been performed with orchestra:—Barnett's 'Ancient Mariner,' Bennett's 'Ajax' music; Macfarren's 'May Day,' and 'Outward Bound,' Gade's 'Crusaders,' Mendelssohn's 'Walpurgis Nacht,' Handel's 'Acis and Galatea,' Gadsby's 'Lord of the Isles,' Schumann's 'Luck of Edenhall,' Alice Mary Smith's 'Ode to the North-East Wind,' and 'Song of the Little Baltung,' Haydn's Surprise Symphony, Mozart's Eb Symphony, and Bennett's F minor Concerto. For its 1885 concert the Society has commissioned its conductor, Dr. Iliffe, organist of St. John's College, to compose a new work, which will be called 'Lara.' For some years Queen's College stood alone in the high standard of its programmes, but of late its example has been extensively followed, and the following complete works were given in the Summer Term of 1884. Gade's 'Comala' at Worcester, and his 'Psyche' (with small band) at Keble; Barnett's 'Ancient Mariner' at New, and his 'Paradise and the Peri' (with band) at Merton; and Macfarren's 'May Day' at Exeter.

To sum up, we have in Oxford every year four concerts of the highest class, two given by the Philharmonic, and two by the Choral; we have two concerts of chamber music every week in each Term; any instrumental player has a weekly chance of practising both orchestral and chamber music, and at least six colleges may be depended on to perform a cantata of considerable dimensions every year. The following works will be heard in Oxford with orchestra during the early part of 1885:—Beethoven's 'Mount of Olives,' Stainer's 'St. Mary Magdalen,' Mozart's 'Twelfth Mass' (so called), Mendelssohn's 114th Psalm and Reformation Symphony, Spohr's 'Christian's Prayer,

Lloyd's 'Hero and Leander,' Handel's 'Alexander's Feast' and 'Acis and Galatea,' Goring Thomas's 'Sun Worshipers,' Mackenzie's 'Bride,' Gade's 'Erl King's Daughter,' and Iliffe's 'Lara.' There will also be performances of three other works, but the details are not yet (Nov. 1884) settled. [J.H.M.]

III. EDINBURGH.—The germ of the first students' musical society established in Scotland is traceable to a 'University Amateur Concert' of February 1867, 'given by the Committee of Edinburgh University Athletic Club, the performers consisting of members of the University, assisted by the Professor of Music, by amateurs of the Senatus Academicus, and by members of St. Cecilia Instrumental Society.' The following winter the Association was organised, and in 1868, 1869, and 1870 concerts were held. An arrangement having been made for elementary instruction to members deficient in previous training, the society was recognised as a University institution by an annual grant of £10 from the Senatus. But its numerical strength was weak, and at a committee meeting in Nov. 1870 it was resolved 'to let the society, so far as active work was concerned, fall into abeyance for the session of 1870-71, in consideration of the difficulty in carrying on the work from want of encouragement from the students.' In the winter of 1871 the present Professor of Music, warmly supported by some of his colleagues, was able to get the matter more under his control, and he was elected president and honorary conductor. Amongst reforms introduced were the use of his classroom and of a pianoforte for the practisings, and the drawing up and printing of a code of rules and list of office-bearers. The latter consists of a president, vice-presidents, including the principal and some half dozen professors, honorary vice-presidents, a committee of some ten students, with honorary secretary and treasurer, and with choirmaster. Subsequently the Duke of Edinburgh complied with the request of the president that His Royal Highness should become patron.—The main object of the Society, as stated in the rules, 'is the encouragement and promotion amongst students of the practical study of choral music.' After the reorganisation of 1871 considerable impetus was given to the matter, and the annual concert of 1872 evinced marked advance and higher aim. Besides a stronger chorus, a very fair orchestra of professors and amateurs, with A. C. Mackenzie as leader, played Mozart's G minor Symphony, some overtures, and the accompaniments; and the president and conductor was presented by his society with a silver-mounted *bâton*. Recent years have brought increased success, both as to annual concerts and as to numbers, which in five years rose from 64 to 236, the average number being some 200. The twelve concerts annually given since 1872 have been very popular, and on the whole well supported. Although the annual subscription is only 5s., and expenses are considerable, in 1883 the balance in hand was about £200, enabling the society not only to

present to the Senatus a portrait of the president, but also to subscribe £50 towards the expenses of an extra concert given during the tercentenary of the University in 1884, and a large collection of music for men's voices, with orchestral accompaniment specially scored, for much of it has been acquired out of the yearly balances in hand. A gratifying outcome of this new feature in Scottish student-life is that each of the other Universities of Scotland have followed the example of Edinburgh—Aberdeen, St. Andrew's, and Glasgow, each possessing a musical society giving a very creditable annual concert. The formation of such a student-chorus, East and West, North and South, cannot fail to raise choral taste amongst the most educated portion of the male population of Scotland, and to afford, as in the days of Queen Elizabeth, opportunity of taking part in most enjoyable artistic recreation. And by no means the least part of the value of University musical societies is that their associations tend through life to foster and cement students' regard for their 'Alma Mater.' [H.S.O.]

IV. DUBLIN.—The University of Dublin Choral Society, like many other similar Societies, originated with a few lovers of music among the students of the College, who met weekly in the chambers of one of their number¹ for the practice of part-singing. They then obtained permission to meet in the evening in the College Dining Hall, where an audience of their friends was occasionally assembled. These proceedings excited considerable interest, and in November 1837 the Society was formally founded as the 'University Choral Society,' a title to which the words 'of Dublin' were afterwards added, when the rights of membership were extended to graduates of Oxford and Cambridge. [See TRINITY COLLEGE, DUBLIN.]

In 1837 the amount of printed music available for the use of a vocal association was small. The cheap editions of Oratorios, Masses, and Cantatas were not commenced until nine years later, and it was not until 1842 that the publication of Mr. Hullah's Part Music supplied choral societies with compositions by the best masters. The Society therefore for some time confined its studies to some of Handel's best-known works, such as 'Messiah,' 'Israel in Egypt,' 'Judas Maccabæus,' 'Jephthah,' 'Samson,' 'Acis and Galatea,' and 'Alexander's Feast,' Haydn's 'Creation' and 'Seasons,' Romberg's 'Lay of the Bell,' and the music to 'Macbeth' and the 'Tempest.' In 1845, however, an important advance was made by the performance, on May 23, of Mendelssohn's music to 'Antigone,' which had been produced at Covent Garden Theatre in the preceding January, and from that time forward the Society has been remarkable for bringing before its members and friends every work of merit within its powers of performance.

The following list shows the larger works (many of them frequently repeated) which, in addition to those mentioned above, have been performed at the Society's concerts:—

¹ Mr. Hercules H. G. Mac Donnell.

Bach. Passion (St. John); Magnificat.	Macfarren. The Sleeper Awakened; John the Baptist.
Balfe. Mazeppa.	Mendelssohn. St. Paul; Lauda
Beethoven. Mass in G; Mount of Olives; Ruins of Athens; King Stephen.	Ston; Athalia; Christus; The First Walpurgis-Night; Loreley.
Carissimi. Jonah.	Monk. The Bard.
Cherubini. Requiem Mass.	Mozart. Requiem.
Costa. Eli.	Roosini. Stabat Mater.
Cowen. The Corsair.	Smart. The Bride of Dunkerron.
Gade. The Erl-King's Daughter; Spring's Message; Psyche; The Crusaders.	Spohr. Last Judgment; Psalm 84.
Gadsby. The Lord of the Isles; Alice Brand.	Stewart. A Winter Night's Wake; The Eve of St John (both written for the Society).
Gollmick. The Hair of Linna.	Sullivan. Martyr of Antioch; Te Deum; On Shore and Sea.
Handel. Saul; Joshua; Esther; Theodora; The Dettingen Te Deum.	Van Bree. St. Cecilia's Day.
Hiller. Lorelei.	Verdi. Requiem Mass.
	Weber. Jubilee Cantata; Music in Preciosa; Liebe und Natur.

Several large selections from operas containing a choral element have been given, as Mozart's 'Idomeneo,' 'Zauberflöte,' and 'Don Giovanni'; Weber's 'Der Freischütz' and 'Oberon,' etc.

For many years the old-fashioned regulations compelled the Society to employ only the choristers of the Cathedral for the treble parts in the chorus, and on occasions where boys' voices were inadequate, to give its concerts outside the college walls; but in 1870 permission was granted to admit ladies as associates, and since that time they have taken part in the concerts of the Society.

About the year 1839 the Church Music Society, of which Mr. J. Rambaut was conductor, was founded in Trinity College. It appears to have restricted itself to the practice of psalmody, and to have had but a brief existence. [G.A.C.]

UPHAM, J. BAXTER, M.D., a citizen of Boston, U.S.A., where he has for long occupied a prominent position in the musical life of the city. He was for nearly thirty consecutive years (1855-1884) president of the Music Hall Association, and it was largely through his personal exertions that the great organ, built by Walcker of Ludwigsburg, was procured for the hall. Before concluding the contract for the organ, Dr. Upham consulted the most notable builders in Europe, as well as with organists and scientific authorities, and personally inspected the most famous organs in the Old World, with the view of securing an instrument that should be in all respects a masterpiece.¹ For 10 years (1860 to 1870) Dr. Upham was president of the Handel and Haydn Society, and it fell to him to prepare and deliver the historical sketch of the society at its bicentenary festival in May, 1865. For 15 years (1857-1872) he officiated as chairman of the Committee on Music in the public schools of the city, and through his active supervision the system of music-training in Boston acquired much of its thoroughness. [See UNITED STATES.] [F.H.J.]

UPRIGHT GRAND PIANO. A transposition of the ordinary long grand piano to a vertical position, so that it might stand against a wall. The upright piano was derived from the upright harpsichord, and like it, its introduction was nearly contemporaneous with the horizontal

instrument. The upright harpsichord (Fr. *Clavecin Vertical*) is figured in Virdung's 'Musica getutscht,' etc., A.D. 1511, as the 'Claviciterium,' but, like all Virdung's woodcuts of keyboard instruments, is reversed, the treble being at the wrong end. He does not figure or describe the Arpichordium, but we know that the long horizontal instrument was in use at that time, and constructive features are in favour of its priority. Upright harpsichords are now rarely to be met with. One decorated with paintings was shown in the special Loan Exhibition of ancient Musical Instruments at South Kensington in 1872, contributed by M. Laconi of Paris. Another, in a fine Renaissance outer case, was seen in 1883 at Christie's, on the occasion of the Duke of Hamilton's sale. The museums of the Conservatoire at Brussels, and of Signor Kraus, Florence, contain specimens. There is also an upright grand piano at Brussels, the oldest yet met with. It was made by Frederici of Gera, in Saxony, in 1745. This was the very time when Silbermann was successfully reproducing the Florentine Cristofori's pianofortes at Dresden, which were horizontal grand pianos. [See PIANOFORTE; CRISTOFORI; and SILBERMANN.] Frederici, however, made no use of Cristofori's action. Neither did he avail himself of a model of Schroeter's, said to be at that time known in Saxony. M. Victor Mahillon, who discovered the Frederici instrument and transferred it to the Museum he so ably directs, derives the action from the German striking clocks, and with good reasons. Frederici is also credited with the invention of the square piano, an adaptation of the clavichord.

The earliest mention of an upright grand piano in Messrs. Broadwoods' books occurs in 1789, when one 'in a cabinet case' was sold. It was, however, by another maker. The first upright grand piano made and sent out by this firm was to the same customer, in 1799. Some years before, in 1795, William Stodart had patented an upright grand pianoforte with a new mechanism, in the form of a bookcase. He gained a considerable reputation by, and sale for, this instrument. Hawkins's invention in 1800 of the modern upright piano descending to the floor, carried on, modified, and improved by Southwell, Wornum, the Broadwoods and others, in a few years superseded the cumbrous vertical grand piano. [A.J.H.]

URBANI. [See VALENTINI.]

URHAN, CHRÉTIEN, born Feb. 16, 1790, at Montjoie, near Aix-la-Chapelle, was the son of a violinist. He early showed great taste for music, and while still untaught began to compose for his two favourite instruments, the violin and piano. The Empress Josephine happening to hear him at Aix-la-Chapelle, was so struck with his precocious talent that she brought him to Paris, and specially recommended him to Lesueur. The composer of 'Les Bardes' was then at the height of his popularity both with the public and the Court, and his countenance was of as much service to Urhan as his lessons in composition. Urhan entered the orchestra of the

¹ The organ was sold and taken down in the summer of 1884, and stored awaiting the erection of a new concert hall, for which it was bought.

Opéra in 1816, was promoted first to a place among the first violins, and finally, on Baillot's retirement (1831), to that of first violin-solo. As a concert-player he made his mark as one of the foremost violinists of the day with Mayseder's brilliant compositions, which he was the first to introduce in Paris. He was frequently heard at the Concerts du Conservatoire, of which he was one of the originators, and where his performances on the viola and the viol d'amour excited great attention. He also contributed to the success of the memorable evenings for chamber-music founded by Baillot, and of Fétis's Concerts historiques. Urhan had studied all instruments played with the bow, and could play the violin with four strings, the five- and four-stringed viola, and the viol d'amour, in each case preserving the characteristic quality of tone. He had a particular method of tuning, by which he produced varied and striking effects of tone. Charmed with his talent and originality, and anxious to turn to account his power of bowing and knowledge of effect, Meyerbeer wrote for him the famous viol d'amour solo in the accompaniment to the tenor air in the 1st act of the 'Huguenots.'

Short in stature, and with no personal attractions, Urhan dressed like a clergyman, and was looked upon, not without reason, as an eccentric; but his religion was untainted by bigotry, and he was kind and charitable. He pushed his asceticism so far as to take but one meal a day, often of bread and radishes; and during the 30 years he sat in the orchestra of the Opéra, either from religious scruples, or fear of being shocked at the attitudes of the *ballerine*, he never once glanced at the stage. As a composer he aimed at combining new forms with simplicity of ideas. He left 2 string quartets; 2 quintets for 3 violas, cello, double-bass, and drums *ad lib.*; PF. pieces for 2 and 4 hands; and melodies for 1 and 2 voices, including a romance on two notes only, all published by Richault, and now almost unprocurable. Urhan styled all his music 'romantic.' He died after a long and painful illness at Belleville (Paris), Nov. 2, 1845. Urhan was godfather to Jules Stockhausen the singer. [G.C.]

URIO, FRANCESCO ANTONIO, a Milanese composer of the 17th and 18th centuries. The title of his first¹ published work, of which there is a copy in the Library of the Liceo Musicale of Bologna, is as follows:—

Motetti di Concerto a due, tre e quattro voci, con violini, e senza. Opera prima. Composti e Dedicati all' Eminentissimo e Reverendissimo Principe Il signor Cardinale Pietro Ottoboni . . . da Francesco Antonio Urrio da Milano Minore Conventuale, Maestro di Cappella nell' Insigne Basilica de' Santi Dodici Apostoli di Roma. In Roma MDCXC nella Stamperia di Gio. Giacomo Komarek, Boemo, etc.

Between this date and that of his second work—also contained in the same Library—he had migrated from Rome to Venice, and was chapel-master of the church of the Frari.

¹ I am indebted for this fact, unknown to Fétis, to the kindness of the Cavaliere Castellani, Chief Librarian to the Biblioteca della R. Università, at Bologna.

Salmi concertati a' tre voci con Violini à beneplacito del Padre Francesco Antonio Urrio Maestro di Cappella nella Chiesa dei Frari di Venetia. Opera Seconda dedicata all' Eccellenza del signor Don Filippo Antonio Spinola Colonna, Duca del Testò, Gentiluomo della Camera di S. M. Cattolica, suo Generale della Cavalleria nello Stato di Milano, e Castellano del Castel Nuovo di Napoli, etc. In Bologna per Martino Silvani 1697, etc.

M. Arthur Pougin, in his Supplement to Fétis's Biographie, states that Urrio wrote a Cantata di camera (1696), and two oratorios, 'Sansone' (1701) and 'Maddalena convertita' (1706) for Ferdinand de' Medici, Prince of Tuscany; but neither the authority for the statement nor the place where the works are to be found can now be ascertained. A 'Tantum ergo' for soprano solo and figured bass is in the library of the Royal College of Music, London, No. 1744. Urrio's most important known work, however, is a Te Deum for voices and orchestra, which owes its interest to us, not only for its own merits, which are considerable, but because Handel used it largely,² taking, as his custom was, themes and passages from it, principally for his Dettingen Te Deum (10 numbers), and also for 'Saul' (6 numbers), 'Israel in Egypt' (1 ditto), and 'L'Allegro' (1 ditto).

Of this work three MSS. are known to be in existence. (1) In the Library of the Royal College of Music, which is inscribed 'John Stafford Smith, A.D. 1780. Te Deum by Urrio—a Jesuit of Bologna. Apud 1682.' Over the Score: 'Te Deum. Urrio. Con due Trombe, due Oboe, Violini & due Viole obligati & Fagotto a 5 Voci,' (2) In the British Museum (Add. MSS. 31,478), 'Te Deum Laudamus con due Trombe, due Oboe et Violini, et due³ Viole obligati. Del Padre Frañco Uria (sic) Bolognese.' This title is followed by a note in ink, apparently in the handwriting of Dr. Thomas Bever, Fellow of All Souls, Oxford, and a collector of music in the last century:

This curious score was transcribed from an Italian Copy in the Collection of Dr. Samuel Howard, Mus. D., organist of St. Bride's and St. Clement's Danes. It formerly belonged to Mr. Handel, who has borrowed from hence several Verses in the Dettingen Te Deum, as well as some other passages in the Oratorio of Saul. T. B.

This copy was written by John Anderson, a Chorister of St. Paul's 1781. Pri. 11. 8s. 0d.

Above this in pencil, in another hand:

In the copy purchased by J. W. Callcott at the sale of Warren Horne, the date is put at 1661.⁴

(3) The copy just mentioned as having been sold at Warren Horne's sale came into the possession of M. Schoelcher (as stated in a note by Joseph Warren on the fly-leaf of No. 2), and is now in the Library of the Conservatoire at Paris. It is an oblong quarto, with no title-page, but bearing above the top line of the score on page 1, 'Te Deum, Urrio, 1660.' The following notes are written on the fly-leaves of the volume.⁵

² First publicly mentioned by Crotch in his Lectures (see the list, p. 122. note), and then by V. Novello (Preface to Purcell, p. 9).

³ In the score itself these are given as 'Violetta' (in alto clef) and 'Violetta tenor' (in tenor clef).

⁴ More accurately 1660.

⁵ I owe these notes to the kindness of my friend M. G. Chouquet, keeper of the Musée of the Conservatoire.

[Page 1.] Edm: T: Warren Horne. 3. 13. 6.

N.B.—Mr. Handel was much indebted to this author, as plainly appears by his Dettingen *Te Deum*, likewise a Duett in Julius Cæsar, and a movement in Saul for Carillons, etc., etc., etc.

J. W. Calloott, May 16, 1797.

Vincent Novello. May day, 1839.
69 Dean Street, Soho Square.

There was another copy of this extremely rare and curious Composition in the Collection of Mr. Bartleman, at whose death it was purchased by Mr. Greateorex. At the sale of the musical Library of Mr. Greateorex the MS. was bought by Charles Hatchett, Esq., 9 Belle Vue House, Chelsea, in whose possession it still remains.
V. Novello, 1832.

This copy was kindly given to me by Mrs. Stokes on the death of my beloved friend Charles Stokes in April 1839. V. N.

[Page 2.] Handel has borrowed these from Urio's *Te Deum* as they arise:

Welcome, mighty King	Saul.
The Youth inspir'd	do.
The Lord is a man of war	Israel in Egypt.
All the Earth	<i>Te Deum</i> .
To Thee Cherubin	do.
Also the Holy Ghost	do.
To Thee all angels	do.
Our fainting courage	Saul.
Battle Symphony	do.
Thou didst open	<i>Te Deum</i> .
Thou sittest at the right hand	do.
O fatal consequence of rage	Saul.
O Lord, in Thee	<i>Te Deum</i> .
We praise Thee	do.
And we worship	do.
Day by Day	do.
Sweet bird	Allegro.
Retrieve the Hebrew name	Saul.

I believe that this curious list is in the handwriting of Bartleman.¹

The 'Italian copy,' which was first Handel's and then Dr. Howard's, if not that in the Royal College of Music (which is certainly in an Italian hand), has vanished for the present.

The *Te Deum* has been published by Dr. Chrysander (from what original the writer does not know), as No. 5 of his 'Denkmäler' of Handel (Bergedorf, 1871). It has been examined chiefly in its connexion with the Dettingen *Te Deum* by Mr. E. Prout, in the Monthly Musical Record for Nov. 1871, and we recommend every student to read the very interesting analysis there given. [G.]

URQUHART, THOMAS, an early London violin-maker, who worked in the reign of Charles II. The dates on his violins are chiefly in the seventies and eighties. The model superficially resembles Gaspar di Salo; it is high, straight, and flat in the middle of the belly, and has a rigid and antique appearance. The corners have but little prominence. The soundholes are 'set straight,' and terminate boldly in circles, the inner members being so far carried on and introverted that the straight cut in each is parallel to the axis of the fiddle. This is Urquhart's distinctive characteristic. The purfling is narrow, coarse, and placed very near the edge. The violins are found of two sizes; those of the larger size would be very useful chamber instruments but for the height of the model, which renders them somewhat unmanageable. The varnish, of

¹ This note appears to be in error, as Bartleman's copy is spoken of just before as being a distinct one from this.

excellent quality ('equal to that on many Italian instruments,' says Mr. Hart), is sometimes yellowish brown, sometimes red. [E.J.P.]

USE. A term traditionally applied to the usage of particular Dioceses, with regard to variations of detail in certain Plain Chaunt Melodies sung in the Service of the Roman Catholic Church, more especially in those of the Psalm-Tones. 'Heretofore,' says the Preface to the Book of Common Prayer, 'there hath been great diversity in saying and singing in Churches within this Realm, some following *Salisbury* Use, some *Hereford* Use, and some the Use of *Bangor*, some of *York*, some of *Lincoln*.'

The Roman Use is the only one which has received the sanction of direct ecclesiastical authority. In France, the most important varieties of Use are those observed in the Dioceses of Paris, Rouen, Reims, and Dijon; all of which exhibit peculiarities, which, more or less directly traceable to the prevalence of *MACHICOTAGE* [vol. ii. p. 186 b] in the Middle Ages, can only be regarded as fascinating forms of corruption. The chief Use, in Flanders, is that of Mechlin; in Germany, that of Aachen. In England, notwithstanding the number of those already mentioned, the only Use of any great historical importance is that of Salisbury, or as it is usually styled, Sarum, which exhibits some remarkable points of coincidence with the Dominican Use, as practised in the present day; as, for instance, in the splendid Mixolydian Melody to the Hymn 'Sanctorum meritis'—printed in the Rev. T. Helmore's 'Hymnal Noted'—which differs from the Dominican version of the Hymn for Matins on the feast of Corpus Christi only just enough to render the collation of the two readings extremely interesting. The Sarum Use is, on the whole, an exceptionally pure one: but, unhappily, it excludes many very fine Melodies well-known on the Continent, notably the beautiful Hypomixolydian Tune to 'Iste Confessor.' [W.S.R.]

UTRECHT. The Collegium Musicum Ultrajectinum, or Stads-Concert, is the second oldest musical society in the Netherlands, if not in Europe. It was founded on Jan. 1, 1631, forty years after the St. Caecilia Concert of Arnheim, a society which is still in existence. The Utrecht Collegium originally consisted of eleven amateurs belonging to the best families of the town, who met together every Saturday evening for the practice of vocal and instrumental music. In course of time professional musicians were engaged to perform, and in 1721 friends of the members and pupils of the professionals were admitted. In 1766 the society first gave public concerts; since 1830 these have been under the leadership of a conductor paid by the town. At the present day the orchestra consists of over forty members, mostly musicians resident in Utrecht, but including a few artists from Amsterdam and amateurs. Ten concerts are given by the society every winter, each programme being repeated at two performances, to the first of which only gentlemen are admitted: the corresponding 'Dames-Concert' takes place a week

later. By a mutual arrangement with the similar societies at Amsterdam, the Hague, Rotterdam and Arnheim, no concerts take place on the same evenings in any of these towns, so that the soloists—generally one vocalist and one instrumentalist—appear alternately at concerts in the different places. The concerts are given in the Gebouw voor Kunsten en Wetenschappen; the average attendance is from 600 to 800. In 1881 the members of the society numbered over 200, so that the subscriptions afford a tolerably certain income. The present director is Mr. Richard Hol, who has filled the place since 1862. On the occasion of the 250th anniversary of the foundation of the society its history was written by Mr. van Reimsdijk. His work is entitled 'Het Stads-Muziekcollegie te Utrecht (Collegium Musicum Ultrajectinum) 1631-1881. Eene bijdrage tot de geschiedenis des Toonkunst in Nederland' (Utrecht 1881). [W.B.S.]

UT, RE, MI (Modern Ital. *Do, re, mi*). The three first syllables of the 'Guidonian system of Solmisation.'¹

Whether Guido d'Arezzo did, or did not, invent the system which, for more than eight centuries, has borne his name, is a question which has given rise to much discussion. A critical examination of the great Benedictine's own writings proves that many of the discoveries with which he has been credited were well known to Musicians, long before his birth; while others were certainly not given to the world until long after his death. We know, for instance, that he neither invented the Monochord, nor the Clavier, though tradition honours him as the discoverer of both. Still, it is difficult to agree with those who regard him as 'a mythical abstract.' Though he writes with perfect clearness, where technical questions are concerned, he speaks of himself, and his method of teaching, in terms so *naïves* and familiar, that we cannot afford to despise any additional light that tradition may throw upon them. We know that he first used the six famous syllables. Tradition asserts, that, from this small beginning, he developed the whole method of Solmisation in seven Hexachords,² and the Harmonic (or Guidonian) Hand. Let us see how far the tradition is supported by known facts.

In a letter, addressed to his friend Brother Michael, about the year 1025, Guido speaks of the value, as an aid to memory, of the first six hemistichs of the Hymn for the festival of S. John the Baptist, 'Ut queant laxis.' 'If, therefore,' he says, 'you would commit any sound, or Neuma, to memory, to the end that, where-soever you may wish, in whatsoever Melody, whether known to you or unknown, it may quickly present itself, so that you may at once enuntiate it, without any doubt, you must note that sound, or Neuma, in the beginning of some well-known Tune. And because, for the purpose of retaining every sound in the memory, after this manner, it is necessary to have ready a Melody which begins with that same sound,

'You see, therefore,' continues Guido, 'that this Melody begins, as to its six divisions, with six different sounds. He then, who, through practice, can attain the power of leading off, with certainty, the beginning of each division, whichever he may desire, will be in a position to strike these six sounds easily, where-soever he may meet with them.'⁴

The directions here given, by Guido himself, clearly indicate the Solmisation of a typical Hexachord—the Hexachordon naturale—by aid of the six initial syllables of the Hymn. Did he carry out the development of his original idea? Tradition asserts that he did, that he extended its application to the seven Hexachords, in succession, and even to their Mutations;⁵ illustrating his method by the help of the Harmonic Hand. And the tradition is supported by the testimony of Sigebertus Gemblacensis, who, writing in 1113, says, in his 'Chronicon,' under the year 1028, that 'Guido indicated these six sounds by means of the finger-joints of the left hand, following out the rising and falling of the same, with eye and ear, throughout a full Octave.' Guido himself, it is true, never recurs to the subject. But he does tell Brother Michael, in another part of his letter, that 'these things, though difficult to write about, are easily explained by word of mouth';⁶ and surely, with Sigebert's testimony before us, we can scarcely escape the conclusion that he really did afterwards explain the fuller details of his system to his friend, *viva voce*, and teach them in his school. But, whether he did this or not, he has at least said enough to

³ 'Si quam ergo vocem vel neumam vis ita memorie commendare, ut ubicumque vellis, in quocumque cantu, quem scias vel nescias, tibi mox possit occurrere, quatenus mox illum indubitanter possis enuntiare, debes ipsam vocem vel neumam in capite alicuius notissimae symphoniae notare. Et pro una quoque voce memorie retinenda huiusmodi symphoniam in promptu habere, quae ab eadem voce incipiat: ut pote sit haec symphonia, quae ego docendis pueris imprimis atque etiam in ultimis utor.'

⁴ 'Vides itaque, ut haec symphonia senis particulis suis a sex diversis incipiat vocibus? Si quis itaque uniuscuiusque particulae caput ita exercitatus noverit, ut confestim quamcumque particulam voluerit, indubitanter incipiat, eadem sex voces ubicumque viderit secundum suas proprietates facile pronuntiare poterit.'

⁵ See MUTATION; also the Table of Hexachords, vol. I. p. 734 b.

⁶ 'Quae omnia cum vix litteris utrumque significemus, facilitatem colloquio denudamus.'

convince us that it was he who first endeavoured to remove 'the cross of the little Choir-Boys, and the torture of learners' (*cruz tenellorum puerorum, et tortura discentium*), by the use of the syllables, Ut, Re, Mi, Fa; and that to him, and to him alone, belongs the honour of having invented, even if he did not perfect, the method of Solmisation which still bears his name.

The Hymn 'Ut queant laxis' is given, in modern notation, in vol. iii. p. 550. The poetry

is known to have been written by Paulus Diaconus, though Albertus Magnus attributes it to S. Jerome—a fact which did not escape the sharp observation of Hermann Finck. The Melody is a very early one, in Mode II. (the Hypodorian). A comparatively late Gallican version is given in the Mechlin Vespéral (1870). The version given in the latest Roman Vespéral (Ratisbon, 1875) is scarcely recognisable, and does not comply with Guido's conditions in any of its sections except the second. [W.S.R.]

V.

VACCAJ, NICOLA, a prolific composer of Italian operas, born at Tolentino March 15, 1790. He passed the first 10 or 12 years of his life at Pesaro, a few more at Rome with the view to the law, and it was not till his 17th or 18th year that he threw off this, and took lessons of Jannaconi in counterpoint. In 1811 he went to Naples and put himself under Paisiello for dramatic composition, and there wrote a couple of cantatas and some church music. In 1814 he brought out his first opera, 'I solitari di Scozia,' at Naples. The next seven years were passed at Venice, each one with its opera. None, however, were sufficiently successful, and he therefore took up the teaching of singing, and practised it in Trieste and in Vienna. In 1824 he resumed opera composition, and in 1825 wrote amongst several others his most favourite work, 'Giulietta e Romeo,' for Naples. In 1829 he visited Paris, and stayed there two years as a singing master in great popularity. He then passed a short time in London, and in 1831 we again find him writing operas in Italy, amongst others 'Marco Visconti' and 'Giovanna Grey'—the latter for Malibran. In 1838 he succeeded Basili as head and principal professor of composition of the Conservatorio of Milan. In 1844 he left his active duties, returned to Pesaro, and wrote a fresh opera, 'Virginia,' for the Argentino Theatre, Rome. It was his last work, and he died at Pesaro Aug. 5, 1848. His works contain 15 operas besides those mentioned above, 12 Ariette per Camera (Cramer, London), and a Method (Ricordi). 'Giulietta e Romeo' was performed at the King's Theatre, Haymarket, London, April 10, 1832. [G.]

VAET, JACQUES (or JACOB), Flemish composer of the 16th century,¹ attached to the imperial Kapelle at Vienna in the capacity of chanter and apparently also of court-composer, as early as 1520–1526, when he wrote a motet 'in laudem serenissimi principis Ferdinandi archiducis Austriae.' After a long life of this

service 'he was appointed 'obrister Kappelmeister,' Dec. 1, 1564, and died Jan. 8, 1567. That he remained active as a composer to the court, is shown by his motet 'in laudem invictissimi Romanorum imperatoris Maximiliani II.,' who ascended the throne in July 1564. 'Both motets were printed in P. Ioannelli's 'Novus Thesaurus Musicus,' Venice, 1568, which also contains a motet 'in obitum Iacobi Vaet.' F. Haemus, in his 'Poemata' (Antwerp 1578), has an elegy 'in obitum Iacobi Vasii, Caesaris Maximiliani archiphonasci,' which is quoted by 'M. vander Straeten.

'Vaet's compositions are principally comprised in the 'Novus Thesaurus' just mentioned, which includes 25 motets, 8 'Salve Regina,' and one 'Te Deum' of his; and in the five volumes of the 'Thesaurus musicus' published at Nuremberg in 1564 (all motets). Other motets, 'Sententiae piae,' etc., appear in several collections of Tylman Susato, Montanus, Phalesius, and Buchaw; and three French chansons are found respectively in Phalesius' first book of 'Chansons' (1554), in Waelrant and Laet's 'Jardin musical' (1556), and in Buchaw's 'Harmoniae' (1568). Vaet's reputation among 'contemporaries stood very high. Among modern critics, 'Fétis admires the correctness, want of affectation, and religious character, of his writing; he did not care, like so many of the composers of that time, to strain after merely learned, or pedantic, effects. 'Ambros, commenting on the richness and nobility of Vaet's style, and the variety of his treatment, singles out his 'masterpiece,' the 8-voice 'Te Deum,' and a 'Miserere' in 5 parts, which he regards as worthy of special distinction. [R.L.P.]

VAGANS, i.e. wandering, uncertain—the old name for the Quinta Pars in a mass or motet, so called because it was not necessarily of any particular compass, but might be a second soprano, or alto, or tenor; though usually a tenor. [G.]

VAISSEAU-FANTÔME, LE. Opera in 2 acts; words translated or imitated from the

¹ The name is also written *Vaedi* and *Waet*. Owing to the latter spelling the composer was often confused with an entirely different person, Jacques (or Glaches) de Wert, a mistake which appeared in the first edition of Fétis' Dictionary. Compare the remarks of M. Vander Straeten, *La Musique aux Pays-bas* iii. 197 f.; 1876.

² Vaet's birthplace is unknown, but one Jean Vaet, who may be of his family, has been discovered as living at Ypres in 1499: Vander Straeten, i. 120; 1867.

German of Richard Wagner, music by Dietrich.¹ Produced at the Grand Opera, Paris, Nov. 9, 1842. [G.]

VALENTINI, PIETRO FRANCESCO, a great contrapuntist, scholar of G. M. Nanini; died at Rome 1654. Various books of canons, madrigals, canzonets, etc., by him, were published before and after his death, of which a list is given by Fétis. His canons were his greatest achievement, and two of them are likely to be referred to for many years to come. The first, on a line from the *Salve Regina*, is given by Kircher (*Musurgia*, i. 402), and was selected by Marpurg, more than a century later (1763), as the theme of seven of his *Critical Letters on music*, occupying 50 quarto pages (ii. 89). He speaks of the subject of the canon with enthusiasm, as one of the most remarkable he had ever known for containing in itself all the possible modifications necessary for its almost infinite treatment—for the same qualities in fact which distinguish the subject of Bach's 'Art of Fugue' and the 'Et vitam venturi' of Cherubini's great 'Credo.'

The first subject is:—

which gives direct rise to three others; viz.—

Second subject, the first in retrograde motion.

Third subject, the first inverted.

Fourth subject, the second in retrograde.

Each of these fits to each or all of the others in plain counterpoint, and each may be treated in imitation in every interval above and below, and at all distances, and may be augmented or diminished, and this for 2, 3, 4, 5 or 6 voices. Kircher computes that it may be sung more than 3000 different ways.

The second canon—'Nel nodo di Salomo (like a Solomon's knot) a 96 voci'—consists of the common chord of G,

¹ PIERRE LOUIS PHILIPPE DIETRICH, a French composer and conductor, was born at Dijon, March 17, 1808, was educated by Choron and at the Paris Conservatoire, was Maître de Chapelle at St. Eustache, and in 1860 became chief conductor of the Grand Opera.

and may be varied almost *ad infinitum*, with insufferable monotony it must be allowed. (See also Burney, *Hist.* iii. 522.) [G.]

VALENTINI, VALENTINO URBANI, usually called; a celebrated *evirato*, who came to London, Dec. 6, 1707, very early in the history of Italian opera in England. Nothing is known of his birth or early career; but he seems to have arrived here, possessed of a contralto voice of small power, which fell afterwards to a high tenor, and with an opera, 'Il Trionfo d'Amore,' in his pocket. The translation of this piece he entrusted to Motteux; and he subsequently sold to Vanbrugh,² for a considerable sum, the right of representation. The Baroness, Margherita de l'Épine, Mrs. Tofts, and Leveridge, sang with him in this opera ('Love's Triumph'), and, if the printed score may be trusted, they all, including Valentini, sang English words. The piece was produced at the end of February, 1708, and he took a benefit in it on March 17. Meanwhile, he had already sung (Dec. 1707) as Orontes, a 'contra-tenor,' in 'Thomyris,' Hughes understudying the part. Valentini's dress³ in this piece cost £25 17s. 3d., a very large sum in those days; his *turban and feathers* cost £3 10s., and his 'buskins' 12 shillings. We find him⁴ (Dec. 31, 1707) joining with the 'Seigniora Margaritta [de l'Épine], Mrs. Tofts, Heidegger, and the chief members of the orchestra, in a complaint against the dishonesty and tyranny of Rich. They claimed various amounts, due for salaries, 'cloaths,' etc. Valentini's pay was fixed at £7 10s. a night, as large a sum as any singer then received; but he seems to have had difficulty in extracting payment of it from Vanbrugh.

There is extant a curious letter, in which M. de l'Épine appeals to the Vice-Chamberlain (Coke) for '*juste reuange*' for the '*impertinence*' of which '*cette creature*' [Valentini] had been guilty, in preventing her from singing one of her songs, a few days before; and declares that she would never suffer '*ce monster, ennemi des hommes des fâmes et de Dieu*' to sing one of her songs without her singing one of his! The letter is simply endorsed by the Vice-Chamberlain, 'Mrs. Margarita about Mr. Valentin.'

Valentini sang, with Nicolini, in 'Pyrrhus and Demetrius,' a part which he resumed in 1709. Nicolini and he sang their music to the Italian words, while the rest of the company sang in English, as was not unusual in the *gallimaufries*⁵ of the time. Valentini reappeared (1710) in 'Almahide,' and (1711) in the original cast of 'Rinaldo,' as Eustazio, a tenor. In 1712 he sang another tenor part, that of Silvio in 'Pastor Fido'; and in the following year another, Egeo in 'Teseo,' as well as that of Ricimer in 'Ernelinda.' In that season (1713) he again joined in a petition, with Pepusch and his wife, la Galeratti, and other artists, for the better regulation of their benefits. Then, as in modern times, operatic affairs were too frequently

² The Coke papers, in the writer's possession.

³ Ibid.

⁴ Bushy.

⁵ The Coke papers.

enlivened with petitions, squabbles, and litigation: impresarios were tyrants, and singers were hard to manage. Valentini sang again in 'Creso,' 1714, after which his name appears no more 'in the bills.'

Galliard says of him that, 'though less powerful in voice and action than Nicolini, he was more chaste in his singing.' [J.M.]

VALENTINO, HENRI JUSTIN ARMAND JOSEPH, eminent French conductor, born at Lille, Oct. 14, 1787. His father, of Italian origin, was an army-chemist, and intended him for a soldier, but his talent for music was so decided that he was allowed to follow his own bent. At 12 he was playing the violin at the theatre, at 14 was suddenly called upon to supply the place of the conductor, and henceforth made conducting his special business. In 1813 he married a niece of Persuis, the composer, on whose recommendation he became in 1818 deputy-conductor of the Opéra under R. Kreutzer, and in 1820 was rewarded with the reversion of the title of first conductor conjointly with Habeneck. The decree did not take effect till Kreutzer's resignation in 1824, when the two deputies had long been exercising the function of conductor in turn. Amongst the works produced under Valentino's direction between 1827 and 1830, may be mentioned 'Moïse,' 'La Muette de Portici,' 'Guillaume Tell,' and 'Le Dieu et la Bayadère.' He also held from April 10, 1824, the reversion after Plantade of the post of Maître de chapelle honoraire to the King, but this he lost by the Revolution of 1830, which also brought about changes at the Opéra. Dr. Véron, the new director, inaugurated his reign by cutting down salaries, and Valentino, determined not to sacrifice the musicians who served under him to his own interests, resigned. He soon after succeeded Crémont as chief conductor of the Opéra Comique, an enviable post which he occupied from April 1831 to April 1836. Here he produced 'Zampa,' 'Le Pré aux Clercs,' 'Le Prison d'Edimbourg,' 'Le Châlet,' 'Robin des Bois' ('Der Freischütz'), 'Le Cheval de Bronze,' 'Actéon,' and 'L'Eclair.' On the direction of all these popular works he bestowed a care, zeal, and attention to *nuances* beyond all praise.

On resigning the Opéra Comique, Valentino settled at Chantilly, but was soon offered the direction of the popular Concerts of classical music. Fascinated by the idea of rivalling the Concerts of the Conservatoire, and spreading the taste for high-class instrumental music, he courageously put himself at the head of the enterprise. The spot selected was the hall at 251 Rue St. Honoré, where Musard had given masked balls and concerts of dance-music, and which was now destined to hear the classical masterpieces interpreted by a first-rate orchestra of 85 players—and all for 2 francs! But the public was not ripe for classical music, and preferred the 1 franc nights and dance-music, under a less eminent conductor. The 'Concerts Valentino,' started in Oct. 1837, came to an end in April 1841, but the name of their founder remained attached to

the hall where so many schemes of amusement have failed since then.

Valentino then retired to Versailles, and lived in obscurity for 24 years. He was indeed asked in 1846 to return to the Opéra, but declined. He had married again, and the last few years of his life were passed in the midst of his family and a few intimate friends. He died at Versailles Jan. 28, 1865, in his 78th year. [G.C.]

VALERIANO, CAVALIERE VALERIANO PELLEGRINI, commonly called; a very distinguished *musico*, attached to the Court of the Elector Palatine, about 1712. In that year he visited London, replacing Nicolini, who left in June. Valeriano, who had a counter-tenor voice of great beauty, 'created' the principal parts in 'Pastor Fido,' produced Nov. 21, and in 'Teseo,' first performed Jan. 10, 1713. He sang also the chief rôle in 'Ernelinda,' and drew the highest salary of the season (about £650). His engagement terminated, Valeriano left England, and did not return here again. [J.M.]

VALLACE, GUGLIELMO. A new libretto to Rossini's 'Guillaume Tell,' written for the production of that opera in Milan, at the Scala Theatre, Dec. 26, 1836. [G.]

VALLERIA, ALWINA. Miss Alwina Valleria Lohmann was born Oct. 12, 1848, at Baltimore, U.S.A., studied at the Royal Academy of Music, London, the piano, with Mr. W. H. Holmes, and singing, as second study, with Mr. Wallworth, and in 1869 gained the Westmoreland Scholarship; received further instruction in singing from Ardit, and on June 2, 1871, made her first appearance in public, after which she was promptly engaged for Italian opera at St. Petersburg, where she made her first appearance on the stage Oct. 23 of the same year, as Linda di Chamouni. Her next engagements were in Germany and at La Scala, Milan. She was afterwards engaged at Her Majesty's Opera, Drury Lane, for two seasons, and made her first appearance May 3, 1873, as Marta. From 1877-78 she was engaged in Italian opera at the same house, and in 1879-82 at Covent Garden, undertaking with readiness and capacity a large number of parts, whether principal or subordinate—viz. Inez ('L'Africaine'), Leonora ('Trovatore'), Adalgisa, Donna Elvira, Susanna, Blonde ('Il Seraglio'), and Michaela on the production in England of 'Carmen' (June 22, 1878). For the seasons 1882 and 1883 she sang in English opera under Carl Rosa in the 'Flying Dutchman' and 'Tannhäuser'; and on April 9, 1883, was much praised for her spirited performance of Colomba, on the production of Mackenzie's opera. She sang in oratorio for the first time on Dec. 26, 1882, at Manchester, in the 'Messiah,' and has since been very successful both in the Handel and Leeds Festivals of 1883. Mme. Valleria has also sung successfully in opera and concerts in America and elsewhere. Her voice extends from Bb below the line to D in alt, is of considerable flexibility, fair power and volume, and pleasant quality. She

is moreover an admirable actress. On Aug. 23, 1877, she married Mr. R. H. P. Hutchinson, of Husband's Bosworth, near Rugby. [A.C.]

VALVE (Fr. *Piston*; Germ. *Ventil*). A contrivance applied to brass instruments with cupped mouthpieces for increasing their powers of performance. It may be described as a second tube or bypath on one side of the main bore, into which the column of air may be diverted at will by a movement of the fingers; the original path being automatically restored on their removal. The side channels are obviously always longer than the simple passage, and therefore act by lengthening the tube, and lowering the note produced by a definite quantity. This quantity is approximately a tone for the first valve; a semitone for the second; a tone and a half for the third. Here the mechanism usually ends; but a fourth valve is often added, especially in baritone, bass, and contrabass instruments, which lowers the pitch about two tones and a-half. Cornets have indeed been made with as many as six valves, but they have not received general acceptance.

It is difficult to identify the original inventor of this ingenious contrivance. A rude form of valve may occasionally be seen on old Trombones, in which four parallel sliding tubes are actuated by a lever for each set, giving the instrument the appearance of a rank of organ pipes or of a Pandean reed. The earliest definite facts are two patents of John Shaw; the first taken out in 1824; the second, which he calls a 'rotary' or 'swivel' action, in 1838. The mechanism was much improved and simplified by Sax of Paris.

The two principal models now in use are the Piston and the Rotatory valve. The former is most used in this country and in France; the latter in Germany. The Rotatory valve is simply a 'fourway stopcock turning in a cylindrical case in the plane of the instrument, two of its four ways forming part of the main channel, the other two on its rotating through a quadrant of the circle, admitting the air to the bypath.' This gives great freedom of execution, but is far more expensive and liable to derangement than the Piston valve. This, as its name implies, is a brass cylindrical piston moving airtight, vertically, in a long cylindrical case. It is pressed down by means of a short rod ending in a button for the finger at its upper end, and flies back to its original place under the influence of a helical spring acting on its lower extremity. On the sides of the case four passages abut; two from the main tube, two from the bypath. The valve itself is perforated obliquely by corresponding holes, which give the open note when it is at the top, the depressed note when it is at the bottom of its stroke. In the Rotatory valve these holes describe an arc of the circle; in the Piston they have a rectilinear vertical traverse.

Whichever form be used, it is intended to serve at least three purposes:

1. To complete the scale.
2. To transpose the key.
3. To remedy false notes or imperfect intonation.

In four-valve instruments the first two of these requirements are combined, in order to bridge over the long gap of an octave which exists between the fundamental note and its first upper partial: for example, the depression of pitch by $2\frac{1}{2}$ tones places a Bb instrument practically in the F below, and thus founds the whole scale on a new key-note, in which the three other valves produce fresh changes of interval.

The third requirement has been applied practically by Mr. Bassett to the trumpet, and his very valuable improvement is described under that heading. [TRUMPET.]

The depressions and changes of pitch produced by each valve have been above named as approximate only. This fact constitutes the great objection to the system. For an instrument like the French Horn, which varies in length according to key from twelve to twenty-six feet, it is clear that a corresponding change must be made in the valve-slides, by which they remain aliquot parts of the main tube. This adjustment can be effected at the beginning of a composition by the player; but in sudden changes, either of crook, key, or of enharmonic nature, it is quite impracticable. In instruments, moreover, of large compass, like the Euphonium, the valve length is totally different according as the passage played lies in the lower or the higher register; still more so if the fourth valve has lowered the whole pitch of the instrument as above described.

In the French Horn, indeed, from the closeness of the harmonics to one another in the part of its scale chiefly used, two valves are sufficient, depressing the note a semitone and a tone respectively. A far better device for this instrument was, however, patented by the late Mr. Ford, and may be seen in the Patent Museum; but nowhere else, having been relegated, like so many other improvements, to the limbo of disuse. In this the piston arrangement, though working on the Rotatory method named above, actuates two short Trombone slides introduced into the main tube, and entirely does away with fixed bypaths. The player therefore has the power, as in the Trombone, of producing any note by ear, in correct intonation.

An equally ingenious if not quite so perfect a correction of the error inherent in this construction has been devised by Mr. Blaikley, of Messrs. Boosey's, under the name of Compensating Pistons, and is best given nearly in his own words.

In the ordinary arrangement the first valve lowers the pitch one tone; the second half a tone; and the third a tone and a half; but as the length of the instrument should be, speaking roughly, in inverse proportion to the number of vibrations of the required notes, the desired result is not exactly obtained when two or three valves are used in combination. Thus, in an instrument in the key of C, the first valve lowers the pitch to Bb, the third valve lowers it to Ab. For the low G the first valve is used in combination with the third, but its tubing is tuned to give the interval from C to Bb, and as the instrument when the third valve is down is virtually in Ab, the tubing of the first valve is not sufficiently long to flatten the pitch a true tone from A to G. This defect is intensified when all three valves are used together to produce Db and Gb. A numerical illustration may make this more clear: Let the first

valve tubing be one-eighth the length of the instrument, and the third valve tubing one-fifth, the length of the instrument being unity, one-fifth added thereto will lengthen it in the right proportion to lower its pitch a minor third—i.e. from C to A \flat . To produce G, we should be able to lower the instrument one tone from A \flat , but the first valve will increase the length only one-eighth of an

inch

as in the common arrangement, and for the purpose of bringing additional tubing into action in connection with the first and second valves, as required for correct intonation when they are either or both used in combination with the third, two air passages are added to each of these valves, and in connection with each pair of passages a loop or circuit of tube of the required length, which is added to the effective length of the instrument only when the third valve is used in connection with the others. Such additional tubing compensates for the lowering of the pitch due to pressing down the third valve. No extra moving parts are introduced, and the established fingering is preserved.

The writer has examined the system, and finds it to work with ease, and to add only a few ounces to the weight of the instrument. [W.H.B.]

VAMPYR, DER. Opera in 4 acts; words by C. G. Haer, music by Marschner. Produced at Leipzig March 28, 1838; in London, at the Theatre Royal English Opera House, in 3 acts, Aug. 25, 1839. [G.]

VAN BREE, JOHANN BERNHARD, son of a musician, born at Amsterdam, Jan. 29, 1801. He was taught chiefly by his father, and first came before the public as a player of the violin, on which he was much renowned in Holland. In 1829 he was appointed conductor of the Felix Meritis Society of Amsterdam, and held the post with great distinction till his death Feb. 14, 1857. Van Bree was an industrious composer, and left behind him a mass of works in all the regular departments of music. In England he is known to Choral Societies by three masses for men's voices, and a cantata for St. Cecilia's Day, all published by Novello. Van Bree was the founder (1840) of the Cecilia-Veren of Amsterdam, which he conducted till his death, and was also head of the music school of the Society for the encouragement of music (*Maatschappij tot bevordering der Toonkunst*). [G.]

VAN DEN EKEDEN, GILLES, Beethoven's first instructor in music. Of his birth and death nothing seems to be known, but he was doubtless son or nephew of Heinrich van den Eked, who in 1693 was Hofmeister to the then Elector of Cologne. In 1722 the name occurs again as a vocalist, but the first certain mention of Gilles is in 1728, when he represents to the Elector that he has been employed as organist for a year and a half without pay, on which 100 gulden is allotted him, increased, on his further petition (July 5, 1729), to 200 gulden.¹ He then entered

the Elector's service before Beethoven's grandfather (See vol. I. p. 162b). In 1780 we find him as teacher to the little Ludwig: when the teaching began or of what it consisted beyond the organ is not known. There is reason to believe however that Beethoven had no instructor in composition before NEUP. He often speaks of his old teacher, with many stories which have not been preserved.² In 1784 Van den Eked's name has vanished from the lists. [G.]

VANDER STRAETEN, EDUARD, distinguished Belgian musician, and writer on music, and author of '*La Musique aux Pays-Bas*,' a work still in progress and destined to be a monument of erudition and research—was born at Oudenarde in Flanders, Dec. 3, 1826. He was educated for the law, first at Alost, and afterwards in the University of Ghent. On his return to Oudenarde, he continued the cultivation of his taste for music, in combination with numismatics and archaeology, the last-named pursuit powerfully influencing the determination of his career. While in his native town he organised and directed performances of excerpts from operatic works, and in 1849 himself set to music a three-act drama, entitled '*Le Promit*.' At this early age he began that research in the rich musical archives of his native country which he has since given to the public in his literary works. M. Vander Straeten next became secretary to Fétis, who was then Director of the Brussels Conservatoire, at the same time continuing his studies in harmony and counterpoint, the latter under Fétis, with whom he entered into active collaboration, in cataloguing the historical section of the Royal Library and contributing numerous articles to Fétis's biographical dictionary. He thus spent fourteen years in preparation for his own historical productions. During this time he acted as musical critic to '*Le Nord*,' '*L'Écho du Parlement*,' and '*L'École Belge*,' and wrote, as well, in various reviews. Although adoring the southern genius of Rossini, he never ceased to advocate the claims of Weber, and also of Wagner, as his operas came out.

The first volume of '*La Musique aux Pays-Bas*' appeared in 1867, and marks the period of his entire devotion to the publication of his archaeological discoveries. He had formed an important library of materials for the musical history of the Low Countries, and had also collected musical instruments bearing upon his studies, including his beautiful Jean Ruckers clavichord of 1627, figured in his third volume.

The Belgian Government now charged M. Vander Straeten with artistic and scientific missions which involved his visiting Germany, Italy, France, and Spain. He visited Weimar in 1870, for the model representations of Wagner's operas, and his reports are alike distinguished by methodic sentiment and clearness of analytical vision. He has been appointed quite recently by his government, in concert with the Académie Royale, on the committee for the publication of account

¹ *Thes. v. l. 12, ff. 26.* The name is spelt Voedman, and Van den Eked.

² *Thes. v. l. 214; Schubert (1st ed.) p. 12.*

Belgian compositions, and it is confided to him to collect the materials for this noble undertaking. The question of the birthplace of the 15th-century composer TINTORIS, which had been claimed for Nivelles in Brabant, aroused a violent controversy. M. Vander Straeten is, however, admitted to be victorious, having adduced proofs that place the locality in West Flanders, and form an important chapter of his fourth volume.

He is an honorary or corresponding member of twelve musical or archaeological societies. His most important published works (to 1885) are—'La Musique aux Pays-Bas avant le XIX^e siècle,' 7 vols. (1867–1885); 'Le Théâtre Villageois en Flandre,' 2 vols. (1874 and 1880); 'Les Musiciens néerlandais en Italie' (1882); 'Les Musiciens Néerlandais en Espagne' (first part, 1885). A complete bibliography of his works to 1877 is appended to an interesting biographical notice, written by M. Charles Meereus, and published at Rome. [A.J.H.]

VANINI. [See BOSCHI.]

VARIANTE is the usual expression in Germany for varying versions or readings of a piece of music. Thus in the principal editions of Bach's instrumental works, besides the adopted text of a piece, other copies containing various changes are printed in an appendix, and entitled Varianten. [G.]

VARIATIONS. In the days when modern music was struggling in the earliest stages of its development, when most of the forms of art which are familiar in the present day were either unknown or in their crudest state of infancy, composers who aimed at making works of any size laboured under great disadvantages. They were as fully conscious as composers are now of the necessity of some system of structure or principle of art to unify the whole of each work, and to carry on the interest from moment to moment; but as they had not discovered any form which could extend for more than a few phrases or periods, their only means of making the music last any length of time was to repeat, and to disguise the repetition and give it fresh interest by artistic devices.

In choral music they took some old familiar piece of plainsong, or a good secular tune, put it into very long notes, and gave it to one of the voices to sing; and then made something ostensibly new upon this basis by winding round it ingenious and elaborate counterpoint for all the other voices. The movement lasted as long as the tune served, and for other movements—if the work happened to be a mass, or work necessarily divided into separate pieces—they either took a new tune and treated it in the same way, or repeated the former one, and sometimes sang it backwards for variety, with new turns of counterpoint each time.

Similarly, in instrumental music, as soon as their art was enough advanced to produce good, clear, and complete dance-tunes and songs, they extended the musical performance by repeating the tunes, with such other touches of fresh

interest as could be obtained by grace-notes and ornamental passages, and runs inserted in the bass or other parts. In this way the attention of composers came to be very much drawn to the art of varying a given theme, and presenting it in new lights; and they carried it to a remarkably advanced stage when scarcely any of the other modern forms of art had passed the period of incubation.

In choral music the art was limited to the practice of using a given tune as the central thread to hold the whole work together; and it almost died out when maturer principles of structure were discovered; but in instrumental music it has held its own ever since, and not only plays a part of great importance in the most modern sonatas and symphonies, but has given rise to a special form which has been a great favourite with all the greatest masters, and is known by the name of Variations.

The early masters had different ways of applying the device. One which appears to have been a favourite, was to write only one variation at a time, and to extend the piece by joining a fresh theme to the end of each variation, so that a series of themes and single variations alternated throughout. In order to make the members of the series hang together, the variations to the different themes were often made in similar style; while the successive themes supplied some little contrast by bringing different successions of harmony into prominence. There are several pieces constructed in this fashion by Byrd and Bull and Orlando Gibbons, who were among the earliest composers of instrumental music in modern Europe; and they consist chiefly of sets of Pavans, or Galiards, or neat little tunes like Bull's 'Jewel.' Many are interesting for ingenuity and originality of character, but the form in this shape never rose to any high pitch of artistic excellence. Another form, which will be noticed more fully later on, was to repeat incessantly a short clause of bass progression, with new figures and new turns of counterpoint over it each time; and another, more closely allied to the modern order of Variations, was a piece constructed upon a theme like Sellenger's Round, which did not come to a complete end, but stopped on the Dominant harmony and so returned upon itself; by which means a continuous flow of successive versions of the theme was obtained, ending with a Coda.

These early masters also produced examples of a far more mature form of regular theme and variations, not unlike thoroughly modern works of the kind; in which they showed at once a very wide comprehension of the various principles upon which variations can be constructed, and an excellent perception of the more difficult art of varying the styles of the respective members of the series so as to make them set off one another, as well as serve towards the balance and proportion of the whole set.

Two of the works which illustrate best the different sides of the question at this early date are Byrd's variations to the secular tune known

as 'The Carman's Whistle' and Bull's set called 'Les Buffons.' These two represent respectively two of the most important principles upon which variations are made, since the first series is almost entirely melodic, and the second structural; that is, each variation in the first series is connected with the theme mainly through the melody, whereas in the second the succession of the harmonies is the chief bond of connection; both themes are well adapted to illustrate these principles, the tune of the first having plenty of definite character, and the harmonies of the second being planned on such broad and simple lines as are most likely to remain in the memory.

Byrd's series consists of eight variations, in all of which, except the last, the melody is brought very prominently forward; a different character being given to each variation by the figures introduced to accompany it. The way in which the various styles succeed one another is very happy. The first is smooth and full, and the second rugged and forcible; the third quiet and plaintive, and the fourth lively and rhythmic; and so on in similar alternation to the last, which is appropriately made massive and full, and is the only one which is based exclusively on the harmonies, and ignores the tune. The two following examples give the opening bars of the fourth and sixth variations, and illustrate the style and way of applying the characteristic figures very happily. The upper part is the tune of the theme.

Ex. 1. Var. 4.

Ex. 2. Var. 6.

Byrd's variations are remarkable not only for their intrinsic qualities, but also as rare examples of melodic treatment in those early days, when composers were more inclined to notice the

bass than the tune. Bull was by no means so great a genius as Byrd, but he had a vein of melody, a good deal of vivacity, and a considerable sense of effect. In 'Les Buffons' the former gift is scarcely brought into play, but the two latter are very serviceable. The theme is the simplest possible succession of chords, as follows:—

Ex. 3.

Upon this fourteen variations are constructed, which are varied and contrasted with one another throughout, upon the same general principles of succession as in Byrd's series. Many of them are merely made of scale passages, or rather commonplace figures; but some are well devised, and the two following are interesting as examples of the freedom with which composers had learnt to treat structural variations even in such early days. Ex. 4 is the beginning of the second variation, and Ex. 5 is the thirteenth, which flows out of the one preceding it.

Ex. 4.

Ex. 5.

In the time which followed Byrd and Bull the best energies of composers were chiefly directed to the development of such instrumental forms as the Suite and the Canzona, and the earlier kinds of Sonata; and Sets of Variations were not so common. There are a few examples among Frescobaldi's compositions; as the 'Aria detta Balletto' in the second book of Toccatas, Canzonas, etc., which is curious on account of the way the variations are put into different times; but his works of the kind are on the whole neither so interesting nor so satisfactory as Byrd's. It is also common to meet with an occasional variation on one or more of the regular dance-movements in the Suites; and in that position they were commonly called Doubles. There is a curious and unusual experiment in a Suite of Kuhnau's in E minor, in which the Courante in 6-4 time is a complete variation of the Allemande in common time that precedes it. But the art of varying a theme of some sort was cultivated to a greater extent about this time under other guises. In Germany composers were fond of harmonising their Chorales in all sorts of ingenious ways, such as are found later in perfection in Bach's Cantatas and Passions; they also used the Chorales as a kind of Canto fermo upon which they based elaborate movements for the organ, full of ingenious and effective figures and various devices of counterpoint; and not a little of the great development of organ-playing, which culminated in J. S. Bach, was carried on by the cultivation of this form of art. Another form which was more obviously allied to the sets of variations, and indeed can in some cases hardly be distinguished from them, was the ground-bass or *basso ostinato*, which was a very favourite form of art all over Europe during the greater part of the 17th century. The principle of following the bass of the theme is indeed constantly made use of in variations, and in theory the only difference between the two forms is that in a ground-bass the bass passage, which is repeated over and over again, is the whole bond of connection which joins the series together; while in variations the bass may change entirely so long as the theme is recognisable either by means of the melody or the succession of the harmonies. But in practice, though there are many examples in which a good clear bass figure is made to persist with obstinate regularity in this form, it often gave place to the succession of the harmonies, or was itself so varied as to become scarcely recognisable. For instance, a so-called Ground by Blow in E minor, with twenty-eight divisions, begins with a section that is much more like a theme for variations; and though the bass moves in good steps, it has no very decided figure whatever. A comparison of the first half of the so-called ground with the corresponding part of the bass of the twentieth division will show that the view musicians then took of the repetitions was at least a liberal one:—

In this case the outline of the bass as defined by the successive steps downwards is pretty well maintained, but in a few other divisions which are more elaborately constructed, not only is the bass altered, but even harmonies which do not strictly correspond to the originals are introduced. Such treatment clearly destroys the individuality of the form of art, and makes the work to all intents a theme with variations, under limitations. The real type of movement constructed on a ground-bass has a decided character of its own, as the obstinate reiteration of a good figure is necessarily a striking bond of connection throughout the piece; and if the figures built upon it are well varied it can be made very amusing. In Purcell's use of this form, which he was evidently fond of, the type is kept much purer, and the divisions on the ground are really what they pretend to be. A quotation of the bass of a ground in one of his Suites will illustrate better than any description the difference between the real thing and a hybrid like Blow's:—

But even so genuine a specimen as Purcell's is closely allied to a theme with variations; and at a time when the form was so popular that it was not only a favourite with composers, but the constant resource of performers with any talent for extemporising to show off their skill in two directions at once, it seems very likely that the more elastic but less pure form adopted by Blow and others should have been easily allowed to pass in the crowd of experiments; and thus composers were constantly developing the form of 'Theme and Variations' under another name.

A celebrated example which bears upon this question is the twelfth and last Sonata of Corelli's Opera Quinta, which is called 'La Follia.' This is sometimes described as a Theme and twenty-two variations, and sometimes as Divisions on a ground. The bass of the theme was well known in those days as Farinelli's Ground, from the inventor, and was commonly used by musicians and composers, as for instance by Vivaldi. Hawkins speaks of it as 'the favourite air known in England as Farinelli's Ground,'

showing a confusion in his mind even as to the difference between a 'ground' and a tune. In Corelli's work the bass is not repeated at all regularly, so it is to all intents and purposes a series of free variations. These are most of them very simple, being different forms of arpeggios on the harmonies of the theme, but they are well devised so as to contrast and set off one another, and are effective in their way for the violin. The tempos vary from Adagio and Andante to Allegro and Vivace, and the time-signatures also, as 3-4, 4-4, and 3-8. Corelli evidently took an easy view of variations, for both in this set and in the Chaconne in the twelfth Sonata of op. 2, the harmonies are not at all strictly followed, and occasionally have next to nothing to do with the theme for several bars together; and this appears to have been rather a characteristic of the Italian style of writing such things. The treatment of the form in this instance, and in many others of nearly the same period (as those by Blow, and many by Locatelli and others a little later), together with the lax way in which Hawkins speaks of the subject, tend to the conclusion that this popular form of Ground-bass movement was gradually becoming mixed up with the form of Theme-and-Variations, and trenching on its province. Even the length of the bass in the Follia and other examples is in favour of this view, because the effect of the ground-bass is lost when it extends beyond very moderate limits. The best examples are after such a concise fashion as the bass quoted from Purcell, and such superb specimens as the 'Crucifixus' in Bach's Mass, his Passacaglia in C minor, and similar works by Buxtehude for the organ. If the ground-bass has several clauses, as in Corelli's Follia or Blow's piece (Ex. 6), it loses its effect and has to be treated after the manner of a theme; and the adoption of long periods led composers to that treatment, at the same time that the habit of looking at their subject in the direction of the bass rather than the upper part, influenced their manner of dealing with variations.

This condition of things throws an interesting light upon J. S. Bach's thirty Variations on an Aria in G major for a harpsichord with two rows of keys, which is the first very important work of its kind, and still among the most remarkable in existence, though it is never played in public in consequence of the difficulty of giving due effect on one row of keys to the rapid crossing passages which are written for two. The Aria which serves for theme is not after the manner of a modern aria, but is a dance movement like those in the Suites. It is in fact a Sarabande of the expressive and elaborate kind familiar among Bach's works; it has plenty of fine melody but no catching tune, and nothing to invite melodic variations of the modern kind. On the other hand, it is constructed of very broad and simple successions of harmony, with the bass moving a step of some sort in almost every bar; and upon this motion of bass or harmonies the whole series of variations is really constructed. It is

therefore actually almost as much of a ground-bass movement as Corelli's Follia, or Blow's example. The actual bass figure is not repeated, but either the steps by which it moves or the regular changes of the harmony are always represented in some way under the elaborate texture of the figures. In fact, what Bach does is to take out the harmonic framework upon which the Aria is built, and use it to build thirty other little movements upon. The way in which these are developed from the original will be best understood by a comparison of the opening bars of some of the variations with the corresponding portion of the bass of the theme.

The following is the bass of the first eight bars of the Aria, with figures to represent the principal harmonies:—

Ex. 9.

In a good many variations, such as the 1st, 2nd, 4th, 12th, and 22nd, these steps are very clearly maintained. The bass figure of the 2nd variation will serve to illustrate this:—

Ex. 10.

It is very rare however that the same positions of the chords are rigidly adhered to throughout. All positions are held to be interchangeable. This would be less possible in dealing with a modern theme with weak or irregular motions of harmony; but where the changes are so strict and clear, the successions are traceable even through a looser treatment of the original. An example which will illustrate Bach's method of interchanging positions of the same chords, and the ingenuity with which he builds one form upon another, is the opening of the tenth variation, which is a complete little four-part Fughetta:—

Ex. 11.

In bar (b) the first position of the chord of the Dominant is implied instead of its first inversion; in bar (c) there is a similar interchange, and in bars (d) and (g) the principal emphasis of the bar falls upon a first inversion instead of a first position of the same chord.

In other variations he goes much further still. In the ninth the strict succession of chords is frequently altered, but in such a way that the character and general contour of the harmonic succession is still to be felt in the background. For instance, in the passage corresponding to bars (e) and (f) the harmonies of E minor and G are forced in in the place of those of G and A. Then the harmony of C and A, which really represents bar (f), is driven into the bar corresponding with (g); and in order to make the final chord of the cadence answer in position with the original, all that appears of the chord corresponding to bar (g) is the last quaver. The following example will show the nature of the change, beginning at the half-bar corresponding with (d) where the first half close falls, up to the first close in the principal key in bar (h):—

Ex. 12.

This appears to be rather an extreme instance, but in reality the change is caused by nothing more than the happy idea of turning the passing note in bar (d) in an opposite direction, and so leading to the intrusion of the chord of E; thus causing the chords of G and C, which follow in their proper order, to come one step too late, and forcing the penultimate chord of the cadence into very close quarters. But the form of the cadence is preserved all the same, and so the change turns out to be more in superficial appearance than reality; while the regularity of the succession is still sufficiently obvious to identify the theme.

The manner in which all the variations are written is contrapuntal, and in many cases they are cast in some one or other of the old contrapuntal forms. Every third variation throughout, except the last, is a Canon of some sort, with a free bass which generally follows the outlines of the bass of the theme. These take all the intervals in regular order—a Canon at the unison in the 3rd variation, a Canon at the second in the 6th, and so on up to a Canon at the ninth in the 27th variation, the Canons at the fourth and fifth being complicated by making them in contrary motion. Variation 10 is a complete Fughetta, and Variation 16 an Overture after the French model, managed by making the part which represents the first half of the theme into the Maestoso movement, and the latter part into the fugal one. The last variation is a 'Quodlibet'; that is, a movement in which several bits of familiar tunes are worked in together. The tunes are 'Volklieder' of

a very bright and happy type. It begins with one to the words 'Ich bin so lang nicht bei dir g'west,' on the top of which another, 'Kraut und Rüben haben mich vertrieben,' is introduced; and the fragments of the two, and probably bits of others which are not identified, are mixed up together in amusing but artistic confusion throughout, always following the harmonic succession of the original aria. After the Quodlibet the theme is directed to be played again, so as to make the cycle complete—a plan followed by Beethoven more than once, most notably in the last movement of his Sonata in E, op. 109. Every variation in the series has a perfectly distinct character of its own, and is knit together closely and compactly by the figures used; which vary from the most pointed vivacity to the noblest dignity and calm; and are so distributed as to keep the action always going, and the interest alive at every step; the result of this many-sided technical workmanship being a perfectly mature art-form. In this respect, as in many others, Bach seems to sum up in his own lifetime the labours of several generations, and to arrive at a point of artistic development which the next generation fell far behind; for a height equal to that of his work was not again reached till Beethoven's time. But the aspect of Bach's work is peculiar to himself and his time. The technical side is brought into extreme prominence. This is shown most obviously in the canons and fugues, but it is also shown in the texture of the other variations. Some few are extremely expressive and beautiful, but it was not with the paramount object of making them all so that Bach attacked his problem, for his variations are rather developments of ideas embodied in vigorous and regular rhythmic figures than romantic or dramatic types. Both the ideas and the way of treating them belong to the old contrapuntal school, and that style of variation-writing which is most richly and comprehensively shown in this series of variations, comes to an end with Bach.

He produced several other sets in the same manner, notably the famous Chaconne in the Suite in D for violin solo; but it is not necessary to analyse that work, since the same principles are observed throughout, even to the repetition of the theme at the end to clench it all together. As in the previous case, the basis of the variation is the harmonic framework of the theme; and the melody hardly ever makes its reappearance till its resumption at the end. The bass steps are just as freely dealt with as in the previous case, from which it may be gathered that Bach considered the harmonic structure the chief thing in a Chaconne (which has the reputation of being a movement on a ground-bass) as much as in a regular Theme and variations. He also produced an example of a different kind, in a little set of eight variations on a very beautiful and melodious theme in A minor. In this the harmonic framework is not nearly so noticeable, and the variations are not made to depend upon it so much as in the other cases. Some few of them

are constructed on the same principles as the great set of thirty, but more often the melody of the theme plays an unmistakeable part. This may be seen from a comparison of the melody of the 3rd, 4th, and 5th bars of the theme, with the same portion of the third variation.

Ex. 13.

The influence of the tune is similarly apparent in several other variations, putting a new complexion upon variation-making, in the direction cultivated by the next generation; but the result is neither so vigorous nor so intrinsically valuable as in other works more after Bach's usual manner, though historically interesting as an experiment in a line which Bach generally thought fit to let alone.

Handel's way of treating variations was very different from Bach's, and more like the methods of the Italian school, as illustrated by Corelli. In most cases, indeed, he regarded the matter from the same point of view as Bach, since he looked upon the harmonic framework as the principal thing to follow; but he reduced the interest of his representation of that framework in new figures to a minimum. Where Bach used ingenious and rhythmical figures, and worked them with fascinating clearness and consistency, Handel was content to use mere empty arpeggios in different forms. In many of his sets of Variations, and other works of the same kind, he makes the effect depend chiefly upon the way in which the quickness of the notes varies, getting faster and faster up to the brilliant but empty conclusion. The set which has most musical interest is the 'Harmonious Blacksmith' in the Suite in E; and in this the usual characteristic is shown, since the variations begin with semiquavers, go on to triplet semiquavers, and end with scale passages of demisemiquavers. The extraordinary popularity of the work is probably owing chiefly to the beauty of the theme, partly also to the happy way in which the style of the variations hits the mean between the elaborate artistic interest of such works as Bach's and the emptiness of simple arpeggios, and partly to the fact that their very simplicity shows to advantage the principles upon which a succession of variations can be knit together into an effective piece, by giving all the members of the series some relative bearing upon each other. In this set the connection and function of each is so thoroughly obvious that the most ordinary

musical intelligence can grasp it, and it is to such grounds of effect that Handel trusted in making all his sets, whether in such an example as the Passacaglia in the G minor Suite or the Chaconne with sixty variations. Only in very few cases does he even appear to attempt to make the separate numbers of the series interesting or musically characteristic, and yet the series as a whole is almost always effective. He is more inclined to allow the tune of his theme to serve as a basis of effect than Bach was. In the variations in the Suite in D it is very prominent, and in the earlier variations of the 'Harmonious Blacksmith' is clearly suggested; and in this way he illustrates the earlier stage of the tendency which came to predominate in the next generation. The following are types of the figures used by Handel in more than one set:—

Ex. 14.

Ex. 15.

Ex. 16.

Another composer showed this tendency to follow the tune even more markedly. This was Rameau, who was born two years before Handel and Bach, but was brought more strongly under the rising influences of the early Sonata period, through his connection with the French operatic school, and the French instrumental school, of which Couperin was the happiest representative. These French composers were almost the first of any ability in Europe to give their attention unreservedly to tunes, and to make tune, and character of a tuneful kind, the object of their ambition. Rameau produced a number of charming tuneful pieces of a harmonic cast, and naturally treated variations also from the point of view of tune, studying to bring the tune forward, and to make it, rather than the harmonic successions, the basis of his variations. When operatic influences came into play and influenced the instrumental music of German composers, and when the traditions of the Protestant school gave place to those of the southern and Catholic Germans, the same result followed.

Other circumstances also affected the form unfavourably. The cause of the falling off in vigour, depth of feeling, and technical resource from the standard of Handel and Bach, is obvious enough in other departments; since men were thrown back as they had been after Palestrina's time, through having to cope with new forms of art. In the case of variations—by this time an old and established form—the cause of such falling off is not easy to see; but in reality variations were just as amenable to unfavourable influences as the rest of instrumental music,

since composers began to try to treat them in the same style as their sonata movements. They dropped the contrapuntal methods, with the opportunities afforded by them, and as they had not yet developed the art of expressing effective musical ideas in the modern style apart from the regular sonata form, their works of the kind seem, by the side of Bach's, to be sadly lacking in interest. Moreover, the object of writing them was changing. Bach wrote up to the level of his own ideas of art, without thinking what would please the ordinary public; but the composers of the middle of the 18th century wrote their clavier music chiefly for the use or pleasure of average amateurs, on whom first-rate art would be thrown away; and aimed at nothing more than respectable workmanship and easy agreeable tunefulness. The public were losing their interest in the rich counterpoint and massive nobility of style of the older school, and were setting their affections more and more on tune and simply intelligible form; and composers were easily led in the same direction. The consequences were happy enough in the end, but in the earlier stages of the new style variation-making appears to have suffered; and it only regained its position in rare cases, when composers of exceptional genius returned, in spite of the tendency of their time, to the method of building a fair proportion of their variations on the old principles, and found in the harmonic framework equal opportunities to those afforded by the tunes.

How strongly Haydn and Mozart were drawn in the prevailing direction is shown by the number of cases in which they took simple and popular tunes as themes, and by the preponderance of the melodic element in their variations. This is even more noticeable in Mozart than in Haydn, who took on the whole a more serious and original view of the form. True, he did not write nearly so many sets as his younger contemporary, and several that he did write are of the very slightest and most elementary kind—witness that which forms the last movement of the Clavier Sonata in Eb, that on a tune in 'Tempo di Minuetto' in a sonata in A, and that in a sonata for clavier and violin in C. In these cases he is obviously not exerting himself at all, but merely treating the matter lightly and easily. But when he set about his work seriously, it has far more variety, interest, and many-sided ingenuity than Mozart's. This is the case with several of the sets in the string quartets, and with the remarkable one for clavier alone in F minor, and the beautiful slow movement in the Sonata for Clavier and Violin in F. The things most noticeable in these are the remarkable freedom with which he treats his theme, and the original means adopted to combine the sets into complete and coherent wholes. Probably no one except Beethoven, Schumann, and Brahms took a freer view of the limits of fair variation; the less essential chords and root harmonies of the theme are frequently changed, even without the melody being preserved to

make up for the deviation, and in certain cases whole passages appear to be entirely altered, and to have little if any connection with the theme beyond observance of the length of its prominent periods, and the fact that the final cadences come in the right forms and places. This occurs most naturally in a minor variation of a major theme, or vice versa, where a passage in the relative major is made to correspond to a passage in the dominant key, and the succession of chords is necessarily altered to a different course to make the passage flow back to the principal key at the same place, both in variation and theme. There is an extremely interesting example of such changes in the slow movement of the Quartet in Eb, No. 22 Trautwein. The theme is in Bb, and the first variation in Bb minor. The second half of the theme begins in F, and has a whole period of eight bars, closing in that key, before going back to Bb. The corresponding part of the first variation begins with the same notes transferred from first violin to cello, and has the same kind of motion, and similar free contrapuntal imitation; but it proceeds by a chain of closely interlaced modulations through Eb minor and Ab, and closes in Db. And not only that, but the portion which corresponds to the resumption of the principal idea begins in the original key in Db, and only gets home to the principal key for the last phrase of four bars, in which the subject again appears. So that for eleven bars the variation is only connected with the theme by the fact that the successive progressions are analagous in major and minor modes, and by a slight similarity in the character of the music. This was a very important position to take up in variation-writing, and by such action Haydn fully established a much broader and freer principle of representing the theme than had been done before. The following examples are respectively the first eight bars of the second half of the theme, and the corresponding portion of the 1st variation:—

Ex. 17.
Theme.

Ex. 18.
Var. 1.

The other noticeable feature of Haydn's treatment of the variation-form is illustrated very happily by the 'Andante con Variazioni' in F minor for clavier solo, and by the movement in the F major sonata for clavier and violin; both showing how strongly he regarded the form as one to be unified in some way or other beyond the mere connection based on identity of structure or tune which is common to all the members of the series. The first of these is really a set of variations on two themes; since the principal theme in the minor is followed by a slighter one contrasting with it, in the major. The variations on these two themes alternate throughout, and end with a repetition of the principal theme in its original form, passing into an elaborate coda full of allusions to its principal figures. Thus there is a double alternation of modes and of styles throughout binding the members together; and the free development of the features of the theme in the coda gives all the weight and interest necessary to clench the work at the end. The slow movement for clavier and violin is somewhat different in system, but aims at the same object. After the theme comes an episode, springing out of a figure in the cadence of the theme, and modulating to the dominant and back; then comes the first variation in full, followed by another episode modulating to Bb, with plenty of development of characteristic figures of the theme, coming back (after about the same length as the first episode) to a pause on the dominant chord of the principal key, and followed by another variation with demisemi-quaver ornamental passages for the pianoforte. This variation deviates a little at the end, and pauses on the dominant chord again; and then the beautiful and serene theme is given out once more in its original form. This is therefore an ingenious kind of Rondo in the form of variations. The short contrasting episodes are quite in Rondo-form, the only difference being that the two middle repetitions of the theme are made unusually interesting by appearing in a fresh guise. One more point worth noting about Haydn's works of this kind, is that some of his themes are so rich and complex. In a few of the sets in the quartets the theme is not so much a tune as a network of figures combined in a regular harmonic scheme—see Ex. 17; and the same holds true of the 'Andante con Variazioni' mentioned above, which is long, and full of the most various and remarkable figures. It may be said finally that there is no branch of composition in which Haydn was richer and

more truly polyphonic than in his best sets of variations.

Mozart, on the other hand, represents the extreme of the melodic form of variations. If in many of Haydn's slighter examples this tendency was perceptible, in Mozart it comes to a head. The variations which he makes purely out of ornamental versions of the tune of the theme, are at least four times as many as his harmonic and more seriously conceived ones. As has been said before, Mozart wrote far more sets than Haydn, and many of them were probably *pièces d'occasion*—trifles upon which there was neither time nor need to spend much thought. It is scarcely too much to say moreover that variation-writing was not Mozart's best province. Two of his greatest gifts, the power of moulding his form with the most refined and perfect accuracy, and spontaneous melody, have here no full opportunity. The themes which necessarily decide the form are in many cases not his own, and, except in rare instances, it does not seem to have entered into his head to try to make new and beautiful melodies on the foundation of their harmonic framework. He seems rather to have aimed at making variations which would be easily recognisable by moderately-gifted amateurs; and it must be allowed that it takes a good deal of musical intelligence to see the connection between a theme and a variation which is well enough conceived to bear frequent hearing. It is also certain that the finest variations have been produced by scarcely any but composers of a very deep and intellectual organisation, like Beethoven, Bach, and Brahms. Mozart was gifted with the most perfect and refined musical organisation ever known; but he was not naturally a man of deep feeling or intellectuality, and the result is that his variation-building is neither impressive nor genuinely interesting. Its chief merits are delicate manipulation, illustrating the last phase of harpsichord-playing as applied to the Viennese type of pianoforte with shallow keys, and he obtains the good balance in each set as a whole without any of Haydn's interesting devices. A certain similarity in the general plan of several of the independent sets suggests that he had a regular scheme for laying out the succession of variations. The earlier ones generally have the tune of the theme very prominent; then come one or two based rather more upon the harmonic framework, so as to prevent the recurrence becoming wearisome; about two-thirds of the way through, if the theme be in the major, there will be a minor variation, and vice versa; then, in order to give weight to the conclusion and throw it into relief, the last variation but one has a codetta of some sort or an unbarred cadenza, or else there is an unbarred cadenza dividing the last variation from the final coda, which usually takes up clearly the features of the theme. These unbarred cadenzas are a characteristic feature of Mozart's sets of variations, and indicate that he regarded them as show pieces for concerts and such occasions, since they are nothing but pure finger-

flourishes to show off the dexterity and neatness of the performer. There are two—one of them a very long one—in the set on Paisiello's 'Salve tu Donuine,' another long one in that on Sarti's 'Come un agnello,' a long one in that on 'Lison dormait,' and others of more moderate dimensions in the sets on Gluck's 'Unser dummer Pöbel meint,' Mr. Duport's minuet, 'Je suis Lindor,' and others. In his treatment of the harmonic framework, Mozart is generally more strict than Haydn, but he is by no means tied by any sense of obligation in that respect, and even makes excellent point out of harmonic digression. A most effective example, which contains a principle in a nutshell, is his treatment of the most characteristic phrase of 'Unser dummer Pöbel' in the fourth variation. The phrase is as follows:—

Ex. 19.

To this he gives a most amusing turn by, as it were, missing the mark by a semitone:—

Ex. 20.

then he goes on to the end of the half of the variation which contains the passage, and begins it again as if for repeat; and then again overshoots the mark by a semitone:—

Ex. 21.

There is probably no simpler example of an harmonic inconsistency serving a definite purpose in variations. In a less obvious way there are some in which very happy effect is obtained by going an unexpected way round between one essential point of harmony and another, and in such refinements Mozart is most successful.

When he introduces sets of variations into sonatas and such works as his Clarinet Quintet, he seems to have taken more pains with them; there are proportionately more free and harmonic variations among them; and the element of show illustrated by the unbarred cadenza is not so prominent. There are good examples of variety of treatment and success in balancing the various members of the series in the variations in the fine Sonata in F for violin and pianoforte. True, the basis of the variations is for the most part melodic, but the principle is treated with more solid effect than usual. The same remark applies to the last movement of the P.F. Sonata in D, written in 1777. This contains some extremely happy examples of the exclusive use of the harmonic principle, as in the 9th variation, in which the vigour and individuality of the

figure give the variation all the appearance of an independent piece. Similarly in the 11th, Adagio cantabile, and in the last, in which the time is changed from 4-4 to 3-4, the melody is so devised as to appear really new, and not merely the theme in an ornamental dress.

An excellent use to which Mozart frequently puts variations is that of presenting the subjects of sonata-movements in new lights, or adding to their interest by new turns and ornaments when they reappear a second or third time in the course of the movement. One example is the recurrence of the theme in the 'Rondo en Polonaise' which forms the middle movement in the Sonata in D just referred to. Another is the slow movement of the well-known Sonata in C minor, connected with the Fantasia in the same key.

The cases in which Mozart ventured to give a variation a thoroughly independent character are rare. He seems to have thought it better to keep always in sight of his theme, and though he invented some charming and effective devices which have been used by later composers, as a rule the variations wait upon the theme too subserviently, and the figures are often too simple and familiar to be interesting. The following ('Je suis Lindor') is a fair sample of his way of ornamenting a tune:—

Ex. 22. Theme. (1)

Variation. (1)

(3)

(4)

Beethoven's work forms an era in the history of variation-making. It was a branch of art eminently congenial to him; for not only did his instinct for close thematic development make him quick to see various ways of treating details, but his mind was always inclined to present the innermost core of his idea in different forms. This is evinced plainly enough in the way in which he perfects his subjects. His sketch-books show how ideas often came to him in the rough; and how, sometimes by slow degrees, he brought them to that refined and effective form which alone satisfied him. The substratum of the idea is the same from first to last, but it has to undergo many alterations of detail before he finds the best way to say it. Even in this his practice differed extremely from Mozart's, but in the treatment of the actual form of 'Theme and variations' it differed still more. In principle Beethoven did not leave the line

taken up by the composers of the Sonata period, but he brought the old and new principles more to an equality than before, and was also very much more daring in presenting his model in entirely new lights. The proportion of purely ornamental variations in his works is small; and examples in which the variations follow the theme very closely are more conspicuous in the early part of his life than later; but even among such comparatively early examples as the first movement of the Sonata in A \flat (op. 26), or the still earlier ones in the Sonata in G (op. 14, no. 2), and the set on Righini's air, there is a fertility of resource and imagination, and in the last case a daring independence of style which far outstrips anything previously done in the same line.

In some sets the old structural principle is once more predominant, as in the well-known 32 in C minor (1806), a set which is as much of a Chaconne as any by Corelli, Bach, or Handel. The theme is in chaconne time, and the strong steps of the bass have the old ground-bass character. It is true he uses the melody of the theme in one or two instances—it would be almost impossible to avoid it at a time when melody counted for so much; but in the large majority the variation turns upon the structural system of the harmonies. Among other points this set is remarkable as a model of coherence; almost every variation makes a perfect complement to the one that precedes it, and sets it off in the same way. In several cases the variations are grouped together, externally as well as in spirit, by treating the same figures in different ways; as happens with the 1st, 2nd and 3rd, with the 7th and 8th, and with the 26th and 27th and others. The 12th marks a new departure in the series, being the first in the major, and the four that follow it are closely connected by being variations upon that variation; while at the same time they form the single block in the major mode in the whole series. Every variation hangs together as closely as those in Bach's great set of thirty by the definite character of the figures used, while the whole resembles that set in the vigour of the style.

In most of the other remarkable sets the principles of treatment are more mixed. For instance, in that on the Ballet Air from the 'Men of Prometheus,' some have a technical interest like Bach's, and some have an advanced ornamental character after the fashion of Mozart's. Among ingenious devices which may fairly be taken as types, the sixth variation is worth noting. The tune is given intact at most available points in its original pitch and original form, but the harmonies are in a different key. A marked feature in the series is that it has an introduction consisting merely of the bass of the theme, and three variations on that are given before the real theme makes its appearance; as happens also in the last movement of the Eroica Symphony, which has the same subject, and some of the same variations, but is not a set of varia-

tions in the ordinary sense of the word, since it has various episodes, fugal and otherwise, as in the movement from Haydn's violin and piano-forte sonata described on p. 223.

Others of Beethoven's sets have original external traits; such as the set in F (op. 34), in which all the numbers are in different keys except the theme and the two last variations, the others going in successive steps of minor thirds downwards. The variations themselves are for the most part based on the melody, but a most ingenious variety of character is kept up throughout, partly by changing the time in each successively.

The sets so far alluded to belong to the early or middle period of Beethoven's life, but the finest examples of his work of this kind belong to the last period, such as those in the Quartet in E \flat , and the variations 'In modo lidico' in the Quartet in A (op. 132), those in the Trio in B \flat , in the Sonatas in E (op. 109), and C minor (op. 111), the two in the 9th Symphony, and the thirty-three on the valse by Diabelli. These last five are the finest and most interesting in existence, and illustrate all manner of ways of using the form. In most cases the treatment of the theme is very free, and is sometimes complicated by the structure of the movement. In the slow movement of the 9th Symphony for instance the theme and variations are interspersed with episodes formed on a different subject and by passages of development based on the principal theme itself. In the choral part the variations are simply based upon the idea, each division corresponding to a variation being really a movement made out of a varied version of the theme adapted in style to the sentiment of the words, and developed without regard to the structure of the periods or plan of the tune.

The sets in the two Sonatas are more strict, and the harmonic and structural variations are in about equal proportions. Their coherence is quite as strong as that of the thirty-two in C minor, or even stronger; while there is infinitely more musical interest in them. In fact, there is a romantic element which colours each set and gives it a special unity. The individual character given to each variation is as strong as possible, and such as to give it an interest of its own beyond its connection with the theme; while it is so managed that whenever the freedom of style has a tendency to obliterate the sense of the theme, a variation soon follows in which the theme is brought forward clearly enough to re-establish the sense of its presence as the idea from which the whole series springs. The set in op. 109 is an excellent model of the most artistic way of doing this, without the device being so obvious as it is in the works of the earlier masters. The first variation has such a marked melody of its own that it necessarily leads the mind away from the theme. But the balance is re-established by the next variation, which is a double one, the repeats of the theme being given with different forms of variations, severally like and unlike the original. The next

variation is also double, but in a different sense, the repeats being given in full with different treatment of the same figures. Moreover the balance is still kept up, since the first half is chiefly structural, and the second resumes the melody of the theme more clearly. The next two are more obscure, and therefore serve all the better to enhance the effect of the very clear reappearance of the theme in the final variation. This plan of making double variations was a favourite one with Beethoven, and he uses it again in the fourth variation in op. 111, and in the Diabelli set. In op. 111 it is worth noticing that there is an emotional phase also. The first two variations gradually work up to a vehement climax, culminating in the third. After this outburst there comes a wonderful stillness in the fourth (9-16), like the reaction from a crisis of passion, and this stillness is maintained throughout, notwithstanding the two very different manners of the double variation. Then there is a codetta and a passage wandering through mazes of curious short transitions, constantly hinting at figures of the theme; out of which the theme itself emerges at last, sailing with wind and tide in perfect fruition of its freedom; the last variation of all seems to float away into the air as the tune sings through the haze of shakes and rapid light passages that spin round it, and the whole ends in quiet repose. In such a sense Beethoven gave to his variations a dramatic or emotional texture, which may be, by those who understand it, felt to be true of the innermost workings of their emotions, but can hardly be explained in words.

Technically the most remarkable set of all is that of thirty-three on the Diabelli valse. In this appear many traits recalling those in Bach's set of thirty. For instance, there is a fugetta, cast in the structural mould of the theme; there are imitative variations, of thoroughly modern type; and there are also examples of the imitations being treated by inversion in the second half, as was the manner of Bach. But in style there is little to recall the methods of the older master, and it is useless to try and lay down hard and fast technical rules to explain the detailed connection of theme and variation. In all these last sets, and in the Diabelli set especially, Beethoven is making transformations rather than variations. He takes the theme in all its phases—harmonic, melodic, or rhythmic—and having the idea well in his mind, reproduces it with unlimited variety in different aspects. At one moment a variation may follow the melody of the theme, at another the harmonic structure, at another it will be enough that some special trait like the persistence of an inner portion of the harmony in thirds or otherwise is reproduced, as in the second phrase of Variation No. 8. At other times he will scarcely do more than indicate clearly the places where the cadences and signs of the periods fall, as in Variation 13, with the long pauses; while at other times he works by nothing more than analogy, as in the relations of the end of the first half and

beginning of the second half of Variation 5, and the beginnings of the second halves of Nos. 9, 13, and 22. In other cases there are even more complicated reasons for the connection. An example occurs as early as the first variation. The strong type of figure, moving by diatonic steps, adopted at the beginning, is worked out in longer reaches in the second half, until it forces the harmony away from the lines of the theme into short transitional digressions. These occur in two successive periods, which are brought round again and rendered externally as well as ideally intelligible by the way in which the periods are made to match. In a few other cases nothing but the strong points of the periods are indicated, and the hearer is left in doubt till he hears the strong cadence of the period, and then he feels himself at home again directly, but only to be immediately bewildered by a fresh stroke of genius in a direction where he does not expect it. The happiest example of this is Variation 13, already alluded to, which is principally rhythmic, just indicating by a sort of suggestion here and there a humorous version of the theme, and making all the progressions seem absurdly wrong at first sight, though they come perfectly right in the end. The two following examples are the first halves of the theme and of Variation 13:—

Ex. 23. (Theme.)

The musical notation for Example 23 is presented in four systems, each with a treble and bass staff. The first system is marked 'Vivace.' and 'p'. The second system is marked 'cres.' and 'p'. The third system is marked 'f' and 'p'. The fourth system is marked 'p' and 'f'. The notation includes various musical symbols such as notes, rests, and dynamic markings. The first system shows the beginning of the theme, and the subsequent systems show the first half of Variation 13.

Ex. 24. (Variation 13).

Vivace.

Another most wonderful variation is the twentieth, in which again there is a mere suggestion of the theme woven into mazes of transitions, passing away from the harmony of the theme in the less essential points, but always making the balance even again at the close, melodic and structural principles being mixed up almost inextricably. Example 25 shows the portion of this variation corresponding to the part of the theme given in Ex. 23:—

Ex. 25. (Variation 20).

Andante.

In almost all the variations except the fugue (no. 32) the periods are kept quite clear, and match the original faithfully; and this is the strongest point in helping the hearer or reader to follow the connection. The free fugue, which comes last but one, is exactly in the very best place to break any sense of monotony in the recurrence of these exact periods, while the last variation sets the balance even again in a very distinct and weighty way, in favour of the plan and melody of the theme.

In connection with the point illustrated by the fugue in this set, it is noticeable that Beethoven from the first seems to have aimed at relieving in some striking and decisive way the monotony which is liable to result from the constant recurrence of short sections, and the persistence of one key. His codas are frequently very long and free, and often contain extra variations mixed up with telling passages of modulation. The early set of variations on a theme by Righini (1790) affords one remarkable illustration of this, and the twelve on the Russian air from 'Das Waldmädchen' (1797), another. In the last movement of op. 111 the same end is gained by the string of transitions in the body of the movement before the last two variations; a similar passage occurs in the slow movement of the 9th Symphony; and in a few instances he gained the same end by putting some of the variations in a different key, as in those of the Eb Quartet, which also contain a modulating episode near the end.

The history of variations seems to be summed up in the set we have just been considering. In the earlier stages of the art the plan of the bass and the harmonies indicated by it was generally the paramount consideration with composers, and great technical ingenuity was expended. In characteristic sets of the earlier sonata-period the melody became paramount, and technical ingenuity was scarcely attempted. In Beethoven's latest productions structural and melodic elements are brought to a balance, and made to minister in all the ways that artistic experience and musical feeling could suggest to the development of the ideas which lie in the kernel of the theme, and to the presentation of them in new lights.

No composer had ever before attempted to produce variations on such principles as Beethoven did, and the art has hardly progressed in detail or in plan since his time; but several composers have produced isolated examples, which are really musical and interesting. Schubert is particularly happy in the variations on the 'Tod und Mädchen' theme in the D minor Quartet, in which there is great beauty of sound, charm of idea, and contrast of style, without anything strikingly original or ingenious in principle. Weber produced numbers of very effective and characteristic sets for pianoforte. Mendelssohn left one or two artistic works of the kind, of which the 'Variations serieuses' is the best. In this set there are happy instrumental effects, and the whole makes an effective pianoforte piece; but Mendelssohn's view of this branch of art was only at the level of the simple standard of Mozart, and not even so free and spontaneous as Haydn's; and in his application of melodic and structural principles he is extremely strict. Far more interesting is Schumann's treatment of the form in such examples as the Andante and Variations for two pianos, and the well-known 'Etudes Symphoniques.' His view of the art tended to independence as much as Mendelssohn's did to rigidity, and at times he was even superfluously free in his rendering of the structural aspect of the theme. His devices are less noticeable for ingenuity than for the boldness with which he gives a thoroughly warm, free, and romantic version of the theme, or works up some of its characteristic figures into a movement of nearly equal proportions with it.

By far the finest variations since Beethoven are the numerous sets by Brahms, who is akin to Beethoven more especially in those characteristics of intellect and strong emphatic character, which seem to make variations one of the most natural modes of expressing ideas. In the Variations and Fugue on a theme of Handel's (op. 24), the superb set for orchestra on a theme of Haydn (op. 56 a), those for four hands on a theme of Schumann's (op. 23), the two Paganini sets, and the fine set on an original theme in D (op. 21, no. 1), he has not only shown complete mastery and perception of all aspects of the form, but a very unusual power of presenting his theme in different lights, and giving a most powerful individuality both of rhythm and figure to the several members of each series. His principles are in the main those of Beethoven, while he applies such devices as condensation of groups of chords, anticipations, inversions, analogues, sophistication by means of chromatic passing notes, etc., with an elaborate but fluent ingenuity which sometimes makes the tracing of the theme in a variation quite a difficult intellectual exercise. But analysis almost always proves the treatment to be logical, and the general impression is sufficiently true to the theme in broad outline for the principle of the form to be intelligible. He uses double variations with the happiest

effect, as in those on the theme by Haydn, where the characteristic repetition of halves is sometimes made specially interesting by building one variation upon another, and making the repetition a more elaborate version of the first form of each half of the variation. Where the variations are strongly divided from one another, and form a string of separate little pieces, the contrasts and balances are admirably devised. In some cases again the sets are specially noticeable for their continuity, and for the way in which one variation seems to glide into another; while they are sometimes connected by different treatment of similar figures, so that the whole presents a happy impression of unity and completeness. Brahms is also, like Beethoven, most successful in his codas. Two very large ones are the fugue in the Handel set, and the fine, massive coda on a ground-bass derived from the first phrase of the theme, in the Haydn variations. Another on a large scale, but in different style, is that which concludes the Hungarian set (op. 21, no. 2.)

In the following examples—which show the first four bars of the theme, and the corresponding portion of the third variation in the first Paganini set, the nature of several very characteristic devices, such as anticipation, insertion of new chords between essential points of the harmonic succession, doubling the variation by giving the repetition of each half in full, with new touches of effect, etc.,—is illustrated.

Ex. 26.

Ex. 27.

A peculiar adaptation of the Variation-principle to the details of other forms of art remains to be noticed. In this also Beethoven led the way. A very fine example is the conclusion of the *Marcia Funebre* of the *Eroica* symphony, where the subject is made to express a terrible depth of grief by the constant breaks of the melody, which seem to represent sobs. A similar device—in that case amounting to a complete variation—is the repetition of the short 'Arioso dolente' in *Ab* minor in the middle of the final fugue in the *Sonata in Ab* (op. 110). Here again the object is obviously to intensify the sadness of the movement by constant breaks and irregularities of rhythm. Another passage of the same kind is the end of the overture to 'Coriolan.'

With a similar view Berlioz has given varied forms of his 'idée fixe' in the 'Episode de la vie d'un artiste'; adapting it each time to the changed conditions implied by the movement in which it appears. Its original form is as follows:—

Ex. 28.

In the ball scene it takes a form appropriate to the dance motion:—

Ex. 29.

Another form occurs in the 'Scène aux Champs,' and in the final 'Nuit de Sabbat' it is purposely brutalised into the following:—

Ex. 30.

Wagner, carrying out the same method on a grander scale, has made great use of it in adapting his 'leitmotiven' to the changed circumstances of the individuals or ideas to which they belong. One of the most remarkable instances is the change from one of Siegfried's tunes as given by his own horn in his early days, representing his light-hearted boyish stage of life—

Ex. 31.

to the tune which represents him as the full-grown hero bidding adieu to Brünnhilde, which is given with the whole force of the orchestra.

Ex. 32.

Liszt has frequently made characteristic variations of his prominent figures for the same pur-

poses, as in the 'Faust' symphony, and 'Les Preludes.'

Among the devices known as 'aesthetic,' variations again play a most prominent part; movements of symphonies and sonatas, etc., being often linked together by different forms of the same idea. Interesting examples of this are to be met with in Schumann's Symphonies in *D* minor and *C*, and again in Brahms's Symphony in *D*. [See SYMPHONY, pp. 35 and 42.]

In such a manner the principle of variation has pervaded all musical art from its earliest days to its latest, and appears to be one of its most characteristic and interesting features. In its early stages it was chiefly a mechanical device, but as the true position of ideas in music has come more and more to be felt and understood, the more obvious has it become that they can be represented in different phases. Thus the interest of the development of instrumental movements in modern symphonies and sonatas is frequently enhanced by the way in which the subjects are varied when they are reintroduced according to the usual principles of structure; in operas and similar works ever since Mozart's time characteristic features are made all the more appropriate by adapting them to different situations; and it is even possible that after all its long history the Variation still affords one of the most favourable opportunities for the exercise of their genius by composers of the future. [C.H.H.P.]

VARSOVIANA. A dance very similar in character to the Polka, Mazurka, and Redowa. It is probably of French origin, and seems to have been introduced by a dancing-master named Désiré in 1853. Somewhat later it was much danced at the Tuileries balls, and is said to have been a favourite with the Empress Eugénie. The music is characterised by strong accents on the first notes of the second and fourth bars, corresponding to marked pauses in the dance. The tempo is rather slow. The following is the tune to which the Varsoviana was generally danced:—

[W.B.S.]

VASCELLO-FANTASMA, IL. An Italian version of Wagner's 'Flying Dutchman.' Produced at the Royal Italian Opera, Covent Garden, June 16, 1877. [G.]

VAUCORBEIL, AUGUSTE EMMANUEL, whose real name was **VEAUCORBEILLE**, born at Rouen, Dec. 15, 1821, son of an actor long a favourite at the Gymnase under the name of Ferville. He entered the Paris Conservatoire in 1835, where he was patronised by Queen Marie Amélie, who made him an allowance. Here he studied seven years, Dourlen being his master for harmony, while Cherubini gave him some advice on composition. He took the second solfeggio prize in

1838. He first tried to earn his living by singing-lessons. As a skilled musician, and man of polished manners, he made friends, and became the pet composer of certain amateur circles. His first publication was 22 songs, of which a 'Simple Chanson' had a well-earned success. His chamber music—two string-quartets, some sonatas for PF. and violin, and one for viola, and two suites for PF.—is well constructed, with ideas at once ingenious and refined, qualities which also form the leading features of a 3-act Opéra-Comique 'La Bataille d'Amour' (April 13, 1863), and a *scena* with chorus, 'La Mort de Diane,' sung by Mme. Krauss at a Conservatoire concert (1870). Of an unpublished opera, 'Mahomet,' we know only some fragments played in 1877, but as far as we can judge, the fire, energy, knowledge of effect, and passion, required for success on the stage were not qualities possessed by M. Vaucorbeil. Finding that composition offered no prospect, he resolved to try a different branch, and in 1872 accepted the post of government commissary of the subsidised theatres. In 1878 he obtained the title of Inspecteur des Beaux Arts, and soon after was made director of the Opéra for seven years, entering on his functions by agreement with M. Halanzier, July 16, 1879. A new era seemed to have opened for the first opera-house in Paris; but instead of securing the services of such artists as Faure, Gayarré, Mme. Fidès-Devriès, etc., he chose his singers from among the young prize-winners at the Conservatoire—a system of 'reducing expenses' which has not been to the advantage of French composers. M. Vaucorbeil himself was a victim of his endeavours to manage this unmanageable theatre. He died after a short illness Nov. 2, 1884. [G.C.]

VAUDEVILLE, a French word, which has had successively four meanings: (1) a popular song, generally satirical; (2) couplets inserted in a play; (3) the play itself; and lastly (4) a theatre for plays of this kind, with songs. Most etymologists derive the word from Vaux de Vire, the name given to songs sung in the valleys (*vaux*) near Vire by a certain fuller and song-writer named Olivier Basselin, who died at Vire in the 15th century. His songs were collected and published in 1610 by an *avocat* named Jean le Houx, who may virtually be considered their author.¹ They contain such lines as these:

Faisant l'amour, je ne saurais rien dire
Ni rien chanter, sinon un *vaux de vire*.

Others² maintain that vaudeville comes from *voix de ville*, quoting as their authority the 'Recueil des plus belles et excellentes chansons en forme de voix de villes' (Paris, 1575) by Jean Chardavoine, a musician of Anjou, but we, with Ménage, prefer the former derivation. It is at any rate certain that the word 'vaudeville' was employed by writers in the 16th century to denote a song sung about the town, with a

catching tune. Many lampoons, such as the *Mazarinades*, are vaudevilles. The word was used in this sense, for some time, as is evident from a passage from Rousseau's 'Confessions': 'A complete collection of the vaudevilles of the court and of Paris for over 50 years, contains a host of anecdotes which might be sought in vain elsewhere, and supplies materials for a history of France, such as no other nation could produce.'

It was about 1700 that the mere street-song passed into 'topical' verses in a dramatic piece. The plays at the fairs of St. Germain and St. Laurent contained vaudevilles, generally adapted to well-known tunes, so as to ensure their immediate popularity. Occasionally fresh music was written for them, and the vaudevilles composed by Joseph Mouret (a Provençal, called by his contemporaries 'le musicien des Graces'), Gillier, Quinault the elder, and Blavet, had great success in their day.

The next step was to conclude the play with a *vaudeville final*, in which each character sang a verse in turn. Of this Beaumarchais's 'Mariage de Figaro' (1784) gives a well-known example.

The rage for vaudevilles gave rise to pieces entirely in verse, and parodies of operas, and largely contributed to the creation of the opéra-comique. To distinguish between these different classes of pieces the name *comédies à ariettes* was given to what are now called opéras-comiques, and the others became successively 'pièces en vaudevilles,' 'comédies mêlées de vaudevilles,' then 'comédies-vaudevilles,' and finally 'vaudevilles.'

II. It is thus evident that the word would afford material for a book embracing some most curious chapters in the history of French dramatic literature; for the vaudeville includes all styles, the comedy of intrigue, scenes of domestic life, village pieces, *tableaux* of passing events, parodies, and so forth. It was therefore natural that from having found a home wherever it could, it should at last have a special house erected for it. The Théâtre du Vaudeville was built in 1792, on the site of a dancing-saloon called 'Vauxhall d'hiver,' or the 'Petit Panthéon,' between the Rue de Chartres and the Rue St. Thomas du Louvre, on the site of the Hotel Rambouillet, and on ground now occupied by the Galerie Septentrionale, and by a part of the new court of the Louvre. This theatre was burnt down in 1838, when the company removed to the Théâtre des Nouveautés, in the Place de la Bourse. This new Théâtre du Vaudeville having disappeared in its turn, was replaced by the present pretty house in the Boulevard des Capucines, at the corner of the Rue de la Chaussée d'Antin. We cannot enumerate here the authors who have contributed to its success; suffice it to say that *vaudeville*, born so to speak simultaneously with the French Revolution, crystallised into one of the most characteristic forms of the old French 'esprit'; that later, as has been justly remarked, it launched boldly into all the speculations of modern thought, from the historic plays of Ancelot and Rozier, and

¹ The 'Vaux de Vire of Jean Le Houx of Vire,' have been recently published in English by J. P. Muirhead (London, 1878).

² See Fétis, Biographie, under 'Leroy,' p. 206.

the Aristophanesque satires of 1848, down to the works—as remarkable for variety as for intense realism—of Emile Augier, Dumas fils, Théodore Barrière, Octave Feuillet, George Sand, and Victorien Sardou.

This last period, so interesting from a literary and philosophical point of view, is, musically, wellnigh barren, while the early days of Vaudeville were enlivened by the flowing and charming inspirations of Chardin (or Chardiny) and Wecht, Doche (father and son), Henri Blanchard, and others less known. Most of the vaudevilles composed by these musicians are to be found in 'La Clé du Caveau' (1st ed. 1807, 4th and most complete, 1872). The airs are in notation without accompaniment. In the library of the Paris Conservatoire is a MS. collection of vaudevilles in 18 vols., with 1 vol. index, made by Henri Blanchard. These have an accompaniment for four strings.

The Comédie-vaudeville, or vaudeville proper, has now been abandoned for the Comédie de genre, but it is not improbable that it may be revived. At any rate, the couplet is not likely to die in a land where, as Beaumarchais said, everything ends with a song. Since his day manners in France have, it is true, greatly changed, but the taste for light, amusing, satirical verses, with a catching refrain, remains, and is likely to remain. Unfortunately the vaudeville, in the old sense of the word, has taken refuge in the Café-concerts, where the music is generally indifferent, and the words poor, if not objectionable. Occasionally in the Revues at the small Paris theatres a smart and witty vaudeville may still be heard. [G.C.]

VAUDEVILLE THEATRE, 404 Strand, London, was designed by Mr. C. J. Phipps, and opened April 16, 1870. Messrs. H. J. Montague, David James, and Thomas Thorne, lessees.

It may be useful here to give a list of the Theatres opened in London since the year 1866.

ALEXANDRA Theatre, Park Street, Camden Town. J. T. Robinson, architect. Opened May 31, 1873; proprietor, Madame St. Claire. Afterwards called **THE PARK**; burned down Sept. 11, 1881.

ALHAMBRA THEATRE (NEW), Leicester Square. Opened Dec. 3, 1883. Perry & Reed, architects. Proprietors, the Alhambra Theatre Co., limited.

AQUARIUM Theatre, adjoining Westminster Aquarium, Tothill Street, S.W. Mr. A. Bedborough, architect. Opened April 15, 1876; first lessee, Mr. Edgar Bruce. Is now known as **THE IMPERIAL**.

AVENUE, Northumberland Avenue, on site of house or gardens of Northumberland House. F. H. Fowler, architect. Opened March 11, 1882; proprietor, Mr. Sefton Parry.

CHARING CROSS, King William Street, Strand. Mr. Arthur Evers, architect. Opened June 19, 1869; first lessees, Messrs. Bradwell and Field. From Oct. 16, 1882, known as **THE FOLLY**, and now as **TOOLE'S**. Built on the site of the Lowther Rooms, where Blake's Masquerades were once held. It afterwards became the oratory of St. Philip Neri, and there Cardinal (then Dr.)

Newman preached his famous sermons to Anglicans in Difficulties. It next became a Working Man's Club and Institute under the presidency of Lord Shaftesbury, and in 1855 was opened by Woodin as the Polygraphic Hall, for his monologue entertainments, after which it became the theatre as named above.

COMEDY, Panton Street. Mr. Thos. Verity, architect. Opened Oct. 15, 1881; lessee, Mr. Alexander Henderson.

COURT, Sloane Square. Mr. Walter Emden, architect. Opened Jan. 25, 1871; first lessee, Miss Marie Litton. The site was formerly occupied by a Methodist chapel; on April 16, 1870, was first known as **THE NEW CHELSEA THEATRE**, and afterwards as **THE BELGRAVIA**.

CRITERION, underneath the Restaurant of that name, Piccadilly. C. J. Phipps, architect. Opened March 21, 1874; lessees, Messrs. Spiers & Pond.

ELEPHANT AND CASTLE, opposite the Chatham and Dover Railway Station of that name. Messrs. Dean, Son & Co., architects. Opened Dec. 26, 1872; first lessee, E. T. Smith.

EMPIRE, Leicester Square. Mr. Thos. Verity, architect. Opened April 17, 1884; proprietors, The Empire Co. Limited. Built on the site of Saville House, which was occupied from Feb. 14, 1806, to April 23, 1846, by Miss Linwood for her Gallery of Needle-work. Saville House afterwards became the Eldorado Music Hall and Café Chantant, and was burned down March 1, 1865.

GAIETY, Strand. C. J. Phipps, architect. Opened Dec. 21, 1868; lessee, Mr. John Hollingshead. Built on the site of the Strand Music Hall.

GLOBE. Mr. S. Simpson, builder. Opened Nov. 28, 1868; proprietor, Mr. Sefton Parry. Built on the site of Lyons Inn, an Old Chancery Inn of Court.

GRAND, Islington. Mr. Frank Matcham, architect. Opened Aug. 4, 1883; first lessees, Messrs. Clarence Holt and Charles Willmott. Built on the site of the Philharmonic Music Hall and Theatre; burned down Sept. 6, 1882.

HOLBORN, High Holborn, W.C. Messrs. Finch Hill & Paraire, architects. Opened Oct. 6, 1866; proprietor, Mr. Sefton Parry. Afterwards known as **THE MIRROR** and **DUKE'S**; burned down July 5, 1880.

NEW ROYAL AMPHITHEATRE, High Holborn, W.C. Thomas Smith, architect. Opened May 25, 1867; proprietors, Messrs. McCollum and Charman. Opened as a circus, but having at the same time a dramatic licence. Subsequently called **THE NATIONAL Theatre**, the **CONNAUGHT**, the **ALCAZAR**; now **THE HOLBORN Theatre**.

NOVELTY, Great Queen Street, Lincoln's Inn. Mr. Thomas Verity, architect. Opened Dec. 9, 1882; proprietors, The Novelty Co. Limited.

OPERA COMIQUE, Strand, Holywell and Wych Streets. F. H. Fowler, architect. Opened Oct. 29, 1870; first lessees, Messrs. Leslie, Steele, and Norton.

PRINCE'S THEATRE, Coventry Street, Haymarket. Mr. C. J. Phipps, architect. Opened Jan. 18, 1884; proprietor, Mr. Edgar Bruce.

QUEEN'S, Long Acre. C. J. Phipps, architect. Opened Oct. 24, 1867; first lessee, Alfred Wigan. Built on the site of St. Martin's Hall. About 1878 it ceased to exist as a theatre, and was sold to a Co-operative Association.

SAVOY. C. J. Phipps, architect. Opened Oct. 10, 1881; proprietor, R. D'Oyley Carte.

VARIETY, Pittfield Street, Hoxton. C. J. Phipps, architect. Opened March 14, 1870; proprietor, Verrell Nunn. [A.C.]

VAUGHAN, THOMAS, born in Norwich in 1782, was a chorister of the cathedral there under Dr. Beckwith. In June 1799 he was elected a lay-clerk of St. George's Chapel, Windsor. On May 28, 1803, he was admitted a gentleman of the Chapel Royal, and about the same time obtained the appointments of vicar-choral of St. Paul's and lay-vicar of Westminster Abbey. In March 1806 he resigned his place at Windsor and in the same year married Miss Tennant, who had appeared as a soprano singer about 1797, and from 1800 had sung at the Concert of Ancient Music and the provincial festivals, and for some years occupied a good position. Becoming estranged from her husband she appeared on the stage at Drury Lane (as Mrs. Tennant) in secondary parts, and eventually subsided into a chorus-singer at minor theatres. In 1813 Vaughan was chosen to succeed Samuel Harrison as principal tenor at the Concert of Ancient Music and the provincial festivals, which position he occupied for more than a quarter of a century. His voice was a genuine tenor, the deficiency of natural power in which was concealed by purity of tone, great distinctness of pronunciation, and faultlessness of intonation. Harrison's style was chaste, refined, and unaffectedly sublime. He sang the tenor part in Beethoven's Ninth Symphony on its production by the Philharmonic Society, London, March 21, 1826. He died at Birmingham, Jan. 9, 1843, and was buried Jan. 17, in the west cloister of Westminster Abbey. [W.H.H.]

VAUXHALL GARDENS. In 1615 one Jane Vaux, widow of John Vaux, was tenant, as a copyholder of the manor of Kennington, of a tenement situate near to the Thames. About 1660 this house, with the grounds attached to it, was opened as a place of public entertainment. The earliest mention of it as such is in Evelyn's Diary, under date July 2, 1661: 'I went to see the New Spring Garden at Lambeth, a pretty contrived plantation.' Pepys at later dates frequently mentions it, and from him we learn that there was an older place of the same name and description in the neighbourhood. On May 29, 1662, he says, 'With my wife and the two maids and the boy took boat and to Fox-hall. . . . To the old Spring Garden. . . . Thence to the new one, where I never was before, which much exceeds the other.' The musical entertainment appears to have been of the most primitive description. Pepys (May 28, 1667) says, 'By water to Fox-hall and there walked in Spring Garden. . . . But to hear the nightingale and other birds, and here fiddles, and there a harp,

and here a Jew's trump [JEW'S HARP], and here laughing and there fine people walking, is mighty diverting.' Addison, in 'The Spectator,' mentions the place as much resorted to. In 1730 Jonathan Tyers obtained a lease of it and opened it June 7, 1732, with an entertainment termed a 'Ridotto al fresco,' then a novelty in England, which was attended by about 400 persons. This became very attractive and was frequently repeated in that and following seasons, and the success attending it induced Tyers to open the Gardens in 1736 every evening during the summer. He erected a large covered orchestra, closed at the back and sides, with the front open to the Gardens, and engaged a good band. Along the sides of the quadrangle in which the orchestra stood were placed covered boxes, open at the front, in which the company could sit and sup or take refreshments. These boxes were adorned with paintings by Hayman from designs by Hogarth. There was also a rotunda in which the concert was given in bad weather. In 1737 an organ was erected in the orchestra in the Gardens, and James Worgan appointed organist. An organ concerto formed, for a long series of years, a prominent feature in the concerts. On the opening of the Gardens on May 1, 1738, Roubiliac's statue of Handel (expressly commissioned by Tyers), was first exhibited.¹ In 1745 Arne was engaged as composer, and Mrs. Arne and Lowe as singers. In 1749 Tyers adroitly managed, by offering the loan of all his lanterns, lamps, etc., and the assistance of 30 of his servants at the display of fireworks in the Green Park on the rejoicings for the peace of Aix-la-Chapelle, to obtain permission to have the music composed by Handel for that occasion publicly rehearsed at Vauxhall, prior to its performance in the Green Park. The rehearsal took place on Friday, April 21, by a band of 100 performers, before an audience of 12,000 persons admitted by 2s. 6d. tickets. The throng of carriages was so great that the traffic over London Bridge (then the only metropolitan road between Middlesex and Surrey) was stopped for nearly three hours. After Lowe quitted, Vernon was the principal tenor singer. On the death of Jonathan Tyers in 1767 he was succeeded in the management by his two sons, one of whom, Thomas, who had written the words of many songs for the Gardens, soon afterwards sold his interest in the place to his brother's family. In 1774 Hook was engaged as organist and composer, and held these appointments until 1820. [See HOOK, JAMES.] In his time the singers were Mrs. Martyr, Mrs. Wroughton, Mrs. Weichsell, Miss Poole (Mrs. Dickons), Miss Leary, Mrs. Mountain, Mrs. Bland (probably the most universally favourite female singer who ever appeared in the Gardens), Miss Tunstall, Miss Povey, Vernon,

¹ This statue remained in the Gardens, in various situations, sometimes in the open air and sometimes under cover, until 1818, when it was removed to the house of the Rev. Jonathan Tyers Barrett, D.D. (to whom the property in the Gardens had devolved, and who then contemplated a sale of it), in Duke Street, Westminster, where it remained until his death. It was purchased at auction in 1833 by Mr. Brown, a statuary, who in 1854 sold it to the Sacred Harmonic Society. It now belongs to Mr. Henry Littleton.

Inclendon, Dignum, Charles Taylor, Collyer, Mahon, etc., etc. Parke, the oboist, was for many years the principal solo instrumentalist. On May 29, 1786, the Gardens were opened for the season, for the first time under the name of 'Vauxhall Gardens' (the old name of 'Spring Garden' having been continued up to that time), with a jubilee performance in commemoration of their first nightly opening by Tyers 50 years before. In 1798 fireworks were occasionally introduced, and afterwards became one of the permanent attractions of the place. The favour shown by the Prince of Wales (afterwards George IV.), made the Gardens the resort of the fashionable world, and the galas given during the Regency, on the occasions and the anniversaries of the several victories over Napoleon, attracted immense numbers of persons. During that period the prosperity of the establishment culminated. In 1815 the celebrated performer on the tight rope, Madame Saqui appeared, and excited universal astonishment by her ascent on the rope to the summit of the firework tower (60 feet high), during the pyrotechnic display. She continued one of the principal attractions of the Gardens for many years. In 1818, the Gardens having become the property of the Rev. Dr. Jon. Tyers Barrett, who deemed the derival of an income from them inconsistent with his sacred calling, they were submitted to auction (on April 11), but bought in. In 1822 however they passed into the hands of Messrs. Bish, Gye, and Hughes. Great changes then took place in the character of the entertainments; and a theatre was erected, in which at first ballets, and afterwards vaudevilles, were performed. The concert however was retained as a leading feature, and in 1823 the singers were Miss Tunstall, Miss Noel, Miss Melville, Goulden, Collyer, Clark, and Master Longhurst. In 1826 Miss Stephens, Mme. Vestris, Braham, Sinclair, De Begnis, etc. were engaged. In 1827 horsemanship was introduced and a mimic representation of the Battle of Waterloo (which proved attractive for several seasons), given on the firework ground. Miss Graddon, T. Phillips, Horn, and Mr. and Mrs. Fitzwilliam were the singers, and Blewitt, T. Cooke, and Horn the composers. In 1828 Blewitt, T. Cooke and R. Hughes were the composers, and Misses Helme, Knight and Coveney, Benson, Williams and Tinney the singers. In 1829 Rossini's 'Il Barbiere di Siviglia' was performed in the theatre by Miss Fanny Ayton, Mesdames Castelli and De Angioli, and Signori Torri, Giubilei, De Angioli and Pellegrini; the orchestral concert being supported by Misses Helme and P. Horton (now Mrs. German Reed), George Robinson, W. H. Williams, and George Smith; Blewitt and T. Cooke continuing as composers. In 1830 Bishop was placed at the head of the musical department, and continued so for 3 years. He produced during that period the vaudevilles of 'Under the Oak,' and 'Adelaide, or the Royal William,' 1830; 'The Magic Fan,' 'The Sedan Chair,' and 'The Battle of Champagne,' 1832, and many single

songs, amongst which was the still popular ballad, 'My pretty Jane,' written for the sweet-toned alto voice of George Robinson. His singers included Miss Hughes and Mrs. Waylett. Balloon ascents formed a main feature of the attractions a few years later. As far back as 1802 Garnerin had made an ascent from the Gardens, but that was an isolated case. In 1835 Charles Green ascended and remained in the air all night. On Nov. 7, 1836, Green, Monck Mason, and Holland ascended in the large balloon, afterwards known as the 'Nassau,' and descended next morning near Coblenz, having travelled nearly 500 miles in 18 hours. In July, 1837, Green ascended, with Cocking attached in a parachute beneath the balloon, when the latter was killed in his descent by the failure of his machinery. The Gardens now rapidly declined. In 1840 an attempt was made to sell them, but they were bought in at £20,000. In 1843 they were under the management of Wardell; masquerades, frequented by the most disreputable classes of the community were given; matters grew worse and worse, until in 1855 they came into the hands of Edward Tyrrell Smith, and reached their lowest depth of degradation. The musical arrangements were beneath contempt; a platform for promiscuous dancing was laid down; and everything lowered in quality. They were not afterwards regularly opened, but speculators were forthcoming who ventured to give entertainments for a few nights in each year, 'for positively the last nights,' until 1859, when the theatre, orchestra, and all the fittings were sold by auction. On July 25 in that year the trees were felled and the site handed over to builders. Vauxhall Gardens had a longer existence than any public gardens in England, and assisted in maintaining a taste for music as a source of rational enjoyment, although they did little or nothing towards promoting its advancement. [W.H.H.]

VECCHI,¹ or VECCHII, ORAZIO,² was born, it seems at Modena, in or about the year 1551. He became the pupil of a monk named Salvatore Essenga, who was himself not unknown as a composer, and who published a volume of 'Madrigali,' containing a piece (doubtless his first essay) by Vecchi, in 1566. The latter entered holy orders and was made first, in 1586, canon, and then, five years later, archdeacon, of Correggio. Soon afterwards however he seems to have deserted his office in order to live at his native town; and by April 1595 he was punished for his non-residence by being deprived of his canonry. Possibly the real reason of his absence or of his deprivation, or both, was the singular excitability and quarrelsomeness of his disposition, of which several stories are told. Be this as it may, in October 1596 he was made chapel-

¹ Vecchi = old, and this may possibly mean that Orazio was the elder of two brothers or of the elder branch of his family.

² Orazio's separate compositions are indexed in Eitner's 'Bibliographie des xvi. und xvii. Jahrhunderts,' pp. 890-895: they consist of 63 Italian and 44 Latin numbers; besides 42 (in German collections) with German words, many of which are presumably identical with compositions differently entitled in Italian or Latin.

master of Modena cathedral; and two years later received the same post in the court, in which capacity he had not only to act as music-master to the ducal family, but also to furnish all sorts of music for solemn and festival occasions, grand mascarades, etc. Through this connexion his reputation extended widely. He was summoned at one time to the court of the Emperor Rudolf II.; at another he was requested to compose some particular music for the King of Poland. In 1604 he was supplanted in his office by the intrigue of a pupil, Geminiano Capi-Lupi; and within a year, Sept. 19, 1605, he died, it is said, of mortification at his ill-treatment.

Among Orazio's writings the work which calls for special notice, and which gives him an important place in the history of music, is his 'Amfiparnasso, commedia harmonica,' which was produced at Modena in 1594 and published at Venice three years later. The 'Amfiparnasso' has been claimed as the first example of a real opera, but on insufficient grounds. It marks, it is true, a distinct step towards the creation of the idea; but it is not itself an opera. It is a simple series of five-part madrigals sung by a choir, while the *dramatis personæ* appear in masks on the stage and act in dumb show, or at most sing but co-ordinate parts in the madrigal.¹ At the same time, the character of the work is highly original and dramatic. The composer, in spite of his clerical standing, is entirely secular in his general treatment of the comedy. He has a strong sense of humour and of dramatic effect; and if he uses his powers in a somewhat perverse and eccentric manner, there is always imagination present in his work, and he lets us see that the madrigal style is breaking down under the weight of the declamatory and dramatic impression which it is now called upon to bear.

Orazio's other works belong to the older Venetian school, which in the 'Amfiparnasso' he was setting the example of forsaking. They fall under the following heads:—(1) Canzonette a 4 voci (four books, 1580–1590, afterwards collected with some additions by Phalesius, 1611), a 6 voci (1587), and a 3 voci (1597, 1599, the former volume in part by Capi-Lupi); (2) Madrigali a 5 e 6 voci (1589–1591, altogether five parts); (3) Lamentations (1587); (4) Motets, and Sacre Cantiones (1590, 1597, and 1604); (5) Hymns and Canticles; (6) Masses (published in 1607); (7) Dialogues; (8) 'Convito musicale'; (9) 'Le Veglie de Siena, ovvero I varij humori della musica moderna, a 3–6 voci' (1604).² [R.L.P.]

VEILED PROPHET OF KHORASSAN, THE. An opera in 3 acts; words by W. Barclay Squire, after Moore; music by C. V. Stanford. Produced at the Court Theatre, Hanover, as 'Der verschleierte Prophet' (German version by Frank, Feb. 6, 1881). The opera has not been produced in London, but the overture and other portions have been given at the Crystal Palace, etc., and the PF. score is published by Boosey & Co. [G.]

¹ See above, OPERA, vol. II. 490 a.

² See generally Fétis, s. v., and Ambros, 'Geschichte der Musik,' III. 545–562 (1st edition).

VEILED VOICE (*Voce velata*). A voice is said to be veiled when it is not clear, but sounding as if it passed through some interposed medium. The definition found in some dictionaries, namely 'a husky voice,' is incorrect. Huskiness is produced by an obstruction somewhere along the line of the vocal cords, a small quantity of thick mucus which obstinately adheres to them, or an abrasion of the delicate membrane which lines them, from cold or over-exertion. But the veil is due to a special condition, temporary or permanent, of the entire surface of the vocal cords, which affects the tone itself without producing a separate accompanying sound. There are two distinct kinds of veil—that which is natural, proceeding from the special aforesaid condition of the vocal cords in a healthy state, and that which proceeds from a defective position of the vocal organs (bad production), over-work, or disease. Almost every fine dramatic voice has a very slight veil upon it, scarcely recognisable as such, but imparting to it a certain richness and pathos often wanting in voices of crystalline clearness. It is in idea like *atmosphere* in a picture. The veil is therefore not a defect in every degree. Some great singers have had it to a considerable extent. Amongst these, Pasta, one of the first who united classic acting to fine singing, could never overcome a veil that was sufficient at times to be very much in the way, counterbalanced, however, by her other great qualities; and Dorus-Gras, a French soprano who flourished about forty-five years ago, was a remarkable instance of the possession of large powers with a veil upon the voice, that would in most cases have been a serious impediment to vocal display. She, however, made the most brilliant singing pierce the impediment, like the sun shining through a mist. The slight veil on the voice of Jenny Lind (Madame Goldschmidt) gave it volume and consistency, and the same maybe said of Salvini the actor, who has, perhaps, the finest speaking voice that ever was heard.

Let no student of singing endeavour to cultivate a veil because some great singers have had it naturally. A superinduced veil means a ruined voice. [H.C.D.]

VELLUTI, GIOVANNI-BATTISTA, born at Monterone (Ancona) in 1781, was the last of the great male sopranos of Italy. At the age of fourteen he was taken up by the Abbate Calpi, who received him into his house and instructed him in music. After the traditional six years of solfeggi, he made his début, in the autumn of 1800, at Forli; and for the next two or three years continued to sing at the little theatres of the Romagna. In 1805, appearing at Rome, he earned a great success in Nicolini's 'Selvaggia'; and two years later, in the same city, he sang the 'Trajano' of the same composer, by which he established his position as the first singer of the day. With no less *éclat* he appeared in 1807 at the San Carlo in Naples, and at the Scala in Milan, during the Carnival of 1809, in 'Coriolano,' by Nicolini, and 'Ifigenia in Aulide,' by Federici. After singing at Turin,

and again at Milan, he appeared in 1812 at Vienna, where he was crowned, medallised, and celebrated in verse. On his return to Italy, he continued to reap golden honours at Milan and other places until 1825, when he came to London. Here he was the first sopranist whom that generation of opera-goers had ever heard, the last (Roselli) having ceased to sing in 1800, at the King's Theatre; and a strong prejudice was rather naturally felt against the new singer. 'His first reception at concerts was far from favourable, the scurrilous abuse¹ lavished upon him before he was heard, cruel and illiberal; and such was the popular prejudice and general cry that unusual precautions² were deemed necessary to secure a somewhat partial audience, and prevent his being driven from the stage on his very first entry upon it. The very first note he uttered gave a shock of surprise, almost of disgust, to inexperienced ears, but his performance was listened to with attention and great applause throughout, with but few *audible* expressions of disapprobation, speedily suppressed. The opera he had chosen was 'Il Crociato in Egitto, by a German composer, named Mayerbeer (*sic*), till then totally unknown in this country.'³

It must be remembered that Velluti at this time was no longer young, and doubtless had lost much of the vigour and freshness of his splendid voice, which had formerly been one of large compass. When he first sang in England, the middle notes had begun to fail, and many of them were harsh and grating to the ear, though the upper register was still exquisitely sweet, and he had retained the power of holding, swelling, and diminishing his tone with delightful effect. The lower notes were full and mellow, and he showed great ingenuity in passing from one register to the other, and avoiding the defective portions of his scale. His manner was florid, but not extravagant; his embellishments, tasteful and neatly executed, and not commonplace. His usual style was suave, but rather wanting in variety; he never rose to *bravura*. In appearance he had been remarkably handsome, and was still good-looking. Velluti received £600 for his services during that (part) season, but was re-engaged for the next at a salary of £2,300, as director of the music as well as singer. He then appeared in Morlacchi's 'Tebaldo ed Isolina,' which he considered his best opera. He was much less admired, however, in this than in the former work; and his favour sensibly declined. For his benefit, he sang in Rossini's 'Aureliano in Palmira,' but in connexion with this got into a dispute about extra pay to the chorus, and the case was decided against him in the Sheriff's Court.

In 1829 Velluti came to London once more and sang on a few occasions. On one of these he was heard by Mendelssohn,⁴ with an effect only of intense loathing. His voice, indeed had completely lost its beauty, and he was not engaged. He returned to Italy, and died in the

early part of February, 1861, at the age of eighty. Velluti was a man of kind and benevolent disposition, and equally gentlemanly feeling and deportment: his private habits were of the most simple and inoffensive kind. In society, his apparent melancholy gave way to a lively and almost playful exuberance of good humour, and he never failed to interest. His chief amusements were billiards and whist, of which, though no gambler, he was very fond.⁵ It is strange that no fine portrait should exist of so great a singer and so handsome a man: the only ones known are an oval by Jügel, after Mouron, representing him as Trajano, and a woodcut, in which he appears as Tebaldo. [J.M.]

VELOCE, CON VELOCITÀ, VELOCISSIMO—'Swiftly; with the utmost rapidity.' A term invented by the 'Romanticists,' generally used of an *ad libitum* passage in a quick movement, as, for instance, a scale-passage, or similar figure, in a cadenza. It indicates an increased rate of speed—not, like *accelerando*, a gradual quickening of the time, but an immediate access of celerity, lasting evenly until the end of the passage or figure to which it is applied. The original time is then resumed without the words *a tempo* being required. In the large majority of cases, the term is only applied to loud passages, as frequently in the works of Chopin, and in the finale of Schumann's Sonata in F# minor, op. 11; but in one instance at least, the slow movement of his second concerto, the former composer applies it to a soft passage, coupling *velocissimo* with *delicatissimo*. No instance of its occurrence is to be found in the works of the 'classical' masters strictly so called; its earliest use would seem to be in that work of Chopin's which Schumann's criticism immortalised, the 'La ci darem' Variations, where, however, it is applied to an entire variation. Under such conditions it must be regarded as equivalent to *Presto con fuoco*. It is worthy of notice that in Czerny's 'Etudes de la Vélocité' the direction occurs only once, and then in the superlative, applying moreover to an entire study. [J.A.F.M.]

VENETIAN SWELL. The first Swell Organ produced its effect by placing the front of the box containing the pipes under the control of the player, who by means of a pedal could raise or lower the panel at will, so releasing or muffling the sound. This plan was first adopted in the organ at St. Magnus, London Bridge, built in 1712. [See ORGAN.] The first Harpsichord Swell made its crescendo by the raising of the lid. These clumsy contrivances were superseded by the Venetian Swell, an invention patented by Shudi in 1762 [see SWELL, HARPSICHORD], and so called from its resemblance to the laths of a Venetian blind. This ingenious device was first applied to the Harpsichord, but was soon adopted by organ builders. The louvres are generally in horizontal rows and are so hung as to close by their own weight; but in very large Swell Organs

¹ The wits of the day called him 'non vir, sed velluti.'

² This statement is contradicted by Ebers ('Seven Years').

³ Lord Mount-Edgcumbe.

⁵ Ebers.

the size and number of these shutters made them too heavy for control by the foot, and they are now often placed vertically and closed by a spring. The old form of Swell could only be left either quite open or completely closed: in recent years a balanced Swell has been introduced which allows the shutters to be left at any angle. In almost all cases the control is given to the foot of the player—generally the right foot. This arrangement has had disastrous effects upon the pedalling of many players. Several ingenious attempts have been made to enable the organist to open and close the box by other means. In the large organ built by Mr. Willis for the 1862 Exhibition, a crescendo could be made by blowing into a small pipe. This however was liable to inconvenient sudden sforzandos. Mr. R. H. M. Bosanquet uses a moveable back attached to the seat by a hinge. A strap fastened to this is passed over one shoulder and under the other arm of the player. When the player leans forward he pulls on the back of the seat, and this opens the Swell. The action of the back Swell and Swell Pedal are distinct, so that acting on the former may not depress the latter. [W.Pa.]

VENI CREATOR SPIRITUS. The Hymn appointed, in the Roman Breviary, to be used at Vespers on the Feast of Pentecost, when the first verse is sung kneeling:—

Veni creator Spiritus
Mentes tuorum visita,
Imple superna gratia
Quæ tu creasti pectora.

It is also sung at Ordinations, and on all other occasions introducing a solemn invocation to the Holy Ghost. The Latin text is supposed to have been written about 800, and is often ascribed to Charlemagne. The English version, by Bishop Cosyn, in the Book of Common Prayer—'Come, Holy Ghost, our souls inspire'—is in Long Measure, answering, so far, to the eight syllables of the original hymn, and susceptible of adaptation to the melody (see 'Hymns Ancient and Modern,' no. 157). The second version—'Come, Holy Ghost, Eternal God'—being in Common Measure, is, of course, less manageable.¹

The Plain Chaunt Melody will be found in the Antiphonarium, the Vespers, and the Directorium Chori. Among polyphonic settings, the finest is that by Palestrina, in the 'Hymni totius anni' (Rome, 1589). A beautiful movement from a 'Magnificat' by Palestrina, was adapted, many years ago, to the English version, and published by Messrs. Burns & Lambert; but is now out of print. Tallis has also written a little setting, in the form of a very simple Hymn Tune, adaptable to the English Common Measure version. [W.S.R.]

VENITE. The name familiarly given to the 95th Psalm—in the Vulgate 'Venite exultemus Domino'—which in the Anglican Service is

¹ The Hymn, 'Come, Thou Holy Spirit, come,' is not 'engraved' from the 'Veni Creator,' but from the Sequence for Whit Sunday, 'Veni Sancte Spiritus,' to which, indeed, the Common Measure version bears quite as much resemblance as it does to the 'Veni Creator' itself.

sung immediately before the Psalms of the day at Matins. For some time after the introduction of the English service the Venite was set to music in the same manner as the Te Deum or Jubilate. Instances of this are found in the services by Tallis, Strogers, Bevin, Byrd, Gibbons,² Mundy, Parsons, and Morley, in Barnard's Church Music. The custom was, however discontinued, and Dr. Giles, who died 1633, was probably the last composer to do it.³ Since then the Venite has been chanted like an ordinary psalm, thus returning to the practice of the Roman church; a practice which indeed must have been partly followed from the first, since in Tallis's service a chant is given for it in addition to the other setting. [G.]

VENOSA, CARLO GESUALDO, PRINCE OF, nephew of Alfonso Gesualdo, archbishop of Naples, was born about the middle of the 16th century. He became the pupil of Pomponio Nenna of Bari, and excelled both as a composer and performer on the organ, clavichord, and lute: on the last he is said to have had no equal in his day. Of his history nothing is recorded; we only know that he was living in 1613. His compositions are contained in a single volume of madrigals published at Genoa in parts, 1585, and in score, 1613. The latter bears the following title: 'Partitura delli sei libri de' madrigali a cinque voci dell' illustrissimo et eccellentissimo principe di Venosa, D. Carlo Gesualdo.'

The prince of Venosa is mentioned by 'Pietro della Valle in company with Peri and Monteverde, as one of those who followed a new path in musical composition and as perhaps that one to whom mainly the world was indebted for the art of effective singing, 'del cantare affectuoso.' This judgment is sustained by modern examination of the prince's works. Burney indeed found them almost repulsive in their irregularity of form and rhythm, and their want of conformity with the strict canons of part-writing. But it is this very irregularity which attracts more recent critics. By swift transitions of keys and bold modulation, Gesualdo produced a singularly rich effect, full of surprises and highly individual. His style is peculiarly distinguished by its pathetic vein. But it is the change of method in his productions that calls for special notice. Gesualdo, in fact, as a skilful instrumental player, was able to use his voices in a freer manner than had commonly been allowed; and, though a brilliant contrapuntist when he chose, he preferred to work consciously on lines which brought him near to the discovery of a genuine harmonic treatment.⁴ [R.L.P.]

VENTADOUR, THÉÂTRE. Ventadour, which has given its name to a street and a lyric theatre in Paris, is a village in the Limousin, created a duchy in 1568 in behalf of Gilbert de Levis, whose descendants have since borne the name of Levis de Ventadour. The Rue Venta-

² Reprinted by Ouseley in his 'Collection of the Sacred Compositions of Orlando Gibbons.' Boyce has not given the Venite in his edition of Tallis, Byrd, or Gibbons. ³ Jebb, p. 209.

⁴ Ambros, 'Geschichte der Musik,' iv. 248 note.

⁵ See especially Ambros, iv. 238—243.

dour, opened in 1640 as the Rue St. Victor, took the name it still bears in 1672.¹ The Theatre was built to replace the Salle Feydeau, and a new street being planned to run from the Rue des Petits Champs to the Rue Neuve St. Augustin, and to be called the Rue Neuve Ventadour, it was decided to place the theatre in the middle of the street and call it by the same name. The street in which the principal façade stands is now called Rue Méhul, and that at the back Rue Monsigny. The building was erected by the architect Huvé, superintended by M. de Guerchy, and cost, including site, 4,620,000 francs (£184,800) which was paid for out of the Civil List, and it was sold to a company of speculators for 2,000,000 francs (£80,000); a disastrous transaction, in keeping with much of the financial history of the Théâtre Ventadour.

The company of the Opéra Comique left the old Salle Feydeau for its new quarters on Easter Monday, April 20, 1829. The audience, a very distinguished one, expressed great satisfaction with the luxury and comfort which pervaded the new Theatre Royal. The programme on the opening night included 'Les deux Mousquetaires,' by Berton; Méhul's overture to 'Le jeune Henri,' and 'La Fiancée,' a three-act opera by Scribe and Auber. In spite of this happy commencement the theatre was destined to frequent collapses, and after two years of vicissitudes the company were obliged to move to the Théâtre des Nouveautés in the Place de la Bourse, where they performed for the first time Sept. 22, 1832. During the two years they played a considerable number of new works, such as Boieldieu's last opera, 'Les deux Nuits' (May 20, 1829); 'Fra Diavolo,' first given as 'L'Hôtellerie de Terracine' (Jan. 28, 1830), and 'Zampa' (May 3, 1831). The theatre reopened June 10, 1834, as the Théâtre Nautique, with 'real water' on the stage. The Théâtre Nautique came to an end early in 1835, and the Théâtre Ventadour was resuscitated (Jan. 30, 1838) for an Italian company cast adrift by the burning of the Salle Favart, and comprising Rubini and Zamboni, Lablache, Tamburini, Morelli, Grisi, Persiani and Albertazzi; but only one opera new to the French, 'Parisina,' was given before the season closed (March 31).

With the autumn of 1838 the theatre again changed its name, and entered on a new but still struggling existence as the Théâtre de la Renaissance. Anténor Joly, the new director, aimed at maintaining a third French lyric theatre in Paris, and produced during two years, besides plays by Victor Hugo, Alexandre Dumas, and Casimir Delavigne, 'Lady Melvil' (Nov. 15, 1838), Albert Grisar's first opera; Donizetti's 'Lucie de Lammermoor' (Aug. 6, 1839), translated into French by A. Royer and G. Vaez; and 'La chaste Susanne' (Dec. 27, 1839), the best work of Moupou. The charming Anna Thillon, who had a brilliant career in France before returning to her native England, appeared

in all three operas with striking success. [See THILLON.]

From Oct. 2, 1841, to the 'année terrible,' 1870-71, the Théâtre Ventadour became the rendezvous of the Paris plutocracy, as well as of the amateurs of Italian music. The building, rearranged by Charpentier, was perfect and most commodious, the pit was converted into orchestral stalls, and open to ladies as well as gentlemen. Many an impresario looked to making a fortune by this Italian theatre, and among those who made the attempt we may mention Lumley, Calzado, Bagier, and Strakosch. The list of distinguished singers heard here during twenty years of more or less continuous prosperity embraces the great artists of that time almost without exception. Besides the old répertoire, these artists introduced to the Paris world all Verdi's operas, the favourite works of Mercadante, Donizetti, and other modern masters, and a few complete novelties. Among the latter, written or translated expressly for the Théâtre Ventadour, we will only specify Rossini's 'Stabat Mater' (Jan. 7, 1842); 'Don Pasquale' (Jan. 4, 1843); Flotow's 'Marta' (Feb. 11, 1858), and 'Stradella' (Feb. 19, 1863). Here, too, Vieuxtemps, Sivori, Liszt, Mme. Pleyel, Emile Prudent, and other celebrated artists gave their best concerts; Berlioz produced his 'Harold en Italie,' the 'Francs Juges,' and 'Carnaval Romain' overtures (May 3, 1844); Felicien David conducted the 'Désert' (Dec. 28, 1844) with enormous success; and Wagner produced fragments from 'Tannhäuser,' 'Tristan und Isolde,' and 'Lohengrin' (Jan. 25 and 31, 1860).

From the war of 1870-71 till its final close on Jan. 11, 1879, the Théâtre Ventadour had a hard struggle against the indifference of the public. Several fruitless attempts were made to resuscitate the taste for Italian music. The most interesting events of this last period were the rival performances by the French Opéra (beginning Jan. 19, 1874) and the Italian artists, after the burning of the Salle Le Peletier; the first performance of 'Aida' (April 22, 1876); and of Verdi's 'Requiem' (May 30, 1876); the transformation of the Italian theatre into the French Théâtre Lyrique, and the representation of the Marquis d'Ivry's opera 'Les Amants de Vérone' (Oct. 12, 1878). On Jan. 20, 1879, the Théâtre Ventadour was sold to a financial company, and its pediment, still decorated with statues of the Muses, now bears the words 'Banque d'escompte de Paris,' a truly exasperating sight.

There is an excellent 'Histoire du Théâtre Ventadour' (large 8vo, 162 pp., 1881), by the lamented Octave Fouque (born 1844), who died in 1883, just as he had attained the first rank among French musical critics. [G.C.]

VENTIL is the German term for the valve in brass instruments. 'Ventilhorn' and 'Ventiltrompet' are therefore equivalent to Valve-horn and Valve-trumpet. [See VALVE; p. 215.] [G.]

VÊPRES SICILIENNES, LES. Opera in 5 acts; libretto by Scribe and Duveyrier, music by Verdi. Produced June 13, 1855, at the

¹ It begins at No. 26 in the Avenue de l'Opéra, and ends at No. 57 in the Rue des Petits Champs.

Grand Opéra, Paris. It was translated into Italian as 'Giovanna de Guzman,' and produced at the Scala, Milan, Feb. 4, 1856, for Mad. Barbieri Nini; at the Royal Italian Opera, Drury Lane, London, July 27, 1859, as 'I Vespri Siciliani.' [G.]

VERACINI, ANTONIO, a violinist and composer who lived during the second half of the 17th century at Florence. According to Fétis he published three sets of sonatas. His nephew and pupil,

FRANCESCO MARIA VERACINI, a celebrated violinist and composer, was born at Florence about 1685, and was known as 'Il Fiorentino.' He appears to have settled early at Venice, where Tartini was so much impressed by his style as to leave Venice without appearing in public, and retire to Ancona for further study after the model of Veracini. [TARTINI.] He visited England for the first time in 1714, acting as leader of the Italian Opera band, and appearing as soloist between the acts. He was then 'regarded as the greatest violinist in Europe' (Burney, Hist. iv. 640). In 1720 he accepted an appointment as solo-player to the Elector of Saxony at Dresden. There he threw himself out of a high window, and in consequence was lamed for life. According to one version he did this in a fit of insanity; but another report goes to the effect that Pisendel, the leading German musician at Dresden, in order to prepare a humiliation to Veracini, who by his conceit and arrogance had incurred the hostility of the Germans, asked him to play a concerto at sight before the Court, and afterwards made a violinist of the orchestra repeat the piece. As the latter had carefully prepared his music, the audience, to Veracini's mortification, gave the preference to his performance and applauded him greatly. Be this as it may, Veracini left Dresden for Prague (1723) and Italy. In 1735 we find him again in London, where he achieved a signal success as a composer. His opera 'Adriano' was performed 17 times during the winter of 1735-36, an enormous run in those days. As a violinist Geminiani, then a rising star, appears to have impaired his success. He is reported to have died in reduced circumstances at Pisa in 1750.

Veracini's general success in Italy, England and Germany, and the special testimony of Tartini, are sufficient proofs of his eminence as a player. At the same time, his compositions, though few of them have been published, show him to have been a musician of remarkable originality and solid attainments. His style is much more modern than that of Corelli and even of Tartini. The pathetic element so predominant in the works of these masters, although not entirely absent in his works, is yet much less prominent than vivacity, grace, and piquancy. His forms are sometimes very extended, his modulations and harmonies not only rich and varied, but often so unusual and bold that it is not surprising to find that 'his compositions were too wild and flighty for the taste of the English at that time' (Burney).

He published two sets of 12 sonatas each (Dresden and Amsterdam, 1721; London and Florence, 1744). For London he composed the operas 'Adriano,' 1735; 'Roselinda,' 1744; 'L'Errore di Salomone,' 1744. A number of concertos, sonatas, and symphonies for 2 violins, viola, violoncello and basso have remained in manuscript, and some of them are in the public libraries of Florence and Bologna. Some of his sonatas have been edited by Ferd. David (Breitkopf & Härtel) and von Wasielewski (Senff, Simrock), and have been played by Joachim and others. [P.D.]

VERDELOT,¹ PHILIPPE, a Flemish composer of the early part of the 16th century, appears to have settled in Italy when young, since his first work—a motet—was printed in the 'Fior de' Motetti e Canzoni' published, as is believed, at Rome in 1526, and since he is found to have resided at Florence at some time between 1530 and 1540. It is certain however that he was, either now or from an earlier date, attached to the singing staff of the church of S. Mark at Venice, and we have the authority of ²Guicciardini for the statement that he was already dead by the year 1567. His last publication is dated 1549.

Verdelot is commemorated by Cosmo Bartoli, and by Vincenzo Galilei, who printed two lute-pieces by him in 'Fronimo.' His works had reached France and were printed in French collections as early as the year 1530. The great Willaert thought so highly of him as to arrange some compositions of his in tablature for lute and a solo voice. The two Venetian masters indeed, together with Arcadelt, may be taken as the representative madrigalists of their time, and ranked among the earliest writers and chief promoters of that style of composition. ³Verdelot's remarkable skill in the science of music is well shown in the fifth part which he added to Jannequin's 'Bataille.' But his distinction is not simply that of a learned writer: his productions also display a certain feeling for beauty and appropriateness of expression which is his highest characteristic.⁴ His works consist exclusively of madrigals, motets, psalms, and masses, and are enumerated by Fétis and Eitner. [R.L.P.]

VERDI, GIUSEPPE, one of the greatest and most popular operatic composers of the 19th century, born at Roncole, Oct. 9, 1813. Though very often called 'il maestro Parmigiano,' and 'il cigno di Busseto,' in point of fact neither Parma nor her smaller sister town Busseto, can boast of having Verdi's name in the rolls of their inhabitants; and the good luck of having been his birthplace fell to a cluster of labourers' houses, called 'Le Roncole,' some three miles from Busseto, and, before the unification of Italy, in the Duchy of Parma. The following certificate

¹ Two notices cited by M. vander Straeten, *La Musique aux Pays-bas* vi. 321, suggest that the name 'Verdelot' is an appellative; if so, we are ignorant of the composer's real name. One of the cases referred to is connected with the town of Bruges.

² Quoted by Vander Straeten, i. 44.

³ Ambros, *Geschichte der Musik*, vol. II. 513.

⁴ See generally Fétis, vol. VIII. 319-321; Ambros, vol. II. 283 f.; vander Straeten, vol. VI. 321 f., 366.

will settle once for all the questions so often raised concerning the place and the date of Verdi's birth.

Anno Dom. 1813, die 11 Octobris.—Ego Carolus Montanari Praepositus Runcularum baptizavi Infantem hodie vespere hora sexta natum ex Carolo Verdi q^m. Josépho et ex Aloisia Utini filia Caroli, hujus Parocchiae jugalibus, cui nomina imposui—Fortuninus, Joseph, Franciscus.—Patrini fuere Dominus Petrus Casali qd. Felicis et Barbara Bersani filia Angioli, ambo hujus Parocchiae.

In the long run of Verdi's life—which happily bids fair still to be preserved for an indefinite number of healthy and vigorous years—we do not meet with any startling and romantic incidents: everything seems to have gone with him, though not smoothly, yet with the common sequence of good and bad turns to which all mortals are liable, let their calling and station in life be what they will. Verdi's biography exhibits nothing heroic or startling, as some would have us believe it does. The connecting-link between his life and his works is indissoluble: the man and the artist proceed abreast, hand in hand toward the same goal, impelled and guided by the same sentiments and emotions. 'Homo sum et nihil humanum a me alienum puto' is the proper motto for the gate of his villa at S. Agata, and the title-page of each of his works. This 'humanity' of his is the reason and explanation of his life, as well as the key to the perfect understanding of his works, and to their popularity wherever there are ears to hear and hearts to feel.

M. Pougin, who, together with other difficult achievements, has successfully continued Fétis's 'Dictionnaire des Musiciens,' has written a biographical sketch of Verdi in the right spirit, confining himself within the strict limits of the plain facts. Of this sketch an Italian translation was made by a well-known Paris correspondent of the Italian papers, under the *nom de plume* of 'Folchetto,' with notes and additions, forming altogether a volume of more than 150 pages, full of accurate and valuable information. Through the combined shrewdness and skill of 'Folchetto' and M. Giulio Ricordi we are enabled to present to our readers the most important period of Verdi's career, in words that are almost the great composer's own. A conversation that he had with Giulio Ricordi was by the latter faithfully put on paper the very night following the interview, and sent to 'Folchetto' for publication. Such is the basis of the following article.

Unlike many musicians that have passed their infancy and childhood amongst artistic surroundings, Verdi's musical genius had to fight for its development against many difficulties. Nothing that he could hear or see was fit to give him the slightest hint of anything grand and ideal: the two hundred inhabitants of Le Roncole were poor and ignorant labourers, and the very nature of the country—an immense, flat, monotonous expanse—however gratifying to a landowner, could hardly kindle a spark in the imagination of a poet. Carlo Verdi and his wife Luigia Verdi Utini kept a small inn at Le Roncole, and in

addition a little shop, where sugar, coffee, matches, tobacco, spirits, and clay pipes were sold at retail. Once a week the good Carlo walked up to Busseto with two empty baskets, and returned with them full of articles of his trade, carrying them on his strong shoulders for all the three miles of the dusty and sunny way. His purchases were chiefly made from a M. Barrezzi, dealer in spirits, drugs, and spices, a prosperous and hearty man who was destined to serve as a bridge to Giuseppe Verdi over many a chasm in his glorious way.

Giuseppe, though good and obedient, was rather of a melancholy character, never joining his playmates in their noisy amusements; one thing only, we are told, could rouse him from his habitual indifference, and that was the occasional passing through the village of a grinding organ: to the child who in after years was to afford an inexhaustible *répertoire* to those instruments for half-a-century all over the world, this was an irresistible attraction—he could not be kept indoors, and would follow the itinerant player as far as his little legs could carry him. This slight hint of his musical aptitude must have been accompanied by others which the traditions of Le Roncole have not transmitted, since we know that even in early childhood the boy was possessed of a spinet. For an innkeeper of Le Roncole, in 1820, to buy a spinet for his child to play on, is an extravagance which we could hardly credit if the author of 'Aida' had not preserved to this day the faithful companion of his childhood. M. Ghislanzoni, who saw it at S. Agata, thus speaks of it:—

At the villa of S. Agata, I saw the first instrument on which his little fingers had first practised. The spinet *emeritus*, has no strings left, its lid is lost, and its keyboard is like a jaw with long and worn-out teeth. And yet what a precious monument! And how many recollections it brings back to the mind of the artist who during his unhappy childhood has so often wetted it with bitter tears! How many sublime emotions are caused by the sight of it!

I have seen it and have questioned it. I took out one of its jacks, on which I thought something had been written, and indeed I found some words as simple as they are sublime, words that while revealing the kind attention of a good-hearted workman, contain something of a prophecy. My readers will be grateful to me for setting before them the inscription in its original simplicity. It would be a profanation to correct the mistakes in its orthography.

'Da me Stefano Cavaletti fu fatto di nuovo questi Saltarelli e impenati a Corame, e vi adatti la pedagliera che io ci ho regalato: come anche gratuitamente ci ho fatto di nuova li detti Saltarelli, vedendo la buona disposizione che ha il giovanetto Giuseppe Verdi d'imparare a suonare questo istrumento, che questo mi basta per essere del tutto sodisfatto.—Anno domini 1821'—

a quaint inscription which cannot be translated literally:—

I, Stephen Cavaletti, made these jacks anew, and covered them with leather, and fitted the ¹pedals; and these together with the jacks I give gratis, seeing the good disposition of the boy Giuseppe Verdi for learning to play the instrument, which is of itself reward enough to me for my trouble.

How the spinet happened to be in such a condition as to require the workmanship of M. Cavaletti to set it right, is thus explained by 'Fol-

¹ The mention of 'leather' and 'pedals' seems to show that this 'spinet' was some kind of pianoforte.

chetto,' who had it from an old friend of Verdi's father:—

Nobody can imagine with what earnestness the boy practised on the spinet. At first he was satisfied with being able to play the first five notes of the scale: next he most anxiously endeavoured to find out chords. Once he was in a perfect rapture at having sounded the major third and fifth of C. The following day, however, he could not find the chord again, whereupon he began to fret and fume, and then got in such a temper, that taking up a hammer he began to break the spinet to pieces. The noise soon brought his father into the room, who seeing the havoc his son was playing, landed so heavy a blow on Giuseppe's ear, as once for all cleared his mind of any thought of again punishing the spinet for his inability to strike common chords.

Another evidence of Giuseppe's musical aptitude is given by the following fact, which occurred when he was only seven years old. He was then assisting the priest at the Mass in the little church of Le Roncole. At the very moment of the elevation of the Host, the harmonies that flowed from the organ struck the child as so sweet, that he stood motionless in ecstasy. 'Water,' said the priest to the acolyte; and the latter evidently not heeding him, the demand was repeated. Still no reply. 'Water,' a third time said the priest, kicking the child so brutally that he fell headlong down the steps of the altar, knocked his head against the floor, and was brought unconscious into the sacristy. After this event Giuseppe's father engaged M. Baistrocchi, the local organist, to give him music lessons. At the end of a year M. Baistrocchi made a declaration to the effect that the pupil had learned all that the teacher could impart, and thereupon resigned his position as Verdi's teacher.

Two years after, having completed this first stage in his musical education, Verdi—then but ten years old—was appointed as organist in the room of old Baistrocchi. The dream of his parents was thus for the time realised: yet before long the mind of the elder Verdi began to be haunted with the thought that some knowledge of the three R's could but bring good to his son in after life: and after debating his scheme with his wife, he resolved upon sending Giuseppe to a school in Busseto. This would have been beyond the small means of the good Verdi, but for the fact that at Busseto lived a countryman and friend—a cobbler known by the name of Pugnatta. This Pugnatta took upon himself to give Giuseppe board and lodging, and send him to the principal school of the town, all at the very moderate price of threepence a day. And to Pugnatta's Giuseppe went: and while attending the school most assiduously, kept his situation as organist of Le Roncole, walking there every Sunday morning, and back to Busseto after the evening service.

It may not be devoid of interest to the reader to cast a glance at Verdi's financial condition at that period of his life. Except clothing, which did not represent an important item, and pocket-money, which he had none, his expenditure amounted to 100 francs 50 centimes a-year—that is, £4 7s. 3d. His salary as the organist of Le Roncole was £1 8s. 10d., which, after one year's

service and many urgent appeals, was increased to £1 12s. To this add a profit of £2 or £2 10s. from weddings, christenings, and funerals; and a few shillings more, the product of a collection which it was then customary for organists to make at harvest time—collected in kind, be it remembered, by the artist himself, with a sack on his shoulders, at each door of the village. Life, under these unfavourable conditions, was not only devoid of comforts, but full of danger. One night, while the poor lad was walking towards Le Roncole, worn down by fatigue and want of sleep or food, he did not notice that he was in the wrong track, and of a sudden, missing his ground, he fell into a deep canal. It was dark, it was bitter cold, and his limbs were absolutely paralysed; and but for an old woman who was passing by the spot and heard his cries for help, the exhausted and chilled boy would have been carried off by the current.

The following story of another very narrow escape from death we give on the entire responsibility of M. Pougin. In 1814 Russian and Austrian troops had been passing through Italy, leaving death and destruction everywhere. A detachment having stopped for a few hours at Le Roncole, all the women took refuge in the church; but not even that holy place was respected by these savages. The doors were unhinged, and the poor helpless women and children ruthlessly wounded and killed. Verdi's mother, with the little Giuseppe in her arms, was among those who took refuge in the church; but when the door was burst open she did not lose her spirits, but ascending the narrow staircase of the belfry, hid herself and her baby among some timber that was there, and did not leave her hiding-place until the drunken troops were far beyond the village.

Giuseppe Verdi, after two years schooling at Busseto, had learned to write, read, and cypher: whereupon the above-mentioned M. Barezzi began to take much interest in the talented Roncolese, gave him employment in his business, and opened a way to the development of his musical faculty.

Busseto must have been the Weimar of the Duchy of Parma. Music was uppermost in the minds of the Bussetesi, and no name of any inhabitant is ever mentioned without the addition of his being a singer, composer, or violinist. M. Barezzi himself was first flute in the cathedral orchestra; he could produce some notes on all kinds of wind instruments, and was particularly skilful on the clarinet, French horn, and ophicleide. His house was the residence of the Philharmonic Society, of which he was the president and patron, and it was there that all rehearsals were made, and all Philharmonic concerts given, under the conductorship of M. Ferdinando Provesi, maestro di cappella and organist of the cathedral.

This was the fittest residence for a lad of Verdi's turn of mind, and he immediately felt it. Without neglecting his chief occupation, he regularly attended the rehearsals, and undertook the task of copying out the parts from the score;

R

and all this in such earnest that old Provesi began to notice Giuseppe with approval, and give him the foundation of a sound musical knowledge. Provesi may be considered the man who led the first steps of Verdi into the right track, and lucky it was for the pupil to have come across such a man. He was an excellent contrapuntist, a composer of several comic operas, of which he had written both words and music, and a man well read in general literature. He was the first man in Busseto to understand Verdi's real vocation, and to advise him to devote himself to music. Don Pietro Seletti, the boy's Latin teacher, and a fair violinist, bore a grudge to Provesi for a certain poem the latter had written against the clergy. The fact that Provesi encouraged Verdi to study music was therefore enough for Don Pietro to dissuade him as strongly from it. 'What do you want to study music for? You have a gift for Latin, and it will be much better for you to become a priest. What do you expect from your music? Do you fancy that some day you may become organist of Busseto?... Stuff and nonsense... That can never be!'

But a short time after this admonition there was to be a mass at a chapel in Busseto where Don Pietro Seletti was the officiating priest. The organist was unable to attend, and Don Pietro was induced to let Verdi preside at the organ. The mass over, Don Pietro sent for him. 'Whose music did you play?' said he; 'it was a most beautiful thing.' 'Why,' timidly answered the boy, 'I had no music, and I was playing extempore, just as I felt.' 'Ah! indeed,' rejoined Don Pietro; 'well, I am a fool, and you cannot do better than study music, take my word for it.'

Under the intelligent guidance of Provesi, Verdi studied till he was 16. During this period he often came to the help of his old master both as organist and as conductor of the Philharmonic Society. The archives of the society still contain several works written by Verdi at that time, and composed, copied, taught, rehearsed, and conducted by himself. None of these compositions have been published, though it would be a matter of interest to examine the first attempts of his musical genius. [See p. 254b.]

It became evident that Busseto was too narrow a field for the aspirations of the young composer, and efforts were made to afford him the means of going to Milan, the most important Italian town, musically speaking. The financial question came again to the front, and, thanks to the good-will of the Bussetesi, it had a happy solution. The Monte di Pietà, an institution granting four premiums of 300 francs a year, each given for four years to promising young men wanting means for undertaking the study of science or art, was induced by Barezzi to award one of the four premiums to Verdi, with the important modification of allowing him 600 francs a-year for two years, instead of 300 for four years. M. Barezzi himself advanced the money

necessary for music lessons, board and lodging in Milan; and Seletti gave him an introduction to his nephew, a professor there, who most heartily welcomed him, and would not hear of his finding lodgings for himself.

We come now to an incident of Verdi's artistic life, to which a very undue importance has been often attached; we mean his being refused a scholarship at the Conservatorio di Musica of Milan, on the ground of his showing no special aptitude for music. If a board of professors were now to be found to declare that the author of 'Rigoletto,' 'Ballo in Maschera,' and 'Aida,' had no musical disposition, such declaration would undoubtedly reflect very little credit on the institution to which the board belonged, or on the honesty and impartiality of the professors; but things were not so bad at that time as we are made to believe they were—nay, it is probable that in the best conducted musical schools of the world, some Verdi, Beethoven, or Bach is every year sent back to his home and his country organ, as was the case with Verdi. Without following Fétis in his study of the preposterous fact, we think that a true idea may be formed of it by looking at the way in which matters of this kind proceed now-a-days, and will proceed so long as there are candidates, scholarships, and examiners.

To a vacant scholarship—for pianoforte, singing or composition—there is always a number of candidates, occasionally amounting to as many as a hundred. A committee of professors, under the presidency of the Principal is appointed to examine all the competitors, and choose the best. The candidates, male and female, have each a different degree of instruction, ranging from mere children with no musical education, to such as have already gone through a regular course of study. To determine whether there is more hope of future excellence in a girl who plays sixteen bars of an easy arrangement of a popular tune, or a boy who can perhaps sing something by heart just to show that he has a certain feeling and a right perception of rhythm and tonality, or in an advanced pupil who submits the score of a grand opera in five acts (not impossibly written by some friend or forefather)—to be able to determine this is a thing beyond the power of the human intellect. The committee can only select one amongst those that have the least disqualifications, but nobody can accuse them of ignorance or ill-will if the chosen candidate, after five years' tuition, turns out to be a mere one-two-three-and-four conductor of *operettas*, while one of the ninety-nine dismissed, after ten years' hard study elsewhere, writes a masterpiece of operatic or sacred music. Not to get a scholarship does not imply that a candidate is unable to pursue a musical career; it means only that there being but one place vacant, and twenty who passed as good an examination as he, he shares with nineteen others the ill luck of not being the happy one chosen. Moreover there are no settled rules as to the time when musical genius breaks out in unmistakable light. We are ready

to believe that Mozart, when only three years old, gave unmistakable hints of what he was afterwards to become; yet we can say, as an eye-witness, that M. Boito, the author of 'Mephistopheles,' a man of undeniable musical genius, did not reveal any decided aptitude for musical composition till nineteen; while several amongst his school-fellows who promised to be the rightful heirs of Rossini and Bellini are now teachers and conductors of provincial schools or second-rate theatres. Let us then bear no grudge to Basily, the then principal of the Conservatoire of Milan, nor let us depreciate him for not having been so gifted as to recognise in the young and unprepossessing organist of Le Roncole the man who was destined to write 'Il Rigoletto' twenty years afterwards.

But though failing to be admitted to the Conservatoire, Verdi stuck to the career which he had undertaken, and, on the advice of Alessandro Rolla, then conductor of 'La Scala,' he asked M. Lavigna to give him lessons in composition and orchestration. Lavigna was a distinguished musician and a composer of no ordinary merit; his operas, 'La Muta per amore,' 'L'Idolo di se stesso,' 'L'Impostore avvilito,' 'Coriolano,' 'Zaira,' and several others, having been performed several times with favourable success. He consented to give the lessons, and to him actually belongs the honour of being the teacher of Verdi.

This was in 1831, when Verdi was eighteen. The two years from 1831 to 1833 passed in an uninterrupted succession of exercises in harmony, counterpoint, and fugue, and a daily study of Mozart's 'Don Giovanni.' In 1833 the death of Provesi brought an entire change to Verdi. He went back to Busseto for five years, and after this lapse of time returned to Milan to take his start as a composer. We give, in the words of M. Ercole Cavalli—for this particular period the best-informed of the biographers—the lively description of Verdi's residence at Busseto.

'In 1833 M. Ferdinando Provesi died. The trustees of the Monte di Pietà, of Busseto, and the other contributors towards Verdi's musical training, had acted with the intention that, after Provesi's death, Verdi should be his successor both as Maestro di Cappella and Organist of the Cathedral, and also Conductor of the Philharmonic Society. Verdi felt very sorry for the death of Provesi; with him he had lost the man who first taught him the elements of his art, and showed him the way to excellence; and though Verdi felt a call to something nobler in life, yet he kept his word to his countrymen and went to Busseto to fill the place left vacant by his deceased professor. The appointment rested with the churchwardens of the Cathedral, men who either belonged to the clergy or were fanatic bigots, and therefore had but little liking for Verdi, whom they called "the fashionable maestrino," as being versed only in profane and operatic music; they preferred somebody cut a little more after their own pattern,

and were anxious for a maestro well grounded in the Gregorian chant.

'Verdi's competitor, one M. Giovanni Ferrari, played indifferently on the organ, but had the strong support of two bishops; he gathered all the votes of the churchwardens, and the pupil of Provesi and Lavigna, for whom so many sacrifices had been made by the town, was black-balled. Upon hearing this decision, the Philharmonic Society, which for many years had made it a rule to enhance the solemnity of all the services in the cathedral by co-operating with their orchestra, lost all patience, and bursting tumultuously into the church, rummaged the archives and took away from them every sheet of music paper belonging to the Society; thereby beginning a civil war that lasted several years, in a town that was formerly an example of tranquillity and peace.

'On this followed satires, insults, affrays, riots, imprisonments, persecutions, banishments and the like; ending in decrees whereby the Philharmonic Society was prohibited to meet under any pretence whatever.'

Verdi next fell in love with Margherita, Barezzi's eldest daughter, whose father, unlike most fathers, did not oppose Margherita's union to a talented though very poor young man.

'In 1836 they were married. The whole Philharmonic Society attended the weddings; it was a happy and glorious day, and all were deeply moved by the prospect already opening before the young man: who, though born in the poorest condition, was at twenty-three already a composer, with the daughter of a rich and much respected man for his wife.'

In 1838 Verdi, with his wife and two children left Busseto and settled in Milan, with the hope of performing his opera 'Oberto Conte di S. Bonifacio.' We are now to witness the vicissitudes of a talented but nearly unknown young man, who comes to a large town, one of the most important musical centres of those days, with no fortune but the manuscript of a melodrama, and nothing to help him on but the golden opinions which his genius and honesty have previously won for him from a few friends; and we shall see this young man transformed in a short time into the favourite composer of all opera-goers. And we are glad to be able to give the relation of this most important period of an artist's career, in words that may be said to be Verdi's own.

The first part of the narrative refers to the time when he was in Milan, studying with Lavigna. On his return there his kind old master was gone—died while his pupil was at Busseto. And here is Verdi's narrative:—¹

'About the year 1833 or 34 there was in Milan a Philharmonic Society composed of first-rate vocalists, under the direction of one M. Masini. The Society was then in the bustle and hurry of arranging a performance of Haydn's Creation, at the Teatro Filodrammatico. M. Lavigna, my teacher of composition, asked me

¹ We have omitted some unimportant sentences.

whether I should like to attend the rehearsals, in order to improve my mind, to which I willingly answered in the affirmative. Nobody would notice the young man that was quietly sitting in the darkest corner of the hall. Three maestri shared the conducting between them—Messrs. Perelli, Bonoldi, and Almasio; but one day it happened that neither of the three was present at the time appointed for rehearsal. The ladies and gentlemen were growing fidgetty, when M. Masini, who did not feel himself equal to sitting at the piano and accompanying from the full orchestral score, walked up to me and desired me to be the accompanist for the evening: and as perhaps he believed in my skill as little as he did in his own, he added, "It will be quite enough to play the bass only." I was fresh from my studies, and certainly not puzzled by a full orchestral score; I therefore answered "All right," and took my place at the piano. I can well remember the ironical smiles that flitted over the faces of the Signori dilettanti: it seems that the quaint look of my young, slender and rather shabbily dressed person was not calculated to inspire them with much confidence.

'However, the rehearsal began, and in the course of it I gradually warmed up and got excited, so that at last, instead of confining myself to the mere piano part, I played the accompaniment with my left hand, while conducting most emphatically with my right. It was a tremendous success, all the more because quite unexpected. The rehearsal over, everybody congratulated me upon it, and amongst my most enthusiastic admirers were Count Pompeo Belgiojoso and Count Renato Borromeo. In short, whether the three maestri were too busy to attend the rehearsals, or whether there was some other reason, I was appointed to conduct the performance, which performance was so much welcomed by the audience that by general request it had to be repeated in the large and beautiful hall of the Casino dei Nobili, in presence of the Archduke and Archduchess Ranieri, and all the high life of those days.

'A short time afterwards, I was engaged by Count Renato Borromeo to write the music for a cantata for chorus and orchestra, on the occasion of the marriage of some member of the Count's family—if I remember right. I must say, however, that I never got so much as a penny out of all that, because the whole work was a gratuitous one.

'M. Masini next urged me to write an opera for the Teatro Filodrammatico, where he was conductor, and handed me a libretto, which after having been touched up by M. Solera, became *Oberto*, Conte di San Bonifacio.

'I closed immediately with the proposition, and went to Busseto, where I was appointed organist. I was obliged to remain there nearly three years, and during that time I wrote out the whole opera. The three years over, I took my way back to Milan, carrying with me the score in perfect order, and all the solo parts copied out by myself.

'But here difficulties began. Masini being no longer conductor, my chance of seeing my opera produced there was at an end. However, whether Masini had confidence in my talents, or wished to show me some kindness for the many occasions on which I had been useful to him, rehearsing and conducting for nothing, he did not give up the business, and assured me he would not leave a stone unturned until my opera was brought out at the Scala, when the turn came for the benefit of the Pio Istituto. Both Count Borromeo and Dr. Pasetti promised me their influence on Masini, but, as far as I am aware, their support did not go beyond some scanty words of recommendation. Masini, however, did his best, and so did Merighi, a cellist who had played under my direction, and had a certain opinion of the young maestro.

'The result was that the opera was put down for the spring of 1839, to be performed at La Scala for the benefit of the Pio Istituto; and among the interpreters were the four excellent artists Mme. Strepponi, Moriani, Giorgio Ronconi, and Marini.

'After a few rehearsals Moriani falls seriously ill, everything is brought to a standstill, and all hope of a performance gone! I broke down utterly, and was thinking of going back to Busseto, when one fine morning one of the theatre attendants knocked at my door and said sulkily, "Are you the maestro from Parma who was to give an opera for the Pio Istituto? Come with me to the theatre, the impresario wants to speak to you."

'Is it possible? said I, but . . . and the fellow began again—I was told to call on the maestro from Parma, who was to give an opera; if it is you, let us go. And away we went.

'The impresario was M. Bartolomeo Merelli. One evening crossing the stage he had overheard a talk between Strepponi and Ronconi, wherein the first said something very favourable to *Oberto*, and the second endorsed the praise.

'On my entering his room, he abruptly told me that having heard my "*Oberto*" spoken of very favourably by reliable and intelligent persons, he was willing to produce it during the next season, provided I would make some slight alterations in the compass of the solo parts, as the artists engaged were not the same who were to perform it before. This was a fair proposition. Young and unknown, I had the good luck to meet with an impresario willing to run the risk of mounting a new opera, without asking me to share in the expenditure, which I could not have afforded! His only condition was that he should share with me the sale of the copyright. This was not asking much, for the work of a beginner. And in fact, even after its favourable reception, Ricordi would give no more than 2000 Austrian livres (£67) for it.

'Though *Oberto* was not extraordinarily successful, yet it was well received by the public, and was performed several times; and M. Merelli even found it convenient to extend the season and give some additional performances of it. The principal interpreters were Mme.

Marini, M. Salvi and M. Marini. I had been obliged to make some cuts, and had written an entirely new number, the quartet, on a situation suggested by Merelli himself; which proved to be one of the most successful pieces in the whole work.

'Merelli next made me an offer which, considering the time at which it was made, may be called a splendid one. He proposed to engage me to write three operas, one every eight months, to be performed either at Milan or Vienna, where he was the impresario of both the principal theatrical houses: he to give me 4000 livres (£134) for each opera, and the profits of the copyright to be divided between us. I agreed to everything, and shortly afterwards Merelli went to Vienna, leaving instructions to Rossi to write a libretto for me, which he did, and it was the *Proscritto*. It was not quite to my liking, and I had not yet brought myself to begin to set it to music, when Merelli, coming hurriedly to Milan during the spring of 1840, told me that he was in dreadful want of a comic opera for the next autumn, that he would send me a libretto, and that I was to write it first, before the *Proscritto*. I could not well say no, and so Merelli gave me several librettos of Romani to choose from, all of which had already been set to music, though owing to failure or other reasons, they could safely be set again. I read them over and over and did not like any; but there was no time to lose, so I picked out one that seemed to me not so bad as the others, *Il finto Stanislao*, a title which I changed into *Un Giorno di Regno*.

'At that period of my life I was living in an unpretentious little house near the Porta Ticinese, and my small family was with me—that is, my young wife and my two sons. As soon as I set to work I had a severe attack of angina, that confined me to my bed for several days, and just when I began to get better I remembered that the third day forward was quarter-day, and that I had to pay fifty crowns. Though in my financial position this was not a small sum, yet it was not a very big one either, but my illness putting it out of my mind, had prevented me from taking the necessary steps; and the means of communication with Busseto—the mail left only twice a week—did not allow me time enough to write to my excellent father-in-law Barezzi, and get the money from him. I was determined to pay the rent on the very day it fell due, so, though it vexed me very much to trouble people, I desired Dr. Pasetti to induce M. Merelli to give me fifty crowns, either as an advance on the money due to me under the agreement, or as a loan for ten days, till I could write to Barezzi and receive the money wanted. It is not necessary to say why Merelli could not at that moment give me the fifty crowns, but it vexed me so much to let the quarter-day pass by without paying the rent, that my wife, seeing my anxieties, takes the few valuable trinkets she had, goes out, and a little while after comes back with the necessary

amount. I was deeply touched by this tender affection, and promised myself to buy everything back again, which I could have done in a very short time, thanks to my agreement with Merelli.

'But now terrible misfortunes crowded upon me. At the beginning of April my child falls ill, the doctors cannot understand what is the matter, and the dear little creature goes off quickly in his desperate mother's arms. Moreover, a few days after the other child is taken ill too, and she too dies, and in June my young wife is taken from me by a most violent inflammation of the brain, so that on the 19th June I saw the third coffin carried out of my house. In a very little over two months, three persons so very dear to me had disappeared for ever. I was alone, alone! My family had been destroyed; and in the very midst of these trials I had to fulfil my engagement and write a comic opera! *Un Giorno di Regno* proved a dead failure; the music was, of course, to blame, but the interpretation had a considerable share in the fiasco. In a sudden moment of despondency, embittered by the failure of my opera, I despaired of finding any comfort in my art, and resolved to give up composition. To that effect I wrote to Dr. Pasetti (whom I had not once met since the failure of the opera) asking him to persuade Merelli to tear up the agreement.

'Merelli thereupon sent for me and scolded me like a naughty child. He would not even hear of my being so much disappointed by the cold reception of my work: but I stuck to my determination, and in the end he gave me back the agreement saying, "Now listen to me, my good fellow; I can't compel you to write if you don't want to do it; but my confidence in your talent is greater than ever; nobody knows but some day you may return on your decision and write again: at all events if you let me know two months in advance, take my word for it your opera shall be performed."

'I thanked him very heartily indeed; but his kindness did not shake my resolution, and away I went. I took up a new residence in Milan near the Corsia de' Servi. I was utterly disheartened, and the thought of writing never once flashed through my mind. One evening, just at the corner of the Galleria De Cristoforis, I stumbled upon M. Merelli, who was hurrying towards the theatre. It was snowing beautifully, and he, without stopping, thrust his arm under mine and made me keep pace with him. On the way he never left off talking, telling me that he did not know where to turn for a new opera; Nicolai was engaged by him, but had not begun to work because he was dissatisfied with the libretto.

'Only think, says Merelli, a libretto by Solera, marvellous . . . wonderful . . . extraordinary . . . impressive dramatic situation . . . grand . . . splendidly worded . . . but that stubborn creature does not understand it, and says it is a foolish poem. I don't know for my life where to find another poem.

'Well, I'll give you a lift out of your trouble. Did you not engage Rossi to do *Il Proscritto* for me? I have not yet written one blessed note of it, and I will give it back to you.

'The very thing! clever fellow! good idea!

'Thus we arrived at the theatre; M. Merelli forthwith sends for M. Bassi, poet, stage-manager, *buttafuori* and librarian, and bids him find a copy of *Il Proscritto*. The copy was found, but together with it M. Merelli takes up another manuscript and lays it before me—

'Look, says he, here is Solera's libretto that we were speaking of! such a beautiful subject; and to refuse it! Take it, just take it, and read it over.

'What on earth shall I do with it? . . . No, no, I am in no humour to read librettos.

'My gracious! . . . It won't kill you; read it, and then bring it back to me again. And he gives me the manuscript. It was written on large sheets in big letters, as was the custom in those days. I rolled it up, and went away.

'While walking home I felt rather queer; there was something that I could not well explain about me. I was burdened with a sense of sadness, and felt a great inclination to cry. I got into my room, and pulling the manuscript out of my pocket and throwing it angrily on the writing-table, I stood for a moment motionless before it. The book as I threw it down, opened, my eyes fell on the page, and I read the line

Va, pensiero, sull' alii dorate.

I read on, and was touched by the stanzas, inasmuch as they were almost a paraphrase of the Bible, the reading of which was the comfort of my solitary life.

'I read one page, then another; then, decided as I was to keep my promise not to write any more, I did violence to my feelings, shut up the book, went to bed, and put out the candle. I tried to sleep, but *Nabucco* was running a mad career through my brain, and sleep would not come. I got up, and read the libretto again—not once, but two or three times, so that in the morning I could have said it off by heart. Yet my resolution was not shaken, and in the afternoon I went to the theatre to return the manuscript to Merelli.'

'Isn't it beautiful? says he.

'More than beautiful, wonderful.

'Well, set it to music.

'Not in the least; I won't.

'Set it to music, set it to music.

'And so saying he gets off his chair, thrusts the libretto into my coat pocket, takes me by the shoulders, shoves me out of his room, slams the door in my face, and locks himself in. I looked rather blank, but not knowing what to do went home with *Nabucco* in my pocket. One day a line, the next day another line, a note, a bar, a melody . . . at last I found that by imperceptible degrees the opera was done!

'It was then the autumn of 1821, and calling to mind Merelli's promise, I went straight to him to announce that *Nabucco* was ready for performance, and that he might bring it out in

the coming season of *Carnevale Quaresima* (Carnival before Lent).

'Merelli emphatically declared that he would stick to his word; but at the same time he called my attention to the fact that it was impossible to bring out the opera during the *Quaresima*, because the repertoire was all settled, and no less than three new operas by known composers already on the list; to give, together with them, a fourth, by a man who was almost a debutant was a dangerous business for everybody, especially for me; it would therefore be safer to put off my opera till Easter, when he had no engagements whatever, and was willing to give me the best artists that could be found for love or money. This, however, I peremptorily refused:—either during the *Carneval* or never; and with good reason; for I knew very well that during the spring it was utterly impossible to have two such good artists as *Strep-poni* and *Ronconi*, on whom, knowing they were engaged for the *Carneval* season, I had mainly built my hopes of success.

'Merelli, though anxious to please me, was not on the wrong side of the question; to run four new operas in one season was, to say the least, rather risky; but I also had good artistic reasons to set against his. The issue was, that after a long succession of *Yes*, *No*, *Perhaps*, and *Very likely*, one fine morning I saw the posters on the walls and *Nabucco* not there.

'I was young and easily roused, and I wrote a nasty letter to M. Merelli, wherein I freely expressed my feelings. No sooner was the letter gone than I felt something like remorse, and besides, a certain fear lest my rashness had spoiled the whole business.

'Merelli sent for me, and on my entering his office he says in an angry tone: Is this the way you write to your friends? . . . Yet you are right; I'll give *Nabucco*; but you must remember, that because of the outlay on the other operas, I absolutely cannot afford new scenes or new costumes for you, and we must be content to make a shift with what we have in stock.

'I was determined to see the opera performed, and therefore agreed to what he said, and new posters were printed, on which *Nabucco* appeared with the rest.

'I remember a droll thing happening about that time: in the third act Solera had written a love-duet between *Fenena* and *Ismaele*. I did not like it, as it seemed to me not only ineffective, but a blur on the religious grandiosity that was the main feature of the drama. One morning Solera came to see me, and I took occasion to make the remark. He stoutly disputed my view, not so much perhaps because he thought I was wrong, as because he did not care to do the thing again. We talked the matter over and over and used many arguments. Neither of us would give way. He asked me what I thought could be put in place of the duet, and I suggested a prophecy for *Zaccaria*: he thought the idea not so bad, and after several butts and ifs said he would think over it and

write it out. This was not exactly what I wanted; because I knew that days and weeks would pass before Solera would bring himself to write a single line. I therefore locked the door, put the key in my pocket, and half in jest and half in earnest said to him: I will not let you out before you have finished the prophecy: here is a Bible, and so more than half of your work is done. Solera, being of a quick temper, did not quite see the joke, he got angrily upon his legs and . . . Well, just for a moment or two I wished myself somewhere else, as the poet was a powerful man, and might have got the better of me; but happily he changed his mind, sat down, and in ten minutes the prophecy was written.

'At the end of February 1842 we had the first rehearsal, and twelve days later, on March 9, the first performance. The principal interpreters were Mmes. Strepponi and Bollinzaghi, and Messrs. Ronconi, Miraglia and Derivis.

'With this opera my career as a composer may rightly be said to have begun; and though it is true that I had to fight against a great many difficulties, it is no less true that Nabucco was born under a very good star: for even the things which might reasonably have been expected to damage its success, turned out to have increased it. Thus, I wrote a nasty letter to Merelli; and it was more than probable that Merelli would send the young maestro and his opera to the devil. Nothing of the kind. Then the costumes, though made in a hurry, were splendid. Old scenes, touched up by M. Peroni, had a magical effect: the first one especially—the Temple—elicited an applause that lasted nearly ten minutes. At the very last rehearsal nobody knew how and when the military band was to appear on the stage; its conductor, Herr Tusch, was entirely at a loss; but I pointed out to him a bar, and at the first performance the band appeared just at the climax of the crescendo, provoking a perfect thunder of applause.

'But it is not always safe to trust to the influence of good stars: it is a truth which I discovered by myself in after years, that to have confidence is a good thing, but to have none is better still.'

So far the maestro's own narrative.

Eleven months later (Feb. 11, 1843), Verdi achieved a still more indisputable success with 'I Lombardi alla prima Crociata,' interpreted by Mme. Frezzolini-Poggi, and MM. Guasco, Severi, and Derivis. Solera had taken the plot from the poem of Tommaso Grossi, the author of 'Marco Visconti.' This opera gave Verdi his first experience in the difficulty of finding libretti unobjectionable to the Italian governments. Though five years had still to elapse before the breaking out of the Milan revolt, yet something was brewing throughout Italy, and no occasion was missed by the patriots in giving vent to their feelings. As soon as the Archbishop of Milan got wind of the subject of the new opera, he sent a letter to the chief of the police, M. Torresani,

saying that he knew the libretto to be a profane and irreverent one, and that if Torresani did not veto the performance, he himself would write straight to the Austrian Emperor.

Merelli, Solera, and Verdi were forthwith summoned to appear before Torresani and hear from him what alterations should be made in the opera. Verdi, in his usual blunt manner, took no notice of the peremptory summons. 'I am satisfied with the opera as it is,' said he, 'and will not change a word or a note of it. *It shall be given as it is, or not given at all!*' Thereupon Merelli and Solera went to see Torresani—who, to his honour be it said, besides being the most inflexible agent of the government, was an enthusiastic admirer of art and artists—and so impressed him with the responsibility he would assume by preventing the performance of a masterpiece of all masterpieces, like the 'Lombardi,' that at the end Torresani got up and said, 'I am not the man to prevent genius from getting on in this world. Go on; I take the whole thing upon myself; only put *Salve Maria* instead of *Ave Maria*, just to show the Archbishop that we are inclined to please him; and as for the rest, it is all right.' The opera had an enthusiastic reception, and the chorus,

O Signore, dal tetto natio,

had to be repeated three times. The Milanese, the pioneers of the Italian revolution, always on the look-out, knew very well that the Austrian Governor could not miss the meaning of the applause to that suggestively-worded chorus.

Of Verdi's first three operas 'I Lombardi' has stood its ground the best. In Italy it is still very often played, and as late as 1879 had the honour of twenty-six performances in one season at Brussels. On Nov. 26, 1847, it was performed with considerable alterations in the music, and a libretto adapted by Vaez and Roger, but with little success, under the title of 'Jerusalem,' at the French Opéra. The experiment of retranslating the work into Italian was not a happy one, and 'Gerusalemme' in Italy was little better welcomed than 'Jerusalem' had been in Paris.

Verdi's works were soon eagerly sought after by all the impresarios, and the composer gave the preference to Venice, and wrote 'Ernani' (March 9, 1844) for the Fenice theatre there. The success was enormous, and during the following nine months it was produced on fifteen different stages. The libretto, borrowed from Victor Hugo's 'Hernani,' was the work of F. M. Piave, of Venice, of whom we shall have occasion to speak again. The police interfered before the performance, and absolutely would not allow a conspiracy on the stage. This time many expressions in the poem, and many notes in the music had to be changed; and besides the annoyances of the police, Verdi had some trouble with a Count Mocenigo, whose aristocratic susceptibility treated the blowing of the horn by Sylva in the last act as a disgrace to the theatre. In the end, after much grumbling, the horn was allowed admittance. The chorus 'Si ridesti il

Leon di Castiglia' gave the Venetians an opportunity for a political manifestation in the same spirit as that at the production of 'I Lombardi' at Milan.

'I due Foscari' (Nov. 3, 1844) followed close on 'Ernani.' It was brought out in Rome at the Argentina, but notwithstanding several beauties, the opera is not reckoned amongst the maestro's best. Three months after 'I due Foscari,' 'Giovanna d'Arco' was given at the Scala in Milan (Feb. 15, 1845). The overture alone survives. 'Alzira' (Aug. 12, 1845), performed at the San Carlo at Naples, neither added to nor detracted from its author's popularity; while 'Attila' (March 17, 1846), produced at the Fenice, was the most successful after 'Ernani.' In this opera a cue to political demonstration was given by the aria,

Oara Patria già madre e Regina,
and by the no less popular line,

Avrai tu l'Universo, resti l'Italia a me.

The *habitués* of Covent Garden have little idea what 'enthusiastic applause' means in Italy, and in Venice especially, and in what acts of sheer frenzy the audiences of 1846 would indulge to give the Austrian Government an unmistakable sign of their feelings. The overcrowded house was in a perfect roar: clapping of hands, shouts, cries, screams, stamps, thumps with sticks and umbrellas, were heard from every corner, while hats, bonnets, flowers, fans, books of words, newspapers, flew from the galleries and boxes to the stalls, and from the stalls back to the boxes or to the stage—the noise often entirely covering the sound of both orchestra and chorus, and lasting till the police could restore order, or till there was no breath left in the audience.

'Attila' was followed by 'Macbeth' (March 17, 1847), at the Pergola of Florence. The book was again the work of M. Piave, though to please the poet and the composer, Andrea Maffei, the renowned translator of Byron, Moore, Schiller and Goethe, did not disdain to write some portions of it. This opera, owing chiefly to the lack of a tenor part, received scant justice in Italy, and still less abroad.

Verdi's fame was now firmly established, and England, following out her programme of attracting everything and everybody with real artistic worth, made a step towards him. Mr. Lumley, the manager of Her Majesty's Theatre, proposed to him to write a new opera, an offer which the composer gladly accepted. 'King Lear' was first named as a fit subject for an English audience, but as *love*—the steam-power of all operatic engines—had no share in the plot, it was feared that the work would want the first requisite for success. It was therefore settled to take the plot from Schiller's 'Robbers.' Maffei himself was engaged to write the poem, and no less artists than Jenny Lind, Lablache, and Gardoni to interpret it. On this occasion the Muse did not smile on her devotee, and the first performance in London (July 22, 1847), proved no more than what in theatrical jargon is called

a *succès d'estime*; a judgment afterwards endorsed by many audiences. 'I Masnadieri' was not only Verdi's first work for the English stage, but was the last opera conducted by Costa at Her Majesty's previous to his joining the rival house at Covent Garden. This coincidence all but shunted Verdi's intellectual activity into a new track. Lumley, deserted by the fashionable conductor, made a liberal offer to Verdi, if he would act for three years as conductor. Verdi had a strong inclination to accept the offer, but there was a drawback in the fact that he had agreed with Lucca, the publisher, of Milan, to write two operas for him. Negotiations were set on foot with the view of breaking off the agreement, but Lucca would not hear of it, and Verdi had therefore to leave London, take a house at Passy, and write the 'Corsaro' and the 'Battaglia di Legnano.' Had he handled the bâton for three years he would probably not have put it down again, and his greatest works might never have appeared; for a man brought face to face with the practical side of musical business cannot take the flights which are found in 'Rigoletto,' the 'Trovatore,' and the 'Traviata.'

'Il Corsaro' (Oct. 26, 1848, Trieste) was a failure. 'La Battaglia di Legnano' (Jan. 27, 1849, Rome), though welcomed on the first night, was virtually another failure. Those who can remember the then political condition of Italy, and the great though unsuccessful struggle for its independence, will very easily see how the composer may be justified for not having answered to the call of the Muse. While so stirring a drama was being played in his native country, the *dramatis personæ* of the Corsaro and the Battaglia di Legnano were too shadowy to interest him. During the summer of 1849, when the cholera was making ravages in France, Verdi, at his father's request, left Paris and went home, and he then bought the villa of S. Agata, his favourite residence, of which we shall give a description further on.

It was in the solitude of the country near Busseto that 'Luisa Miller' was composed for the San Carlo of Naples, where it was produced with great and deserved success on Dec. 8, 1849. The poem, one of the best ever accepted by an Italian composer, was the work of M. Cammarano, who took the plot from Schiller's drama, and adapted it most effectively to the operatic stage.

In connection with Luisa Miller we shall relate an authentic incident illustrating the way in which the superstitious blood of the south can be stirred. The word 'jettatore' is familiar to anybody acquainted with Naples. It means somebody still more to be dreaded than an evil angel, a man who comes to you with the best intentions, and who yet, by a charm attached to his person, unwittingly brings all kinds of accidents and misfortunes upon you. There was, at this time, one M. Capecelatro, a non-professional composer, and a frantic admirer of all musicians, and, welcome or not welcome, an unavoidable friend to them. He was looked upon as a 'jettatore,' and it was an accepted fact in all Nea-

politan circles that the cold reception of *Alzira* at San Carlo four years before was entirely due to his shaking hands with Verdi, and predicting a great triumph. To prevent the repetition of such a calamity, it was evident that M. Capecelatro must not be allowed to see, speak, or write to Verdi under any pretence whatever before the first performance of *Luisa Miller* was over. Therefore a body of volunteers was levied amongst the composer's many friends, whose duty was to keep M. Capecelatro at a distance. Upon setting his foot on Neapolitan ground, Verdi found himself surrounded by this legion of friends; they never left him alone for a minute: they stood at the door of his hotel; they accompanied him to the theatre and in the street; and had more than once to contend fiercely against the persistent and unreasonable M. Capecelatro. All went smoothly with the rehearsals, and the first performance was wonderfully good. During the interval before the last act—which, by the bye, is one of Verdi's most impressive and powerful creations—a great excitement pervaded the house, and everyone was anxious to see the previous success crowned by a still warmer reception of the final *terzetto*. Verdi was standing on the stage in the centre of his guards, receiving congratulations from all, when suddenly a man rushes frantically forwards, and crying out 'At last!' throws his arms fondly round Verdi's neck. At the same moment a side-scene fell heavily on the stage, and had it not been for Verdi's presence of mind, throwing himself back with his admirer hanging on him, both would have been smashed. We need not say that the admirer was Capecelatro, and that the last act of *Luisa Miller* had, compared to the others, a very cold reception.

'*Stifellio*' (Nov. 16, 1850, Trieste) was a failure; and even after being re-written and reproduced under the title of '*Aroldo*' (Aug. 16, 1857, Rimini), it did not become popular, though the score contains some remarkable passages, amongst others a great *pezzo concertato* and a duet for soprano and bass, which would be almost sufficient of themselves, now-a-days, to ensure the success of an Italian opera.

We are now going to deal with the period of the artist's career in which he wrote the masterpieces that have given him his world-wide fame—'*Rigoletto*,' '*Trovatore*,' and '*La Traviata*.' Wanting a new libretto for *La Fenice*, Verdi requested Piave to adapt the '*Le Roi s'amuse*' of Victor Hugo, and one was soon prepared, with the suggestive French title changed into '*La Maledizione*.' Widely open to criticism as is Victor Hugo's drama, the situations and plot are yet admirably fit for opera-goers who do not trouble themselves about the why and the wherefore, but are satisfied with what is presented to them, provided it rouses their interest. Verdi saw the advantages offered by the libretto, and forthwith sent it to Venice for approval. But after the political events of 1848-49 the police kept a keener eye than before on all performances, and an opera in which a king is made to appear under such a light as François I. in

'*Le Roi s'amuse*,' was met by a flat refusal. The direction of *La Fenice* and the poet were driven almost mad by the answer; the season was drawing near, and they would probably have to do without the 'grand opera d'obbligo.' Other subjects were proposed to the composer, who, with his Olympian calm, always refused on principle, saying, 'Either *La Maledizione* or none.' Days went on without any solution to the problem, when it was brought to an unexpected end in a quarter where help seemed least likely. The chief of the Austrian police, M. Martello, who, like Torresani, had as great a love for the interests of art as he had hatred to patriotic ideas—came one morning into Piave's room, with a bundle of papers under his arm, and patting him on the shoulder, said 'Here is your business; I have found it, and we shall have the opera.' And then he began to show how all the necessary alterations could be made without any change in the dramatic situations. The king was changed into a duke of Mantua, the title into '*Rigoletto*,' and all the curses were made to wreak their fury on the head of the insignificant duke of a petty town. Verdi accepted the alterations, and after receiving the complete libretto, went to Busseto and set furiously to work. And his inspiration served him so well that in forty days he was back at Venice with *Rigoletto* ready, and its production took place on March 11, 1851. This was as great and genuine a success as was ever achieved by any operatic composer; since no change, either of time or artistic taste, during more than thirty years, has been able to dim the beauty of this masterpiece.

Nearly two years passed before the appearance of '*Il Trovatore*,' which was performed at Rome at the Teatro Apollo on Jan. 19, 1853; and in little more than a month later '*La Traviata*' was brought out at the Fenice at Venice (March 6, 1853). The reception of the two works was very different: *Il Trovatore* from the very first hearing was appreciated in full; *La Traviata* was a dead failure. 'Caro Emanuele,' wrote Verdi to his friend and pupil Muzio, '*Traviata* last night made a *flasco*. Is the fault mine or the actors'? Time will show.' Time showed that the responsibility was to be laid entirely to the singers, though they were amongst the best of the day. The tenor, M. Graziani, took cold and sang his part throughout in a hoarse and almost inaudible voice. M. Varesi, the baryton, having what he would call a secondary rôle, took no trouble to bring out the dramatic importance of his short but capital part, so that the effect of the celebrated duet between Violetta and Germond in the second act was entirely missed. Mme. Donatelli, who impersonated the delicate, sickly heroine, was one of the stoutest ladies on or off the stage, and when at the beginning of the third act the doctor declares that consumption has wasted away the young lady, and that she cannot live more than a few hours, the audience was thrown in a state of perfectly uproarious glee, a state very different from that necessary

to appreciate the tragic action of the last act. Yet the failure at Venice did not prevent the opera from being received enthusiastically elsewhere. In connection with the *Traviata* we may add that at its first performance in French, at Paris, Oct. 27, 1864, the heroine was Miss Christine Nilsson,—her first appearance before the public.

Next to the '*Traviata*' Verdi wrote '*I Vespri Siciliani*,' which appeared in Paris on June 13, 1855. It is strange that writing for the French stage an Italian composer should have chosen for his subject a massacre of the French by the Sicilians. Messrs. Scribe and Duveyrier may be complimented upon their poetry, but not upon their common sense in offering such a drama to an Italian composer, who writing for the first time for the Grand Opéra, could hardly refuse a libretto imposed on him by the then omnipotent Scribe. However, the music was appreciated to its value by the French public, who overlooking the inopportunity of the argument, welcomed heartily the work of the Italian maestro. In Italy—where the opera was reproduced with a different libretto, and under the title of '*Giovanna di Guzman*,' the Austrian police not allowing a poem glorifying the revolt of Sicily against oppressors—it did not actually fail, but its many beauties have never been fully appreciated.

'*Simon Boccanegra*'—by Piave, expressly composed by Verdi for La Fenice and produced March 12, 1857—was a total failure, though the prologue and last act may be ranked amongst his most powerful inspirations. The failure was owing to the dull and confused libretto, and to a very bad interpretation. Both book and music were afterwards altered—the former by Arrigo Boito—and the opera was revived with success in Milan on April 12, 1881.

'*Un ballo in Maschera*,' though written for the San Carlo of Naples, was produced at the Teatro Apollo of Rome. Its original title was '*Gustavo III*'; but during the rehearsals occurred the attempt of Orsini against Napoleon III (Jan. 13, 1858), and the performance of an opera with so suggestive a title was interdicted. Verdi received a peremptory order from the police to adapt his music to different words, and upon his refusal the manager of San Carlo brought an action against him for 200,000 francs damages. When this was known, together with the fact that he had refused to ask permission to produce his work as it was, there was very nearly a revolution in Naples. Crowds assembled under his window, and accompanied him through the streets, shouting '*Viva Verdi*,' i.e. '*Viva Vittorio Emanuele Re Di Italia*.'

In this crisis M. Jasovacci, the enterprising impresario of Rome, called on Verdi, and taking the responsibility of arranging everything with the Roman police, entered into a contract to produce the work at Rome. Richard, Governor of Boston, was substituted for Gustavo III; the opera was re-christened '*Il ballo in Maschera*,' was brought out (Feb. 17, 1859), and Verdi achieved one of his greatest successes.

This was his last opera for the Italian stage. The next three were written for St. Petersburg, Paris, and Cairo.

'*La Forza del Destino*'—the plot borrowed by Piave from '*Don Alvar*,' a Spanish drama by the Duke of Rivas—was performed with moderate success on Nov. 10, 1862, at St. Petersburg. Seven years later Verdi had the libretto modified by Ghislanzoni, and after various alterations in the music, the opera was again brought before the public.

'*Don Carlos*,' the words by Méry and Du Locle, was enthusiastically received at the Opera in Paris, March 11, 1867. Verdi has since (1883) introduced some changes in the score, materially shortening the opera.

His latest operatic work is '*Aida*,' which was produced at Cairo Dec. 27, 1871. During the last thirteen years Verdi has given nothing but his Requiem, produced at Milan on the occasion of the anniversary of the death of Manzoni, May 22, 1874; in 1880 a '*Pater Noster*' for 5 voices, and an '*Ave Maria*' for soprano solo. Artists and amateurs are anxiously waiting for '*Othello*,' to a libretto by Arrigo Boito; but it would appear that the composer is not satisfied with his work, since there are as yet no intimations of its production.

Amongst Verdi's minor works are the '*Inno delle Nazioni*,' performed at Her Majesty's Theatre in 1862, and a string quartet in E minor, written at Naples in 1873, and performed at the Monday Popular Concerts, London, Jan. 21, 1878. A complete list of all his compositions will be found at the end of this article.

Of Verdi as a man, as we have already hinted, little or nothing can be said.

From the earliest moment of his career, his dislike of the turmoil of the world has never varied. Decorations, orders, titles have been heaped upon him at home and abroad, but he is still annoyed if addressed otherwise than '*Signor Verdi*.' In 1860 he was returned as member of the Italian parliament for Busseto, and at the personal wish of Count Cavour took the oath, but very soon sent in his resignation. In 1875 the king elected him a senator, and Verdi went to Rome to take the oath, but never attended a single sitting. Some years after the loss of his wife and children he married Mme. Strepponi, but from this second marriage there is no family. He lives with his wife all the year round at his villa of S. Agata, near Busseto, excepting only the winter months which he spends in Genoa. Passing by the villa every one may see that our representation of his turn of mind is quite true. It stands far from the high road, concealed almost entirely by large trees. Adjoining it is a large and beautiful garden, and this again is surrounded by the farm. Verdi himself looks after the farming operations, and an Englishman will find there all the best agricultural implements and machines of modern invention.

Verdi's life at S. Agata is not dissimilar from that of other landed proprietors in the district. He gets up at five o'clock, and takes, according

to the Italian custom, a cup of hot black coffee. He then goes into his garden to look after the flowers, give instructions to his gardener, and see that his previous orders have been carried out. The next visit is to the horses, as the maestro takes much interest in them, and his stud is well known as the 'Razza Verdi.' As a rule this visit is interrupted at eight o'clock by the breakfast bell—a simple breakfast of coffee and milk. At half-past ten the bell again summons the maestro and his wife to a more substantial *déjeuner*, after which he takes another walk in the garden.

At two o'clock comes the post, and by this Verdi is for a while put in communication with the world, and has for a few hours to remember—with regret—that he is not only a quiet country-gentleman, but a great man with public duties. At five in summer, and six in winter, dinner is served: before or after this he drives for an hour, and after a game at cards or billiards, goes to bed at ten. Friends sometimes pay him a visit: they are always welcome, provided they are not interviewers, or too fond of talking about music. In a letter addressed to Filippi—the leading musical critic of Italy—the maestro discloses his views of critics and biographers:—

'If you will do me the honour of a visit, your capacity as a biographer will find very little room for displaying itself at S. Agata. Four walls and a roof, just enough for protection against the sun and the bad weather; some dozens of trees, mostly planted by me; a pond which I shall call by the big name of lake, when I have water enough to fill it, etc. All this without any definite plan or architectural pretence: not because I do not love architecture, but because I detest every breach in the rules of harmony, and it would have been a great crime to do anything artistic in a spot where there is nothing poetical. You see it is all settled: and while you are here you must forget that you are a biographer. I know very well that you are also a most distinguished musician and devoted to your art... but Piave and Mariani must have told you that at S. Agata we neither make, nor talk about music, and you will run the risk of finding a piano not only out of tune, but very likely without strings.'

Shunning everything like praise, as an artist, he shuns even more the reputation of being a benevolent man, though the kindness of his heart is as great as his genius. Money is sent by him, often anonymously, to those in want, and the greater part of the works done at his villa are done with the view of affording his workmen the means of getting their living during the winter. Of the strength of his friendship and gratitude, he gave an undeniable proof in what he did for his humble associate, the poet or—as he would call himself the *librettista*—F. M. Piave. As soon as Verdi heard that the old man had had an attack of paralysis, he took upon himself all the expenses of the illness, during the many remaining years of Piave's life gave him a yearly allowance, which enabled

the old poet to surround himself with all requisite comfort, and after his death paid for the funeral, and made a large provision for the little daughter of his poet and friend.

Whether M. Verdi will ever give the last touches to 'Othello,' and whether it will prove a success or a failure, are facts of interest to the author and the opera-goers only. For the musical critic, 'Othello,' whatever it may be, can neither add to nor detract from the merits of its author. From 'Oberto Conte di S. Bonifacio' to the 'Messa di Requiem' we can watch the progressive and full development of Verdi's genius, and though we have a right to expect from him a new masterpiece, still nothing leads us to believe that the new work may be the product of a *nuova maniera*.

If popularity were a sure test of merit, Verdi would indisputably be the greatest operatic composer of the second half of this century. In 1850 the great Italian composers had all passed away: Bellini and Donizetti were gone; Rossini, though still living in Paris, was practically dead to music. Of the old school there were in Italy only Mercadante, Petrella, and Parisini: out of Italy there were Meyerbeer, Auber, Gounod, and Wagner, though Meyerbeer and Auber are to be reckoned amongst the operatic composers of the first half of this century. Since 1850 Italy has produced Boito, Ponchielli, and Marchetti; France, Massenet and Bizet; Germany, Goetz and Goldmark. Among these, fame designates Verdi, Wagner, and Gounod as the three greatest composers of their respective nations. The three, however, enjoy different degrees, and even different kinds of popularity. Gounod's fame is almost solely based on 'Faust.' Wagner's operas, or rather his early operas, may be said to be familiar to everybody in Germany, and German-speaking nations: but outside of Germany only large towns, like London, St. Petersburg, and Brussels, are really acquainted with his works. Paris has notoriously shut her ears to him; and New York appears as yet not to have heard one of his operas. As for the Latin races—Italy, Spain, France—nobody has been yet brought to a right understanding, not to mention the 'Niebelungen,' even of 'Rienzi.' Of Verdi, on the other hand, we may safely affirm that there is not an opera-house in the world, the Bayreuth Theatre excepted, where most of his operas have not been performed, and a season seldom passes without at least a performance of the 'Traviata,' the 'Trovatore,' or 'Rigoletto.' Amongst Italians, no matter what their opinion of the composer is, there is a general belief that Verdi enjoys the greatest popularity of all living musicians: and we do not hesitate to endorse this opinion. Music is a universal language, and operatic music is, of all branches of that art, the one which most forcibly imposes itself upon the attention of the public, as the indefinite musical expression is rendered definite by the meaning of the words, and by the dramatic action on the stage. Moreover, music is of all arts the one that can be most easily and cheaply brought home to everybody. This is the reason

why we think that Verdi is more known to the million than any other man in the world.

In comparison to what Verdi has done in the opera and the church, we can hardly reckon him amongst composers of instrumental music. A Quartet for strings, the Overture to 'Nabucco,' 'Giovane d'Arco,' 'Vespri Siciliani,' 'Aroldo,' 'Forza del Destino,' and other less important compositions, constitute all his repertoire in that branch of art. Leaving out his one Quartet, to which he attaches no importance, and only reluctantly allowed to be played out of his own drawing room, the Overtures, though some of them effective and full of inspiration, can hardly be taken as specimens of instrumental music. They are almost entirely constructed on the melodies of the opera; and the choice is made (excepting in the case of the Prelude to 'Aida' and a few bars of that to 'Il Ballo in Maschera') rather with a view to presenting the audience at the outset with the best themes of the work, than on account of the fitness of the melody for instrumental development. Italians have an instinctive tendency toward vocal music. Distinct rhythm, simply harmonized and well-balanced musical periods, are to them the highest musical expression: fugues, canons, double-counterpoint, have no charm for them. They appreciate variations on a theme, but fail to catch in full the meaning of development. Now, without development proper there can be no absolute instrumental music, and for this reason we say that Verdi has done nothing in the way of adding to the small repertoire of Italian instrumental music, and in fact none of his Overtures can bear comparison with those of the German school, nor even with those of his countrymen and contemporaries, Foroni, Bassini, Sgambati, and Sanareglia or Catalani.

It is certainly not on his Overtures that Verdi will rest his fame. He is by nature, inclination, and education an operatic composer, and whatever he has done in other directions must be considered only as accessory. In this light we will consider his 'Requiem,' though by that work one can fairly gauge at his power in religious composition. It was chance that led the composer to try his hand at sacred music, and a few words spent on the origin of the 'Messa' will not be here out of place, inasmuch as not even M. Pongin is well informed on this particular fact.

Shortly after Rossini's death (Nov. 13, 1868), Verdi suggested that the Italian composers should combine to write a Requiem as a tribute to the memory of the great deceased; the Requiem to be performed at the cathedral of Bologna every hundredth year, on the centenary of Rossini's death, and nowhere else and on no other occasion whatever. The project was immediately accepted, and the thirteen numbers of the work, the form and tonality of each of which had been previously determined, were distributed as follows —

1. Requiem eternam (G minor), Donola.
2. Dies ire (D minor), Bassini.
3. Tuba mirum (B♭ minor), Pedrotti.
4. Quid sum miser (A♭ major), Legnani.

5. B.
6. B.
7. C.
8. C.
9. D.
10. D.
11. A.
12. E.
13. E.

The several numbers were duly set to music and sent in, but, as might have been expected, when performed in an uninterrupted succession, they were found to want the unity and uniformity of style that is the *sine qua non* of a work of art; and, though every one had done his best, there were too many different degrees of merit in the several parts; so that, without assigning any positive reason, the matter was dropped, and after a while each number was sent back to its author. But M. Mascagni, of Milan, who had first seen the complete work, was so much struck by Verdi's 'Libera me,' as to write him a letter stating the impression he had received from that single number, and entreating him to compose the whole Requiem. Shortly after this, Alessandro Manzoni died at Milan; whereupon Verdi offered to write a Requiem for the anniversary of Manzoni's death; and this is the work, the last movement of which was originally composed for the Requiem of Rossini.

The piece has been enthusiastically praised and bitterly gainsaid. The question can only be decided by time, which, so far, seems inclined to side with Verdi's admirers. In Italy, unbiased criticism on the subject has been rendered impossible by a letter written to a German paper by Dr. Hans von Bülow, declaring the work to be a monstrosity, unworthy of an ordinary pupil of any musical school in Germany. This language could not but create a strong reaction, not only among Verdi's countrymen, but among all persons to whom his name was associated with enjoyment, —and from that moment even those who might have reasonably objected to the Requiem understood that it was not the time to do so.

We leave to technical musicians the task of finding out whether there are, as an anonymous writer asserts, more than a hundred mistakes in the progression of the parts, or not. Even were this the case it is doubtful whether the mistakes rest with the composer or with those who pretend to establish certain rules for his inspiration. Be this as it may, it is certainly not by looking at Verdi's Requiem in that way that we shall discover what place he is likely to hold among writers of sacred music. Not to mention Palestrina, whose music can now-a-days only be heard and fully understood in the Cappella Sistina, if even there, but looking at the sacred music of Handel and Bach, and setting up the oratorios, cantatas, and masses of these two giant artists against Verdi's Requiem, we cannot but urge that no comparison is possible. Widely different as Bach's mind was from Handel's, there is in both the expression of a similar feeling. In Verdi's work we may easily recognise the presence of another kind of feeling, requiring quite another mode of musical manifestation. There

is mysticism in Bach and Handel, while there is drama in Verdi, and the dramatic character of the work is the chief fault that has been found with it, and apparently on good ground. Still, though commonly believed, and blindly—we would almost say instinctively—accepted that the Messiah and the 'Matthew-Passion' are the patterns and *diapason* for all religious music, it remains to be proved whether this is an axiom or not: and whether the musical forms adopted by Bach and Handel were chosen because of their being abstractedly the fittest for the expression of the subject, or simply because at that time the purely melodic development was nearly unknown.

No doubt Bach and Handel are up to this day unsurpassed by any religious composer. Neither Marcello nor Lotti, Mozart, Beethoven, Cherubini, Mendelssohn nor Berlioz, have in their sacred music on the whole come up to the mark of the two great Germans: this, however, means that the genius of the latter was greater than that of the former, but does not at all show that they were in the right and others in the wrong track of composition. A man of genius can convey to the mind of an audience the full and deep meaning of a religious passage by a mere melody with a simple accompaniment, or even without any at all: while a learned musician may make the same passage meaningless and even tedious by setting it as a double fugue. Of this fact we might quote many instances: but it will be enough to hint at Schubert's Ave Maria, and even that of Gounod, though founded on another work—noble and simple melodies, and certainly fuller of pathos and religious feeling than many of the elaborate works in which for centuries the church composers have exercised their skill and their proficiency in the architectural and ornamental branch of their art.

It is equally safe to assert that no special form can be declared to be the only one suitable for sacred music, and that even Bach and Handel wrote their masterpieces as they did, because that was the then universally accepted style of composition. There is certainly something in the *stilo fugato* nobler and sterner than in a purely melodic composition; still, we repeat that even simple melodies rouse high and noble feelings, and we see no objection to the praises of God being sung in melodies, instead of 'chorales,' or 'fugatos,' or Gregorian themes. Verdi's Requiem, it has been said, puts the hearer too often in mind of the stage; its melodies would do as well for an opera; its airs, duets, and concerted pieces would be wonderfully effective in 'Rigoletto,' 'Trovatore,' and 'Aida,' and are therefore too vulgar to be admitted in a sacred composition, in which everything that has any connection with earth must be carefully avoided. But this is our judgment and not the composer's. Did Palestrina choose for his sacred music a different style from the one in which he wrote his madrigals? Did not Handel in the 'Messiah' itself adapt the words of the sacred text to music that he had previously written with other intentions? And why should not Verdi be

allowed to do as they did, and give vent to his feelings in the way that is most familiar to him? Of all branches of art there is one that must necessarily be in accordance with the feelings of the multitude, and that is religious art; and on that ground we think that Verdi has been right in setting the Requiem to music in a style that is almost entirely popular. Whether it was possible for him, or will be possible for others to do better while following the same track, we willingly leave the musical critics to decide.

As an operatic composer, we have already said that Verdi is the most popular artist of the second half of the present century—we might say of the whole century, because, not in quality, but in number, his operas that still enjoy the honour of pleasing the public, surpass those extant of Bellini, Rossini, and Donizetti. How he won his popularity in Italy can be easily explained; how his name came to be almost a household word amongst all music-loving nations, is more difficult to understand when we think that no less men than Wagner, Meyerbeer, and Gounod were, at the same time, in the full bloom of their glory—the last two, of their activity: for this widespread popularity there are however very good reasons, arising entirely from Verdi's intellectual endowments and not from fashion, or mere good fortune.

Though Italian operatic composers may be reckoned by scores, yet after Rossini, Bellini, and Donizetti, only one man has had power enough to fight his way up. After Donizetti's death Verdi remained the only composer to uphold the glory of Italian opera, and from 1845 to this day nobody in 'the land of music' has shown any symptom of rivalling him, with the exception of Arrigo Boito, and he, notwithstanding the promise of his *Mefistofele*, has as yet brought out no other work.

As regards Italy, the attention of foreign audiences was naturally enough concentrated on Verdi. But on the other side of the Alps there were men who could stand comparison with him on every ground, viz. Wagner, Gounod, and Meyerbeer. To run the race of popularity with these men, and win the prize, would seem to require even a greater power than that of Verdi; still, by looking carefully at the peculiar qualities of each composer we may be able to discover why the Italian maestro, with endowments and acquirements perhaps inferior to those of the German and French artists, has left them behind as far as public favour is concerned.

The opera or musical drama considered from a philosophical point of view, is undoubtedly the highest artistic manifestation of which men are capable. All the most refined forms of art are called in to contribute to the expression of the idea. The author of a musical drama is no more a musician, or a poet, or a painter: he is the supreme artist, not fettered by the limits of one art, but able to step over the boundaries of all the different branches of æsthetic expression, and find the proper means for the rendering of his thought wherever he wants it. This was

Wagner's aim, and the 'Nibelungen Ring,' or still better 'Tristan and Isolde,' are the actuation of this theory, or at least are works showing which is the way towards the aim. Unhappily the grand scheme has not been carried out by the great artist, nor is it probable that it will ever be so; because if a man has the power to conceive the type of ideal beauty, it is very doubtful whether he will find the practical means for expressing it; and as the opera or musical drama is at present, we must reckon it to be the most impressive and most entertaining branch of art, but the least ideal, and the farthest from the ideal type of perfection. Let musical critics and philosophers say what they will, audiences in every quarter of the world will unanimously declare that the best opera is the one that amuses them best, and requires the least intellectual exertion to be understood. Taking this as the standard it is undeniable that Verdi's operas answer perfectly to the requirement.

To deliver a lecture on Astronomy before a select number of scientific men is quite a different thing from holding a course of lectures on Astronomy for the entertainment and instruction of large and popular audiences: if one means to give something to another, one must give what that other is able to receive, and give it in the fittest way. And this is what Verdi did during all his musical career; and his manner of thinking, feeling and living made it quite natural to him. Verdi felt much more than he learnt, that rhythm, the human voice and brevity, were the three elements apt to stir, to please and not to engender fatigue in his audiences, and on them he built his masterpieces. In the choice of his libretto he always preferred plots in which the majority of the public could take an interest. Wotan protecting Hunding against Siegmund's sword, with the spear on which the laws of the universe are cut in eternal runes, is certainly one of the highest dramatic situations that can be brought on the stage; but unhappily it is not a thing whose real meaning can be caught by everybody; while in the poems of 'Traviata,' 'Rigoletto,' 'Trovatore,' etc., even the most unlearned men will have no trouble in bringing home to themselves the feelings of the dramatic personæ.

Three different styles have been distinguished in Verdi's operas—the first from 'Oberto Conte di S. Bonifacio' to 'Luisa Miller'; the second from 'Luisa Miller' to 'Don Carlos'; while the third comprises only 'Don Carlos' and 'Aida.' [See too the able remarks in vol. iii. p. 301 of this Dictionary.] We fail to recognise these three different styles. No doubt there is a great difference between 'Attila,' 'Ernani,' 'Rigoletto,' and 'Aida': but we submit that the difference is to be attributed to the age and development of the composer's mind, and not to a radical change in his way of rendering the subject musically, or to a different conception of the musical drama. The more refined expression of 'Aida' compared to 'Il Trovatore,' and of 'Il Trovatore' compared to 'Nabucco' or 'I Lombardi,' answers to the

refinement of musical feeling which audiences gradually underwent during the forty years of the artistic career of the great composer; he spoke a higher language, because that higher language had become intelligible to the public; but what he said the first day is what he always said, and what he will say again, if he should ever break his long silence. Amongst living composers Verdi is undoubtedly the most universally popular: what posterity will think of this judgment passed by Verdi's contemporaries we do not know, but certainly he will always rank among the greatest composers of operatic music of all ages and amongst all nations, because seldom, if ever, is to be found such truth and power of feeling expressed in a clearer or simpler way.

We subjoin a complete catalogue of Signor Verdi's works.

OPERAS.

Oberto Conte di S. Bonifacio, Nov. 17, 1839. Milan.	Stiffelio, Nov. 16, 1850. Trieste.
Un giorno di Regno, ¹ Sep. 5, 1840. Milan.	Rigoletto, Mar. 11, 1851. Venice.
Nabuccodonosor, March 9, 1842. Milan.	Il Trovatore, Jan. 19, 1853. Rome.
I Lombardi, Feb. 11, 1843. Milan.	La Traviata, Mar. 6, 1853. Venice.
Ernani, Mar. 2, 1844. Venice.	Les Vêpres Siciliennes, June 13, 1855. Paris.
I due Foscari, Nov. 3, 1844. Rome.	Simon Boccanegra, Mar. 12, 1857. Venice.
Giovanna d' Arco, Feb. 15, 1845. Milan.	Aroldo, ² Aug. 16, 1857. Rimini.
Alzira, Aug. 12, 1845. Naples.	Un ballo in Maschera, Feb. 17, 1857. Rome.
Attila, Mar. 17, 1846. Venice.	La forza del Destino, ⁴ Nov. 10, 1862. St. Petersburg.
Macbeth, Mar. 12, 1847. Florence.	Macbeth (revised), Apr. 21, 1865. Paris.
I Masnadieri, July 22, 1847. London.	Don Carlos, Mar. 11, 1867. Paris.
Jerusalem, ³ Nov. 23, 1847. Paris.	Aida, ⁵ Dec. 24, 1871. Cairo.
Il Corsaro, Oct. 25, 1848. Trieste.	S. Boccanegra (revised) Apr. 1871. Milan.
La battaglia di Legnano, Jan. 27, 1849. Rome.	
Luisa Miller, Dec. 8, 1849. Naples.	

DRAWING-ROOM MUSIC.

Sei Romanze.—Non t'accostare all'urna. More Elisa, lo stanco poeta. In solitaria stanza. Nell' orror di notte oscura. Perduta ho la pace. Deh pietosa.	Guarda che bianca luna, with flauto obbligato.
L' esule, a song for bass.	Album di sei Romanze. Il Tramonto. La Zingara. Ad una stella. Lo spazza camino. Il mistero. Brindisi.
La Seduzione, a song for bass.	Il Foveretto. Romanza.
Notturmo a tre voci. S. T. B.	Tu dici che non m'ami. Stornello.

INNO DELLE NAZIONI.

Composed on the occasion of the London Exhibition, and performed at Her Majesty's Theatre on May 24, 1862.

QUARTETTO.

For two violins, viola and violoncello; written at Naples, and performed in the author's own drawing-room on April 1, 1873.

SACRED MUSIC.

Messa da Requiem. Performed in S. Mark's church in Milan, May 22, 1874.	Ave Maria, soprano and strings. Both performed for the first time at La Scala of Milan, on April 18, 1880.
Pater Noster, for 2 sopranos, contralto, tenor, and bass.	

Verdi wrote a great many compositions between the ages of thirteen and eighteen, that is, before coming to Milan. Amongst them are Marches for brass band, short Symphonies, six Concertos and Variations for pianoforte, which he used to play himself: many Serenate, Cantate, Arie, and a great many Duetti, Terzetti, and Church compositions; amongst them a 'Stabat Mater.' During the three years he remained

¹ This opera was performed in some theatres under the title of 'Il Santo Stanislao.'

² This opera is a re-arrangement of 'I Lombardi.'

³ This is an adaptation of the music of 'Stiffelio' to a new poem.

⁴ Reproduced, with alterations and additions, at La Scala of Milan Feb. 20, 1869.

⁵ The first performance in Europe was on Feb. 8, 1872, at La Scala of Milan.

at Milan he wrote amongst other things two Symphonies which were performed there, and a Cantata. Upon his return to Busseto, he wrote a 'Messa' and a 'Vespro,' three Tantum Ergos, and other sacred compositions, as well as choruses to Alessandro Manzoni's tragedies, and 'Il cinque Maggio.' Everything is lost with the exception of a few symphonies that are still performed at Busseto, and the music to Manzoni's poems, which is now in the writer's possession. [G.M.]

VEREENIGING VOOR NOORD-NEDERLANDS MUZIEKGESCHIEDENIS (Association for the History of Dutch Music) is the literary branch of the national Society for the Advancement of Music (Maatschappij tot bevordering der Toonkunst). It was separated in 1868-9 for the purpose of collecting and publishing materials for the musical history of the Dutch Netherlands, especially during the period extending from Obrecht (1450) to Sweelinck (1621). Its publications are as follow:—

- | | |
|--|--|
| 1. Sweelinck's <i>Regina Coeli</i> (ed. H. A. Viotta, 1869). | 6. Eight Psalms by Sweelinck (ed. R. Eitner), with Libretto by F. H. L. Tiedeman (1876). |
| 2. Old Dutch Songs, from the lute-book of Adrianus Valerius (ed. A. D. Loman, 1871). | 7. Chanson by Sweelinck (ed. R. Eitner, 1877). |
| 3. Organ compositions, by Sweelinck and Scheidt (ed. R. Eitner, 1871). | 8. Selections from Johannes Wanning's 'LII Sententiae' (ed. R. Eitner, 1878). |
| 4. Twelve Geuzeliedjes, songs of the Geuzen during the Spanish oppression (ed. A. D. Loman, 1873). | 9. Mass 'Fortuna Desperata,' by Jacob Obrecht (ed. R. Eitner, 1880). |
| 5. Three madrigals by Schuyt, and two chansons by Sweelinck (ed. R. Eitner, 1873). | 10. Old Dutch Dances arranged for piano (4 hands), by J. G. M. van Riemdijk (1883). |

The Vereeniging has also published a volume entitled '*Musique et Musiciens au XVII^e Siècle. Correspondance et Œuvre musicales de Constantin Huygens publiées par W. J. A. Jonckbloet et J. P. N. Land*' (1882). Besides these works, three volumes of transactions have appeared, under the title of '*Bouwsteenen*' (issued for members only, 1869-72, 1872-4, and 1874-81). To each is prefixed a short 'chronicle' of the proceedings of the association. The contents are principally (1) materials for a dictionary of Dutch musicians, most valuable for local statistics and bibliography, (2) catalogues of little-known musical collections, (3) particulars respecting the organs, carillons, etc. of Holland, (4) miscellaneous contributions to the antiquities of Dutch music. The '*Bouwsteenen*' are now superseded by a regular journal ('*Tijdschrift*'), of which two numbers have appeared (1882, 1883). The secretary is Dr. H. C. Rogge, university librarian at Amsterdam. [R.L.P.]

VERHULST, JOHANNES JOSEPHUS HERMAN, was born March 19, 1816, at the Hague, and was one of the earliest students at the Royal School of Music there, where he learned violin and theory. He afterwards played in the orchestra of the French Opera under Charles Hanssen, and wrote many pieces, amongst others an Overture in B minor which was published by the Society tot Bevordering der Toonkunst. An allowance from the King enabled him to go first to Cologne, where he studied with Joseph Klein, and then to Leipzig, where he arrived Jan. 12,

1838, and was well received by Mendelssohn; and soon after made Director of the important 'Euterpe' Concerts. There and in Germany he remained till 1842, when he returned to the Hague and was at once decorated by the King with the order of the Lion and made Director of the Music at Court. Since then he has resided at Rotterdam and the Hague, and at Amsterdam, where for many years he has conducted the Felix Meritis Society, and the Cecilia Concerts, as well as the Diligentia Society at the Hague. As a conductor he is very famous in his own country. His compositions comprise symphonies, overtures, quartets, much church music (amongst other pieces a Requiem for men's voices is much spoken of), songs and part-songs, to Dutch words. Verhulst's music is little known out of his own country. In England the writer only remembers to have heard one piece, an intermezzo for orchestra called '*Gruss aus der Ferne*,' performed occasionally at the Crystal Palace. Verhulst's friendship with Schumann was one of the great events of his life. How close and affectionate it was may be judged from the many letters given in Jansen's '*Die Davidsbündler*,' and especially the following note written at the end of one of Schumann's visits to Holland:

Dear Verhulst,—Good-bye. It delighted me to find you in your old spirits. Unfortunately you cannot say the same of me. Perhaps my good genius may yet bring me back to my former condition. It delighted me too to find that you have got so dear a wife: in that matter we are both equally fortunate. Give her a nice message from me, and take a hearty greeting and embrace for yourself from your old

ROBERT SCH.

Scheveningen, Sept. 8, 1852.

Schumann's '*Overture, Scherzo, and Finale*' (op. 52) is dedicated to Verhulst, who possesses the autograph, with the following inscription.¹

J. J. Verhulst
übergibt die Partitur des alten Opus
mit alten Sympathien.

Rotterdam d. 18 Dec. 1853.

R. Schumann.

[G.]

VERLORENE PARADIES, DAS (Paradise Lost). Russian sacred opera in 3 parts; words from Milton, music by Rubinstein (op. 54). Produced at St. Petersburg Dec. 17, 1876. [G.]

VERNON, JOSEPH, originally appeared at Drury Lane as a soprano singer in 1751. On Feb. 23 he sang in '*Alfred*' (music by Arne and others), and on Nov. 19 performed the part of Thyrsis in Dr. Boyce's '*Shepherd's Lottery*.' In 1754 he became a tenor singer. In the early part of 1755 he married, at the Savoy Chapel, Miss Poitier, a singer at Drury Lane. There was some irregularity in the performance of the ceremony which infringed the law for the prevention of clandestine marriages, and Wilkinson, the chaplain of the Savoy, and Grierson, his curate, the actual celebrant, were tried, convicted and transported. Vernon had been compelled to appear as a witness against Grierson upon his trial, and the public, unjustly suspecting him of having instigated the prosecution, refused to

¹ See Jansen's '*Die Davidsbündler*.'

allow him to appear upon the stage. His enforced retirement lasted until the end of 1756, when he was permitted to return, and became an established favourite. He had an indifferent voice, but sang with such excellent taste and judgment as to render his organic defect almost imperceptible. He was moreover an admirable actor, and was constantly allotted parts in which no singing was required. This rare union of the qualities of singer and actor peculiarly fitted him for such parts as the Clown in 'Twelfth Night,' and Autolycus in 'The Winter's Tale,' in both of which he excelled. He was the original Cymon in Michael Arne's opera of that name. Linley composed for him the well-known song in 'The School for Scandal.' He was for many years a favourite singer at Vauxhall. He composed, and about 1762 published in a volume, 'The New Songs in the Pantomime of The Witches; the celebrated Epilogue in the Comedy of Twelfth Night; a Song in The Two Gentlemen of Verona; and two favourite Ballads sung by Mr. Vernon at Vauxhall.' He died at South Lambeth, March 19, 1782. [W.H.H.]

VÉRON, LOUIS DÉSIKÉ, born in Paris, April 5, 1798, died there Sept. 27, 1867; the son of a stationer, studied medicine on leaving school, and took his doctor's degree in 1823. He had been intimate with the chemist Regnaud, and on his death bought the patent of his 'Pâte Regnaud,' and made a fortune. In 1828 he gave up doctoring, and took to writing for the press. In 1829 he founded the 'Revue de Paris,' and became a personage of importance. In spite of this, however, he gave up journalism, and became (March 2, 1831) director of the Opéra for five years, with a subsidy of 810,000 francs for the first year, 760,000 francs for the second, and 710,000 francs (respectively £32,500, £30,500, and £28,500) for the last three. Thus at his ease in money matters, with an excellent body of artists, and an able coadjutor in Edmond Duponchel (born 1795, died 1868), who looked after the *mise-en-scène*, his usual luck did not fail him, for the first work he produced was 'Robert le Diable' (Nov. 21, 1831). The success of Meyerbeer's first masterpiece is well known, but it is not so well-known that the manager of the Opéra exacted from the composer a large sum in consideration of the expenses of mounting the opera. With much energy and tact, Véron at once set to work to vary and renew the répertoire, as the following list of the works produced for the first time under his administration will show:—In 1832 'La Sylphide,' with Taglioni; the opéra-ballet 'La Tentation,' with a very original march-past of demons; Auber's opera 'Le Serment,' of which all that remains is the lively overture, and a coquettish air sung to perfection by Mme. Damoreau; and 'Nathalie,' a ballet for Taglioni. In 1833 'Gustave III,' with its masked ball; Cherubini's last opera 'Ali Baba'; and 'La Révolte au Sérail,' a smart and witty ballet. In 1834 'Don Juan'; and 'La Tempête,' in which Fanny Elsaler made her début. And finally, Feb. 23, 1835, 'La Juive,' with

Falcon, Nourrit and Levasseur—his greatest success after 'Robert,' and a greater aid to his reputation than any other work. Content with his enormous gains, and unwilling to risk losing them, Dr. Véron relinquished his licence to Duponchel, and took to politics. Failing to secure his election as a Deputy in 1838 he returned to journalism, and became in turn manager, editor, and sole proprietor (1844) of the 'Constitutionnel.' This is not the place in which to dilate on the important part played by this paper till Dr. Véron gave it up in 1862, but it admirably served the interests of its proprietor, who was twice elected a member of the Corps Législatif. While attending the Chamber he found time to write his own life under the title of 'Mémoires d'un Bourgeois de Paris' (Paris 1854, 6 vols. 8vo.), which obtained a *succès de curiosité*, and encouraged its author to further works, 'Cinq cent mille francs de rente' (1855, 2 vols. 8vo.) a novel of manners; a sequel to the 'Mémoires' (1856); a political treatise, 'Quatre ans de règne. Où allons-nous?' (1857); and, finally, one coming more within the scope of this Dictionary, 'Les Théâtres de Paris, from 1806 to 1860' (1860, 8vo.). These books are all forgotten, but 'Mimi Véron' (his nickname at the Opéra balls), the man of business and purveyor of pleasures under Louis Philippe, was a characteristic personage in his day, and a typical 'Bourgeois de Paris,' both in his industry and his vanity. [G.C.]

VERSCHIEBUNG (Ger. literally *shoving aside*). The mechanism acted upon by the left pedal of the pianoforte, by means of which the hammers are shifted slightly to the right, so as to strike one or two strings instead of three, thus producing a weaker tone of a peculiarly delicate quality. The word is employed in pianoforte music to indicate the use of this pedal; thus the directions *mit Verschiebung*, *ohne Verschiebung*, are synonymous with the Italian *ad una corda*, *a tre corde*. [See PEDALS; SORDINI; U.C.] A charming effect is obtained by Schumann in the slow movement of his Sonata for piano and violin in D minor, op. 121, where he makes the piano play *mit Verschiebung*, accompanied by the violin *am Steg*, that is, close to the bridge, thus producing a veiled quality of sound which suits admirably with the refined tone of the pianoforte. [F.T.]

VERSCHWORENEN, DIE (i.e. The Conspirators)—a one-act play, with dialogue, adapted by Castelli from the French, and composed by Schubert. The MS. in the British Museum has the date April 1823 at the end. The title was changed by the licensers to the less suggestive one of 'Der häusliche Krieg' (i.e. The Domestic Struggle), but the piece was not adopted by the management, and remained unperformed till March 1, 1861, when Herbeck produced it at a Musikverein concert. It was brought out on the stage at Frankfort Aug. 29, 1861; in Paris, as 'La Croisade des Dames,' Feb. 3, 1868; at a Crystal Palace Concert ('The Conspirators') Mar. 2, 72. [G.]

VERSE. A term used in church music to signify that an anthem or service contains portions for voices *solī*—duets, trios, etc. The origin of the term is obscure; but it is possible that it arose from a colloquial expression that certain services or anthems contained verses (i.e. portions of canticles or of Scripture) to be sung by soloists. A verse-service or verse-anthem sometimes includes portions set for a voice *solo*. When one voice maintains the chief part of an anthem it is described as a 'Solo-anthem': but the expression solo-service is rarely used. Some writers only employ the term verse-anthem when an anthem commences with voices *solī*. An anthem which commences with a chorus followed by parts for *solī* voices is termed 'full with verse.' [J.S.]

VERSICLE (Lat. *Versiculum*). A short sentence, in the Offices of the Church, followed by an appropriate Response; as—'V. Domine, in adjutorium meum intende. R. Domine, ad adjuvandum me festina.' 'V. O God, make speed to save us. R. O Lord, make haste to help us.'

The Versicles—or, rather, the Responses which follow them—from the Office of Vespers, and other Roman Catholic Services, have been harmonised by Vittoria, G. B. Rossi, and other Composers: but none of them will bear any comparison with the matchless English Responses, in all probability set originally to the old Latin words, by our own Tallis, whose solemn harmonies have never been approached, in this particular form of music. Some very fine Responses by Byrd, and other English Composers, will be found, in company with old versions of those of Tallis, in Jebb's Choral Responses. [W.S.R.]

VERT-VERT. Comic opera in 3 acts; words by Meilhac and Nutter, music by Offenbach. Produced at the Opéra Comique, March 10, 1869. [G.]

VERVE, a French word adopted as the equivalent of spirit or inspiration in performance. [G.]

VESPERALE—The Vespéral. That portion of the Antiphonarium Romanum which contains the Plain-Chaunt Melodies sung at Vespers. It contains the words and music of all the Psalms, Canticles, Antiphons, Hymns, and Versicles, used throughout the ecclesiastical year; the music being printed in the old Gregorian Notation. The most correct Vesperals now in print are those published at Mechlin in 1870, and at Ratisbon in 1875; the latter formally authorised by the Congregation of Rites. [W.S.R.]

VESPER (Lat. *Officium Vesperarum*, *Vesperæ*, *Oratio vespertina*, *Ad Vesperas*). The last but one, and most important, of the 'Horæ Diurnæ,' or 'Day hours,' in the Antiphonarium.

The Office begins with the Versicle and Response, 'Deus in adjutorium,' followed by five Psalms. On Sundays, these are usually Pss. cix, cx, cxl, cxlii, and cxliii (corresponding to Pss. cx–cxiv in the English Prayer-Book version); on other days, they vary. Each Psalm is sung with a proper Antiphon, which, on certain Festivals, is doubled—i.e. sung entire, both before and after the Psalms. On Ferial

days, the first two or three words only of the Antiphon are sung before the Psalm, and the entire Antiphon after it. The Psalms are followed by the Capitulum; and this by a Hymn, which varies according to the Festival or the day of the week. After this, 'Magnificat' is sung with a special Antiphon. Then follows the Prayer (or Collect) for the day; succeeded by the proper Commemorations. Should Compline follow, the Office of Vespers ends here. If not, the Commemorations are followed by one of the 'Antiphons of Our Lady,' with which the Office concludes.

The music sung at Vespers is more solemn and elaborate than that used at any of the other Hours. The proper Plain-Chaunt Melodies are found in the Vespéral. [See VESPERALE.] The Melodies of the Antiphons are of extreme antiquity. The Psalms are sung to their proper Gregorian Tones; for the most part, either entirely in Unison, or in alternate verses of Unison and Faux Bourdon. Many Faux Bourdons, by the great Composers, are still extant. Proske has included some by B. Nanini, F. Anerio, and others, in vol. iii. of his 'Musica Divina'; and a copy of a MS. collection, entitled 'Studij di Palestrina,' will be found among the Burney MSS. in the British Museum. Proske has also printed a very fine setting of the opening Versicle and Response, by Vittoria; and Ambros another, by G. B. Rossi, first printed in 1618.

Polyphonic Magnificats are necessarily very elaborate; for during the Canticle the High Altar is incensed, and sometimes the Altar in the Lady Chapel also—a ceremony which often occupies a considerable time. [See MAGNIFICAT.]

The Hymns for the various Seasons have also been frequently set, in very elaborate form, by the Polyphonic Composers; Palestrina's 'Hymni totius anni' is a complete collection, of unapproachable beauty. Some fine isolated specimens will also be found among the works of Tallis, Byrd, and other Composers of the English School; and Proske has published many interesting examples, collected from various sources. The four 'Antiphons of Our Lady'—*Alma Redemptoris*, *Ave Regina*, *Regina Cæli*, and *Salve Regina*—have been treated by many good writers, including Palestrina, Anerio, and O. Lasso, in the form of highly developed Motets.

With so large a *répertoire* of Compositions of the highest order, the Office of Vespers may be made a very impressive one; and, indeed, with little more than Plain-Chaunt, treated in Unison, and very simple Faux-Bourdon, it is sung at Notre Dame de Paris, S. Sulpice, and other large French churches, with a solemnity well worthy of imitation. [W.S.R.]

VESPRI SICILIANI. [See VÊPRES SICILIENNES, LES, p. 238 b.]

VESTALE, LA. Lyric tragedy in 3 acts; words by Jouy, music by Spontini. Produced at the Grand Opéra, Paris, Dec. 16, 1807. [G.]

VESTRIS, LUCIA ELIZABETH,¹ or ELIZA LUCY,² born either Jan. 3 or March 2, 1797, in

¹ Register of deaths.

² Signature at second marriage.

London, daughter of Gaetano Bartolozzi, artist, and grand-daughter of Francesco Bartolozzi, the celebrated engraver. On Jan. 28, 1813, she married Armand Vestris, dancer and ballet-master at the King's Theatre, and grandson of the celebrated Vestris. [See *Ballet*, i. p. 132.] It was on the occasion of his benefit at that theatre (July 20, 1815) that his wife, having received instruction in singing from Corri, made her first appearance in public as Proserpine in Winter's 'Il Ratto di Proserpina.' Her success that season was great, in spite of her then limited ideas of acting and want of vocal cultivation. She re-appeared in 1816 in Winter's 'Proserpina' and 'Zaira,' Martini's 'Cosa Rara,' and Mozart's 'Così fan Tutte' and 'Nozze' (Susanna), but with less success, her faults becoming more manifest with familiarity. In the winter she appeared at the Italian Opera, Paris, and at various theatres there, including the Français, where she played Camille in 'Les Horaces,' with Talma as Horace. About this time Vestris deserted her. (He died in 1825.) On Feb. 19, 1820, she made her *début* at Drury Lane as Lilla in 'The Siege of Belgrade'; made an immediate success in that and in Adela ('The Haunted Tower'), Artaxerxes, Macheath, and 'Giovanni in London,' and remained for many years a favourite at the patent theatres, not only in opera, but in musical farces and comedies. In certain of these she introduced well-known songs—'Cherry ripe,' 'I've been 'roaming,' 'Meet me by moonlight alone,' and others, which gained their popularity at the outset through her very popular ballad singing. On April 12, 1826, she played Fatima on the production of 'Oberon.' With her subsequent career as manager of the Olympic, Covent Garden, and Lyceum, we cannot deal, save to mention that during her tenancy of Covent Garden, in conjunction with Charles Mathews the younger (whom she married July 18, 1838), opera was occasionally performed, viz. 'Artaxerxes,' 'Comus,' etc., English versions of 'Norma,' 'Elena di Feltre' (Mercadante), and 'Figaro,' with Miss Kemble, Miss Rainforth, etc., and with Benedict as conductor. In Figaro she played Cherubino, but resigned 'Voi che sapete' to Miss Kemble. She died at Fulham Aug. 8, 1856.

'As a girl she was extremely bewitching, if not faultlessly beautiful—endowed with one of the most musical, easy, rich contralto voices ever bestowed on singers, and retaining its charm to the last—full of taste and fancy for all that was luxurious, but either not willing, or not able to learn, beyond a certain depth.' (Athenæum, Aug. 17, 1856.) At the Italian Opera, says Chorley (Musical Recollections), 'if she had possessed musical patience and energy, she might have queened it, because she possessed (half Italian by birth) one of the most luscious of low voices, great personal beauty, an almost faultless figure, which she adorned with consummate art, and no common stage address. But a less arduous career pleased

¹ Introduced into Mozart's Figaro, 1820. (Packer.)

her better; so she could not—or perhaps would not—remain on the Italian stage.' [A.C.]

VEUVE DU MALABAR, LA. A French novel, by Lemièrre, from which Spohr took the plot of his 'Jessonda.'¹ It has been burlesqued in 'Le Veuf du Malabar' by Siraudin and Busset, music by Doche (Opéra Comique, May 27, 1846); and under its own title by Delacour and Cremieux, music by Hervé (Variétés, April 26, 1873). [G.]

VIADANA, LUDOVICO, was born at Lodi about 1565. Of his education we know nothing save that he adopted the monastic profession. In or before 1597 he was in Rome, to which city his musical style is properly affiliated. He was chapelmaster in the cathedral of Fano in Urbino, and at Concordia in the states of Venice; but the order of his preferments is doubtful. All that is certain is that he occupied the same office ultimately at Mantua, where he is known to have been living as late as 1644. He composed and published a number of volumes of canzonets, madrigals, psalms, canticles, and masses: but the work upon which his historical significance rests is a collection of 'Cento concerti ecclesiastici a 1, a 2, a 3, e a 4, voci, con il basso continuo per sonar nell'organo. Nova invenzione comoda per ogni sorte di cantori e per gli organisti,' Venice 1603 (or, in some copies, 1602) in five volumes. In consequence of this publication Viadana has been commonly regarded as the inventor of the (unfigured) *basso continuo* to accompany the voice on an instrument—a judgment expressed, but, as Ambros thinks, unfairly, in the remark of a contemporary, Prætorius. As a matter of fact, *basso continuo* had been employed in the accompaniment of recitative some years earlier by Caccini and Peri and others before them. Viadana however was the first thus to accompany solemn church-compositions, and therefore the first to use the organ for the purpose. He is also the inventor of the name *basso continuo*. Nor had any one previously thought of writing pieces for a solo voice, or for two or three voices, expressly with the object of their being accompanied by a thorough-bass.² The way thus opened by Viadana enabled him to employ a freer and lighter style than his contemporaries of the Roman school. Building up his compositions (in his 'Cento concerti') from the bass instead of from a cantus firmus, he succeeded in creating real self-contained melodies; and if he cannot be justly regarded as the inventor of the notion of *basso continuo*, he at least was led by it to a not far-off view of the modern principle of melodic, as opposed to contrapuntal, composition. [R.L.P.]

VIAGGIO A REIMS, IL, OSSIA L'ALBERGO DEL GIGLIO D'ORA. Opera in one act; words by Balocchi, music by Rossini. Produced, with a wonderful cast, at the Théâtre Italien at Paris, June 19, 1825, as part of the festivities at the

¹ See his 'Selbstbiographie,' ii. 149.

² 'Geschichte der Musik,' iv. 243, etc.

³ See on the whole question Fétis, viii. 394 b–397 a.

coronation of Charles X. The music was afterwards adapted to the new libretto of 'Le Comte Ory,' and produced at the Grand Opera, Aug. 20, 1828. [See vol. i. p. 383; iii. 171 a.] [G.]

VIARD-LOUIS, JENNY. [See p. 342.]

VIARDOT-GARCIA, MICHELLE FERDINANDE PAULINE, a great lyric actress and singer, younger sister of Maria Malibran, is the daughter of the famous Spanish tenor and teacher, Manuel del Popolo Garcia, and of his wife, Joaquina Sitchez, an accomplished actress. She was born in Paris July 18, 1821, and received her names from her sponsors, Ferdinand Paer, the composer, and the Princess Pauline Galitzin. Genius was Pauline Garcia's birthright, and she grew up from her cradle in an atmosphere of art, and among stirring scenes of adventure. She was only three years old when her father took his family to England, where his daughter Maria, thirteen years older than Pauline, made her first appearance on the stage. His children were with him during the journeys and adventures already described, and Pauline has never forgotten her father being made to sing by the brigands. [See GARCIA, vol. i. p. 581.]

The child showed extraordinary intelligence, with a marvellous aptitude for learning and retaining everything. At that time it would have been hard to determine where her special genius lay. Hers was that innate force which can be applied at will in any direction. She learned languages as if in play. Her facility for painting, especially portrait-painting, was equally great. Her earliest pianoforte lessons were given her by Marcos Vega, at New York, when she was not four years old. At eight, after her return from Mexico, she played the accompaniments for her father at his singing lessons, 'and I think,' she wrote afterwards, 'I profited by the lessons even more than the pupils did.' She thus acquired a knowledge of Garcia's method, although she never was his pupil in the usual sense, and assures us that her mother was her 'only singing-master.' Her father worked her hard, however, as he did every one. In his drawing-room operettas, composed for his pupils, there were parts for her, 'containing,' she says, 'things more difficult than any I have sung since. I still preserve them as precious treasures.'

The piano she studied for many years with Meysenberg, and afterwards with Liszt; counterpoint and composition with Reicha. Her industry was ceaseless. After the death of her father and sister she lived with her mother at Brussels, where, in 1837, she made her first appearance as a singer, under the auspices of De Beriot. She afterwards sang for him on a concert tour, and in 1838 at the Théâtre de la Renaissance in Paris, at a concert, where her powers of execution were brilliantly displayed in a 'Cadence du Diable' framed on the 'Trillo del Diavolo' of Tartini. On May 9, 1839, she appeared at Her Majesty's Theatre as Desdemona in 'Otello,' and with genuine success, which increased at each performance. A certain resemblance to

her sister Malibran in voice and style won the favour of her audience, while critics were not wanting who discerned in her, even at that early age, an originality and an intellectual force all her own. Her powers of execution were astonishing, and with the general public she was even more successful, at that time, in the concert-room than on the stage. In the autumn of the same year she was engaged for the Théâtre Lyrique by the impresario M. Louis Viardot, a distinguished writer and critic, founder of the 'Revue Indépendante.' Here, chiefly in the operas of Rossini, she shared in the triumphs of Grisi, Persiani, Rubini, Tamburini, and Lablache. With these great artists she held her own, and though in many ways less gifted by nature than they, her talent seemed enhanced rather than dimmed by juxtaposition with theirs. Her face lacked regularity of feature; her voice, a mezzo-soprano, but so extended by art as to compass more than three octaves, from the bass C to F in alt, was neither equal nor always beautiful in tone. It had probably been overworked in youth: although expressive it was thin and sometimes even harsh, but she could turn her very deficiencies to account. Her first admirers were among the intellectual and the cultivated. The public took longer to become accustomed to her peculiarities, but always ended by giving in its allegiance. For men and women of letters, artists, etc., she had a strong fascination. Her picturesque weirdness and statuesque grace, her inventive power and consummate mastery over all the resources of her art, nay, her very voice and face, irregular, but full of contrast and expression—all these appealed to the imagination, and formed an *ensemble* irresistible in its piquancy and originality. 'The pale, still,—one might at the first glance say lustreless countenance,—the suave and unconstrained movements, the astonishing freedom from every sort of affectation,—how transfigured and illumined all this appears when she is carried away by her genius on the current of song!' writes George Sand; and Liszt, 'In all that concerns method and execution, feeling and expression, it would be hard to find a name worthy to be mentioned with that of Malibran's sister. In her, *virtuosity* serves only as a means of expressing the idea, the thought, the character of a work or a rôle.'

In 1840 she married M. Viardot, who resigned the Opera management, and accompanied her to Italy, Spain, Germany, Russia, and England. At Berlin, after her performance of Rahel, in 'La Juive,' one of her greatest parts, she was serenaded by the whole orchestra. Here too she astounded both connoisseurs and public by volunteering at a moment's notice to sing the part of Isabelle in 'Robert le Diable' for Fräulein Tuczek, in addition to her own part of Alice—a bold attempt, vindicated by its brilliant success.

She returned to Paris in 1849 for the production of Meyerbeer's 'Prophète.' She had been specially chosen by the composer for Fides, and to her help and suggestions he was more

indebted than is generally known. She was indeed, as Moscheles wrote, 'the life and soul of the opera, which owed to her at least half of its great success.' She played Fides more than 200 times in all the chief opera-houses in Europe, and has so identified herself with the part that her successors can do no more than copy her.

From 1848 to 1858 she appeared every year in London. In 1859 M. Carvalho, director of the Théâtre Lyrique, revived the 'Orphée' of Gluck, which had not been heard for thirty years. The part of Orphée, restored (by Berlioz) from a high tenor to the contralto for which it was written, was taken by Mme. Viardot, who achieved in it a triumph perhaps unique.¹ This revival was followed in 1861 by that of Gluck's 'Alceste' at the Opéra. The music of this—as Berlioz calls it—'wellnigh inaccessible part,' was less suited than that of Orphée to Mme. Viardot's voice, but it was perhaps the greatest of all her achievements, and a worthy crown to a repertoire which had included Desdemona, Cenerentola, Rosina, Norma, Arsace, Camilla ('Orazi'), Amina, Romeo, Lucia, Maria di Rohan, Ninette, Leonora ('Favorita'), Azucena, Donna Anna, Zerlina, Rahel, Iphigénie (Gluck), Alice, Isabelle, Valentine, Fides, and Orphée.

In 1863 Mme. Viardot fixed her abode at Baden, and has sung no more at the Opera, though she has appeared at concerts, and was heard in London as lately as 1870. She has composed a great deal, and several operettas, the books of which were written for her by Turgénief, were represented in her little private theatre by her pupils and her children. One of these, translated into German by Richard Pohl, as 'Der letzte Zauberer,' was performed in public at Weimar, Carlsruhe, and Riga. In 1871 she was obliged, as the wife of a Frenchman, to leave Germany, and since then has lived in Paris. She has devoted much time to teaching, and for some years was professor of singing at the Conservatoire. Among her pupils may be named Mlle. Désirée Artot, Orgeni, Marianne Brandt, and Antoinette Sterling. Mme. Viardot has published several collections of original songs, and vocal transcriptions of some of Chopin's Mazurkas, made famous by her own singing of them and by that of Jenny Lind. Her three daughters are all clever musicians. Her son, PAUL VIARDOT, a pupil of Léonard, born at Courtavent, July 20, 1857, has appeared with success in London and elsewhere as a violinist. Mme. Viardot is still the centre of a distinguished circle of friends, by whom she is as much beloved for her virtues as admired for her genius and her accomplishments. Not one of her least distinctions is that to her Schumann dedicated his beautiful Liederkreis, op. 24.

We cannot close this brief account of a great artist without an allusion to her well-known collection of autographs, which among other treasures contains the original score of 'Don

¹ The reader is referred to Chorley's 'Thirty Years' Recollections of the Opera' and to Berlioz's 'A travers chants,' for detailed descriptions of her wonderful performance, which was repeated over a hundred times.

Giovanni,' a cantata, 'Schmücke dich,' by J. S. Bach, Mendelssohn's 42nd Psalm, a scherzo by Beethoven, etc. [F.A.M.]

VIBRATO, an Italian term (past participle of, or verb adjective derived from, *vibrare*, to vibrate), denoting an effect, something akin to TREMOLO (which see), yet differing essentially from it, used in musical performance. In vocal music its mechanism is an alternate partial extinction and re-inforcement of a note, producing almost its apparent re-iteration. In music for bowed instruments it is identical with the vocal 'tremolo,' consisting of a rapid change of pitch brought about by a quick oscillation of the hand while the finger is stopping a note, and producing a trembling sound or thrill. It is strange that vibrato on the bowed instrument is the tremolo on the voice, while the tremolo in instrumental music (the rapid reiteration of the same note by up and down bow) more nearly resembles the vocal vibrato. It is sometimes heard on the flute and cornet. When the vibrato is really an emotional thrill it can be highly effective, as also the tremolo in extreme cases, but when, as is too often the case, it degenerates into a mannerism, its effect is either painful, ridiculous, or nauseous, entirely opposed to good taste and common sense, and to be severely reprehended in all students whether of vocal or instrumental music. Hard and fast lines in matters of expression in art are difficult, if not almost impossible, to draw. Cultivation of taste, observance of good models, and especially the true and unbiassed analysis of the human feelings, must be the guides as to how far these two means of expression are to be used. [H.C.D.]

VICARS CHORAL. 'The assistants or deputies of the Canons or Prebendaries of (English) collegiate churches, in the discharge of their duties, especially, though not exclusively, those performed in the choir or chancel, as distinguished from those belonging to the altar and pulpit.' (Hook.) The Vicars Choral answer to the *κονομικοί ψαλταί* of the early church. Originally each member of the capitular body had a vicar choral or minor canon attached to his dignity, whose appointment only lasted during his own life; but in process of time the numbers of these inferior ecclesiastical corporations became diminished. The difference between Minor Canons and Vicars Choral appears to be that whereas for the former, only clergy are eligible, the latter post can be held by either laymen or clerics. The former term is generally found in cathedrals of the new foundation, where the lay members are termed 'lay clerks,' the name 'vicars choral' being chiefly confined to cathedrals of the old foundation. St. Patrick's (Dublin) and Hereford have both Minor Canons and Vicars Choral; in the former the two bodies form distinct corporations, in the latter they are united. In all cathedrals of the old foundation in England, in St. David's, and in twelve Irish cathedrals the Vicars Choral form a distinct corporation, the members of which vary in number from twelve to three: these corporations

are distinct from the chapter as regards property, but in subjection to it as to the performance of the services. Formerly the members of these ecclesiastical colleges lived in common in collegiate buildings, some of which (as at Hereford, Wells, and York) still exist. The 42nd Canon orders that the Vicars Choral shall 'be urged to the study of the Holy Scriptures, and every one of them to have the New Testament, not only in English, but also in Latin.' The name is entirely confined to the Anglican church; in Catholic cathedrals the corresponding duties to those of the Vicars Choral are performed by various functionaries. (Jebb on Choral Service; Hook's Church Dictionary, etc.) [W.B.S.]

VICENTINO, NICOLA, was born at Vicenza in 1511 or 1512.¹ If we are to believe the title he gives himself in his first publication, as 'unico discepolo' to Adrian Willaert,² he had his musical education at Venice; but as the 'unico' is plainly false, we may perhaps question the 'discepolo.' He became ordained, entered the service of Ipolito of Este, cardinal of Ferrara, and accompanied him to Rome, where he lived, it seems, for many years. In 1546 he published a volume of madrigals, with explanatory directions, written with the design of restoring the old scales of the Greeks. He then invented a peculiar instrument, the 'archicembalo,' with several keyboards, in order to illustrate his system, and employed a private choir to practise it. He published also a theoretical work entitled 'L'antica Musica ridotta alla moderna prattica' (Rome 1555). His efforts were however rewarded with scant success, and he experienced much opposition. One contest into which he was led in defence of his theory, and in which he was defeated—that, namely, with Lusitano—is famous. The cardinal, his patron, is said to have looked on Vicentino's discomfiture as a personal affront; he took him back to Ferrara, and appointed him chapel-master in his court. This post he appears to have held until his death. If we may judge by a medal struck in his honour, which describes him as 'perfectae musicae divisionisque inventor,' he must have enjoyed a certain amount of fame; but there is a story that the medal was his own device. His real eminence was that of a performer on the clavichord, and it is difficult to quarrel with the criticism of J. B. Doni and Apostolo Zeno, who ridiculed him for pretending to be anything more than a performer. At best his theories belong only to a passing phase in the history of music.³ [R.L.P.]

VICTORINE. An opera in 3 acts; words translated from the French by E. Falconer, the music by Alfred Mellon. Produced at the English Opera, Covent Garden, Dec. 19, 1859. [G.]

¹ The place has been incorrectly given as Rome, and the date as 1513; but the latter is fixed to a year or two earlier by the notice in his 'Antica Musica,' 1565, that he was then in his 44th year.

² Cassi has singularly inverted the relation, making Vicentino Willaert's master: Storia della Musica sacra nella 4ta Cappella ducale di san Marco in Venezia, i. 83, 135; Venice, 1854.

³ A manuscript notice furnished in 1826 by Abbate Todschini of Vicenza to the Gesellschaft der Musikfreunde in Vienna, and now preserved in the library of that society, adds nothing to our knowledge of Vicentino's biography.

VIDAL, a name borne in the past and present by several French musicians and writers on music. The earliest, B. Vidal, whose initial only is known, died in Paris in 1800. He was a talented guitar-player and teacher during the last quarter of the 18th century, and published sonatas, short pieces, and a method for his instrument.

JEAN JOSEPH, born at Sorèze, 1789, a clever violinist formed in Kreutzer's school, took the second Grand Prix for composition in 1809, was for 20 years in Baillot's quartet-party, conducted the orchestra of the Théâtre Italien from 1829 to 1832, played first violin in Louis Philippe's band, and was a valued teacher. He died in Paris, June 4, 1867.

LOUIS ANTOINE, born at Rouen July 10, 1820, an amateur cello-player, a friend of Vuillaume, the musical instrument maker, and an accomplished linguist, has lately made some mark as a writer on music by his beautiful work on bowed instruments, 'Les Instruments à archet,' in three 4to. volumes, with etchings by Hillemacher. Vol. i. (1876) treats of musical instrument making and makers; vol. ii. (1877) of players, especially the virtuosi of the bow; and vol. iii. (1878) of music-printing, with biographies of chamber-musicians, and a catalogue of works for instruments played with the bow. M. Vidal has been for the last few years occupied with preparations for a similar history of pianoforte-making.

FRANÇOIS, Provençal poet, born at Aix, July 14, 1832, is the author of 'Lou Tambourin,' an interesting work on the Tambourine of Provence, and the Galoubet, or pipe. It is in the Provençal dialect, with a French translation.

PAUL ANTONIN, born at Toulouse, June 16, 1863, passed brilliantly through the Paris Conservatoire, and took successively the first Harmony prize in 1879, the first prize for Fugue in 1881, and the Grand Prix de Rome in 1883. A talented pianist, an excellent reader and accompanist, Paul Vidal's technical knowledge seems already complete, and his cantata 'Le Gladiateur' is instrumented in masterly style. We hope great things from this young composer. [G.C.]

VIELLE, originally the name of the large primitive violin used by the French Troubadours in the 13th century. [See VIOLIN, p. 274 b.] It was next applied to the Hurdy-gurdy, an instrument which is contemporaneous with the Troubadour's fiddle, being in fact in its original form simply the latter instrument adapted for playing with a wheel and handle, the intonation being regulated by a clavier on the fingerboard. Early in the last century the modern vielle or hurdy-gurdy was cultivated as a musical instrument of high class, ranking nearly with the lute and bass viol, and many of the French Vielles of that period are beautiful artistic productions. The instrument is not altogether extinct in our own time; the writer remembers a performer who visited Vichy in 1870, describing himself as 'Vielliste de sa Majesté l'Empereur,' who executed some difficult music, chiefly operatic airs and fantasias, on his singular instrument, with

considerable effect. The staccato with the wheel is surprisingly brilliant; the defect of the instrument for the listener is its monotony of force and intonation, and for the player the extreme fatigue which the rotary motion induces in the muscles of the right arm. Even in England a clever performer may sometimes (though rarely) be heard about the streets. [E.J.P.]

VIERLING, GEORG. One of those solid, cultivated musicians, who are characteristic of Germany. He was born Sept. 15, 1820, at Frankenthal in the Bavarian Palatinate, where his father was schoolmaster and organist. His education was thoroughly well grounded with a view to a scientific career, and it was not till 1835, at the Gymnasium at Frankfort, that his musical tendencies asserted themselves. Without neglecting his general studies he worked hard at the piano, and afterwards at the organ under J. C. H. Rinck of Darmstadt for two years. 1843 to 1846 were passed in systematic study under A. B. Marx at Berlin, and in 1847 he became organist of the Oberkirch at Frankfurt-on-the-Oder, conducted the Singakademie there, and was musically active in other ways. After passing a short time at Mayence he took up his permanent residence in Berlin, and founded the Bach-Verein, which did much to advance the study of the great master. For some time past Vierling has withdrawn from active life, and his Bach Society is now conducted by Bargiel.

His works are all in the classical style, and embrace every department:—a Symphony, op. 33; Overtures to 'The Tempest,' 'Maria Stuart,' 'Im Frühling,' 'Hermannschlacht,' and 'Die Hexe'; a Pf. trio, op. 51; 'Hero and Leander' and 'The Rape of the Sabines,' for Chorus and Orchestra; in addition to Solo and Part-songs, Pianoforte pieces, etc. His last work is a Roman Pilgrims-song of the 7th century, 'O Roma Nobilis,' for 6-part chorus a capella (op. 63). [G.]

VIEUXTEMPS, HENRI, a celebrated violin-player of our own day, born at Verviers, Belgium, Feb. 17, 1820.¹ His father was connected with music, and thus the child grew up in a favourable atmosphere. Through the kindness of a Herr Genin he had instruction from Lecloux, a competent local musician, and by the time he was six played Rode's 5th Concerto in public in the orchestra. In the winter of 1827 he and his father made a tour with Lecloux, in the course of which the boy was heard by De Beriot, who at once adopted him as his pupil, devoted himself to his thorough musical education, and in 1828 took him to Paris and produced him in public. On De Beriot's departure to Italy in 1831, the boy returned to Brussels, where he remained for some time, studying and practising hard, but without any guidance but his own. In 1833 his father took him on a lengthened tour through Germany—the first of an enormous series—in the course of which he met Guhr,

¹ The materials for this sketch are supplied by Vieuxtemps' autobiography published in the *Guide Musical*, and translated in the *Musical World*, June 25, 1881, and following nos., by Philharmonic Programmes, the *Allg. Musikalische Zeitung*, and other sources.

Spohr, Molique, and other musicians, and heard much music, amongst the rest 'Fidelio.' The journey extended as far as Munich and Vienna, where he excited surprise, not only for his fulness of tone, purity of intonation, and elegance of style, but also for the ready way in which he played off a MS. piece of Mayseder's at sight (A. M. Z. 1834, p. 160). He remained in Vienna during the winter, and while there took lessons in counterpoint from Sechter. There too he made the acquaintance of Mayseder, Czerny, and others. He also played Beethoven's Violin Concerto (at that time a novelty) at one of the Concerts Spirituels. The party then returned northwards by Prague, Dresden, Leipzig (where Schumann welcomed him in a genial article in his 'Neue Zeitschrift'), Berlin, and Hamburg. In the spring of 1834 he was in London at the same time with De Beriot, and played for the first time at the Philharmonic on June 2.² Here too he met Paganini. The winter of 1835 was spent in Paris, where he made a long stay, studying composition under Reicha. After this he began to write. In 1837 he and his father made a second visit to Vienna, and in 1838 they took a journey to Russia, by Warsaw, travelling for part of the way with Henselt. The success was so great as to induce another visit in the following year, when he made the journey by Riga, this time with Servais. On the road he made the acquaintance of Richard Wagner. But a little later, at Narva, he was taken with a serious illness which delayed his arrival for some months, and lost him the winter season of 1838. The summer was spent in the country, mostly in composition—Concerto in E, Fantaisie Caprice, etc.—both which he produced in the following winter amid the most prodigious enthusiasm; which was repeated in his native country when he returned, especially at the Rubens Fêtes in Antwerp (Aug. 1840), where he was decorated with the Order of Leopold, and in Paris, where he played the Concerto at the concert of the Conservatoire, Jan. 12, 1841. He then made a second visit to London, and performed at the Philharmonic Concert of April 19, and at two others of the same series—a rare proof of the strong impression he made. The next few years were taken up in another enormous Continental tour, and in a voyage to America in 1844. A large number of compositions (ops. 6 to 19) were published after regaining Brussels; but the strain of the incessant occupation of the tour necessitated a long *Kur* at Stuttgart. During this he composed his A major Concerto (op. 25), and played it at Brussels in Jan. 1845. In the following autumn he married Miss Josephine Eder, an eminent pianist of Vienna. Shortly after this he accepted an invitation to settle in St. Petersburg as Solo Violin to the Emperor, and Professor in the Conservatorium, and in Sept. 1846 quitted Western Europe for Russia. In 1852, however, he threw up this strange contract and returned to his old arena and his incessant wanderings. 1853 saw

² Moscheles' 'Lift.' I. 204; and Philh. Programmes.

the composition of his Concerto in D minor (op. 31). 1855 was spent in Belgium, and at a property which he had acquired near Frankfort. In 1857 he again visited the United States in company with Thalberg, and in the winter of 1858 was once more in Paris occupied in finishing his 5th Concerto in A minor (op. 37). The next ten years were occupied in constant touring all over Central Europe, and, somewhat later, Italy. Serious affliction now overtook his hitherto prosperous course. First his father, and then—June 29, 1868—his beloved wife, were taken from him by death. To divert his mind from the shock of these losses he engaged in another enormous tour over Europe, and that again was followed, in August 1870, by a third expedition to the United States, from which he returned in the spring of 1871 to find Paris in ruins. This was the last of his huge tours. From 1871 to 1873, on the invitation of M. Gevaerts, who had succeeded Fétis at the Brussels Conservatoire, he acted as teacher to the violin class there, and as director of the Popular Concerts; but this sphere of activity was suddenly ended by a paralytic attack which disabled the whole of his left side, and by consequence made playing impossible. True, he was able in time to resume the direction of his pupils, but his career as a player was at an end. His passion for travelling, however, remained to the last, and it was at Mustapha-les Alger, in Algiers, that he died June 6, 1881, leaving a 6th Concerto, in G, dedicated to Mme. Normann-Neruda, by whom it was first played. In 1872 Vieuxtemps was elected member of the Académie Royale of Belgium, on which occasion he read a memoir of Étienne Jean Soubre.

Vieuxtemps was one of the greatest violinists of modern times, and with De Bériot heads the modern French school. He had all the great qualities of technique so characteristic of that school. His intonation was perfect, his command of the bow unsurpassed. An astonishing staccato—in up and down bow—was a speciality of his; and in addition he had a tone of such breadth and power as is not generally found with French violinists. His style of playing (*Vortrag*) was characteristically French. He was fond of strong dramatic accents and contrasts, and, generally speaking, his style was better adapted to his own compositions and those of other French composers than to the works of the great classical masters. At the same time it should be said that he gained some of his greatest successes in the Concertos of Beethoven and Mendelssohn, and was by no means unsuccessful as a quartet-player, even in Germany.

As a composer for the violin he has had a wider success than almost any one since Spohr; and the fact that not a few of his works, though written more than forty years ago, are still stock-pieces of the répertoires of all French and not a few German violinists, shows such vitality as to lift him out of the rank of composers of merely ephemeral productions of the virtuosic genre. It must be granted that their value is

very unequal. While some of his Concertos contain really fine ideas worked out with great skill, he has also published many show-pieces which are not free from vulgarity.

While De Bériot, with his somewhat flimsy workmanship but undeniable charm of sentimental melody, has often been compared to Bellini and Donizetti, Vieuxtemps might not improperly be called the Meyerbeer among composers for the violin. He appears to share the good and the bad qualities of that great opera-writer. On the one hand, no lack of invention, beauty of melody, extremely clever calculation of effect; and on the other, a somewhat bombastic and theatrical pathos, and occasional lapses into triviality. Vieuxtemps shares also with Meyerbeer the fate of being generally underrated in Germany and overrated in France, where Meyerbeer is not unfrequently placed on the same level with Beethoven, and where Vieuxtemps, after playing his E major Concerto in Paris for the first time is said to have been invited to write a Grand Opera—an offer which he wisely declined.

The best-known of his works are the Concertos, no. 1, in E (op. 10); no. 2, in F♯ minor (op. 19); no. 3, in A (op. 25); no. 4, in D minor (op. 31); no. 5, in A minor (op. 37); no. 6, in G (op. 47); the *Fantaisie Caprice*, and *Ballade et Polonaise*. He also published a Sonata for piano and violin, 3 Cadenzas for Beethoven's Violin Concerto, and a large number of concert-pieces, many of which are long since obsolete. [P.D.]

VIGANÒ, SALVATORE. A famous dancer, and composer both of the action and the music of ballets, who will have a longer reputation than is otherwise his due, owing to his connection with Beethoven. He was born at Naples March 29, 1769, and died at Milan (the native town of his father) Aug. 10, 1821. He began his career at Rome in female parts, women being then forbidden the stage there. We next find him at Madrid—where he married Maria Medina, a famous dancer—Bordeaux, London, and Venice. At Venice he brought out an opera, 'Raoul, sire de Crequi,' both words and music his own. Thence he came to Vienna, where he and his wife made their *début*, May 13, 1793. He then travelled in Germany, and returned to Vienna in 1799. Here he attracted the notice of the Empress, and the result was his ballet of *The Men of Prometheus*, 'Gli Uomini di Prometeo,' or 'Die Geschöpfe des Prometheus' (music by Beethoven), the subject of which is said to have been suggested by Haydn's 'Creation' (*Schöpfung*), then in its first fame. The piece is called an heroic allegorical ballet, in two acts. It was produced at the Court Theatre, March 28, 1801, and the two 'creations' were danced by Viganò and Mlle. Cassentini, his wife being then *passée*. It had a remarkable run, being performed sixteen times in 1801, and thirteen times in 1802. Viganò was evidently a man of great ability, and made a real reputation for his abandonment of the old artificial Italian style of ballet in favour of a 'closer imitation of nature.' Ten ballets of his are mentioned in the 'Allge-

meine musikalische Zeitung,' and no doubt these are not all that he composed. How solid was his success may be judged from a passage in one of the letters of Henri Beyle (Stendhal): 'Viganò has been immensely prosperous; 4000 francs are the usual income of a ballet composer, but he has had 44,000 for the year 1819 alone.'

Viganò seems to have given his name to a kind of Minuet in 4-4 time; at least, if we may so interpret the title of a set of 12 Variations on a Minuet 'à la Viganò,' which Beethoven published in Feb. 1796.

The minuet was certainly danced, for the names of the dancers are given,¹ and is as certainly in Common time:—

It is worth noting that Beethoven has put the concluding variation and coda into triple time:—

The new form does not appear to have taken root. Beethoven wrote a Scherzo in duple time in his Sonata, op. 31, no. 3, and a Trio in the same in the 9th Symphony; and Mendelssohn a Scherzo in 2-4 in his Scotch Symphony; but a Minuet proper would seem to be essentially in triple time.

There is a life of Viganò—'Commentarii della vita,' etc., by Carlo Ritorni, 8vo., Milan, 1838; and much information on him and on the Ballet of Prometheus (from which the above is chiefly compiled) is given by Thayer in his 'Beethoven,' vol. ii. 124-126 and 380-384. [G.]

VILBACK,² ALPHONSE CHARLES RENAUD DE, born June 3, 1829, at Montpellier. He entered the Paris Conservatoire in 1842, and in 1844 took the first organ-prize, and the Prix de Rome at the same time as Victor Massé. The favourite pupil of Halévy, and remarkably industrious, he first became known as a composer of pianoforte pieces, more brilliant than original, but, like all young prize-winners on their return from Italy, he aspired to the stage. It was not however, till Sept. 4, 1857, that he produced his first work, 'Au clair de la Lune,' a pretty oper-

¹ The title of the original edition (given in the Wiener Zeitung of Feb. 27, 1796) runs as follows: 'XII Variationi per il Clavicembalo o Piano-Forte (for harpsichord or piano) Sul Menuetto ballato dalla Sigr. Venturini e Sigr. Chechi nel Ballo delle Nozze disturbate, del Sigr. Luigi van Beethoven no. 3. In Vienna presso Artaria e Comp.' The Ballet was composed by J. J. Halbl, and produced at the Court Theatre, May 18, 1796.

² This is probably the French spelling of the German name Wilbach. Mendelssohn, writing to his sister (Nov. 16, 1830), speaks of ordering a set of studs from Paris 'à la Beck.'

etta in one act ('Bouffes Parisiens'), followed closely by his last 'Don Almanzor' (Théâtre Lyrique, April 16, 1858). He found his true vocation as organist of Saint Eugène (1855 to 1871), where he rivalled Lefébure-Wély in improvisation, and equalled him in execution. Unfortunately he became a mere music-publisher's hack, and amateur pianists are familiar with his mosaïques, fantaisies, etc., for two and four hands, with such titles as 'Beautés de l'Opéra,' etc. This journey-work did not even pay, and it was in something like poverty that he died at Brussels, March 19, 1884. So brilliant and agreeable a talker deserved a better fate. He became nearly blind, but to the last retained his charming manner and his ability as a musician. The library of the Conservatoire contains the MSS. of his cantata 'Le Renégat de Tangier' and a 'Messe Solennelle' (Aug. 1847). He has also left printed scores of several orchestral works, 'Pompadour gavotte,' 'Chanson Cypriote,' 'Marche Serbe,' etc. [G.C.]

VILLANELLA (Ital., a country girl). An unaccompanied Part-Song, of light rustic character, sharing, in about equal proportions, the characteristics of the Canzonetta, and the Balletta. The looseness of the style is forcibly described by Morley, who, in Part III. of his 'Introduction to Practicall Musicke,' speaks of it thus—'The last degree of grauity (if they have any at all) is given to the villanelle, or country songs, which are made only for the ditties sake: for, so they be aptly set to expresse the nature of the ditty, the composer, (though he were neuer so excellent) will not stick to take many perfect cords of one kind together, for, in this kind, they think it no fault (as being a kind of keeping decorum) to make a clownish musick to a clownish matter: and though many times the ditty be fine enough, yet because it carrieth that name Villanella, they take those disallowances as being good enough for a plow and cart.'

This severe criticism of the old master is, however, applicable only to Villanelle of the very lowest order. The productions of Kapsperger³—whose attempts in this direction were very numerous—and of other Composers wanting the delicate touch necessary for the successful manipulation of a style so light and airy, are certainly not free from reproach. But the Villanelle of Pomponio Nenna, Stefano Felis, and other Masters of the Neapolitan School,⁴ differ but little from the charming Canzonetti, the Canzone alla Napolitana, and the Balletti, for which they are so justly celebrated, and may be fairly classed among the most delightful productions of the lighter kind that the earlier half of the 17th century has bequeathed to us. Among the lighter Madrigals of Luca Marenzio—such as 'Vezzosi augelli,' quoted in vol. ii. p. 190—there are many which

³ JOHANN HIERONYMUS KAPSPERGER, a prolific composer and skilled musician, flourished at Venice and elsewhere in Italy in the earlier half of the 17th century; is mentioned with great eulogium by Kircher (Musurgia); and left a mass of works both for voices and instruments behind him, of which a list is given by Fétis.

⁴ The Stadtbibliothek at Munich contains a large number of these works, by Giovanni de Antiquis, and fourteen other Neapolitan composers; printed at Venice in 1574, in 2 very rare vols. obl. 8vo.

exhibit almost all the more prominent characteristics of the Villanella, in their most refined form: and the greater number of the Canzone of Giovanni Feretti, and the Balletti of Gastoldi—to which Morley is generally believed to have been indebted for the first suggestion of his own still more charming Ballets—differ from true Villanella only in name. The same may be said of more than one of the best known and best beloved of Morley's own compositions in the same style.—The best example of a modern Villanella is Sir Julius Benedict's well-known 'Blest be the home.'¹ [W.S.R.]

VILLAROSA, IL MARCHESE DI. The author of a Dictionary of Neapolitan musicians, entitled, 'Memorie dei compositori di musica del Regno di Napoli, raccolte dal Marchese di Villarosa. Napoli 1840'—indispensable to all students of Italian musical history. He was also the author of a work on Pergolesi (2nd ed., Naples, 1843), and to him is due the first certain knowledge of the place and date of the birth of that great composer, so prematurely removed. [See vol. ii. 686 b.] [G.]

VILLOTEAU, GUILLAUME ANDRÉ, well-known French writer on music, born Sept. 6, 1759, at Bellême (Dept. de l'Orne). After the death of his father, he was put, at four years of age, into the maîtrise of the Cathedral of Le Mans, and afterwards into the town school, under the Fathers of the Oratory. He declined, however, to enter a seminary, and roamed about from town to town seeking engagements as a church-chorister. In despair for a living, he at length (like Coleridge) enlisted as a dragoon, but was totally unfitted for a military life, and returned to the maîtrise of Le Mans, which he shortly exchanged for that of the Cathedral of La Rochelle. He ultimately went up for three years to the Sorbonne, and obtained a place in the choir of Notre Dame, but the outbreak of the Revolution brought this employment to an end, and in 1792 he entered the chorus of the Opéra, and remained there till offered a place as musician among the *savants* who accompanied Napoleon on his expedition to Egypt.

This musical mission opened to him a congenial sphere for his very considerable abilities. Having studied on the spot ancient music, both Egyptian and Oriental, he returned to Paris, and continued his researches in the public libraries. As a member of the Institut de l'Égypte, he was anxious, before taking part in the great work which that body was commissioned by Government to draw up, to publish a 'Mémoire sur la possibilité et l'utilité d'une théorie exacte des principes naturels de la musique' (Paris, 1809, 88 pp. 8vo), which he had read before the Société libre des Sciences et des Arts. This was followed by 'Recherches sur l'analogie de la Musique avec les Arts qui ont pour objet l'imitation du langage' (Ibid. 1807, 2 vols. 8vo), in which he developed

some of his favourite ideas. It is in four parts: (1) The relations of the art of music to language and morals; (2) The part played by music in ancient times, and the causes which led to the loss of its former power over civilised and uncivilised peoples; (3) The condition of music in Europe since the days of Guido d'Arezzo, the necessary acquirements for a complete musician, and new and original observations on the nature, origin, and object of music; (4) A continuation of the former, and an attempt to prove that music is an imitative and not an arbitrary art, that it has always been essentially traditional, and that by it were preserved intact for many centuries all human attainments—law, science, and the arts. This huge book, with all its tediousness, purposeless digressions, and false philosophy, is crammed full of learning, and contains ideas which at that date were new and original.²

Villoteau's fame rests not on this book, but on his share in 'La Description de l'Égypte,' the magnificent work in 20 vols. folio (11 being plates), which took 17 years to publish (1809–1826), and which reflected so much credit on Conté and Jomard the distinguished secretaries of the commission. The musical portions are: (1) On the present condition of music in Egypt; researches and observations historical and descriptive made in the country (240 pp. October, 1812); (2) A description, historical, technical, and literary of musical instruments in use among the Orientals (170 pp., 1813, with three plates engraved by Dechamel); (3) A dissertation on the different kinds of musical instruments to be seen on the ancient monuments of Egypt, and on the names given them in their own language by the first inhabitants of the country (26 pp.); (4) The music of ancient Egypt (70 pp., 1816).

Now that Egypt and the East are familiar ground, it is easy to refute some of Villoteau's hypotheses, or to prove him wrong on minor points; but recollecting how little was known before him of the subjects he treated with so much learning and care, we may realise how much we owe to his patience and penetration. As a student, and unversed in matters of business, Villoteau made no profit either out of his position or his labours. Three-parts ruined by a notary, whom he had commissioned to buy him a property in Touraine, he had to leave Paris for Tours, where he owned a small house. Here he lived on his own slender resources, and on certain small sums allowed him by government for a French translation of Meibom's 'Antiquæ musicæ auctores VII' (1652), which however was never published. The MS., now in the library of the Conservatoire, is in three columns, the original Greek, and translations into Latin and French, all in Villoteau's hand. The Greek seems correct, but is difficult to read from its having neither stops nor accents.

¹ In the article on SUMER IS IOMMEN DI, we promised to give any farther information which might reach us, under the head of VILLANELLA. We regret to say that no discovery likely to throw any new light upon the subject has as yet been made.

² According to Fétis, its success was so small that the publisher exported or destroyed all the unsold copies, a fact which would account for its present scarcity, but as the copyright was Villoteau's own property, and it had been entered at Galland's, it is difficult to believe a story so much to the discredit of a respectable bookseller like Renouard.

During his last years, Villoteau wrote a 'Traité de Phonéthésie,' now lost, which was not approved by the Institut de France, and consequently not published. He died at Tours, April 27, 1839, aged nearly 80. [G.C.]

VINCI, LEONARDO, born 1690 at Strongoli in Calabria, and educated with Pergolesi and Porpora, in the Conservatorio de' Poveri di Gesù Cristo at Naples, under Gaetano Greco. Of his life but little is known. He appears to have begun his career in 1719 with two comic pieces in Neapolitan dialect, which were followed by 26 operas of various characters and dimensions. Of these, 'Ifigenia en Tauride' (Venice, 1725), 'Astianatte' (Naples, 1725), 'Didone abbandonata' (Rome, 1726), and 'Alessandro nell'Indie' (Rome, 1729), had the greatest success. 'Didone' established his fame. His last was 'Artaserse' (Naples, 1732). In 1728 he was received into the congregation of the Rosario at Formiello, for whom he composed two Oratorios, a Kyrie, two Masses à 5, and some Motets. He was poisoned by the relative of a Roman lady with whom he had a *liaison*, and died in 1732. His operas, says Burney (iv. 405-537, etc.), form an era in dramatic music by the direct simplicity and emotion which he threw into the natural clear and dramatic strains of his airs, and by the expressive character of the accompaniments, especially those of the obbligato recitatives. He left a great number of cantatas for 1 and 2 voices, with bass or strings. These are quoted by Florimo ('Cenno Storico' p. 230-234), from whom the above facts are chiefly derived. A collection of his airs was published by Walsh of London, and highly prized. 'Vo solcando,' from 'Artaserse,' was sung everywhere by musicians and amateurs alike. [G.]

VINGT-QUATRE VIOLONS. No reader of French 'Mémoires' of the 17th century can be ignorant of the part played by ballets at the courts of Henri IV., Louis XIII., and Louis XIV. The ballet combined the pleasures of music, dancing, and the play, gave great opportunities for magnificent display, and was for nearly a century the favourite diversion of princes and *grands seigneurs*, thus preparing the way for opera. The passion for *ballets de cour* and dancing led to the formation of a special band of violinists, who, under Louis XIII, bore the name of the 'band of 24 violins of the King's chamber.' Its members, no longer mere *ménétriers* [see ROI DES VIOLONS, iii. 145], became *musiciens en charge*, with a prospect of being eventually admitted to the Chapelle du Roi. Their functions were to play for the dancing at all the court-balls, as well as to perform airs, minuets, and rigadoons, in the King's antichamber, during his *lever* and public dinner, on New Year's Day, May 1, the King's fête-day, and on his return from the war, or from Fontainebleau.

No complete list of 'the 24 violins' who enlivened the court of the melancholy Louis XIII. has yet been made, but some of their airs may be seen in the MS. collection of Philidor *diné*—one of the precious possessions of the Con-

servatoire library. [See vol. ii. p. 703 a.] The composers names are Michel Henri, Constantia, Dumanoir, Robert Verdié, Mazuel, Le Page, Verpré, de La Pierre, de La Vallez, and Lazzarin, all, we conjecture, among the 24. The violinists occasionally acted in the ballets, as in the 'Ballet des doubles Femmes' (1625), when they walked in backwards, dressed as old women with masks at the back of their heads, so as to look as if they were playing behind their backs. This had a great success, and was revived by Taglioni (the father) in the masked ball in Auber's 'Gustave III,' in 1833.

In Louis XIV's reign the band of 24 violins was called the 'grande bande,' and on Dumanoir's appointment as Roi des Violons, the King made him conductor, with the title of '25me violon de la Chambre.' The post however was suppressed at the same time with that of the Roi des ménestriers (May 22, 1697). The 'grande bande,' again called 'the 24 violins,' continued to exist till 1761, when Louis XV. dissolved it by decree (Aug. 22). During the rage for French fashions in music which obtained in Charles II.'s reign, the '24 violons' were imitated here, in the 'King's music,' and became the 'four-and-twenty fiddlers all of a row' of the nursery rhyme. Meantime a dangerous rival had sprung up in its own home. In 1655 Lully obtained the direction of a party of 16 violins, called the 'petite bande.' As violinist, leader, and composer he soon eclipsed his rival, and his brilliant career is well known. The modest position of conductor of a few musicians, whose duty was simply, like that of the 'grande bande,' to play at the King's *levers*, dinners, and balls, satisfied him at first, but only because it brought him in contact with the nobility, and furthered his chance of becoming 'Surintendant de la Musique' to Louis XIV. This point once gained, nothing further was heard of the 'petite bande,' and by the beginning of the next reign it had wholly disappeared.

The 24 violins remained, but as time went on they became old-fashioned and distasteful to the courtiers. Accordingly, as fast as their places fell vacant they were filled by musicians from the Chapelle du Roi, and thus the band became independent of the community of St. Julian. After 1761 the only persons privileged to play symphonies in the King's apartments were the musicians of his 'chamber' and 'chapel.' [G.C.]

VINNING, LOUISA, born probably at Newton Abbot, Devon. She appeared in public when a child, from 1840 to 42, under the title of the 'Infant Sappho,' as a singer and harpist at the Adelaide Gallery, Polytechnic, and elsewhere. She afterwards received instruction in singing from Frank Mori, and on Dec. 12, 1856, was brought prominently into notice by taking the soprano part in the 2nd and 3rd parts of the 'Messiah' at the Sacred Harmonic Society's Concert, at a moment's notice, and 'with credit to herself,' in place of the singer engaged, who became suddenly indisposed during the performance. Miss Vinning afterwards sang at the Crystal Palace, the Worcester Festival, 1857, the Monday Popular Con-

certs (1861), and elsewhere, until her marriage with Mr. J. S. C. Heywood, in or about 1865. At her concert, on July 5, 1860, Mme. Montigny-Rémaury made her first appearance in England. [A.C.]

VIOL (Ital. *Viola*; Fr. *Viola*). The generic name of the family of bowed instruments which succeeded the mediæval Fiddle and preceded the Violin. The Viol was invented in the 15th century, and passed out of general use in the 18th. It differs from the violin in having deeper ribs, and a flat back, which is sloped off at the top, and was strengthened internally by cross-bars and a broad centre-piece, on which the sound-post rests. The shoulders curve upwards, joining the neck at a tangent, instead of at right angles, as in the violin. The neck is broad and thin, the number of strings being five, six, or seven; the peg-box is usually surmounted by a carved head. The soundholes are usually of the C pattern. [See SOUNDHOLES.] The Viol was made in four principal sizes—Treble or Discant, Tenor (*Viola da Braccio*), Bass (*Viola da Gamba*), and Double Bass (*Violone*): the last is still in use, the double bass of the violin pattern never having found general favour. The Viols are tuned by fourths and thirds, instead of fifths. Their tone is rather penetrating than powerful, and decidedly inferior in quality and flexibility to that of the violin, which accounts for their disappearance before the latter instrument. [See VIOLIN.] [E.J.P.]

VIOLA. (1) The Italian name of the VIOL. (2) The usual name for the TENOR VIOLIN. (The accent is on the second syllable.) [E.J.P.]

VIOLA BASTARDA. The Bass Viol, or *Viola da Gamba*, mounted with sympathetic strings like the *Viola d'Amore*. It afterwards developed into the Barytone. [See BARYTONE.] [E.J.P.]

VIOLA D'AMORE. A Tenor Viol with sympathetic strings. It usually has seven stopped strings. The sympathetic strings, of fine steel or brass, pass through small holes drilled in the lower part of the bridge, and under the finger-board: their number varies from seven to fourteen. They are tuned to a diatonic or chromatic scale. We give the ordinary tuning of the gut strings. The sympathetic strings, tuned to the scale of D, diatonic or chromatic, are sometimes screwed up by pegs similar to those of the gut strings: but the better plan is to attach them to wrest-pins driven into the sides of the peg-box. [See VIOLIN.] [E.J.P.]

VIOLA DA BRACCIO. The Tenor Viol. It had originally 6 strings, tuned as follows:—The sixth string was generally dropped in the last century, and the instrument thus approximated in compass to the common Viola or Tenor Violin, which has now superseded it. It was sometimes called *Viola da Spalla*. [See VIOLIN.] [E.J.P.]

VIOLA DA GAMBA. The Bass Viol. [See VIOL, VIOLIN.] (2) Under the incorrect title of *Viol di Gamba* it designates an organ stop of 8 ft. pitch, with open pipes, in the choir organ. Considering its imitative aims, it is troubled with a most inappropriate slowness of speech, and in the lower octaves can hardly be used alone. [W.Pa.]

VIOLA DA SPALLA (i.e. *Shoulder Viol*). [See VIOLA DA BRACCIO.] [E.J.P.]

VIOLA DI BORDONE. [See BARYTONE.]

VIOLA DI FAGOTTO (*Bassoon Viol*). A name sometimes given to the *Viola Bastarda*. [E.J.P.]

VIOLA POMPOSA. A small Violoncello with an additional treble string, tuned thus:—

It was invented by Sebastian Bach, and is probably identical with the '*Violoncello piccolo*' of his scores. The sixth of his solos for the Violoncello was written for this instrument. [See p. 281 b.] [E.J.P.]

VIOLET. A name sometimes given to the *Viola d'Amore*. L. Mozart calls the *Viola d'Amore* with chromatic sympathetic apparatus the '*English Violet*': a singular denomination, for, as in the case of the *Corno Inglese*, the instrument appears never to have been made, and seldom used, in this country. [E.J.P.]

VIOLETTA. The French version of '*La Traviata*,' by M. E. Duprez; produced at the *Théâtre Lyrique*, Oct. 27, 1864. [G.]

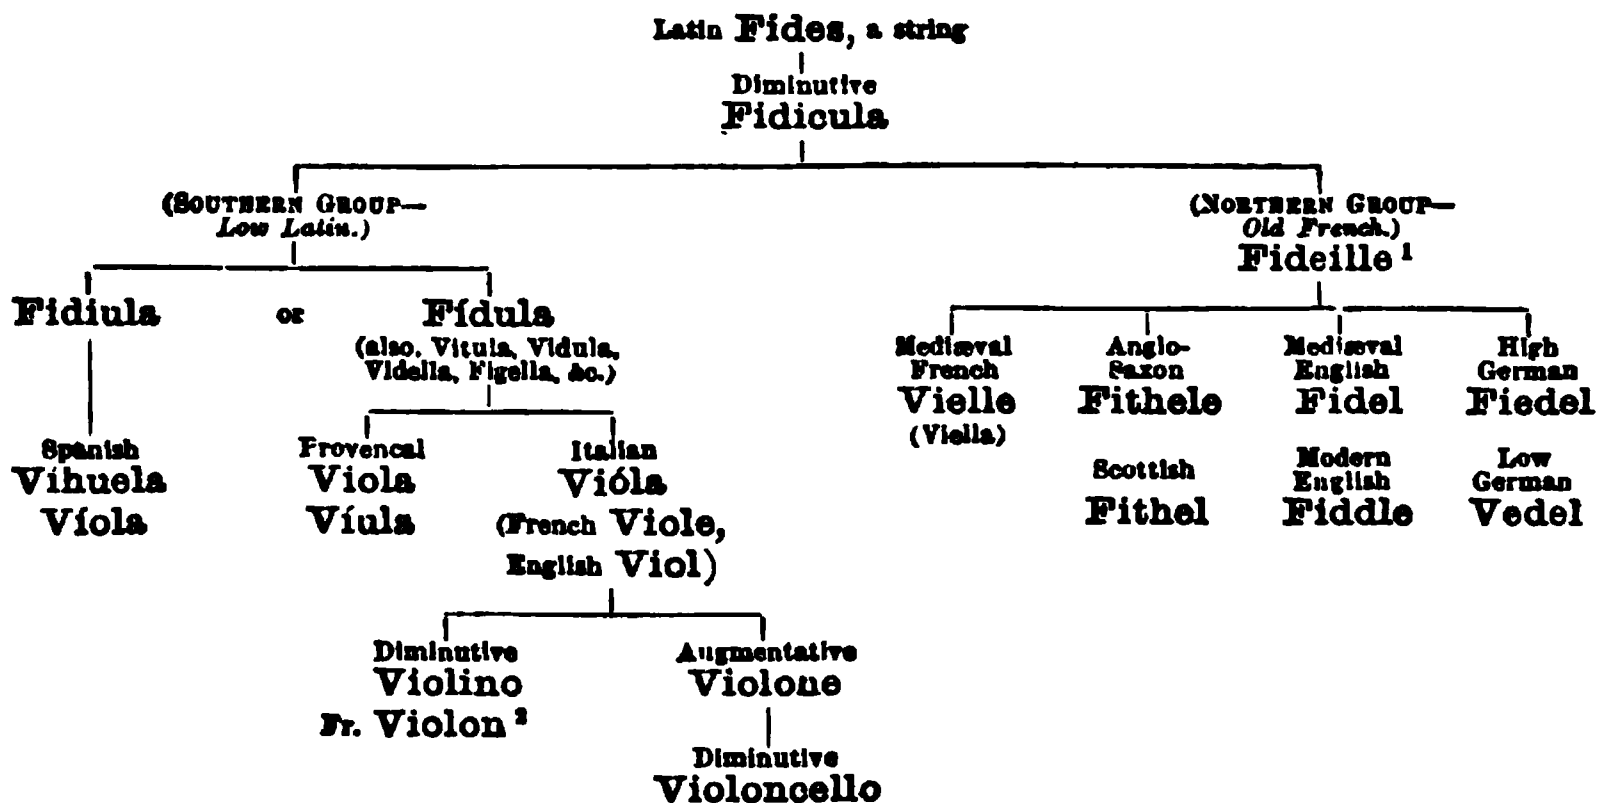

VIOLETTA MARINA. A name found occasionally in the scores of Handel and his contemporaries, probably to designate the *Viola d'Amore*. [See VIOLA D'AMORE, VIOLIN.] [E.J.P.]

VIOLIN (*Fiddle*), **VIOL**, **VIOLA**, **VIOLONE**, **VIOLONCELLO.** Portable instruments of different sizes, constructed on the common principle of a resonant wooden box, pierced with two soundholes, and fitted with a bridge, over which several gut strings attached to a tailpiece are stretched by means of pegs. The strings are stopped with the left hand on a fingerboard, and set in vibration with a bow held in the right. Being the only instruments with strings in common orchestral use, they are usually called '*stringed instruments*,' and collectively '*the strings*': but the German name '*bowed instruments*' is more accurate.¹ They have been developed by the application of the bow to the Greek lyre and monochord; and their common name (*Viol*, *Violin*, *Fiddle*) is derived from the Latin name by which a small sort of lyre appears to have been known throughout the Roman empire. The Latin name for any kind of string is '*fides*,' of which the diminutive is '*fidicula*': and by a grammatical figure which substitutes the part for the whole,

¹ A German authority insists that the true name is '*Bow-string instruments*.'

these terms came to designate the lyre itself, just as we now speak of the quartet of fiddles collectively as 'the strings.' In the deriva-

tive tongues the diminutive assumed various forms, which may be divided into two groups, thus:—

The Violin is the most popular and useful of all portable instruments, and indeed of all instruments except the pianoforte, and it has considerable importance as being the principal instrument in the orchestra, the main body of which is composed of violins, in their three sizes of trebles, altos or tenors, and basses. It is nearer to the human voice in quality, compass, and facility of execution than any other instrument; few are simpler in construction, and none is so cheap or so easily mastered, provided the learner sets rightly about it. In addition to the popularity which it enjoys on these accounts, the fiddle exercises an unique charm over the mind from the continuity of its existence and usefulness. Most people are aware that 'an old fiddle is better than a new one.' This, as will appear further on, is not absolutely true; although probably the majority of the fiddles in use are not new, very many being one, two, and even three hundred years old. A violin, if it be only well-made to begin with, can by timely and judicious rehabilitation, be made to last practically for ever, or at least to outlast the lifetime of any particular possessor: and few things are more fascinating than putting an old disused Violin through this process, and reawakening its musical capacities. The Violin thus enjoys a sort of mysterious immortality, the effect of which is often enhanced by the groundless idea

that no good fiddles have been made since the golden age of the Cremona makers, which terminated 120 years ago, and that the secrets of violin-making are lost. In connexion with this, a good deal of enthusiasm has been lavished by connoisseurs on the beauty of design and varnish of the old Cremona Violins, and even in some useful and reputable works on this subject this enthusiasm has been carried to a point where it can only be described as silly and grotesque. A fiddle, after all, even a Stradivari, is not a work of pure art, like a piece of painting or sculpture: it is as merely a machine as a watch, a gun, or a plough. Its main excellences are purely mechanical, and though most good fiddles are also well-designed and handsome, not a few are decidedly ugly. Leopold Mozart, in his Violin-School, has some pertinent remarks on this fallacy. To choose a fiddle for its outward symmetry and varnish, he says, is like choosing a singing bird for its fine feathers.

Instruments more or less corresponding to our fiddle have been in use from very early times, and their origin has been the subject of much speculation. Bowed instruments have long been in use among various Oriental peoples: and this fact, interpreted by the fallacy that all inventions have their ultimate origin in the East, has led many to ascribe an Oriental origin to our bowed instruments. Strict examination compels us to reject this view. The harp and lyre were borrowed by the Greeks from Egypt, probably, like the alphabet, through Phœnicia: but here the debt of Europe to the stringed instrument makers of the East begins and ends. The Arabic and Hindoo instruments from which Fétis and others deduce the Violin, evidently belong to a totally distinct family. Their resonant box consists of a small drum, perforated by a stick, the top of which serves as a fingerboard, while the lower end is rested on the ground during per-

¹ The form Fideille is not found, so far as the writer knows, in literature, its place having been early taken by the decayed form 'vielle': but its past existence is demonstrable by analogy. Brachet (*Grammaire Historique de la Langue Française*, p. 285) gives the following instances of the French forms assumed by Latin words in -culus, -a, -um: Abeille (apicula), Orteil (orticulum), Sommeil (somaticulus), Péril (periculum), Oreille (auricula), Cornelle (cornicula), Onaille (oviculus), Vermell (vermiculus), Aiguille (acicula). From this list, to which may be added Corbeille (corbicula), we may safely conclude that Fidicula became in the oldest French 'fideille,' which form was transmitted with very little alteration to Anglo-Saxon and Old High German, while in France itself it became by phonetic decay 'Vielle.'

² 'Violon' is the old French diminutive of 'Viola,' and exactly equivalent to 'Violino.'

formance. Now it can be shown that until the 15th century no European bowed instrument, except the Marine Trumpet, which is a direct descendant of the Greek monochord, was rested on the ground during performance. [See TROMBA MARINA.] All were played overhand, and were rested on or against the upper part of the performer's body. This alone, independently of all inconsistencies of construction, distinguishes them from the Rebab and the Ravanastram, and strengthens our conviction of their affinity with the Lyre. Most Eastern bowed instruments appear to be rude imitations of those of Europe; and the development of the latter is so clearly traceable that it is superfluous to seek their origin elsewhere. The fiddle has developed out of the lyre and monochord, just as our music has developed out of the diatonic scale which the Greeks deduced from the use of those instruments.

Though the plurality of strings of our bowed instruments, and even their common name¹ are borrowed from the lyre, their principal parts, the elongated resonant box with its soundholes, the fingerboard, and the moveable bridge, come from the monochord. As early as the legendary age of Pythagoras the Greeks obtained the intervals of the scale by cutting off the aliquot parts of the monochord by means of a moveable bridge. For this the pressure of the finger was an obvious substitute: and practical use of the monochord in training the voice must have early

suggested the discovery that its tones could be prolonged by rubbing, instead of plucking them with the plectrum or finger.² The lyre suggested plurality of strings, and furnished a model of manageable size. Given the lyre and the monochord, the fiddle must evidently have been developed sooner or later: and we now know that

as early as the 3rd century B.C. an instrument something between the two, and curiously reminding us of the stringed instruments of the middle ages, was used in the Greek colonies in Sicily. Fig. 1 represents a specimen carved on a Greek sarcophagus now used as a font in the Cathedral of Girgenti. A bas-relief in the Louvre shows another specimen of the same instrument.³

The resemblance between this antique instrument and the rebec and lute is noteworthy; and it possibly represents that particular form of lyre which was denominated 'Fidicula.'

The following genealogical table may assist the reader's memory:—

The CITHRA [see that article], which appears to be a survival of the normal pattern of the small Roman Lyre in a remote part of the Empire, is an obvious link between the musical instruments of antiquity and those of modern Europe.⁴ When and by whom the bow was applied to these instruments we cannot tell. But certainly long before the 13th century, various modifications of them, some plucked with the fingers or plectrum, others sounded with a bow, were in use throughout Europe under the names of Fiddle, Crowd, Rotte, Geige (Gigue, Jig), and Rebec (Riheb, Ribible). About the 13th century an improved instrument appeared in the south of Europe concurrently with that remarkable musical and literary movement which is associated with the Troubadours. This instrument was called 'Viola' or 'Vielle'; but it is convenient to assign it the name of Guitar-Fiddle, reserving the term Viol for the later instrument with cornerblocks which is permanently associated with the name. The Guitar-Fiddle, which was

intended to accompany the voice, was larger than its predecessors, increased size being made possible by giving it a waist, so as to permit the bow to reach the strings. It may be described as a rude Guitar, Hurdygurdy, and Viol in one; for we find the same instrument, in different instances sometimes plucked, sometimes bowed, and sometimes played with the wheel. When modified and developed for plucking it became the Spanish guitar, for playing with the wheel, the Vielle or Hurdygurdy, and for bowing, the Viol. The Viol was employed, as the Guitar-Fiddle had been, to support the voice: and the development of choral singing led to the construction of viols of various pitches. In the fifteenth century we first meet with experiments in constructing bowed instruments of different sizes, corresponding to the various human voices. Cornerblocks, which mark the transition from the Guitar-Fiddle to the Viol, were probably invented to facilitate the construction of the larger fiddles. Their use prepared a great advance in the

¹ Fiddle, i. e. fidicula, = lyre.

² The similarity between some ancient Welsh airs and the Greek modes suggests that these airs may be remnants of the popular music, of Greek origin, which spread with the sway of Rome over Western Europe.

³ If the finger be slightly rested a continuous tone can be produced. The Glan Harmonica is an example in which the finger performs the functions of a bow.

⁴ Carl Engel, 'The Early History of the Violin Family,' p. 111.

art of fiddle-making: for they increased both the tension of the resonant box, and the transmission of the vibration of the strings. The construction of instruments with cornerblocks, in various sizes, was contemporary with the great development of polyphonic choral music in Germany and the Netherlands in the 15th century: and by the beginning of the next century, the Treble or Discant Viol, Tenor, Bass Viol, and Double Bass or Violone, were well established both in those countries and in North Italy.

The 'Violin' model, which differs from the Viol in having shallower sides, with an arched instead of a flat back, and square shoulders, and in being composed in all its parts of curved or arched pieces of wood, glued together in a state of tension on the blocks, first appears in Italy towards the middle of the 16th century. It completely revolutionised the fiddle-maker's art, driving out of use first the Discant Viol, then the Tenor, and last of all the Bass Viol. The Double Bass, alone, which remains a Viol pure and simple, has resisted the inroads of the Violin model in all save the soundholes. The substitution of the Violin for the Viol in all its sizes except the largest, is due to the louder tone of the former instrument, and it accords with a general principle underlying the whole history of musical instruments, which may be stated as the 'survival of the loudest.' The vibrations of the Viol were insufficient to meet the growing demand for power. As a means to this end, Viols were constructed double-strung in fifths and octaves [see LYRE], and also with sympathetic strings of metal, constituting the family of the Viola d'amore and BARYTONE. [See vol. i. p. 146.] But in the last century the Violin effected a complete rout of all its competitors, and its model was finally adopted for the Tenor and Bass, and sometimes even for the Double-Bass, although for the last-named instrument the Viol model is still generally used in this country. The Viol Double Bass has survived partly because it is much easier to make, partly because from this particular instrument a penetrating, rather than powerful, tone is required. The Violin extinguished the Discant Viol in Italy and Germany in the 17th century, in France and England in the 18th. England held out longest for the Bass Viol or Viola da Gamba, for this instrument continued to be manufactured and played in this country to nearly the end of the last century, when it had everywhere else become practically extinct. The models now in use for our bowed instruments have scarcely changed at all since the time of Stradivari (1680-1730): and his models varied only in the design of certain details from those in use a century earlier.

The Violin, as we have it, is therefore about three centuries old. Of all musical instruments it is the only one that has survived unchanged throughout modern musical history. The lutes, the universal companions of bowed instruments until a century and a half ago, have disappeared as completely as the spinet and the harpsichord. Wind instruments of all kinds have

been completely revolutionised, but the Violin has remained for three hundred years the same: and it is probably destined to remain so while music exists, for though numberless attempts have been made to improve it they have been all abandoned.

The model of the Violin, which the experience of centuries and the ingenuity of many generations of mechanics thus wrought out, appears at first sight eccentric and capricious. It might be thought that any sort of resonant box, and any sort of frame strong enough to hold the strings, would equally answer the purpose. The fact however is, that every minute detail has its use and meaning. Suppose, for instance, the fiddle were made with straight sides. In this case, unless either the resonant box is so much narrowed as to spoil the tone, or the bridge is considerably heightened, with the same result, the bow could not reach the outer strings. Suppose, again, it were made of the same general outline, but without cornerblocks, like a guitar. In this case the vibrations would be more numerous, and their force would be consequently less; the tone would be thin, as may be proved with one of the many guitar-shaped fiddles which have been occasionally made in all periods. Suppose it made with a flat back like the Viol: in this case, though the tone might be improved in the high treble, it would be deficient in depth in the middle and bass, unless indeed it were made considerably larger and deeper. If the curves of the various parts or the shape and position of the bridge and soundholes are materially altered, the capacity for vibration is injured, and the tone deteriorates in consequence. If the body of the instrument is lengthened at the expense of the fingerboard, the player's left hand is cramped: if the whole length is increased the instrument becomes too large to be conveniently handled. Probably every structural alteration that could be suggested has been at some time tried and dismissed. The whole design of the fiddle has been settled gradually in strict accordance with the requirements of tone and execution.

The total normal length of the violin has been determined by the length of the average human arm bent at a convenient angle. The length of the handle or neck has been determined by the space necessary for the average human hand to manipulate the fingerboard; and since 'shifting' on all the strings has become general this length has increased. The length of the resonant box is the first of these measurements less the second. Its central or smallest breadth is determined by the requirements of bowing, as applied to a bridge of sufficient breadth and height to set the instrument properly in vibration. The other breadths and lengths are determined by the necessity of allowing a sufficient vibrating length for the strings, while keeping the bridge in the centre, i.e. on a line dividing the superficial area of the belly into two equal parts, or nearly so. The tongue, so to speak, of the violin, that which corresponds to the reed of a wind instrument, is

the bridge; and the action of the bridge depends upon the soundpost. The soundpost is a slender cylindrical block, fixed at both ends, performing the double function of transmitting certain vibrations from the belly to the back and of making a firm base for one foot of the bridge. The bridge is a true reed; its treble foot is rigid, and rests on that part of the belly which is made rigid by the soundpost. Its bass foot rests on that part of the belly which has a free vibration, augmented and regulated by the bass bar: and it is through this foot that the vibration of the strings is communicated to the belly, and thereby to the mass of air in the fiddle. The treble foot of the bridge is therefore the centre of vibration: the vibrational impulse is communicated by the bass foot alone, and undulates round the treble foot in circles, its intensity being modified by the thicknesses and curves of the belly and by the incisions called the soundholes.

The steps by which this instrument, at once so simple and so complex, has been produced, are easily traced: its intermediate forms can be studied in artistic monuments, and some of them even still exist. Old stringed instruments have generally died hard: and very primitive ones have maintained their place side by side with the improved ones founded upon them. Thus the Marine Trumpet, which is the oldest bowed instrument, and represents the earliest development of the Monochord, long continued in use concurrently with instruments of a more advanced kind, and is not yet quite obsolete. [See TROMBA MARINA.] A Guitar-shaped Violin, which is directly descended from the Fidel of the Troubadours, has been made and used in all ages. Similarly the Rebec long continued in use side by side with the violin.¹ The Viola da Gamba has never been completely effaced by the Violoncello. But perhaps the most singular survival of all is the Welsh Crwth, which is simply the small lyre, as introduced by the Romans into Celtic Britain, adapted by some slight modifications for use as a bowed instrument. In tracing the history of stringed instruments it is necessary to beware of assuming that the same name always designates the same instrument. 'Violino' and 'Violon,' for instance, were at first commonly employed to denote the Tenor. [See TENOR VIOLIN.] 'Violoncello' is literally the 'little violone' or bass viol. The Violone itself, as its augmentative termination implies, was a 'big Viola,' and originally designated the Bass Viol. When the Double Bass-Viol became common, the name was transferred to this larger instrument. It then became necessary to find a new name for the small Bass, and hence the diminutive name 'Violoncello.' When our modern Violoncello, which is properly the 'Bass Violin,' came into use, the original name and the functions of this small Violone were transferred together to the

¹ See the article REBEC. In that article the author erroneously stated that no specimen of the Rebec was known to exist, an error shared by M. Vidal (*Instruments à Archet*, vol. I, p. 18) and by M. Chouquet (*Catalogue Raisonné des Instruments du Conservatoire*, p. 2 ('Impossible d'en retrouver un seul aujourd'hui'). In the Exhibition of Ancient Musical Instruments at Milan in 1881 no less than six genuine specimens were exhibited.

new instrument, which still retains them. 'Vielle,' now appropriated to the hurdy-gurdy, denoted in the 13th century the instrument which we have called the Guitar-Fiddle. 'Fiddle,' 'Crwth,' 'Geige,' and 'Ribeca,' all now frequently employed in various languages to designate the modern violin, are properly the names of distinct instruments, all now obsolete. 'Lyre' has been employed at different times to designate all sorts of bowed instruments. 'Viola,' which seems to have been the original Provençal name of the guitar-fiddle, and afterwards designated Viols of all sizes, is now appropriated to the Tenor Violin. But it is needless to multiply instances. No rational account of the development of instruments can be obtained from the use of names. For this purpose we must examine the instruments themselves when they exist: when they have perished we must have recourse to artistic representations, which, however imperfect, are all we have to rely on before about 1550, a century later than the earliest development of bowed instruments as a class by themselves. For, although the fittings of the two classes differed, it was not until the 15th century that any constructive difference was effected between plucked and bowed instruments. In that century the discovery seems to have been made that an arched back and a flat belly were best for the plucked class, and a flat back and arched belly with inwardly curving bouts for the bowed class; and hence the lute and the viol. A higher bridge, supported by a soundpost, in the bowed class, completed the separation. Both however were strung alike: and down to the time of Bach the same music often served for both, and was played with identical stringing and fingering.

It is curious that both the pianoforte and the violin owe their origin to the monochord. Familiarity with the monochord might have early suggested that by stopping the strings of the lyre upon a fingerboard the number of strings necessary to the latter instrument might be diminished by two-thirds, the tuning facilitated, and the compass extended. But before any improvement in this direction was ever made, the monochord itself had been developed into other instruments by the application of the bow and the wheel. The monochord consisted of an oblong box, at each end of which was fixed a triangular nut. A peg at the tail end of the box served to attach the string: at the other end the string was strained tight, at first by weights, by changing which the tension and pitch of the string were altered at pleasure, afterwards by a screw. Beneath the string were marked those combinations of the aliquot parts of the string which yielded the diatonic scale. The belly was pierced with soundholes near the tail; a moveable block or bridge somewhat higher than the nuts served to cut off so much of the string as was necessary to produce the desired note. This moveable bridge has survived in all bowed instruments, though its position is never changed; and it will serve to the end of time to connect them with their original.

This now-forgotten instrument was the main foundation on which mediæval music rested. By its aid the organ was tuned, and the voice of the singer was trained to the ecclesiastical scales, the principal of which, with their Authentic and Plagal tones, were graduated upon it in parallel lines. The oldest representations of the monochord show it horizontally placed on a table and plucked with the finger: but as the most primitive of bowed instruments is simply a bowed monochord, it may fairly be assumed that the bow was early employed to render its tones continuous. Probably a common military bow was originally used. Nothing could be more natural. The monochord was used, as already said, to tune the organ and to train the voice: and its efficiency in both respects would be greatly increased by thus prolonging its sounds. The wheel was probably used at an early period as a substitute for the bow; and the monochord was thus ready for further developments.

Adapted so as to be handled vertically, i. e. with one end on the ground, it became the *Trummscheidt* or *Marine Trumpet*. [See *TROMBA MARINA*.] In its primitive form, the *Trummscheidt* must have been very unlike the mature instrument as described in that article. As we find it in old pictures, it was a monochord about 6 feet long, the lower part consisting of a large wooden sheath, 4 feet long and about 10 inches wide at the bottom, and diminishing to 5 inches in width where it joins the handle. The handle and head together were about 2 feet long. It had a common bridge, and was played, not in harmonics, but by stopping and bowing in the ordinary way. We know from Merseus that it was occasionally strung with two or more strings, thus forming, if the expression is permissible, a double or triple monochord.

Whether the second modification of the monochord, in which it retains its horizontal position, and the string is set in vibration by a wheel and handle, and which is represented by the *Organistrum* or *Hurdy-gurdy*, preceded or followed the *Trummscheidt* in point of time cannot be determined. Structurally the *Organistrum* departs less from the monochord than the *Trummscheidt* does, because the horizontal position is retained: on the other hand, the invention of the wheel and handle cannot have preceded that of the bow, for which it is a substitute. Originally the *Organistrum* was an ecclesiastical instrument, and it may be said to be a combination of the monochord and the organ. It was made of large size, and was played, like the organ, by divided labour, the performer being solely concerned with the clavier, while an assistant supplied the rotary or grinding motion which produced the tone. The large *Organistrum* is found in the sculpture over the celebrated door of Santiago at Compostella, which proves its position among ecclesiastical instruments. But we have also actual specimens which appear to have been used in the church. Two are preserved in the Germanic Museum at Nuremberg, in both of which the size and orna-

mentation leave no doubt as to their ecclesiastical character.¹

Meanwhile, the Roman Lyre or *Fidicula*, in various modified forms, had never gone out of use. Introduced into Celtic Britain by the Romans, the *Fidicula* was called by the Britons '*Crwth*,' a word which signifies 'a bulging box.' Latinised as '*Chrotta*,' this became by phonetic decay '*Hrotta*' and '*Rotta*.' The meaning of the word, taken together with existing pictures, gives us a clue to its shape. The upper part consisted of two uprights and a crosspiece or *transtillum*, the lower part of a box bulging at the back, and flat at the front where the strings were extended. From the illustrations in old manuscripts it appears that sometimes the resonant box was omitted and the type of the primitive harp was approached. In either form the primitive *fidicula* must have been of small size. It apparently had neither bridge nor fingerboard, and was plucked with the fingers. But in a celebrated ancient '*Harmony of the Gospels*' in the Frankish dialect, attributed to Otfrid von Weissenburg (840-870), we find the Lyre, the Fiddle, the Harp, and the *Crwth*, all enumerated in the *Celestial Concert*.² Were any of these instruments played with the bow? In other words, does this passage indicate that the art of fiddling is a thousand years old? The writer is inclined to think that it does. It is hard to see how so many sorts of stringed instruments could have been differentiated, except by the circumstance that some of them were played with the bow: and in an English manuscript of not much later date belonging to either the 10th or 11th century, we have a positive representation of an English fiddler with fiddle and bow, the former being, in fact, the instrument called by Chaucer the *Ribible*, and afterwards generally known by the name in its French form '*Rebec*.'

FIG. 2.

Certainly in the 11th or 10th, probably in the 9th century, the bow, the bridge, and the fingerboard, all derived from the monochord, had evi-

(Schiller, *Thesaurus Antiq. Teut.* vol. I. p. 273.)

dently been applied to the 'Fidicula' or 'Crwth.' The instrument is altered precisely as might have been expected. The crosspiece and uprights have disappeared. Their place is taken by a neck and head, the latter forming a peg-box; and the bulging lower part of the instrument is modified to suit the change. It may well be, however, that this primitive bowed instrument was the direct descendant of the lute-shaped *fidicula* which the *Girgenti sarcophagus* (p. 267) proves to have existed before the Christian era, and that it is identical with the 'Fidula' of Ottfried.

Sometimes the crosspiece and uprights, placed somewhat closer together, were retained side by side with the new features, the neck and finger-

FIG. 3.

board. The above cut, from Worcester Cathedral, serves to illustrate the coalition of the *Crwth* and *Rebec*, the upper part of the instrument being intermediate between the two. The instrument thus produced is the bowed *Crwth*, to which, following Mr. Engel, it may be convenient to assign the name of *Crowd*, leaving the original word *Crwth* to designate the primitive *fidicula* plucked with the fingers. In point of tone and execution the *Crowd* and the *Rebec* were identical. The *Crowd* was the *Crwth* with the addition of a bridge and a fingerboard: the *Rebec* was the *Crowd* minus its uprights and crosspiece, and having a pear-shaped body. The name *Fidel*, the decayed form of 'Fidicula,' probably indifferently applied to both, and was afterwards used for the larger instrument presently mentioned.

The 'Geige,' which some authorities have treated as an independent instrument, appears to be practically identical with the *Rebec*. In the *Nibelungenlied* the instrument played by the 'Vidlar' is called the 'Gige,' though the bow is always called 'Videlbogen.' Mediæval sculpture, painting, manuscripts and heraldry yield numberless illustrations of the 'Geige.' If there was any marked difference between it and the *Rebec* it amounted to this, that the *Rebec* had a narrower pear-shaped body, like the lute, while the *Geige* had a short neck fitted to an oval or circular resonant box.

The accompanying woodcut is taken from Cologne Cathedral, and shows the *Geige* of the 13th century.

FIG. 4.

The next, from the Kreuz-Capelle in Burg Carlstein in Bohemia, shows the improved one of

FIG. 5.

the 14th century. The name 'Geige' probably contains the root 'jog' or 'fig,' the connection lying in the jogging or jiggling motion of the fiddler's right arm.

A writer of the 13th century gives instructions both for this small fiddle, which he calls 'Rubeba,' and for the larger *Fidel*, then just coming into use,

which he calls 'Viella.'¹ The *Rubeba* or *Rebec*, according to him, had two strings only, which were tuned by the interval of a fifth, the lower being C, the upper G. 'Hold it close to the head,' he writes, 'between the thumb and forefinger of the left hand.' He then minutely describes the fingering, which is as follows:—

It will at once strike the reader that we practically have here the second and third strings of the violin. A third string was soon added: and we know from *Agricola* that the highest string of the three-stringed *Rebec* was tuned a fifth higher, thus:—

We have here practically the three highest strings of the violin: and it is thus clear that the violin, in everything except the ultimate shape of the resonant box and the fourth string, is at least as old as the 13th century, and probably very

¹ Jerome of Moravia (a Dominican monk of Paris), 'Speculum Nostre,' printed in Consensu, Scriptores de Musica Medii Aevi, Tom. I. The original MS. is in the Bibliothèque Nationale; Fonds de la Sorbonne, No. 1077. A French translation, with notes by H. Fume, appeared in Fétis's *Revue Musicale* for 1827.

much older. Another striking illustration of the identity of fiddling and the fiddler now and six hundred years ago is afforded by the bow-hands of the mediæval players, whose grasp of the bow is generally marked by perfect freedom and correctness.

These early mediæval fiddles were small instruments of simple construction and slight musical capacity, chiefly used in merry makings to accompany song or dance. Companies of professional players were maintained by noblemen for their amusement: witness the four-and-twenty fiddlers of Etzel in the *Nibelungenlied*. The reader will remember that Etzel's private band of fiddlers, richly dressed, and headed by their leaders, Schwemel and Werbel, are chosen as his messengers into Burgundy: and among the noble Burgundian guests whom they bring back is the redoubtable amateur fiddler Volker, who lays about him like a wild boar with his 'Videlbogen starcken, michel, unde lanc,' doing as much execution, says the rhymers, as an ordinary man with a broadsword. Volker 'der videlar,' or 'der spillemann,' as he is often called, is not a mere figment of the poet. Everything proves the mediæval fiddles to have been popular instruments, and their use seems to have been familiar to all classes. Wandering professional musicians, 'fahrende Leute,' carried them from place to place, playing and singing to them for subsistence. Among the amateurs who played them were parsons and parish clerks: witness the parish clerk Absolon of Chaucer, who could 'play tunes on a small ribble,' and the unfortunate parson of Ousemer, near Stendal, who, according to the Brunswick Chronicle (quoted by Forkel), was killed by a stroke of lightning as he was fiddling for his parishioners to dance on Wednesday in Whitsun-week in 1203.¹

These primitive fiddles apparently sufficed the musical world of Europe until the 13th century. Their compass seems to have been an octave and a half, from C to G, including the mean notes of the female or boy's voice. The extension of the compass downwards is probably the clue to the improvement which followed. It may be observed that the development of musical instruments has always been from small to large and from high to low: the ear, it would seem, seeks ever more and more resonance, and musical requirements demand a larger compass: but the development of the Song in the hands of the Troubadours affords an adequate explanation of the fact that the fiddle-maker about this time strove to make his resonant box larger. But there is an obvious limit: if the belly is greatly widened the bow cannot be made to touch the strings without making the bridge of inordinate height. Some ingenious person, about the 13th century, devised an alternative: this consisted in constructing the sides of the resonant box with a contrary flexure, giving the contour of the instru-

ment a wavy character, exactly like the guitar, and making a sort of waist. By this means the bridge could be left at the proper height, while the capacity of the instrument in respect of size, compass, and resonance was increased. Some unknown mechanic thus invented what came to be called in Northern Europe the Fidel, in Northern France the Vielle, in Southern France and Italy the Violo. We have called it the Guitar-fiddle. There can be little doubt that Provence is its motherland, and that it first came into use among the Troubadours.

FIG. 2.

The invention of the waist was the first principal step in the development of the Viol, and this feature was only possible in instruments constructed like the monochord and hurdy-gurdy, with sides or ribs. The Geige, Crowd, and Rebec were constructed on the principle of the Lute, which still survives in the Mandolin: they consisted of a flat belly and a convex back, joined oyster-fashion by the edges. No improvement as regards resonance was possible in these oyster-shaped instruments: the fiddle of the future required a certain depth in all its parts, which can only be given by sides or ribs. No other instrument was capable of a waist: and as the reader is aware, the body of such an instrument was ready to hand in the small organistrum or hurdy-gurdy. The Guitar-fiddle was simply a Hurdy-gurdy played with the bow. The description of it by Jerome of Moravia proves that it was a harmonic as well as a melodic instrument. It had five strings, the lowest of which was a bourdon, *i. e.* was longer than the rest, and did not pass over the nut, but was attached to a peg outside the head. In the long Bourdon of the Troubadour's-fiddle we thus have the origin of the fourth string, which was afterwards reduced to the normal length by the expedient of covering it with wire. The two highest strings were usually tuned in unison: this enabled the player either to double the highest note, or to play in thirds, at pleasure. Jerome of Moravia gives three different tunings,

¹ 'In demselben Jare geschah ein Wundertrocken bey Stendal in dem Dorpe gahen Ousemer, der sat de Paroch des Midweekens in den Fincken und veddelte grove Doren to dem Dese, da quam ein Donnerchloch, und schloech dem Paroch synen Arm uff mid dem Videlbogen und XLIV Lede tod er dem Tyn.'

and probably others were in use, each being adapted to the music intended to be performed.

The Guitar-fiddle was larger than the Geige and Rebec, and approximated in size to the Tenor. [See opposite, Fig. 6.] This instrument is probably the Fidel of Chaucer. It has place in English life as an instrument of luxury.

For him [i. e. the Oxford Clerk] had lever han at his beddes hed

A twenty bokas, clothed in black and red,
Of Aristotle and his philosophy,
Than robes rich, or Fidel or Sautrie.
(*Canterbury Tales*, Prologue.)

Existing representations of the Fidel appear to indicate that the increased length of the instrument was not at first accompanied by a corresponding increase in the length of the strings, and that it was fitted with a tailpiece and loop of unusual length. It had no corner-blocks. A good idea of the mediæval Fidel may be gained from the modern Spanish or common guitar, which appears to be simply the improved Fidel of the Troubadours minus its bridge, tailpiece, soundpost and soundholes. It has precisely the same arrangement for the pegs, which are screwed vertically into a flat head, which is often, but not always, bent back at an angle with the neck. The guitar, however, requires no bridge, and no soundpost: its tailpiece is glued to the belly, and it retains the primitive central soundhole, which in the bowed instrument gives place to a double soundhole on either side of the bridge. [See SOUNDHOLES.]

We now reach a step of the greatest importance in the construction of bowed instruments, the invention of 'corner-blocks.' This improvement followed naturally from the invention of the waist. A modern violin has two projecting points on each of its sides, one at either extremity of the bouts or bow-holes which form the waist of the instrument. In the classical pattern, which has prominent corner-blocks, these projections form a sharp angle: in the older ones, including the viola, the angle is less acute, and the corner therefore less prominent. These corners mark the position of triangular 'blocks' inside, to which the ribs of the instrument are glued, and which are themselves glued to the back and belly, forming, so to speak, the corner-stones of the construction. They contribute enormously to the strength and resonance of the fiddle. Corner-blocks, as well as bowed instruments of the larger sizes, first appear in the 15th century: and as large fiddles can only be conveniently constructed by means of corner-blocks we may fairly conclude that the two inventions are correlative.

The writer inclines to ascribe the origin of corner-blocks to Germany, because it was in that land of mechanical inventions that the manufacture of the viol in its many varieties was chiefly carried on by the lute-makers from 1450 to 1600, because the earliest known instrument-makers, even in France and Italy, were Germans, and because it is in the German musical handbooks of the first part of the 16th century — Virdung, Luscinius, Jaden-

künig, Agricola, and Gerle—that we find the viol family for the first time specifically described. This invention was the turning-point in the development of bowed instruments. It not only separated them definitely from their cognates of the lute and guitar class, but it gave them immense variety in design, and rendered them easier to make, as well as stronger and more resonant. Whether double or single corner-blocks were first employed, is uncertain. Possibly the first step was the introduction of single corner-blocks, by which the ribs were increased from two to four, the upper ones having an inward curvature where the bow crosses the strings. The illustration is from a drawing by Raffaele,

FIG. 7.

in whose paintings the viol with single corner-blocks occurs several times. [For another specimen, see SOUNDHOLES, Fig. 3.] Single corner-blocks were occasionally used long after the introduction of double ones. The writer has seen very good

old Italian tenors and double-basses with single corners. A well-known specimen in painting is the fine Viola da gamba in Domenichino's St. Cecilia. The vibration is more rapid and free than that of the instrument with double corners, but the tone is consequently less intense.

But the foundation on which fiddle-making was finally to rest was the viol with double corners. Double corners produced a new constructive feature, viz. the 'middle bouts,' or simply the 'bouts,' the ribs which curve inwards between the two corner-blocks. While the corner-blocks enormously increased the resonance of the fiddle, the bouts liberated the right hand of the player. In early times the hand must have been kept in a stiff and cramped position. The bouts for the first time rendered it possible for the fiddler to get at his strings:

FIG. 8.

and great stimulus to playing must have been the consequence. It was long before the proper proportions of the bouts were settled. They were made small and deep, or long and shallow, at the maker's caprice. At one period, probably an early one, their enormous size rendered them the most conspicuous feature in the outline. It would seem that fiddlers desired to carry

their newly-won freedom of hand to the uttermost: and the illustrations in Agricola prove that this preposterous model prevailed for instruments of all four sizes.

The fantastic outlines which were produced

by this extravagant cutting of the bouts were sometimes further complicated by adding more blocks at the top, or bottom, or both, and by cutting some of the ribs in two pieces, and turning the ends in at right angles. The former of these devices was early abandoned, and few specimens of it exist: but the latter was sometimes used for the viola d'amore in the last century. Its tendency is to diminish the vibrational capacity, and the intensity of the tone. Its adoption was partly due to artistic considerations, and it is capable of great variety in design. But it naturally went out of practical use, and the viol settled down to its normal model about the beginning of the 16th century, by the final adoption of the simple outline, with double corners and moderately long and shallow bouts.

Concurrently with these experiments on the outline, we trace a series of experiments on the place and shape of the soundholes and bridge. For a sketch of the development of the former, the reader is referred to the article *SOUNDHOLES*. Their true place, partly in the waist, and partly in the lower part of the instrument, was not defined until after the invention of the violin. In the guitar-fiddle the soundholes had naturally fallen into something nearly approaching their true position. But the invention of the bouts displaced them, and for nearly a century we find them shifting about on the surface of the instrument. Sometimes, indeed, it occurs to the early viol-makers to leave them in the waist between the bouts. But at first we frequently find them in the upper part of the instrument, and this is found even in instances where their shape is of an advanced type.

Later, we usually find the soundholes and bridge crowded into the lower part of the instrument, near the tailpiece, the instrument-maker evidently aiming at leaving as much as possible of the belly intact, for the sake of constructive strength. The illustration is from Jost Amman's '*Büchlein aller Stände*,' and represents a minstrel of the 16th century performing on a three-stringed Double Bass.

Afterwards the soundholes are placed between the bouts, the extremities of both approximately corresponding, the bridge standing beyond them. This arrangement prevailed during the early half of the 16th century. It was not until the violin model had been some time in use that the soundholes were lowered in the model, extending from the middle of the waist to a short distance below the bouts, and the bridge fixed in its true place in the middle of the soundholes.

The Bridge, the most important part of the voicing apparatus, and in reality the tongue of

the fiddle, was perfected last. [See *STRADIVARI*.] The plan of cutting a small arch in the moveable block of the monochord, so as to check the vibration as little as possible, is probably of Greek origin, and in the Marine Trumpet the bridge, which has only one string to support, can be made proportionately small, and its vibrating function more perfect. [See *TRONKA MARINA*.] The polychord instruments of the Middle Ages required a more massive support; but the bridge-like character was always maintained, the pattern being from time to time modified so as to produce the maximum of vibration without loss of strength. The soundpost beneath the treble foot of the bridge is of uncertain antiquity. At first, it would seem, the expedient was tried of lengthening one foot of the bridge, and passing it through the soundhole, so as to rest on the centre block of the back: this primitive bridge and soundpost in one have been found in existing specimens of the *Crwth*. The superior effect of a separate soundpost, supporting the bridge and augmenting the vibration, must soon have been discovered: and many early pictures of fiddles with bridges leave no doubt that it was extensively in use. [See *SOUNDPOST*.]

The scale of the larger mediæval viol makes it probable that the vibration of the belly under the bass strings was regulated by a Bass-bar. Cross-bars were early employed to strengthen the back of the viol and the belly of the lute; and observations of their effect on the vibration possibly suggested the use of a longitudinal bar for the viol. The bass-bar is at least as old as the invention of corner blocks, and probably older. Concurrently with the development of the Viol in its larger sizes, we find a characteristic change in the head or peg-box, which completely transformed the physiognomy of the instrument. The mediæval peg-box was invariably flat, like that of the Guitar, the pegs being inserted at right angles to the face of the instrument; see figures 2, 4, 5, 6, and 7, from the last of which the reader will at once understand how this form of peg-box facilitated the addition of bourdons, though it afforded but a weak and imperfect means of straining the strings to their due tension and keeping them in their proper place. When the invention of the larger viols superseded Bourdons, the flat peg-box gave place to the modern one, which bends back so that the strings form an obtuse angle in crossing the nut; the pegs are transverse instead of perpendicular, and have a support in each side of the box; the tensile force is applied directly instead of obliquely, in the direction of the fiddle's length. The top of the improved peg-box was often surmounted by a human or animal's head. This, however, obliged the fiddle-maker to have recourse to the artist for the completion of his work. A volute was therefore substituted, the well-known 'scroll' of the fiddle, on the curves of which accomplished fiddle-makers employed the same taste and skill which they displayed in the curved lines and surface of the body.

FIG. 2.

About the end of the 15th century we find the viol with the distinctive features above indicated fully developed, in its three principal sizes, Discant, Tenor, and Bass, in general use. They had at first sometimes four, sometimes five, and sometimes six strings, which were tuned by fourths, a single major third being interpolated in the five and six stringed instruments, in order to preserve the same tonality in the open notes. This device was borrowed from the Lute. The fixed number of six strings, and the settled tuning by fourths with a major third in the middle, is proved to be at least as old as 1542 by a method published in that year at Venice.¹ The tuning is as follows:

The relative tuning of the Viols is evidently derived from the parts of contemporary vocal music: and the early concerted music written for the Viols is always within the compass of the relative voices. It seems, in fact, to have been entirely based upon vocal music. As early as 1539 we have vocal compositions professedly adapted to be either played or sung (*buone da cantare et sonare*).²

This parallelism between the parts of vocal and stringed music explains why in early theoretical works we hear little or nothing about the Double Bass. We may however assume that it was employed as a sub-bass in octaves to the voice and Bass Viol. Strung with three, four, five, and even six strings, the lowest would by analogy be tuned a fourth lower than those of the Bass Viol, as at (a); and this is in fact the tuning of the modern Double Bass. The tuning for completely strung instruments was probably as at (b), but the highest strings would be inef-

fective, and liable to break, and they could have been of little use in playing a sub-bass: and as the pressure of useless strings impairs the resonance of the instrument, it may be assumed that the upper strings came to be gradually abandoned. The trio of viols, tuned as prescribed by the 'Regola Rubertina' of 1542, continued in use unaltered for a century and a half as the basis of chamber-music: for Playford's 'Introduction to the Skill of Musick' gives the same tuning without alteration. We may therefore take the duration of the school of pure six-stringed viol music as about a hundred and fifty years (1550-1700). During the latter part of

this period the Violin and Tenor Violin came steadily into use for orchestral purposes in substitution for the Treble and Tenor Viols, and the invention of the Violoncello or Bass Violin completed the substitution of the new model for the old. The trio of viols was in fact rather a theoretical than a practical musical apparatus: and its two highest members had but little significance apart from the rest. The Treble or Discant Viol, feeble and delicate in tone, though employed in concerted music, never took the place of the more powerful Rebec and Geige, which continued in popular use until they were ultimately driven from the field by the Violin. The Tenor Viol laboured under a great disadvantage. Being too large and too clumsy to be played fiddlewise, it became the practice to rest the lower part of the instrument on the knee, and its shoulder upon the arm, the left hand being elevated at the height of the head. It was then bowed underhand, the bow passing obliquely over the strings. This difficulty must have tended to check its musical usefulness: and as the lowest string of both the Discant and Tenor Viol was little used, it was at length omitted, and makers were thus enabled to construct Tenor Viols of more manageable size. The German and French Treble and Tenor Viols of late manufacture have only five strings, the lowest in each, as in the Violin and Tenor, being G and C respectively. The Treble and Tenor Viols thus gradually approximated in size and tuning to the Violin and Tenor, by which they were ultimately effaced. The five-stringed Treble Viol survived longest in France, where it was called 'Quinton' or 'Pardeus de Viole': and from the very numerous specimens which were sent forth in the last century from the workshops of Guersan and

FIG. 18.

other Parisian makers, there can be no doubt that it was a fashionable instrument, in fact probably a musical toy for ladies of quality. The stop being an inch shorter than that of the Violin, and the tuning by fourths and a third entirely obviating the necessity of employing the fourth finger, it is easily played by small and comparatively unpractised hands. The back and ribs of Guersan's Quintons are usually built up of parallel staves of sycamore and cedar, a method which not only makes the tone extremely soft and resonant, but combined with fine finish and elegantly carved scrolls gives them a most picturesque appearance. The illustration is from a specimen in the

writer's possession.

The development of the Viola d'Amore, which is briefly described below, probably prevented the use of the common Tenor Viol, without sympathetic strings, as a solo instrument. Built large

¹ *Regola Rubertina, che insegna a sonar di Viola d'arco testada, da Sylvestro Genesi del Fontego.* (Röhlmann, *Gesch. der Sagen-Instrumente*, p. 102.) ² 'Art for viols and voices' is frequently found on the title-pages of the English madrigals of the 17th century.

enough to give a resonant note on the lowest open string, C, the five-stringed Tenor Viol is undoubtedly a difficult instrument to manage: but after some practice it may be commanded by a player with an arm of sufficient length. The best have thick whole backs, cut slabwise or on the flat, instead of on the cross, and the flaming-sword soundhole, which

FIG. 11.

the German makers preferred, seems to favour the development of tone. The tone is rich and penetrating: and the writer has heard the five-stringed Tenor Viol played in concerted music with good effect. The illustration represents one made in 1746 by Elser of Mainz. [See TENOR VIOLIN.]

The Bass Viol alone, of the original Viol family, developed into an instrument having important musical qualities of its own, and secured a noticeable place in musical history under its Italian name of Viola da Gamba. This is no doubt due to its long-continued use as an orchestral bass, and to its similarity in tuning to the Theorbo Lute. In the latter quarter of the 16th century, and throughout the 17th, while the Violin and the Tenor were taking the place of the higher Viola, the Bass Viol maintained its place, and afforded a wide field to a considerable school of players and composers, principally in England, France, and the Low Countries. It was the first bowed instrument to receive treatment commensurate to its capacities, a circumstance which is accounted for by the fact that its tuning is practically identical with that of the lute, and that both instruments were practised by the same players. Throughout the 17th century, the Viola da Gamba closely followed in the wake of the lute, and the two reached their highest development at the hands of French composers in the early part of the 18th century. The command of the six-stringed finger-board which the lutenists had attained through two centuries of incessant practice was in fact communicated by them to bowed instruments through the medium of the Bass Viol. By the middle of the 17th century, before anything having any pretensions to musical value had been written for the Violin, and still less for the Violoncello, many species of composition had been brought to a considerable degree of perfection on the Lute, and this development of the Lute was directly communicated to the Viola da Gamba. The great mass of Viola da Gamba chamber-music of the 17th

century which still exists in manuscript, is evidently adapted from lute music. The Corrente, Chaconne, Pavane, Gig, Galliard, and Almaine, were favourite measures for both: the Prelude, in which the capacity of the instrument for modulation was displayed, was also much the same; but the Viol was especially employed in the 'Division on a Ground,' which was the delight of English musicians in the 17th century. So completely was this the case that in Simpson's well-known Method for the Viola da Gamba the instrument is named the 'Division Viol.' It was made in three sizes, that used for division being of medium size: the largest size was used for the 'Concert Bass,' played in combination with other Viols: a size smaller than the Division Viol was used for Lyra or Tablature playing, in which the composer varied the tuning of the Viol, and employed tablature instead of staff notation for the convenience of the player.

Occasionally the tuning of the Division Viol itself was varied: the two favourite 'scordature' of the English players, usually called the 'Harp-way' tunings, from the facilities they afforded for arpeggios, were as follows:

Harp-way sharp.

Harp-way flat.

The following 'harp-way' tunings have been noticed by the writer in old German compositions for the instrument:—

(1) Sharp. (2) Flat. (3) Sharp.

The use of these tunings greatly increases the resonance of the Viola da Gamba, and facilitates execution in thirds on the upper strings: but the writer is unacquainted with any instance of their use, or of the use of any other scordatura, by the classical writers for the instrument. The great writer for the Viola da Gamba was De Caix D'Hervelois, who flourished early in the last century: but there were many others of less note. The writings of De Caix, like those of Bach, occasionally require the seventh string, tuned to Double Bass A, a fourth below the sixth string. This was added towards the end of the 17th century, by a French violist named Marais. [See SCORDATURA.]

The latest development of the Viol was the construction of instruments with sympathetic strings of metal. These date from the 16th century: their properties are scientifically discussed in the 2nd Book of Bacon's 'Natural History' (1620-1625). The fanciful name 'd'Amore,' given to these instruments, relates not to any special aptitude for expressing amorous accents, but to the sympathetic vibration of the open metallic strings, stretched over the belly, to the tones of those which pass over the fingerboard. They were made in several sizes. Even Kits are found made with sympathetic strings (Sordine

d'Amore): the next largest size was called the Violino d'Amore, and in its later type was a Violin rather than a Viol. It usually has peg-holes for five sympathetic strings: there exists a very curious one by Stradivari, guitar-shaped.¹ The Tenor size became more generally known as the Viola d'Amore, an instrument in very general use in Italy and Germany in the 17th and 18th centuries. The instrument is invariably made with 'flaming-sword' soundholes, and often has a 'rose' under the finger-board. The sympathetic strings, of fine brass or steel wire, are attached by loops at the bottom to small ivory pegs fixed in the bottom block above the tail-pin; they are then carried through small holes drilled in the lower part of the bridge, under the finger-board, which is hollowed for the purpose, and over an ivory nut immediately below the upper nut, into the peg-box. In the earlier instruments the sympathetic strings are worked by pegs similar to those of the gut-strings: but the later plan was to attach them to small wrest-pins driven vertically into the sides of the peg-box, and tune them with a key, a preferable method in all respects. The sympathetic apparatus was of two species, the diatonic and the chromatic, the former consisting of six or seven, the latter of twelve or more strings. In the former species the strings are tuned to the diatonic scale, the lowest note being usually D, and the intervals being adapted by flattening or sharpening to the key of the piece in performance. In the chromatic description this is unnecessary, there being twelve strings, one for each semitone in the scale, so that every note played on the instrument has its sympathetic augmentation. Sometimes a double set (24) of sympathetic strings was employed. In the classical age of this instrument, the time of Bach and Vivaldi, it was tuned by fourths and a third like the tenor viol. Following the example of the Viola da Gamba, a seventh string was added about the beginning of the last century, and ultimately the so-called 'harp-way' tuning of the Lute and Viola da Gamba came to be generally adopted, which was ultimately modified thus:

The latter tuning was most employed, and is used in the well-known obligato part in Meyerbeer's 'Huguenots.' The Viola d'Amore is a singularly beautiful and attractive instrument, but the inherent difficulties of execution are not easily surmounted, and as every *forte* note produces a perfect shower of concords and harmonics, all notes which will not bear a major

¹ Now in the possession of F. Johns, Esq. The instrument was probably tuned like the ordinary viola, and the five sympathetic strings tuned to c, d, a, f, and g, the sympathetic tuning being however varied to suit the key.

third require to be very lightly touched. The illustration represents a diatonic Viola d'Amore dated 1757, by Rauch of Mannheim.

FIG. 12.

The 'English Violet' mentioned by Mozart and Albrechtsberger is identical with the Viola d'Amore: the former applies the name to the chromatic Viola d'Amore, to which he assigns fourteen sympathetic strings, the latter to a common Viola d'Amore having six instead of seven strings. Why the Germans called it 'English' is a mystery, for the writer has never met with nor heard of a true Viola d'Amore of English make. The 'Violetta Marina,' employed by Handel in the air 'Gib l'ebro mio ciglio' (Orlando), and having a compass as low as tenor E, appears also to be simply the Viola d'Amore.

The Viola da Gamba with sympathetic strings was at first known as the Viola Bastarda, but after undergoing considerable mechanical improvements in the sympathetic apparatus, it became the well-known Barytone, the favourite instrument of the musical epicures of the last century. [See BARYTONE.] The seventh string added to the Viola da Gamba by Marais was usually employed in the Barytone. The sympathetic apparatus of the Barytone is set in a separate metal frame, and has an independent bridge.

The disuse of instruments with sympathetic strings is easily explained. They added little or nothing to the existing means of producing masses of musical sound. They were essentially solo instruments, and were seldom employed in the orchestra. Nothing but continuous use in professional hands in the orchestra will keep a musical instrument from going out of fashion: and it invariably happens that the disuse of instruments in the orchestra only shortly precedes their disuse in chamber music. The practical extinction of these instruments is to be regretted. Originally invented as a means of augmenting the tone of the Viol, they acquired a character entirely unique, and are undoubtedly capable of further development.

The early employment of the Violin and Tenor Violin in the orchestra left the Treble and Tenor Viols exclusively in the hands of amateurs, who only slowly relinquished them. The pure school of concerted viol-playing seems to have held its ground longest in England: the 'Fantasies' of Gibbons,² and those of many other composers, which repose in manuscript in the libraries,

² Edited by Rimbaud for the Musical Antiquarian Society. The Preface is full of interesting information as to viol music.

sufficiently indicate the extent to which the art was cultivated. In performance, the parts were usually doubled, i.e. there were six players, two to each part, who all played in the fortes: the piano passages were played by three only. To accompany voices, theorboes were added in the bass, and violins in the treble: but the English violists of the 17th century long regarded the violin as an unwelcome intruder. Its comparatively harsh tone offended their ear by destroying the delicate balance of the viol concert: Mace denominates it 'the scolding violin,' and complains that it out-tops everything.¹ When the 'sharp violin,' as Dryden calls it, was making its way into music in England, it had already been nearly a century in use on the continent. The model had been developed in Italy: the treble violin had first come into general use in France.

Of the viol family the most important seems originally to have been the Tenor. This agrees with the general plan of mediæval music, in which the tenor sustains the cantus or melody, the trebles and basses being merely accompaniments. The violin apparently originated in the desire to produce a more manageable and powerful instrument for the leading part. The Geige and Rebec were yet in use: perhaps the contrast between their harsher tone and the softness of the discant viol may have suggested the construction of a viol with a convex back modelled like the belly. But the extreme unhandiness of the tenor viol is probably the true key to the change. It was impossible to play artistically when supported on the knee, and too large to be held under the chin. At first, it would appear that violin-makers made it handier in the latter respect by cutting away the bottom, exactly as the top was sloped away to the neck: and viols thus sloped at the bottom are still extant. The more effective expedient of assimilating the back to the belly not only reduced the depth at the edges but rendered it easier to retain in position. The first instrument to which we find the name Violino applied was the tenor, and the common violin, as a diminutive of this, was the 'Violino piccolo.' [See TENOR VIOLIN.]

However the idea of assimilating the model of the back to that of the belly may have originated, it must have been quickly discovered that its effect was to double the tone. The result of making the instrument with a back correlative to the belly, and connected with the latter by the sides and soundpost, was to produce a repetition of the vibrations in the back, partly by transmission through the ribs, blocks, and soundpost, but probably in a greater degree by the concussion of the air enclosed in the instrument. The force which on the viol produced the higher and dissonant harmonics expended itself in the violin in reproducing the lower and consonant harmonics by means of the back. [See HARMONICS.]

The invention of the Violin is commonly assigned to Gaspar Duiffoprugcar, of Bologna, and placed early in the 16th century: and it has

¹ Music's Monument, p. 223.

been stated there still exist three genuine violins of Duiffoprugcar's work, dated before 1520.² The name is obviously a corruption. There existed in the 16th century in Italy several lute-makers of the Tyrolese name Tieffenbrücker;³ and as some of them lived into the following century it is possible that they may have made violins. But the authenticity of any date in a violin before 1520 is questionable. No instrument of the violin pattern that can be fairly assigned to a date earlier than the middle of the 16th century is in existence, and it is scarcely credible that the violin could have been so common between 1511 and 1519, seeing that we find no mention of it in contemporary musical handbooks which minutely describe the stringed instruments of the period. In default of any better evidence, the writer agrees with Mr. Charles Reade (quoted in Mr. Hart's book, 'The Violin,' p. 68) that no true violin was made anterior to the second half of the 16th century, the period of Gaspar di Salo and Andreas Amati. The earliest date in any instrument of the violin pattern which the writer has seen, is in a tenor by Peregrino Zanetto (the younger) of Brescia, 1580. It is, however, certain that tenors and violins were common about this time, and they were chiefly made in the large towns of Lombardy, Bologna, Brescia, and Cremona. The trade had early centred in the last-named city, which for two centuries continued to be the metropolis of violin-making; and the fame of the Cremona violin quickly penetrated into other lands. In 1572 the accounts of Charles IX. of France show a payment of 50 livres to one of the king's musicians to buy him a Cremona violin.⁴

The difficulty of ascertaining the precise antiquity of the Violin is complicated by the fact that the two essential points in which it differs from the Viol, (1) the four strings tuned by fifths, and (2) the modelled back, apparently came into use at different times. We know from early musical treatises that the three-stringed Rebec and some four-stringed Viols were tuned by fifths: and the fact that the modelled back was in use anterior to the production of the true violin is revealed to us by a very early five-stringed Viol with two Bourdons, now in the Historical Loan Collection at the Inventions Exhibition. This unique instrument, while it has the primitive peg-box with seven vertical pegs, has a modelled back and violin sound-holes: and it only needs the four strings tuned by fifths, and a violin scroll, to convert it into a Tenor of the early type.

Another very important member of the Violin family is the VIOLONCELLO, which, though its name (little Violone) would seem to derive it from the Double Bass, is really a bass Violin,

² Wasielewski, Die Violine im xvii. Jahrhundert, p. 3. The dates are stated as 1511, 1517, and 1519.

³ Besides Gaspar we hear of Magnus, Wendelm, Leonhard, Leopold and Uldrich Tieffenbrücker. Magnus was a lute-maker at Venice, 1607. Wasielewski, Geschichte, etc., p. 31.

⁴ A Nicolas Dolinet, joueur de flûte et violon du dict sieur, la somme de 50 livres tournois pour luy donner moyen d'achepter un violon de Cremona pour le service du dict sieur. Archives curieuses de l'Histoire de France, vol. viii. p. 365.

formed on a different model from the Violone. It is traceable in Italy early in the 17th century, was at first used exclusively as a fundamental bass in the concerted music of the church, and it is not until a century later that it appears to have taken its place as a secular and solo instrument. Elsewhere during the 17th century and a considerable part of the 18th, the Viol Bass (Viola da gamba) was almost exclusively in use as a bass instrument. The first English violoncellos date from about the Restoration. The oldest one known to the writer is undoubtedly the work of Edward Pamphilon. It is of a very primitive pattern, being extremely *bombé* in the back and belly, the arching starting straight from the purfling, which is double. The writer has also seen a Violoncello by Rayman, another of the Restoration fiddlemakers. Barak Norman's Violoncellos are not uncommon, though far fewer than his innumerable Bass Viola. The earlier Violoncellos in England therefore date not long after those of Italy; the French and German ones somewhat later. The Violoncello must have been kept out of general use by its irrational fingering; for being tuned by fifths, and the fingers of the performer being only able to stretch a major third, the hand has great difficulty in commanding the scales: and it was not until the middle of the last century that its difficulties were sufficiently overcome to enable it to practically supplant the Viola da Gamba in the orchestra. [See GAMBA, vol. i. p. 579.]

The adoption of four strings, tuned by fifths, for the Violin in its three sizes, really marks the emancipation of bowed instruments from the domination of the Lute. Such impediments to progress as complicated and various tunings, frets, and tablature music were thus removed. In most respects this change facilitated musical progress. The diminished number of strings favoured resonance; for in six-stringed instruments there is an excessive pressure on the bridge which checks vibration and increases resistance to the bow. By the change the fingering was simplified, though in the larger instruments it was rendered more laborious to the executant. Composers, though still obliged to regard the limited capacities of stringed instruments, were able to employ them with less reserve. Music, however, cannot be said to have lost nothing by the abandonment of the Viol.¹ The Violin affords fewer facilities for harmonic combinations and suspensions, in the form of chords and arpeggios. Bowed instruments tended more and more to become merely melodic, like wind instruments. Effects soon came to be sought by increasing the length of the scales, and employing the higher and less agreeable notes, the frequent use of which, as in modern music, would have shocked the ears of our forefathers. It is often supposed that early violinists were not sufficiently masters of their instrument to command the higher positions. Nothing can be

more absurd. In addition to what has been stated under the head *SHIFT*, it may be observed that many existing compositions for the Viola da Gamba prove that very complicated music was played on that instrument across the strings in the higher positions, and the transfer of this method of execution to the violin obviously rested with individual players and composers. Bach's Violin Solos represent it in the hands of one of transcendent genius; but Bach, with unfailing good taste, usually confines the player to the lower registers of the instrument. The tuning of the principal stringed instruments thus become what it is at the present moment and is probably destined to remain.

The strings indicated by solid notes are 'spun' or 'covered' strings—that is, they are closely enveloped in fine copper or silver wire. The others are of plain gut, usually called 'cat-gut,' and perhaps at one time derived from the cat, but now manufactured out of the entrails of the sheep. The Tenor and Violoncello, it will be observed, are octaves to each other. A smaller Bass, intermediate between the Tenor and the Violoncello, and in compass an octave below the Violin, whence the name 'Octave Fiddle,' sometimes applied to it, was in use in the last century, but has long been abandoned. A Violoncello of smaller dimensions, but of identical pitch with the ordinary Violoncello, and chiefly used for solo playing, appears to be the same instrument which L. Mozart, in his Violin School, calls the 'Hand-bassel,' and Boccherini the 'Alto Violoncello.' Boccherini intimates on the title-page of his Quintets that the first Violoncello part, which extends over the whole compass of the ordinary instrument, may be played on the Alto Violoncello.

The 'Violino piccolo' of Bach, which Leopold Mozart (1756) describes as obsolete in his time, was a three-quarter Violin (Quartgeige), tuned a minor third above the Violin.

The invention of a smaller Violoncello with five strings, tuned as at (a), and thus combining the scales of the Violoncello and the Octave Fiddle, is ascribed to J. S. Bach. It was called Viola Pomposa, but never came into general use. It appears, in fact, to have been merely a reproduction of an old form of the Violoncello, which is mentioned by L. Mozart as obsolete. [See p. 267 b.]

The musical development which followed closely on the general employment of the Violin family throughout Europe is treated in other articles. [See VIOLIN-PLAYING.] Extraordinary as this development has been, it has produced

¹ Schubert's Sonata for the Pianoforte and Arpeggione (a revived form of the Viola da Gamba) is in fact a tribute to the musical capabilities of the Viol. [See ARPEGGIONE.]

² In Austrian dialect 'Bassel' became 'Bassel,' and even 'Pasedel.' See Nohf's Beethoven, III. note 244. So too 'Bratsche' was corrupted into 'Prätschel.' (Engel, 'Musical Myths,' I. 160.)

no constructive changes in the instrument, and only the slightest modifications. The increased use of the upper shifts has indeed necessitated a trifling increase in the length of the handle, while the sound-post, bridge and bass-bar are larger and more substantial than those formerly in use. It might probably be further shown that the strings were smaller and less tense, and lay closer to the finger-board, and that the tone of the fiddle was consequently somewhat feebler, thinner, and more easily yielded. In other respects the fiddle family remain very much as they came from the hands of their first makers three centuries ago.

The reason of the concentration of fiddle-making at Cremona is not at first sight apparent. The explanation is that Cremona was in the 16th century a famous musical centre. This is partly due to the fact that the Cremonese is the richest agricultural district of Lombardy, and was mainly in the hands of the monasteries of the city and neighbourhood. These wealthy foundations vied with each other in the splendour of their churches and daily services, and furnished constant employment to painters, composers, and instrument-makers. The celebrity of Cremona as a school of music and painting was shared with Bologna; but its principal rival in fiddle-making was Brescia, where Gaspar di Salo, the two Zanettos, Giovita Rodiani, and Maggini, made instruments from about 1580 to 1640. The characteristics of these makers, who compose what is sometimes called the Brescian School, are in fact shared by Andreas Amati, the earliest known maker of Cremona. To speak of a 'Brescian School' is misleading: it would be more correct to class their fiddles generally as early Italian. The model of these early Italian violins is generally high, though the pattern is attenuated: the middle bouts are shallow; the *f*-holes are narrow and set high, and terminate abruptly in a circle like that of the crescent soundhole. (See Fig. 6, vol. iii. p. 641.) The scroll is long, straight, and ungraceful. The violins are generally too small; the tenors are always too large, though their tone is deep and powerful. Violoncellos of this school are not met with. The substantial excellence of the makers of Brescia is proved by the fact that the larger violins of Maggini, and the Double Basses of Gaspar di Salo are still valued for practical use. De Beriot played on a Maggini Violin: and Vuillaume's copies of this maker once enjoyed a high reputation among French orchestra players for their rich and powerful tone.

The reputation of the Cremona violins is mainly due to the brothers Antonio and Girolamo Amati¹ (Antonius et Hieronymus), who were sons of Andrew Amati, and contemporaries of Maggini. [See AMATI.] The idea of treating the violin as a work of art as well as a tone-producing machine existed before their time: but so far the

artistic impulse had produced only superficial decoration in the form of painting or inlaying. The brothers Amati, following unconsciously the fundamental law of art-manufacture that decoration should be founded on construction, reduced the outlines and surfaces of the instrument to regular and harmonious curves, and rendered the latter more acceptable to the eye by a varnish developing and deepening the natural beauty of the material. Nor did they neglect those mechanical conditions of sonority which are the soul of the work. Their wood is

FIG. 13.

of fine quality, and the disposition of the thicknesses, blocks, and linings, leaves little to be desired. Those who came after them, Nicholas Amati, Stradivari, and Joseph Guarneri (del Gesù), augmented the tone of the instrument. But for mere sweetness of tone, and artistic beauty of design, the brothers Antonius and Hieronymus even yet remain unsurpassed. The illustration (Fig. 13), shows the soundholes, bouts, and corners of the most famous maker of the family, Nicholas Amati, the son of Hieronymus (1596-1684). He began by copying most accurately the works of his father and uncle; his early violins are barely distinguishable from theirs. Between 1640 and 1650 his style develops unconsciously into that which is associated with his own name. His violins become larger, the thickness is increased in the middle, the blocks are more massive and prominent, and the soundholes assume a different character. But these changes are minute, and tell only in the general effect. And the same love of perfectly curved outlines and surfaces rules the general design. During a very long life Nicholas Amati varied from his own standard perhaps less than any maker who ever lived. After his time the Cremona violin was carried to its utmost perfection by his pupil Antonio Stradivari (1649-1737). [See STRADIVARI; and for some account of other makers see ALBANI, AMATI, GAGLIANO, GRACINO, GUADAGNINI, GUARNIERI, LANDOLFI, SERAFIN.]

FIG. 14.

The principal varieties in the design of violins of the classical period will be illustrated by a comparison of Figs. 13, 14 and 15. Fig. 14 is from a violin by Stainer; Fig. 15, from a Tenor by Joseph Guarnerius. [For an illustration of a violin by Stradivari, see vol. iii. p. 728.] After Cremona, Venice among Italian towns produced the best fiddle-makers; then come Milan and Naples. The pupils and imitators of Stradivari maintained the reputation of the Italian Violins during the first half of the last century: but after 1760 the style of Italian violin-making shows a general decline. This is partly attributable to the fact that the musical

¹ Amatus is originally a Christian name, identical with Ahmad, which in the feminine form survives in French and English (Ahmad, Amy). The current family name is 'de' Amati' (De Amatis).

world was by this time amply provided with instruments of the best class, and that the demand for them declined in consequence. Good instruments, however, were made by some of the second-rate makers of the latter part of the century. One of the best of the Italian makers, Pressenda, worked at Turin in the present century.

FIG. 15.

The violin-makers of South Germany form a distinct school, of which some account will be found under KLOTZ and STAINER. Munich, Vienna, Salzburg, and Nuremberg, produced many fiddle-makers. The makers of France and the Low Countries more or less followed Italian models, and during the past century there have been many excellent French copyists of Stradivari and Guarneri; two of the best are noticed under LUPOT and VUILLAUME; besides these there have been Aldric, G. Chanut the elder, Silvestre, Maucotel, Mennegand, Henry, and Rambaux. The numerous English makers are reviewed under the head LONDON VIOLIN MAKERS. The oldest English school, represented by such makers as Urquhart and Pamphilon, had much quaintness and beauty of style; but the fame of the Stainer and Cremona patterns soon effaced it. The only English makers of any note now living in London, are Furber and the Hills.

The trade of making viols and violins was grafted on the profession of the lute-maker, and to this day the Italian and French languages express 'violin-maker' by *Luthier* and *Liutaro*, though lute-making has long been obsolete. In Cremona and some other Italian towns, principally Venice and Milan, the demand for the violin produced workmen who devoted themselves primarily to making bowed instruments, and to whom the lute tribe formed a secondary employment; but the earlier violins of Germany, France and England were produced by men whose primary employment was lute-making. Hence the uncertainty and inferiority of their models, though their workmanship is often praiseworthy and always interesting. But as the Cremona violin spread all over Europe, the lute-makers of other countries at first unconsciously, afterwards of set purpose, made it an object of imitation. The original violin models of England, Germany, and France, were thus gradually extinguished; and since about the middle of the last century scarcely any other models have been followed than those of the Cremona makers. It was about this time that a change, from an artistic point of view disastrous, swept over the art of violin-making. This change seems to have been the result of a demand for more and cheaper fiddles, and it originated in Italy itself. We know from Bagatella's singular brochure on the Amati model, that 'trade fiddles' (*violini dazzicali*), cheap instruments of coarse construction, probably made by German workmen, were

sold by the dozen in Italy in the last century. Such fiddles were soon produced in far greater numbers in Germany and France. In Germany the manufacture of 'trade fiddles' was first carried on at Mittenwald, in Bavaria, where it originated with the family of Klotz; it afterwards extended to Grolitz: early in the last century Mirecourt in French Lorraine became a seat of the trade; and in recent times Mark-Neukirchen in the kingdom of Saxony has risen to importance. These towns still supply nine-tenths of the violins that are now made. 'Trade' or common violins can be bought for fabulously low sums. The following is the estimate of M. Thibouville-Lamy, of Mirecourt, Paris, and London, the principal fiddle-maker of our time, of the cost of one of his cheapest violins:—

	s.	d.
Wood for back	2	6
" belly	2	6
" neck	1	0
Workmanship in neck	2	0
Blackened fingerboard	2	0
Workmanship of back and belly	3	0
Cutting out by saw	14	0
Shaping back and belly by machinery	1	0
Varnish	10	0
Fitting-up, strings, bridge and tail-piece	7	6
4 per cent for general expenses	3	0
15 per cent profit	10	0
	4	6

Ludicrously low as this estimate is, it is certain that one of these fiddles, if carefully set up, can be made to discourse very tolerable music. Vast numbers of instruments of better quality, but still far below the best, costing from £1 to £2 10s., are now sold all over the world. Mirecourt and Markneukirchen mainly produce them: of late years the latter place has taken the lead in quantity, the German commercial travellers being apparently more pushing than the French; but the Mirecourt fiddles have decidedly the advantage in quality, having regard to the price.

But violins of a superior class to the trade fiddle, of good workmanship throughout, and in every way excellent musical instruments, though inferior to the best productions of the classical age, have been and still are made, not only at Mirecourt, but in the principal musical centres of Europe. London, Paris, Vienna, and Munich, have had a constant succession of violin-makers for the past two centuries. The English violin manufacture suffered a severe blow by the abolition of duties on foreign instruments, and it can hardly be said that the musical stimulus of the last few years has caused it to revive. Those makers who carry on their trade in England are chiefly employed in rehabilitating and selling old instruments, and their own productions, too few in number, are usually bespoken long beforehand. At present, therefore, an intending purchaser will not find a stock of new instruments by the best English makers: but it is to be hoped that, as the demand increases, they will find means to increase the supply. *Musica.*

Hill & Sons charge £15, Mr. Duncan of Glasgow £12, for their violins.

Those who wish to purchase a new violin of the best quality ready made, cannot do better than resort to the French makers. Vuillaume, now deceased, was a few years ago at the head of the list, and sold his violins for £14: they are now worth considerably more. The sale prices of instruments by some living French makers are as follows:—

	Violins.			Tenors.			Violoncellos.		
	£	s.	d.	£	s.	d.	£	s.	d.
Gand & Bernardel, Paris	16	0	0	13	13	4	26	13	4
Miremont, Paris	13	6	8	16	0	0	24	0	0
Cherpital, Paris	10	13	4	13	6	8	24	0	0
Thibouville-Lamy, Paris									
and London	8	0	0	8	0	0	16	0	0
Geronimo Grandini, sen.									
Mirecourt	4	6	8	4	6	8	8	13	4

M. Thibouville-Lamy has all these on sale; his own instruments are highly recommended.

Instruments of good quality are made in this country by W. E. Hill & Sons, 72 Wardour Street; Charles Boulangier, 16 Frith Street; G. Chanot, 157 Wardour Street; Szepessy Bela, 10 Gerrard Street; Furber, Euston Road, all in London: G. A. Chanot, of Manchester, and George Duncan, of Glasgow, are also excellent makers. Among foreign makers, the following may be mentioned—in Vienna, Zach, 1 Kärnthner Strasse; Bittner, 1 Kärnthner Strasse; Lembök, Canova Strasse; Voigt, Spiegel Gasse; Gutermann, Maria-Hilf Strasse: Rampflier, Burggasse, Munich; Sprenger, 34 Garten Strasse, Stuttgart; Hammig, Leipzig; Lenk, Promenade Platz, Frankfort-on-the-Maine; Liebich, Breslau; Mougnot, Brussels; Hel, Lille; Marchetti, Milan; Guadagnini Brothers, Turin; and Ceruti, Cremona.

Old instruments, however, are generally preferred by purchasers, especially those by the old Italian makers. Among these, the best instruments of Stradivari and Guarnieri del Gesù form a distinct first class; their prices range from £200 to £500. Inferior instruments by these makers can be bought at from £100 to £200. The very best instruments of second-class makers often realise over £100: but ordinary instruments by second and third-rate makers can generally be bought at prices ranging from £20 to £50: while old Italian fiddles of the commonest description are considered to be worth from £10 to £20. Fair instruments by old French, German, and English makers can be bought at still lower prices, ranging from £3 to £10. Red instruments, other things being equal, will generally fetch somewhat more than yellow or brown ones. The principal English dealers in old violins are Hill & Sons, G. Hart, G. Chanot, and Withers.

Old violins may be divided into two classes, those made on the 'high' and the 'flat' model respectively. The latter, which is characteristic of Stradivari and his school, including all the best modern makers, is undoubtedly the best. The 'high' model, of which Stainer is the best-

known type, was chiefly in use with the German and English makers before the Cremona pattern came to be generally followed in other countries. It is, in fact, a survival of the Viol, for which instrument the high model is the best: even Stradivari used the high model for the Double Bass and the Viola da Gamba. But a high-modelled violin, however handsome and perfect, is practically of little use. The tone, though easily yielded and agreeable to the player's ear, is deficient in light and shade, and will not 'travel.' The flatness of the model, however, must not go beyond a certain point. Occasionally a violin is met with, in which the belly is so flat as to have almost no curvature at all. The tone of such violins is invariably harsh and metallic.

The question is often asked, are old Italian violins really worth the high prices which are paid for them, and are not the best modern instruments equally good? In the writer's opinion the prices now paid for old Italian violins, always excepting the very best, are high beyond all proportion to their intrinsic excellence. The superiority of the very best class indeed is proved by the fact that eminent professional players will generally possess themselves of a full-sized Stradivari or Giuseppe Guarneri, and will play on nothing else. There can be no doubt that these fine instruments are more responsive to the player, and more effective in the musical result, than any others; and as their number, though considerable, is not unlimited, the purchaser must always expect to pay, over and above their intrinsic value, a variable sum in the nature of a bonus or bribe to the vendor for parting with a rare article, and this necessarily converts the total amount paid into a 'fancy price.' But when we come to inferior instruments by the great makers, and the productions of makers of the second and third class, the case is widely different. Such instruments are seldom in request by the best professional players, who, in default of old instruments of the highest class, use the best class of comparatively modern violins; and the prices they command are usually paid by amateurs, under a mistaken idea of their intrinsic value. No one with any real idea of the use of a violin would pay £100 for instruments by Montagnana, Serafin, or Peter Guarnerius, when he could buy a good Vuillaume, Pressenda, or Lupot for from £20 to £30: yet the writer has constantly known the first-named price realised for Italian instruments of decidedly inferior merit.

Though Tenors and Violoncellos of the highest class are as valuable as Violins, Tenor and Violoncello players can usually procure moderately good instruments more cheaply than Violinists. Not only are the larger instruments less in demand, but while old English Violins are useless for modern purposes, the Tenors and Violoncellos which exist in large numbers, are generally of very good quality, and many players use Banks and Forster Tenors and Bases of these makers by preference. Double Bases by the great makers are rare and not effective in the or-

chestra: professional players usually choose old English ones, or modern ones by such makers as Fendt and Lott, who made the Double Bass a speciality.

Fiddle-making is so little practised as a trade in this country, that a short explanation of the process may be useful. The question is often asked whether the belly and back of the fiddle are not 'bent' to the required shape, and the enquirer hears with surprise, that on the contrary, they are 'digged out of the plank,' to use the words of Christopher Simpson, with infinite labour and care. The only parts of the Fiddle to which the bending process is applied are the ribs.

In construction, the violin, tenor, and violoncello may be said to be identical, the only difference being in the size and in the circumstance that the ribs, bridge, and soundpost of the violoncello are relatively higher than those of the other instruments. The tenor is one seventh larger than the violin, the violoncello twice as large: the double-bass is about double the size of the violoncello. The number of separate pieces of wood which are glued together for the fixed structure of the violin is as follows:—

Back . . .	2 pieces (sometimes 1)
Belly . . .	2 " (sometimes 1)
Blocks . . .	6 " (sometimes 5)
Ribs . . .	6 " (sometimes 5)
Linings . . .	12 "
Bar . . .	1 "
Purfling . . .	24 "
Nut . . .	1 "
Fingerboard . . .	1 "
Handle or Neck . . .	1 "
Lower Nut . . .	1 "
Total	57

The moveable fittings comprise thirteen additional parts:—

Tailpiece . . .	1
Loop . . .	1
Button or Tailpin . . .	1
Screws . . .	4
Strings . . .	4
Soundpost . . .	1
Bridge . . .	1
Total	13

The violin thus consists of seventy different parts, all of which, except the strings and loop, are of wood. The wood employed is of three sorts—maple for the back, handle, ribs and bridge; ebony for the fingerboard, nuts, screws, tailpiece and button; the purfling is partly of ebony, partly of maple; the belly, bar, blocks, linings, and soundpost are of pine. All metal is a profane substance in fiddle-making: no fragment of it should be employed, whether constructively or ornamentally. The parts must be put together with the finest glue, and with invisible joints.

The tone, other things being the same, depends largely on the quality of the maple and pine used. The wood must not be new: it should have been cut at least five or six years, and be well seasoned. It is, however, not advisable to use wood that is so old as to have lost much of its elasticity. Both pine and maple should be as white as possible, with a grain moderately wide, even, and as a rule perfectly straight.

Local shakes and knots render the wood useless. Curves in the grain derange the vibration, and are therefore usually avoided: but the writer has seen violins in which a slightly curving grain has produced an exceptional power of tone.

The belly and back are often made each out of a single block of wood. This, however, is wasteful, and they are usually made each in two pieces. A square block of maple of suitable grain for the back, having been selected somewhat exceeding in length and in half-breadth the dimensions of the intended fiddle, and about an inch and a half thick, the saw is passed obliquely through it from end to end, dividing it into two similar pieces, each having a thick and a thin edge. The thick edges are planed perfectly true and glued together. The figure of the grain, when the fiddle is made, will thus match in the halves.

The first thing to be done is to settle the design of the instrument. The modern maker invariably adopts this from a Stradivari or a Giuseppe Guarneri (del Gesù) fiddle, sometimes mixing the two designs. The old makers generally worked by rule of thumb, using the moulds of their predecessors, and if they made new patterns only slightly varied the old ones as experience suggested. It was by a succession of such minute experimental changes that the classical patterns were reached, and though attempts have been made to reduce their designs to mechanical principles, and to frame directions for constructing them by the rule and compasses¹ no practical violin-maker would think of doing so. There is no reason why he should slavishly copy any model: but his design should be based on study and comparison of classical patterns, not upon any theoretical rules of proportion.

Having settled the design, whether a tracing from an old instrument, or an entirely new one, the first thing is to trace the outline on a plate of hard wood about as thick as a piece of cardboard, and to cut this carefully out with the pen-knife. This is called the Pattern, and it serves both for back and belly.

The next thing is to make the Mould, which is made out of a block of hard wood about three quarters of an inch thick. Its outline stands three eighths of an inch all round inside that of the Pattern. Having cut out the mould to the requisite size and shape, the workman cuts rectangular spaces for the six blocks, large ones at the top and bottom and small ones at the four corners. The next thing, and one of great importance, is to trim the edges of the mould so that it shall be everywhere perfectly at right angles to the faces. Eight finger-holes are now pierced, to enable you to manipulate it without touching the edges. The making of the mould requires the greatest care and nicety: and fiddlemakers will keep and use a good one

¹ The most noticeable of these is the 'calcolo' of Antonio Bagatella an amateur of Padua, published in 1783, by which he pretends to reveal the secret of the proportions used by the brothers Amati. It is reprinted in Folegatti's 'Il violino esposto geometricamente nella sua costruzione' (Bologna, 1874). Bagatella seems to have ruined many a good violin by adapting it to the Procrustean bed of his 'calcolo.'

all their lives. In addition to the pattern and the mould the fiddlemaker requires four templates of varying size, cut to curves which are the reverse of the principal curves of the surface. The largest is the curve lengthwise in the middle of the fiddle (1), the other three are transverse, being (2) the curve of the surface at the greatest width in the upper part, (3) that at the narrowest part of the waist, (4) at the greatest width at the lower part.

The first part of the fiddle actually made is the back. The block out of which it is made is first reduced to the exact shape of the pattern; its upper surface is then cut away and brought to the right curves by the aid of the four templates. The maker then hollows out the inside, gauging the proper thicknesses by means of a pair of callipers. Precisely the same method is used for the belly, but its thicknesses are everywhere somewhat less than those of the back.

The top and bottom blocks are next prepared and shaped, temporarily fixed in the mould by means of a single drop of glue, brought to the exact height of the mould by the knife and file, and cut to the right shape by the aid of the pattern. The next task is to prepare a long strip of maple planed to the right thickness for the ribs. The proper length of each rib is ascertained on the mould by means of a strip of cartridge paper, and each rib is then cut off to its length and the edges prepared for joining. The ribs are now dipped two or three times in water, and bent to the curves of the mould by means of a hot iron. They are then placed in position on the mould and glued to the blocks; eight moveable blocks of wood, trimmed as counterparts to the ribs, one in each bout, one in the outer curve of each corner block, and two at the top and bottom, are applied outside them, and the whole mass is tightly screwed up in a frame and left to dry. When the frame and moveable blocks are removed, the ribs and blocks form a structure which only requires the addition of the back and belly to be complete. The back is first glued on, and the inside joint is filled up with linings of pine passing from block to block and dovetailed at each end into the blocks, similar linings are now glued to the upper edge of the ribs and brought to a flat surface. Lastly, the belly, on which the bass bar has already been fitted, is glued on, and the resonant box is complete.

The design and cutting of the head, the carving of the volute, and the double grooving of its back, are among the most difficult branches of the violin-maker's art. When the handle is ready it is accurately fitted and glued to the top block and to the semicircular button at the top of the back, which hold it firmly in the angle they form. The fiddle is now ready for varnishing. After being sized, three or more coats of varnish are successively applied. This is of two kinds, one made with oil and the other with spirits of wine. Oil varnish is long in drying; hence in this country, except in hot weather, the process is tedious, and the old English makers usually preferred spirit varnish, which dries very quickly.

The best makers in all countries have used oil varnish, the soft texture of which penetrates and solidifies the wood without hardening the tone.

When the varnishing and polishing are completed the fingerboard is glued on, and the violin is then ready for its moveable fittings. The peg-holes are now pierced, the pegs inserted, and the button prepared for the bottom block. The soundpost is made so as to fit the slopes of the back and belly and inserted in a perfectly vertical position: this is ensured by observation through the bottom block and soundholes. The bridge is then prepared and fitted, the tail-piece looped on, and the violin is ready for stringing.

Many of the best fiddle-makers, however, seldom make new instruments, which can be produced more cheaply and expeditiously by inferior workmen. Their principal and most profitable occupation is the purchase, restoration, and sale of old ones, which are preferred by modern purchasers, the best, because they really surpass in workmanship and appearance any of modern times, the inferior ones, because age has rendered them more picturesque to the eye, and easier to play. An old violin has generally to undergo many alterations before it is fit for use. If any part is worm-eaten, it must be renewed. If the blocks and linings are out of repair, or badly fitted, they must be properly arranged. Cracks must be united; if the belly or ribs have been pressed out of shape, they must be restored to shape by pressure on the mould: the damage to the belly, above the soundpost, which is sure to have occurred, must be repaired; if the old bass-bar remains, a larger and stiffer one must be provided, to enable the belly to bear the increased tension of a higher bridge. In almost every case the neck must be 'thrown back,' i.e. so re-arranged as to raise the lower end of the fingerboard farther above the belly, and thus admit of a bridge of the modern height: the new handle, carefully grafted into the head, must be made of somewhat greater length than the old one. The peg-holes, enlarged by use, must be plugged and repierced: a new bridge and soundpost must be adjusted with all the accuracy which these important details demand. Great labour and attention are demanded by an old violin, and it will be thrown away unless every detail of it is considered with strict reference to the particular type of instrument which is in hand. Hence the restoration of old instruments demands a knowledge of the fiddle which is wider and deeper than that required for the mere fiddlemaker.

For further information on the subject of the Violin the reader is referred to Rühlmann's 'Geschichte der Bogen-Instrumente' (Brunswick, 1882), a collection of valuable materials, with an excellent Atlas of Illustrations; Dubourg on the Violin (R. Cocks & Co.); Mr. Hart's excellent work, 'The Violin' (Dulau & Co.); M. Vidal's 'Les Instruments à Archet,' 3 vols. 4to. Paris, 1876-8, and Mr. E. H. Allen's recent publication 'Violin-making as it was and is' (Ward & Lock). [E.J.P.]

VIOLIN DIAPASON. An organ stop of 8 ft. pitch, in scale between the Open Diapason and the Dulciana. The pipes are open, and have a slot near the top. It is usually in the Swell organ. [W.Pt.]

VIOLIN-PLAYING. Some account of the musical employment of the mediæval fiddle, from which the viol and the violin were developed, will be found in the preceding article (p. 273). From this it appears that all the elements of violin-playing were already in existence in the 13th century. But it was not till the middle of the 16th that players on bowed instruments began to shake off the domination of the lute, with its tunings by fourths and thirds, and its excessive number of strings; and it appears that concurrently with this change, the modelled back, which gives the characteristic violin tone, came into use, and the fiddle finally took its present form. It seems to have spread quickly both in France and Italy. At Rouen, in 1550, a considerable number are said to have been employed in public performances, and Montaigne, in 1580, heard at Verona a Mass with violins. Too much importance, however, must not be attached to such statements, since the terms 'violin' and 'viola' were then often applied to stringed instruments of all kinds.

In order to gain an idea of the way the violin was played at this early period, we naturally look to the scores of contemporaneous composers. But here we meet with a difficulty. Down to the end of the 16th century we do not find the instruments specified by which the different parts are to be played. On the titles of the earlier works of A. and G. Gabrieli (1557-1613) we read: 'Sacrae Cantiones, tum viva voce tum omnis generis Instrumentis cantatu commodissimæ' (most convenient for the voice, as for all kinds of instruments), or 'Sacrae Symphonie tam vocibus quam instrumentis' (for voices as well as instruments); or 'Psalmi tum omnis generis instrumentorum tum ad vocis modulationem accomodati' (Psalms for all kinds of instruments and the voice); or 'Buone da cantare e suonare,' or other similar directions.¹ No doubt settled usages prevailed in this respect, and it is of course to be assumed that whenever violins were employed, they took the upper part of the harmony. It is obvious that, as long as the violins had merely to support and to double the soprano-voice, the violin-parts were of extreme simplicity. Soon, however, we meet with indications of an independent use of the violin. As early as 1543 Silvestro Ganassi, in the first part of his 'Regula Rubertina' (Venice), speaks of three varieties of violins as Viola di Soprano, di Tenore, e di Basso; and Castiglione, in his 'Cortigiano,' mentions a composition as written for 'quattro viole da arco,' which almost seems to indicate a stringed quartet. Towards the end of the century we meet with the Balletti of Gastoldi and Thomas Morley, some of which were printed without words, and appear, therefore, to have been in-

¹ These expressions are exactly equivalent to the words so often found on the title-pages of English madrigals of the 17th century—'Apt for vocals [viols] and voices.'

tended for independent instrumental performance. Nevertheless, they are entirely vocal in character, and do not exceed the compass of the human voice. Among the earliest settings which are not purely vocal in character are the 'Canzoni da sonare' by Maschera (1593),—originally, perhaps, written for the organ, but printed in separate parts, and evidently therefore intended for performance by various instruments. The earliest instance of a part being specially marked for 'Violino' we find in 'Concerti di Andrea e Giovanni Gabrieli—per voci e stromenti musicali Venetia, 1587.' Up to this time the leading instrument of the orchestra was the Cornetto (Germ. *Zinke*)—not, as might be concluded from its German name, an instrument made of metal, but of wood. The parts written for it correspond to the oboe parts in Handel's scores. In Gabrieli's the cornetti alternate with the violins in taking the lead. His instrumental compositions may roughly be divided into two classes, the one evidently based on his vocal style, the other decidedly instrumental in character. In a 'Sonata' belonging to the first class, we find an instrumental double-choir, a cornetto and 3 trombones forming the first choir, a violin and 3 trombones the second, and the two being employed antiphonally; the setting is contrapuntal throughout, and the effect not unlike that of a motet for double-choir. The violin-part does not materially differ from that for the cornetto. To the second class belong the Sonatas and Canzoni for 2 or 3 violins with bass. Here the setting is much more complicated, mostly in fugato-form (not regular fugues), reminding us to a certain extent of organ-style, and certainly not vocal in character, but purely instrumental. The scores of Gabrieli contain the first beginnings of the modern art of instrumentation, and mark an epoch in the history of music. Not content with writing, in addition to the voices, obligato instrumental parts, he takes into consideration the quality (*timbre*) of the various instruments. That this should have been brought about at the very period in which the violin came into general use, can certainly not be considered a mere accident, although it may be impossible to show which of the two was cause and which effect. Once the violin was generally accepted as the leading instrument of the orchestra, its technique appears soon to have made considerable progress. While Gabrieli never exceeds the 3rd position, we find but a few years later, in a score of Claudio Monteverde (1610), passages going up to the 5th position: after an obligato passage for 2 cornetti, enter the violins (1st and 2nd):

The manner in which, in this example, the violins are¹ used 'divisi' is worthy of notice. In another work of Monteverde's, 'Combattimento di Tancredi e Clorinda, di Claudio Monteverde. Venezia, 1624,'² we find modern violin-effects introduced in a still more remarkable way. Here we have recitatives accompanied by *tremolos* for violins and bass, *pizzicatos* marked thus, 'Qui si lascia l'arco, e si strappano le corde con duoi diti'; and afterwards, 'Qui si ripiglia l'arco.' That violinists were even at that time expected to produce gradations of tone with the bow is proved by the direction given respecting the final pause of the same work: 'Questa ultima nota va in arcata morendo.'

The earliest known solo composition for the violin is contained in a work of BIAGIO MARINI, published in 1620. It is a 'Romanesca per Violino Solo e Basso se piaci' (*ad lib.*) and some dances. The Romanesca³ is musically poor and clumsy, and, except that in it we meet with the shake for the first time, uninteresting. The demands it makes on the executant are very small. The same may be said of another very early composition for violin solo, 'La sfera armoniosa da Paolo Quagliati' (Roma 1623).⁴ Of far greater

¹ Quite in accordance with Barlior's advice.

³ Reprinted in the Appendix of Wasielowski's book: 'Die Violine im XVII. Jahrhundert.'

importance, and showing a great advance in execution, are the compositions of CARLO FABINA, who has justly been termed the founder of the race of violin-virtuosos. He published in 1627, at Dresden, a collection of Violin-pieces, Dances, French airs, Quodlibets, etc., among which a 'Capriccio stravagante' is of the utmost interest, both musically and technically. Musically it represents one of the first attempts at tone-picturing (*Klangmalerei*), and, however crude and even childish, the composer evidently was well aware of the powers of expression and character pertaining to his instrument. He employs a considerable variety of bowing, double-stopping, and chords. The 3rd position, however, is not exceeded, and the fourth string not yet used. TARQUINIO MERULA (about 1640) shows a technical advance in frequent change of position, and especially in introducing octave-passages. PAOLO UCCELLINI, in his canzoni (1649), goes up to the 6th position, and has a great variety of bowing. Hitherto (the middle of the 17th century) the violin plays but an unimportant part as a solo instrument, and it is only with the development of the Sonata-form (in the old sense of the term) that it assumes a position of importance in the history of music. The terms 'Sonata,' 'Canzone,' and 'Sinfonia' were originally used in a general way for instrumental settings of all kinds, without designating any special form. Towards the year 1630, we find the first compositions containing rudimentally the form of the classical Violin Sonata. Its fundamental principle consisted in alternation of slow and quick movements. Among the earliest specimens of this rudimentary sonata-form may be counted the Sonatas of Giov. Battista Fontana (published about 1630), a Sinfonia by Mont' Albano (1629), Canzoni by Tarquinio Merula (1639), Canzoni and a Sonata by Massimiliano Neri (1644 and 51). From about 1650, the name Canzone falls out of use, and Sonata is the universally accepted term for violin-compositions. M. Neri appears to have been the first to have made the distinction between 'Sonata da chiesa' (church-sonata) and 'Sonata da camera' (chamber-sonata). The Sonata da chiesa generally consisted of 3 or 4 movements: a prelude, in slow measured time and of pathetic character, followed by an allegro in fugato-form; again a slow movement and a finale of more lively and brilliant character. The Sonata da camera, at this early period, was in reality a Suite of Dances—the slow and solemn Sarabandes and Allemandes alternating with the lively Gavottes, Giges, etc. The artistic capabilities of the violin, and its powers for musical expression, once discovered, the Roman Catholic clergy, who have ever been anxious to avail themselves of the elevating and refining power of the fine arts, were not slow to introduce it in the services of the Church. We have seen already the extended use which Gabrieli, in his church-music, made of orchestral accompaniments, and how, from merely supporting and doubling the voices, he proceeded to obligato instrumental settings. From about 1650, instrumental performances—unconnected with vocal music—began to form a regular part

TABLE SHOWING THE CONNEXIONS OF THE PRINCIPAL SCHOOLS OF VIOLIN-PLAYING, AND THE RELATION OF MASTER AND PUPIL.

The date given is of birth, except where marked otherwise. The lines — indicate direct pupilship.

of the services of the Church. This was probably nothing new as regards the organ, but the violin was now introduced into the Church as a solo-instrument, and the Violin Sonata—then almost the only form of violin-composition—thereby received the serious and dignified character which exercised a decisive influence upon the future development, not only of violin-playing, but of instrumental music generally. The influence of this connexion with the Church afterwards extended to secular violin-music. The Dances pure and simple soon made room for more extended pieces of a Dance character, and afterwards almost entirely disappear from the Chamber Sonata, which begins more and more to partake of the severer style of the Church Sonata, so that at last a difference of name alone remains, the Church-Sonata-form dominating in the Chamber as much as it did in the Church. The first great master of the Violin-Sonata is GIOVANNI BATTISTA VITALI (1644-1692). He cultivated chiefly the Chamber-Sonata, and his publications bear the title of 'Balletti, Balli, Correnti, etc. da Camera,' but in some of his works the transition from the Suite-form to the later Sonata da camera, so closely allied to the Church-Sonata, is already clearly marked. In musical interest, Vitali's compositions are greatly superior to those of his predecessors and contemporaries. His dances are concise in form, vigorous in character, and in some instances—especially in a Ciaccona with variations—he shows high powers as a composer. [See VITALI.] His demands on execution are in some instances not inconsiderable, but on the whole he does not represent in this respect any material progress.

The first beginnings of violin-playing in an artistic sense in GERMANY were doubtless owing to Italian influence. As early as 1626 Carlo Farina was attached to the Court of Dresden. About the middle of the century a certain JOHANN WILHELM FUCHSHEIM is mentioned in the list of members of the Dresden orchestra, under the title of 'Deutscher Concertmeister,' implying the presence of an Italian leader by his side. Gerber, in his Dictionary, mentions two publications of his for the violin: (1) 'Violin-Exercitium aus verschiedenen Sonaten, nebst ihren Arien, Balladen, Allemanden, Couranten, Sarabanden und Giguen, von 5 Partien bestehend, Dresden, 1687'; and (2) 'Musikalische Tafelbedienung (Dinner-Service), Dresden, 1674.' THOMAS BALTZAR was, according to Burney and Hawkins, the first violinist who came to England. He appears to have greatly astonished his audiences, especially by his then unknown efficiency in the shift, in which however he did not exceed the 3rd position. It is amusing to read, that a certain D. Wilson, who was then considered the best connoisseur of music at Oxford, confessed that, when he first heard Baltzar play, he had looked at his feet to see whether he had a hoof, as his powers seemed to him diabolic. Baltzar's compositions consist of Chamber Sonatas in the sense of Suites of Preludes, Dances and Variations. Burney, in the fourth volume of his

History, gives an Allemande of his. Two sets of 'The Division Violin' were published in London in 1688 and 1693. [See vol. i. p. 451 a]. Of far greater importance than Baltzar are two German violinists, JOHANN JACOB WALTHER (born 1650), and FRANZ HEINRICH BIBER (died 1698). WALTHER [see that article] appears to have been a sort of German Farina, with a technique much further developed; he ascends to the 6th position and writes difficult double-stops, arpeggios and chords. His compositions are, however, clumsy and poor in the extreme, and if we consider that he was a contemporary of Corelli, we cannot fail to notice the much lower level of German art as compared with that of Italy. BIBER was no doubt an artist of great talent and achievement. [See vol. i. p. 240.] His technique was in some respects in advance of that of the best Italian violinists of the period, and from the character of his compositions we are justified in assuming that his style of playing combined with the pathos and nobility of the Italian style that warmth of feeling which has ever been one of the main characteristics of the great musical art of Germany.

In tracing the further progress of violin-playing we must return to Italy. After Vitali it is TORELLI (1657-1716) who chiefly deserves our attention, as having added to the Sonata a new and important kind of violin-composition, the Concerto. In his Concerti da Camera and Concerti grossi we find the form of the Sonata da Chiesa preserved, but the solo-violins (one or two) are accompanied not only by a bass, as in the Sonata, but by a stringed band (2 orchestral or ripieno violins, viola and bass), to which a lute or organ part is sometimes added, an arrangement which on the whole was followed by Vivaldi, Corelli, and Handel. If no remarkable progress in the technique of the instrument was effected by the introduction of the Concerto, it is all the more striking to notice how henceforth the best composers for the Church contribute to the literature of the violin. We have, in fact, arrived at a period in which the most talented musicians, almost as a matter of course, were violinists—just as in modern times, with one or two exceptions, all great composers have been pianists. The most eminent representative of this type of composer-violinist is ARCANGELO CORELLI (1653-1713). His works, though in the main laid out in the forms of his predecessors and, as far as technique goes, keeping within modest limits, yet mark an era both in musical composition and in violin-playing. He was one of those men who seem to sum up in themselves the achievements of their best predecessors. Corelli's place in the history of instrumental music is fully discussed elsewhere. [See CORELLI, vol. i. p. 400; SONATA, vol. iii. p. 556.] Here it remains only to state that in both main branches of violin-composition, in the Sonata and the Concerto, his works have served as models to the best of his successors. They are distinguished chiefly by conciseness of form and logical structure. There is nothing tentative, vague or experimental in them; the various parts seem balanced to a

nicety, the whole finished up and rounded off with unerring mastery. His harmonies and modulations, though not free from monotony, are sound and natural; simplicity and dignified pathos on the one hand, and elegant vivacity on the other, are the main characteristics of his style. The technical difficulties contained in his works are not great, and in this respect Corelli's merit does not lie in the direction of innovation, but rather of limitation and reform. We have seen how the violin at the beginning of its career simply adopted the style of the vocal music of the period, how later on it took in the orchestra the place of the cornetto, and how, though very gradually, a special violin style began to be formed. Now followed a period of experiments—all more or less tending towards the same end—a style which should correspond to the nature, ideal and mechanical, of the instrument. In both respects, as we have seen, remarkable progress was made; although exaggeration was not always avoided. The virtuoso *par excellence* made his appearance even at this early period. Corelli, by talent and character had gained a position of authority with his contemporaries, which has but few parallels in the history of music. This authority he used to give an example of artistic purity and simplicity, to found a norm and model of violin-playing which forms the basis of all succeeding legitimate development of this important branch of music.

Before mentioning the most important of Corelli's pupils we have to consider the influence exercised on violin-playing by the Venetian VIVALDI (died 1743). Though by no means an artist of the exalted type of Corelli, his extraordinary fertility as a composer for the violin, his ingenuity in making new combinations and devising new effects, and especially his undoubted influence on the further development of the Concerto-form, give him an important position in the history of violin-playing. While in the *Concerti grossi* of Torelli and Corelli the solo-violins are treated very much in the same manner as the orchestral violins—the solo-passages being usually accompanied by the bass alone—Vivaldi not only gives to the solo-violins entirely distinct passages of a much more brilliant character, but he also adds to his orchestra oboes and horns, which not merely double other parts, but have independent phrases and passages to perform—thereby giving the earliest instance of orchestration as applied to the Concerto.

As an executant the Florentine VERACINI¹ exercised a greater influence than Vivaldi. Owing in great measure to its connexion with the Church, the Italian school of violin-playing had formed a pure and dignified style, which was brought to perfection by Corelli. As far as it went, nothing could be more legitimate and satisfactory in an artistic sense—yet there was something wanting, if this severe style was not to lapse into conventionality: the element of human individuality, strong feeling and passion. Some German masters—especially Biber—were

certainly not devoid of these qualities; but their efforts were more or less crude, and lacking in the fine sense for beauty of form and sound which alone can produce works of art of a higher rank. Veracini, a man of passionate temperament, threw into his performances and compositions an amount of personal feeling and life, which in his own day brought on him the charge of eccentricity, but which to us appears as one of the earliest manifestations of a style which has made the violin, next to the human voice, the most powerful exponent of musical feeling. His Violin Sonatas are remarkable for boldness of harmonic and melodic treatment, and of masterly construction. The demands he makes on execution, especially in the matter of double stops and variety of bowing, are considerable. His influence on Tartini—after Corelli the greatest representative of the Italian school—we know to have been paramount. [See TARTINI, vol. iv. p. 58.] TARTINI (1692–1770) by a rare combination of artistic qualities of the highest order, wielded for more than half a century an undisputed authority in all matters of violin-playing, not only in Italy, but in Germany and France also. He was equally eminent as a performer, teacher, and composer for the violin. Standing, as it were, on the threshold of the modern world of music, he combines with the best characteristics of the old school some of the fundamental elements of modern music. Himself endowed with a powerful individuality, he was one of the first to assert the right of individualism in music. At the same time we must not look in his works for any material change of the traditional forms. His Concertos are laid out on the plan of those of Corelli and Vivaldi, while his Sonatas, whether he calls them *da chiesa* or *da camera*, are invariably in the accepted form of the *Sonata da chiesa*. The *Sonata da camera* in the proper sense, with its dance forms, he almost entirely abandons. The difference between Tartini's style and Corelli's is not so much one of form as of substance. Many of Tartini's works bear a highly poetical and even dramatic character, qualities which, on the whole, are alien to the beautiful but colder and more formal style of Corelli. His melodies often have a peculiar charm of dreaminess and melancholy, but a vigorous and manly tone is equally at his command. His subjects, though not inferior to Corelli's in conciseness and clear logical structure, have on the whole more breadth and development. His quick passages are freer from the somewhat exercise-like, dry character of the older school; they appear to be organically connected with the musical context, and to grow out of it. As an executant Tartini marks a great advance in the use of the bow. While no material change has been made in the construction of the violin since the beginning of the 16th century, the bow has undergone a series of modifications, and only toward the end of the 18th century attained its present form, which combines in such a remarkable degree elasticity with firmness. [See BOW, vol. i. p. 264; TOURTE, vol. iv. p. 155.]

¹ Francesco Maria (about 1685–1750). See vol. iv. p. 289.

Whether Tartini himself did anything to perfect the bow, we are not aware, but the fact that old writers on musical matters frequently speak of 'Tartini's bow,' seems to point that way. At any rate, we know that in his time the bow gained considerably in elasticity, and in some letters and other writings of Tartini's we have direct evidence that he made a more systematic study of bowing than any one before him. The task of the violinist's left hand is a purely mechanical one: all power of expression rests with the bow. If we consider the character of Tartini's compositions, we cannot but see what great and new claims on expression, and consequently on bowing, are made in them. That these claims were fulfilled by Tartini in an extraordinary degree, is the unanimous opinion of his contemporaries: in the production of a fine tone in all its gradations, as well as in perfect management of a great variety of bowing, he had no rival. As regards the technique of the left hand he excelled particularly in the execution of shakes and double-shakes, than which there is no better test for those fundamental conditions of all execution, firmness and lightness of finger-movement. At the same time, to judge from his compositions, his *technique* was limited even in comparison to that of some of his contemporaries—he does not exceed the 3rd position, his double-stops are on the whole simple and easy. He appears to have adhered to the holding of the violin on the right side of the string-holder, a method which was a barrier to further development of the technique of the left hand. With him the exclusive classical Italian school of violin-playing reached its culminating point, and the pupils of Corelli and Tartini form the connecting links between that school and the schools of France and Germany. In this respect the Piedmontese SOMIS (about 1700–1763) must be considered the most important of Corelli's pupils. We do not know much of him as a player or composer, but as the teacher of GIARDINI (1716–1796), and of PUGNANI (1727–1803), the teacher of VIOTTI (1753–1824), his influence reaches down to Spohr and our own days. The most brilliant representatives of Italian violin-playing after Tartini were GEMINIANI and NARDINI. [See vol. i. p. 587; vol. ii. p. 446.] The former was a pupil of Corelli, the latter of Tartini. Their style is decidedly more modern and more brilliant than that of their great master's. Nardini's influence in Germany—where he passed many years—contributed much towards the progress of violin-playing in that country. Geminiani (1680–1761), who for a long time resided in London, was the first to publish a Violin-School of any importance. Compared with that of Leopold Mozart (see vol. ii. p. 379), which appeared a few years later, and on the whole is a work of much higher merit, Geminiani's 'school' shows an advance in some important points of *technique*. Here for the first time the holding of the violin on the left side of the string-holder is recommended—an innovation of the greatest importance, by which alone the high development of modern

technique was made possible. He goes up to the 7th position. As affording the only direct evidence of Corelli's method and principles (which in all main respects have remained ever since the basis of all legitimate and correct treatment of the instrument), Geminiani's book is still of the greatest interest. In LOCATELLI (1693–1764), another pupil of Tartini, a curious instance is afforded, how, in spite of the strongest school-influence, a powerful individuality will now and then, for better or worse, strike out a path for itself. While some of Locatelli's compositions afford clear evidence of his sound musicianship and genuine musical feeling, he shows himself in others, especially in a set of Caprices, to have been, to say the least, an experimentalist of the boldest type. In overstepping to an astonishing degree the natural resources and limits of the instrument, these caprices afford one of the earliest instances of charlatanism in violin-playing. [See LOCATELLI, vol. ii. p. 155.]

The beginnings of violin-playing in France date from a very early period. We have already seen that the very first known maker of violins, Duiffoprugcar, was called to France by Francis I., and that there is some evidence of the violin having very quickly gained considerable popularity there. Musical guilds spread throughout the country as early as the 14th century. The most important was the 'Confrérie de St. Julien,' headed by 'Le Roy des Ménétriers du Royaume de France.' [See ROI DES VIOLONS, vol. iii. p. 145.] Whatever historical or antiquarian interest may attach to these guilds, they did little to further musical art in general or the art of violin-playing in particular. We have no means of forming an estimate of the proficiency as violinists of these ménétriers, but, to judge from the extreme simplicity of the violin-parts in the scores of Lulli, who in 1652 was appointed Director of the Royal Chapel (Les vingtquatre violons du Roy), it cannot have been great. [See vol. iv. p. 266.] As late as 1753 a certain Paris musician, Corrette, writes that when Corelli's Violin Sonatas came to Paris, no violinist was to be found who could have played them. The violin compositions Frenchmen of the same period, among which of the Suites of RÉBEL (about 1700), a pupil of Lulli, were counted the best, are in every respect inferior to the average of Italian and even of German productions of the same period: the setting is as poor and even incorrect as the treatment of the instrument is primitive. FRANÇOIS FRANÇOEUR, in his Sonatas (1715), shows decided progress in both respects. (As a curiosity it may be noticed that François, in order to produce certain chords, adopted the strange expedient of placing the thumb on the strings.) As was the case in Germany, it was owing to the influence of the Italian school, that violin-playing in France was raised to real excellence. The first French violinist of note who made his studies in Italy under Corelli was BAPTISTE ANET (about 1700). Of much greater importance however was JEAN MARIE LÉOLAIN (1697–1764), a pupil of Somis, who again was a direct pupil of Corelli's.

As a composer for the violin L clair has among Frenchmen down to Rode hardly a rival. If most of his works are characterised by the essentially French qualities of vivacity, piquancy, and grace, he also shows in some instances a remarkable depth of feeling, and a pathos which one would feel inclined to ascribe to Italian influence, if at the same time it did not contain an element of theatrical pomposity characteristic of all French art of the period. His *technique* shows itself, within certain limits—he does not go beyond the 3rd position—to be quite as developed as that of his Italian contemporaries. By the frequent employment of double-stops a remarkable richness of sound is produced, and the bow is used in a manner requiring that agility and lightness of management for which at a later period the French school gained a special reputation.

Among other French violinists, directly or indirectly formed by the Italian school, may be mentioned PAGIN (born 1721), TOUCHEMOULIN (1727–1801), LAHOUSSE (1735–1818), BARTH LEMON (died 1808), and BERTHAUME (1752–1828). Meanwhile an independent French school began to be formed of which PIERRE GAVINI S (1728–1800) was the most eminent representative. Of his numerous compositions, ‘Les vingt quatre matin es’—a set of studies of unusual difficulty—have alone survived. Without partaking of the eccentricity of Locatelli’s Caprices, these studies show a tendency towards exaggeration in *technique*. Beauty of sound is frequently sacrificed—difficulty is heaped on difficulty for its own sake, and not with the intention of producing new effects. At the same time, so competent a judge as F tis ascribes to Gavini s a style of playing both imposing and graceful.

Not directly connected with any school, but in the main self-taught, was ALEXANDRE JEAN BOUCH R (1770–1801). He was no doubt a player of extraordinary talent and exceptional technical proficiency, but devoid of all artistic earnestness, and was one of the race of charlatan-violinists, which has had representatives from the days of Farina down to our own time. If they have done harm by their example, and by the success they have gained from the masses, it must not be overlooked that, in not a few respects, they have advanced the *technique* of the violin. The advent of VIOTTI (1753–1824) marks a new era in French violin-playing. His enormous success, both as player and composer, gave him an influence over his contemporaries which has no parallel, except in the cases of Corelli and Tartini before him, and in that of Spohr at a later period.

In Germany the art of Corelli and Tartini was spread by numerous pupils of their school, who entered the service of German princes. In Berlin we find J. G. GRAUN (1700–1771), a direct pupil of Tartini, and F. BENDA (1709–1786), both excellent players, and eminent musicians. In the south, the school of Mannheim numbered among its representatives JOHANN CARL STAMITZ (1719–1761), and his two sons

Carl and Anton—(the latter settled in Paris, and was the teacher of R. Kreutzer); CHR. CANNABICH (1731–1798), well known as the intimate friend of Mozart; WILHELM CRAM R (1745–1799), member of a very distinguished musical family, and for many years the leading violinist in London; IGNAZ FR NZL (born 1736) and his son Ferdinand (1770–1833). The Mannheim masters, however, did not contribute anything lasting to the literature of the violin. On the whole, the Sonata, as cultivated by Tartini, remained the favourite form of violin compositions. At the same time, the Concerto (in the modern sense) came more and more into prominence. The fact that W. A. Mozart, who from early childhood practised almost every form of composition then in use, wrote no sonatas for violin¹ solo, but a number of concertos for violin and orchestra, is a clear indication of the growing popularity of the new form. Mozart in his younger years was hardly less great as a violinist than a piano-player, and his Violin Concertos, some of which have been successfully revived of late, are the most valuable compositions in that form anterior to Beethoven and Spohr. While they certainly do not rank with his Pianoforte Concertos, which date from a much later period, they stand very much in the same relation to the violin-playing of the period, as his Pianoforte Concertos stand to contemporary pianoforte-playing. Here, as there, the composer does not disdain to give due prominence to the solo instrument, but the musical interest stands in the first rank. The scoring, although of great simplicity—the orchestra generally consisting of the stringed quartet, two oboes, and two horns only—is full of interest and delicate touches. On the other hand, the Concertos of Tartini and his immediate successors are decidedly inferior to their Solo Sonatas. The Concerto was then in a state of transition: it had lost the character of the Concerto grosso, and its new form had not yet been found, although the germ of it was contained in Vivaldi’s Concertos. On the other hand, the Solo Sonata had for a long time already obtained its full proportions, and the capabilities of the form seemed wellnigh exhausted. Meanwhile the Sonata-form, in the modern sense of the word, had been fully developed by composers for the pianoforte, had been applied with the greatest success to orchestral composition, and now took hold of the Concerto. Mozart and Viotti produced the first Violin Concertos, in the modern sense, which have lasted to our day. Mozart, however, in his later years gave up violin-playing altogether,² and although, like Haydn, he has shown in his chamber-music how thoroughly in sympathy he was with the nature of the violin, he did not contribute to the literature of the instrument any works wherein he availed himself of the technical proficiency attained by the best violinists of his time. In this respect it is significant that Spohr, whose unbounded admiration for Mozart is well known,

¹ That is, for violin without accompaniment.

² His latest Violin Concerto dates from 1776. (See M chel, No. 203.)

seems never to have played his Violin Concertos in public. Viotti and Rode were Spohr's models for his earlier Concertos.¹

Towards the end of the 17th century Paris became the undisputed centre of violin-playing, and the Paris school, represented by Viotti, as depository of the traditions of the classical Italian school; by KREUTZER (1766-1831), who, though born at Versailles, was of German parentage, and a pupil of Anton Stamitz; and by RODE (1774-1830), and BAILLOT (1771-1842), both Frenchmen, assumed a truly international character. The single circumstance that four violinists of such eminence lived and worked together at the same place, and nearly the same time, would be sufficient to account for their essential influence on the taste and style of this period. Differing much in artistic temperament, they all took the same serious view of their art, and shared that musical earnestness which is averse to mere technical display for its own sake, and looks on execution as the means of interpreting musical ideas and emotions. As teachers at the newly founded Conservatoire, Rode, Kreutzer, and Baillot formally laid down the principles of violin-playing as they prevail to this day. If it is to Germany that we have to look for their true successors, apparently because their style, founded on a broad and truly musical basis, irrespective of national peculiarities, found its most congenial soil in the country of the great composers, who in their works are truly international, as all art of the very first rank must be; while the strongly pronounced national character of French violinists was bound sooner or later to assert itself, and to return to a characteristically French style of playing. Baillot, in his *'L'Art du Violon,'* points out as the chief distinction between the old and the modern style of violin-playing, the absence of the dramatic element in the former, and its predominance in the latter. In so far as this means that the modern style better enables the player to bring out those powerful contrasts, and to do justice to the enlarged horizon of ideas and emotions in modern musical compositions, it merely states that executive art has followed the progress, and shared in the characteristic qualities of the creative art of the period. A comparison of Mozart's String Quartets with those of Beethoven, illustrates to a certain extent this difference. The style of playing which was admirably adapted for the rendering of the works not only of Corelli and Tartini, but also of Handel, and even Mozart, could not cope with Haydn, and still less with Beethoven. The great merit of the masters of the Paris School was, that they recognised this call for a freer and bolder treatment of the instrument, and approached their task in a truly musical and artistic spirit.

The manner and style of the Paris school were brought to Germany by Viotti and Rode, who

¹ Mozart's Solo Violin Concertos, with two exceptions, remain in MS., and indeed seem to have undergone an almost total eclipse till our own days, when one or two of them have been resuscitated by David, Joachim, and others.

both travelled a great deal, and by their performances effected a considerable modification in the somewhat antiquated style then prevailing in that country. The Mannheim school, as already mentioned, was the most important centre of violin-playing in Germany during the second half of the 18th century. It produced a number of excellent players, such as the three Stamitzes, Chr. Cannabich, Ferd. Fränzl, and others. They had adhered more closely than the French players to Tartini's method and manner, and not only Spohr, but before him Mozart, speaks of their style as old-fashioned, when compared with that of their French contemporaries. The fact that the last and final improvements in the bow as made by Tourte of Paris, were probably unknown to them, would account for this. [See p. 155.] Another remarkable player belonging to this school, was J. F. ECK (born 1766), whose brother and pupil FRANZ ECK (1774-1809), was the teacher of Spohr. Both the Ecks appear to some extent to have been under the influence of the French school. Spohr in his Autobiography speaks of Franz Eck as a French violinist. Spohr therefore can hardly be reckoned as of the Mannheim school, and we know that later on he was greatly impressed by Rode, and for a considerable time studied to imitate him. His earlier Concertos are evidently worked after the model of Rode's Concertos. Thus—granting the enormous difference of artistic temperament—Spohr must be considered as the direct heir of the art of Viotti and Rode. At the same time, his individuality was so peculiar, that he very soon formed a style of his own as a player no less than as a composer. As a composer he probably influenced the style of modern violin-playing even more than as a player. His Concertos were, with the single exception of Beethoven's Concerto, by far the most valuable contributions to the literature of the violin, as a solo instrument, hitherto made. Compared even with the best of Viotti's, Rode's, or Kreutzer's Concertos they are not merely improvements, but in them the Violin Concerto itself is lifted into a higher sphere, and from being more or less a show-piece, rises to the dignity of a work of art, to be judged as much on its own merits as a musical composition, as by its effectiveness as a solo-piece. Without detracting from the merits of the works of the older masters, it is not too much to say that there is hardly enough musical stuff in them to have resisted the stream of superficial virtuoso-music which more than ever before flooded the concert-rooms during the first half of the 19th century. We believe that it was mainly owing to the sterling musical worth of Spohr's violin compositions that the great qualities of the Classical Italian and the Paris schools have been preserved to the present day, and have prevented the degeneration of violin-playing. Spohr had great powers of execution, but he used them in a manner not wholly free from one-sidedness, and it cannot be said that he made any addition to the technique of the instrument. He set a great example of

purity of style and legitimate treatment of the instrument—an example which has lost none of its force in the lapse of more than half a century.

Next to Spohr no one has had a greater influence on the style of modern violin-playing than Paganini. The fame of Corelli and Tartini had spread far beyond their own country; the fiddlers of Italy, like the singers, travelled during the 18th century all over Europe in search of gold and laurels. Some of them returned to enjoy a quiet old age under their native sky; others, like Viotti, never came back. A great many either settled abroad, in Paris or London, or were attached to some of the many courts of Germany. Thus we find Geminiani and Giar dini in London, Viotti alternately in Paris and London, Locatelli at Amsterdam, Nardini at Stuttgart, as soloists, leaders, and teachers. In this way the school of Italy was virtually transferred to France and Germany by the pupils of Tartini; and at the beginning of the century it was practically extinct in Italy, where violin-playing, with few exceptions, had sunk to a very low level. But Italy afterwards produced a few violinists of great eminence, who, more or less self-taught, achieved enormous successes as virtuosi, and no doubt have largely influenced modern violin-playing. LOLLI (about 1730–1802) was one of these; an extraordinary fiddler, but a poor musician. Of much greater importance was PAGANINI (1784–1840). The sensation he created wherever he appeared was unprecedented. By his marvellous execution, and his thoroughly original, though eccentric personality and style, he for a time held the public and the musicians of Europe spell-bound. His influence on the younger violinists of the period could not fail to be considerable—more so in France than in Germany, where the more serious spirit prevailing among musicians and the presence of such a master as Spohr, were powerful enough to keep the influence within bounds. The growing importance and popularity of chamber-music for the violin, especially of the String Quartet, since Haydn, Mozart, and Beethoven, were another barrier against the predominance of an exclusive virtuoso style of violin-playing in Germany. French violinists, especially Baillot, were certainly anxious enough to attack these highest tasks of the violinist, but there can be no doubt that in their hands the works of the German classics assumed an aspect which was too frequently more in accordance with the French character of the performers than with the intentions of the composers. In this respect the minute directions which Baillot gives for the performance of a great number of passages extracted from the works of most eminent composers, is extremely curious and instructive. It was but natural that Paganini should have a number of imitators, who copied with more or less success his harmonics and double-harmonics, his long and quick staccatos, pizzicatos with the left hand—in fact, all those technical feats which, though not invented by

him, he brought to the highest pitch of perfection. The style of the man, which had its source in his genius and originality, was inimitable. He could not, and did not start a school. SIVORI (born 1817) claimed to be his only actual pupil. But, pupils or no pupils, Paganini caused nothing short of a revolution in the technique of the French school. The striking change which the general style of violin-playing underwent in France during the third decade of this century has, however, other and deeper causes, and finds its explanation in the complete revolution in musical taste which took place at that period. The Classical Paris school was in reality the school of Italy, which for the time being had made Paris, as it were, its headquarters. Founded by Viotti, the Italian, at a time when German instrumental music, in the persons of Haydn and Mozart, was occupying the attention of the whole musical world, this School hardly reflected the salient points of the French national character, although it harmonised well with the classical tendencies of the sister arts in that country. In Baillot's 'L'Art du Violon,' we cannot fail to recognise already a leaning towards a style which was more in harmony with the genius of the French nation—a style, brilliant, showy, full of shrewdly calculated effects, elegant, and graceful, aiming chiefly at a highly polished execution, and distinguished by what they themselves untranslatableably call *élan*. At the same time, the French school gained, in what might be termed its classical period, a basis and a systematic method for the technical training of violinists, the advantages of which are still so apparent in the highly finished technique of a large number of French violin-players of the present day.

It is only within the last fifty years that instrumental composition, apart from the stage, has gained any great importance in France. As in Italy, so there, the operatic style of the period determined the general musical style. Thus we find the chaste and graceful style of Méhul and Boieldieu reflected in Rode and the best of his contemporaries. The success of Rossini threw everything else for a time into the shade, and brought about a complete revulsion of musical taste in France; but if Rossini's sparkling and graceful style appealed to one prominent feature of the national character, it was Meyerbeer, with his supreme command of theatrical effect, who took hold of another. The most eminent native opera composers, Adam, Auber, Herold, and Halévy, while no doubt strongly French in character, did not escape the powerful influence of these two masters; and it is but natural that in common with all other branches of musical art, violin-playing and composition for the violin had to submit to it. While in Germany the spirit of instrumental music was almost as dominant on the stage as in the concert-room, and delayed the formation of a truly dramatic style of music, in France the operatic style was as supreme in the concert-room as on the stage; and in that sense

Baillot's characterisation of the modern style of violin-playing as the dramatic style is quite correct.

The two most eminent representatives of the modern French school, DE BÉRIOT (1802-1870) and H. VIEUXTEMPS (1820-1881), were of Belgian nationality. The Belgian school of violin-playing is, however, in reality but a branch, though a most important one, of the Paris school. De Bériot's style as a composer for the violin seems to have been formed under the influence of the modern Italian opera composers, especially of Rossini, Donizetti, and Bellini; and his Concertos and *Airs variés*, which have attained an immense popularity all over the world, share the strong and weak points of modern Italian music. They have plenty of melody, though of a somewhat sentimental kind, and their general style, without affording much difficulty to the player, is most brilliant and effective. If De Bériot's ideas are on the whole superficial and often not free from triviality, they are also unpretentious and unaffected. The same can hardly be said of Vieuxtemps. He certainly was a great violinist, and as a musician decidedly superior to Bériot. His compositions contain ideas of great beauty and are often cleverly worked out, but at the same time there is in them too frequently an element of theatrical bombast and pretension which is analogous to Meyerbeer's grand-opera style, just as De Bériot's is to the spontaneous melody of Italian opera. De Bériot's treatment of the instrument, though often commonplace, does not go against its nature, while Vieuxtemps not unfrequently seems to do violence to it, and in some of his *tours de force* oversteps the boundaries of the beautiful. Both these great artists travelled much, and gained by the great excellence of their performances universal success in almost every European country. Vieuxtemps was also the first violinist, of the highest rank, who visited America. De Bériot, as leader at the Brussels Conservatoire, formed a great number of excellent violinists, the best known of whom are the Spaniard MONASTERIO (born 1836), SAURET (born 1852), SCHRADIECK (born 1846), and HERMAN (born 1844). JEAN BECKER (born 1836), and LAUTERBACH (born 1832) also studied for some time under him.

Among Baillot's pupils F. A. HABENECK (1781-1849) attained a great reputation as conductor and as teacher. He counts among his pupils SAINTON (born 1813), PRUME (1816-1849), ALARD (born 1815) and LÉONARD (born 1819). The two last, with MASSART (born 1811), a pupil of Kreutzer, have for thirty years past, as teachers at the Paris Conservatoire, headed the Franco-Belgian school. Alard's most eminent pupil is SARASATE (born 1844). MARSICK and M. DENGREMENT (born 1866) studied under Léonard.

WIENIAWSKI, LOTTO, and TERESINA TUA, are pupils of Massart. Wieniawski (1835-1880) was indeed a wonderful player. He possessed a beautiful tone, an astonishing technique of the left hand and of the bow, and threw into his performances

an amount of life and warmth which, if it now and then led to some exaggeration, was irresistible. The marvellous perfection of Sarasate's playing, and the gracefulness of his style, are too well known to require further comment. The character of his répertoire deserves, however, special attention. It is a very extended one, and illustrates a remarkable general change in the répertoires, if not in the style, of the younger generation of French violinists. Formerly the French violinist, no less than the German one, as a matter of course, wrote his own Concertos—or if that was beyond his power, his own Fantasias or the like. Unfortunately, French violinists, with few exceptions, have not been highly trained musicians. We know that Rode and De Bériot had even to seek assistance in the scoring of their Concertos. The descent from the compositions of Rode and Kreutzer to those of De Bériot, Alard, and Léonard, is only too apparent. The operatic Fantasias of the last two mark, we may say, the lowest point to which composition for the violin had hitherto descended. Of late years the taste for serious instrumental music has grown more and more universal in France, and a reaction has set in. Not that the public has left off its delight in brilliant technical display. The fabulous successes of some modern virtuosi prove the contrary. But these triumphs have been won as much by their performance of the best Concertos by the best composers as of brilliant show-pieces.

In Germany we find the schools of Cassel, Leipzig, and Vienna taking the lead. Spohr at Cassel had a great number of pupils, but his manner and style were too exclusively individual to form a school. His most eminent pupil was FERDINAND DAVID (1810-1873) who as founder of the Leipzig School exercised great influence on violin-playing in Germany. It can hardly be said that he perpetuated in his pupils Spohr's method and style. Entirely differing from his great master in musical temperament, enjoying from his early youth close intercourse with Mendelssohn, and strongly imbued with the spirit of modern music as manifested in Beethoven, he represents a more modern phase in German violin-playing and an eclecticism which has avoided onesidedness not less in matters of technique than of musical taste and judgment generally. He was the first who played Bach's Violin Solos, and all the last Quartets of Beethoven (not even excepting the Fugue) in public. Schubert's Quartets and Quintet were on the programmes of his chamber-concerts at the time when they had, except perhaps at Vienna, nowhere yet been heard in public. [See vol. iii. p. 356 b.] As a teacher his chief aim was to give to his pupils a thorough command of the technique of the violin, and to arouse and develop their musical intelligence. There as elsewhere the classical works of violin literature naturally formed the main stock of teaching-material. At the same time David laid great stress on the study of the modern French masters, maintaining that, irrespective of musical value, their works,

being as a rule written with the aim of bringing out the capabilities of the violin, contain a large amount of useful material for technical training, which in the end must benefit and improve the execution of music of any style. The correctness of this theory is strikingly proved by JOACHIM, who as Boehm's pupil at Vienna, was made thoroughly familiar with the technique of the modern French school, while he studied most of his classical repertoire at Leipzig under David's guidance, and in what we may term Mendelssohn's musical atmosphere. Joachim's unlimited command over technical difficulties in music of any style, which enables him to do equal justice to Paganini and Bach, is undoubtedly largely owing to the fact that his early training was free from onesidedness, and that he gained through the study of brilliant modern music the highest finish as well as the completest mastery. David trained a large number of good violinists: —Japha (Cologne), Röntgen (Leipzig), Jacobsohn (Bremen), Schradieck (who succeeded him at Leipzig), F. Hegar (Zürich), and many more. By far the most eminent of his pupils is WILHELMJ (born 1845), a virtuoso of the very first rank, who combines a fine broad tone with a technique of the left hand unrivalled by any other living violinist.

A most powerful influence on the style of the German violinists of the present day has been exercised by the Vienna school, more especially by the pupils of BOEHM (1798–1876). Although it is difficult to trace any direct connexion between the Viennese violin-players of the last century and the school of Italy, Italian violinists came very early to Vienna, and the local players adopted their method and style. We know that Tartini was for three years in the service of Count Kinsky, a Bohemian noble, and also that Trani, Ferrari, and other Italian virtuosos came to Vienna. It is remarkable that the leading Viennese composers of the last century, down to Haydn, were almost without exception violinists. Some of them, like Anton Wranitzky and Dittersdorf, were virtuosos of high rank, but most of them were in the first place composers and leaders, and in the second place only violinists. Naturally they excelled less as solo-players than in the performance of chamber-music, which at that period hardly enjoyed anywhere so much popularity as at Vienna. It was the time of preparation for the great classical period which opened with Haydn, and the circumstance that the violin was even then cultivated in Vienna far more in connexion with good and serious music than merely as a solo-instrument, has undoubtedly contributed much towards giving to the later representatives of that school their thoroughly musical character, and towards making Vienna the earliest home of quartet-playing. As a quartet-player SCHUPPANZIG (1776–1830), a pupil of Wranitzky, attained great reputation, and may be regarded as standing first on the roll of great quartet-players. For many years in close intercourse with Haydn and Beethoven, enjoying the advice and guid-

ance of these great masters in the production of their Quartets, he established the style of quartet-playing which has been handed down by the most eminent Vienna violinists to our days. His greatest pupil was MAYSEDER (1789–1863), a brilliant solo-player, of a style more elegant than powerful. Among his pupils the best known are MISKA HAUSER (born 1822), and DE AHNA (born 1835). The latter, an excellent soloist, has lived for many years at Berlin, and plays second violin in Joachim's quartet.

It is however through the pupils of JOSEPH BOEHM (1798–1876) that the Vienna school attained general renown and importance. ERNST (1814–1865), G. HELLMESBERGER sen., DONT sen., JOACHIM, LUDWIG STRAUS, RAPPOLDI, and GRÜN, all studied under Boehm. Boehm himself can hardly be reckoned as belonging to the old Vienna school, since he made his studies under Rode, and no doubt was also influenced by Spohr, who resided at Vienna in 1813, 14, and 15. The modern Vienna school therefore, though certainly not uninfluenced by the musical traditions of Vienna, appears in reference to technique and specific violin-style to be based on the principles of the classical French school. Counting among its representatives players of a great diversity of talent and artistic temperament, who afterwards formed more or less a style of their own, the Vienna school, or, strictly speaking, Boehm's school, can hardly be said to have been directly continued at Vienna. Boehm, although a thoroughly competent violinist, was not a player of great genius, but he was possessed of an eminently sound and correct taste and judgment in musical and technical matters, and had a rare talent for teaching. Ernst, next to Joachim the most famous of his pupils, came largely under the influence of Paganini, whose style he for some time closely imitated. Undoubtedly a violinist of the first rank, and by no means exclusively a bravura-player, he did not to any extent affect the prevailing style of violin-playing, nor did he train pupils. An enormous influence on modern violin-playing, and on the general musical life of Germany and England, is exercised by Joachim. He combines in a unique degree the highest executive powers with the most excellent musicianship; and while through his brilliant example he may truly be said to have given to modern German violin-playing a peculiar character, it has not been without effect even on the style of the French school. Unsurpassed as a master of the instrument, he uses his powers of execution exclusively in the service of art. First musician, then violinist, seems the motto of his life and the gist of his teaching. His performances undoubtedly derive their charm and supreme merit from the strength of his talent and of his artistic character, and are stamped with a striking originality of conception; at the same time fidelity to the text, and careful endeavour to enter into the spirit and feeling of the composer, are the principles of executive art which Joachim through his long career has invariably practised. In the

rendering of Bach's Solos, of Beethoven's Concerto and Quartets, he has absolutely no rival, and it seems impossible he should ever be surpassed in these highest tasks of the violinist, in which both his conception and execution appear to fulfil the ideal of the composer. With Ernst, and still more with Joachim, an element derived from the national Hungarian, and the Hungarian gipsy music has come into prominence. Haydn, and still more Schubert, made frequent use of its peculiar melodic progressions and characteristic rhythms. [See vol. ii. p. 197.] It is fiddle-music par excellence, and if introduced into serious music with such judgment and discretion as in Joachim's Hungarian Concerto and transcriptions of Brahms's Hungarian Dances, it is not only artistically legitimate and musically interesting, but opens a field for telling and beautiful violin-effects. It evinces the same desire to make the resources of popular national music available for artistic purposes, which showed itself in Chopin's idealisations of the Polish element, and of late in Sarasate's adaptations of Spanish melodies and dances. Joachim has trained a large number of excellent violinists. Among the best of his pupils are: J. Ludwig, well-known as teacher and quartet-player in London, Hänflin (Hanover), Walde-mar Meyer, Holländer (Cologne), Kruse (Berlin), Kotek (Berlin), Schnitzler (Rotterdam), Hess (Frankfort), Petri (Leipzig), Halir (Mannheim), Schiever (Liverpool), Gompertz (London), T. Nachez, and many more.

In addition to Boehm's pupils, the Vienna school produced a number of eminent violinists, such as JOSEPH HELLMESBERGER, a pupil of his father, who for a great many years has been the leading violinist at Vienna, and enjoys a special reputation for quartet-playing; LEOPOLD AUER (born 1845), pupil of Dont, jun., and performer of the first rank, and others. LEOPOLD JANSÁ (1796-1875) deserves to be specially mentioned as the teacher of the most eminent lady-violinist of the present day, WILMA NORMANN-NERUDA (born 1840). Madame Neruda, possessing a highly-finished technique, is not merely a brilliant soloist, but a thorough musician, versed in the whole range of musical literature, and an admirable quartet-player. It is, no doubt, largely owing to her immense success and popularity that of late years violin-playing has been much taken up by ladies, but, if we except Teresina Tua, with but transient success. Lady amateur violinists in London, as in Boston and New York, at the present time are counted by hundreds.

The school of Prague—started by F. W. PIXIS (1786-1842), a pupil of Fränzl at Mannheim, and of Viotti—has produced several violinists of note: J. W. KALLIWODA (1801-1866), M. MILDNER (1812-1865), who succeeded Pixis as Professor of the Violin at the Prague Conservatoire, and FERDINAND LAUB (1832-1874), a violinist of the very first rank.

It remains to mention a few violinists of eminence who do not stand in any direct connexion

with the established schools of violin-playing. FRANZ CLEMENT (1780-1842), who was a musician and player of remarkable genius, deserves specially to be remembered as the first who played in public, and for whom, in fact, was written, the Concerto of Concertos, the original MS. of which bears this inscription: 'Concerto par Clemenza pour Clement, primo Violino e Direttore al teatro di vienna, Dal L. v. Bthvn. 1806.' C. J. LIPINSKI (1790-1861) was mainly self-taught, an excellent, solid, and brilliant player; though not exercising, either as composer or teacher, much influence on violin-playing generally. BERNHARD MOLIQUE (1803-1869), although a pupil of Rovelli's at Munich, must be called a follower of Spohr. His concertos take a high rank in violin-literature, and although they cannot rival Spohr's in spontaneity of ideas, they show, as it were, a further development of that master's violin-style and technique. During his long residence in England, Molique formed a number of pupils, the best known of whom is CARRODUS. OLE BULL¹ (1810-1880), a player of great originality, not free from charlatanism, was entirely self-taught, and has not inappropriately been described as a Northern Paganini. He belongs to no school, and has exercised no influence on the style of violin-playing of the period.

England has produced but few violin-players of eminence, and violin-playing has, as a rule, been represented in this country by foreigners. Thus we find Geminiani, Giardini, Wilhelm Cramer, Salomon, Viotti, Mori, Sainton, Straus, Normann Neruda, as the leading resident violinists in London, while there is hardly an eminent player during the last hundred years who has not visited the country.

The earliest English violin-player of note was DAVIS MELL, whom Hawkins calls the great rival of the German Baltzar. [See vol. i. p. 133.] JOHN BANISTER (about 1640-1700) was leader of the band of Charles II., in succession to Baltzar. MATTHEW DUBOURG (1703-1767) was a pupil of Geminiani, and appears to have been a clever player. His pupil, JOHN CLEGG (died about 1742), was a brilliant virtuoso. J. ABRAHAM FISHER (born 1744) was a player of much talent, who travelled a great deal on the continent, but appears to have been much of a charlatan. THOMAS LINLEY (1756-1778) studied under Nardini at Florence, but died young. GEORGE A. P. BRIDGETOWER (1779-184-), though not born in England, made his studies in London, and must have been a player of considerable powers, to judge from the fact that Beethoven played with him the Kreutzer Sonata for the first time in public. THOMAS PINTO (died about 1780) and GEORGE F. PINTO (1786-1806) were born in London of Portuguese parents. Both were clever violinists. Among modern players, the most eminent are HENRY BLAGROVE (1811-1872), a pupil of Spohr, and the brothers ALFRED (1837-1876) and HENRY HOLMES (born 1839). The last-named, now

¹ See BULL, OLE, in Appendix.

chief Professor of the Violin at the Royal College of Music in London, is a thoroughly artistic player, who more especially excels in quartet-playing.

There can be no doubt that the number of good violin-players is very much greater at the present time than it ever was before. Striking originality and genius are probably as rare as ever, but the improvement which has taken place in the rank and file during the last forty years is truly astonishing. While formerly even the most famous orchestras contained but a few who could make any claim to be soloists, nowadays the great majority are thoroughly trained artistic players. One of the best-known teachers of modern times used to declare that the same concertos which during the first half of this century were considered the *ne plus ultra* of difficulty, and were attempted in public by perhaps a very few of the most famous virtuosos—he used specially to adduce Lipinski's 'Concerto Militaire'—are now as a matter of course studied and fairly mastered by the average student at any Conservatoire. It is obvious how much orchestral performances must have gained by this general spread of executive skill, and we can safely assume that at no period of musical history has orchestral music been so generally well executed as at the present day.

At the same time we cannot speak of a modern violin-technique and a modern development of such technique as we speak of it in reference to piano-playing. The development of the technique in any instrument, as a matter of course goes along with the perfecting of its mechanical structure. Now in the case of the pianoforte this gradual perfecting of the mechanism has continued up to the present time. Thus the technique of Mozart probably stands in the same relation to the technique of Liszt as an old Vienna clavicembalo to a modern Broadwood. In the case of the violin it is not so. For more than three hundred years the violin has undergone no structural alteration whatever, and no important change in the principles of execution has taken place since the days of Corelli. The advance made in mastering difficulties since the early days of violin-playing is more apparent than real. There are but few points of modern technique which one or another of the old masters had not already attempted (Locatelli, Lolli, Bach, etc.), and it is owing only to the more complicated nature of modern music (not to speak of the morbid tendency towards exaggeration in every respect) that the execution of great difficulties is more often demanded. It is only in reference to 'bowing' that we can speak of a modern development, and that for the very good reason that the modern flexible bow attained its present form but very gradually at the end of last century. In the art of bowing we do find, as in piano-playing, a modern development which follows the gradual perfecting of the instrument. TOURTE, of Paris, made the modern bow what it is, and the violinists of his time were not slow

to avail themselves of its immense advantages. Hence resulted a rapid progress in the art of bowing, which culminated in Paganini, and there reached a point of perfection which is not likely to be surpassed. [P.D.]

VIOLONCELLO—i.e. the little Violone—commonly CELLO. For the place of this instrument in the Violin family see vol. i. 580; iv. 268, 269, 281. II. The name is given to an organ stop of 8 ft. pitch, usually to be found in the Pedal organ, but occasionally in the Great also. It may be found both with open and closed pipes. There is always, as its name implies, some attempt to give the string quality. [W.Pa.]

VIOLONCELLO-PLAYING. Though the manufacture of the Bass Violin or Violoncello followed closely on the invention of the Tenor and Treble Violins, nearly a century elapsed before the Violoncello took its proper rank in the family of stringed instruments. This is due to the fact that the six-stringed Viola da gamba, the established chamber and orchestral bass of the 17th century, was a very popular instrument, and more easily handled than the Violoncello, though inferior to it in power and quality of tone. [See GAMBA.] The larger and more thickly strung Violoncello was at first employed to strengthen the bass part in vocal music, particularly in the music of the church. It was in Italy that the instrument first took a higher position. The stepping-stone appears to have been the continuous basses which formed the usual accompaniment to solos for the Violin. The ringing tones of the Violin demanded a more powerful accompaniment than the Viola da gamba could give; and with many Violin solos of the latter part of the century we find bass parts of some difficulty, which were played on the Violoncello by accompanists who made this department of music a special study. Corelli is said to have had a Violoncello accompaniment to his solo performances, though his basso continuo is obviously written in the first instance for the Viola da gamba: but it is not until after the death of Corelli that we hear of the first solo violoncello player. This was one Franciscello (1713-1740), of whom little is known except that he played solos in the principal European capitals. The name of Vandini has also come down to us as the violoncello accompanist of the solos of Tartini. These two players rank as the fathers of the Violoncello, and it may be assumed that it was from its association with the Violin as a bass that the Violoncello itself became a model instrument, and that the methods of violin playing came to be applied to it.

Among the earliest compositions for the Violoncello may be mentioned the sonatas of Antoniotti of Milan, an Amsterdam edition of which is dated 1736, and of Lanzetti, violoncellist to the King of Sardinia (1730-1750). According to M. Vidal¹ we trace in these masters the first decided recognition of the capacities of the

¹ Les Instruments à Archet, tom. I. p. 327.

instrument. The left hand stops an octave and a half (upper E) on the first string, necessitating the use of the thumb, which is the special characteristic of the higher positions of the Violoncello. Canavasso and Ferrari, two other Italian Cello players, appeared in Paris between 1750 and 1760. There already lived in Paris a player whose name stands by tradition at the head of the French school. This was the famous Berteau, who died in 1756. None of Berteau's compositions are known to exist, except a well-known study printed in Duport's 'Essai,' and a sonata in Breval's 'Méthode'; but he is always recognised as the first of the French school of violoncello-players. Cupis, Tillière, the two Jansons, and the elder Duport were among his pupils. Among the classical composers, Handel and Bach first employed the instrument in its wider range; it is only necessary to mention the famous six solos of the latter, while well-known instances of its use by the former are the obligato parts to 'O Liberty' (Judas), 'What passion cannot music raise' (St. Cecilia's Day), and 'But O! sad virgin' (L'Allegro). Pepusch's 'Alexis' was for long a favourite. With the creation of the stringed quartet the Violoncello gained the greater prominence which is exemplified in the chamber music of Haydn and Boccherini. The latter master was himself a solo cellist of considerable ability; he played at the Concert Spirituel in Paris in 1768. Gluck is said to have been a cellist, but no predilection for the instrument appears in his works.

The true method of violoncello-playing was first worked out by the younger Duport, and laid down in his famous 'Essai sur le Doigté du Violoncelle, et sur la Conduite de l'archet.' DUPORT, who was born in 1749, made his début at the Concert Spirituel in the same year in which Boccherini performed (1768); the 'Essai' was published some years later. Before Duport much confusion had existed in fingering and bowing the instrument; many players, it appears, endeavoured to get over the difficulties of the scales by fingering the Violoncello like the Violin, i.e. stopping whole tones with successive fingers, thus throwing the hand into a false position, and losing that *aplomb* which is indispensable alike to certainty of fingering and solidity of tone. Duport, recurring to the practice of the old Viola da gamba players, laid down the principle that the true fingering was by semitones, only the first and second fingers being as a rule allowed to stretch a whole tone where necessary; and he overcame the inherent difficulties of the scales by dividing the positions into four so-called 'Fractions,' and by adopting a methodical system of shifting, the violin fingering being only retained in the higher 'thumb' positions, where the fingering is similar to the first position of the Violin, the thumb acting as a moveable nut. The 'Essai' of Duport formed an epoch in violoncello-playing. Among his pupils was Frederick William, King of Prussia, to whom Mozart dedicated the three famous quartets in F major, Bb major, and D major, in

which the Violoncello occupies so prominent a place; while Beethoven's two first Violoncello sonatas (op. 5) were dedicated to Duport himself. The compliment of Voltaire to Duport, who visited him when at Geneva on a musical tour, aptly illustrates the change which was taking place in the treatment of the instrument. 'Monsieur,' he is reported to have said, 'vous me faites croire aux miracles: vous savez faire d'un bœuf un rossignol!' In Germany Bernhard ROMBERG and STIASTNY, contemporaries of Duport, worked upon his method, while Levasseur, Lamare, Norblin, Platel, Baudiot and others represented the school in France. The Italians were slower in the cultivation of the Violoncello, and Burney in his Tour remarks that the Italian players retained the underhand grasp of the bow, while elsewhere the overhand grasp, founded on that of the violin, was generally adopted. Since the time of Duport, the tendency of players and composers has been to make the Violoncello more and more a Bass Violin, i.e. to assimilate its treatment more and more closely to that of the treble instrument. The most accomplished players even perform (an octave lower in pitch) on it solo violin pieces of great difficulty, the 'Trillo del diavolo' and 'Carnaval de Venise' not excepted. Merk, Franchomme, Kummer, and Dotzauer ranked among the best bravura players of their times, but the greatest master of all the effects producible on the Violoncello was undoubtedly the late M. Servais (died 1866), under whose large and vigorous hand, says a critic, the Violoncello vibrated with the facility of a kit: the staccato in single notes, in thirds, in octaves, all over the fingerboard, even to the most acute tones, came out with irreproachable purity; there was never a hesitation or a doubtful note. He was an innovator in every sense of the word: never, before him, had the Violoncello yielded such effects. His compositions will remain as one of the most marvellous monuments of the instrumental art of our time.¹ Servais may well be called the Paganini of the Violoncello. The English players who have left the greatest name are CROSDILL and LINDLEY. Among living players the name of Signor PIATTI should be mentioned as a master in all styles, equally admirable in the severest classical music and in the brilliant technical effects which are embodied in some of his own compositions. GRÜTZMACHER, DAVIDOFF, the HAUSMANNs, and our own EDWARD HOWELL, must also be named.

At present players use thinner strings than formerly: and the use of the thumb positions is more restricted, the rule being to employ ordinary stopping wherever practicable. The objection to the thumb positions is that the quasi-open notes, being stopped sideways, are necessarily weak and unequal. For solo performance the tenor register of the Violoncello, i.e. the first and second strings, each employed in its lowest octave, is the best portion of the instrument: the ponderous notes of the lowest string are ex-

¹ Vidal, Instruments à Archet, tom. I. p. 371.

ceedingly effective in legato and tenuto passages. The Cello affords less scope than the Violin for displaying skill in bowing, the bow being shorter than that of the Violin, though the instrument itself is very much larger: while the bowing is to some extent reversed, because in the Violin the bow points in the downward direction of the scales, i.e. towards the lowest string, while in the Cello, which is held in a reversed position, the bow points in the upward direction, towards the highest string. The rule of the old Viola da gamba players, however—to bow strictly the reverse way to the Violin, i.e. to commence the bar with an up-bow—is not applicable to the Cello.

The principal Methods for the Violoncello are those by B. Romberg, Kummer, Dotzauer, Lee, and Piatti. The Studies of Stiasny, Grütz-macher, and Lee, are usually recommended. Perhaps the best known among special writers for the instrument is Goltermann, who wrote many sonatas, and concertos with alternative orchestral or pianoforte accompaniment, as well as a very large number of lighter solos. Many of his works possess considerable musical as well as technical interest. Besides Goltermann, there may be mentioned Popper, a living violoncellist of good repute, Dunkler, and Signor Piatti, who, besides being the author of several original compositions, has rendered good service to the musical world by his admirable editions, with pianoforte accompaniments, of the Sonatas of Marcello and Boccherini. The principal classical compositions for the Violoncello and Piano are Beethoven's Four Sonatas, Hummel's Sonata, Sterndale Bennett's Sonata, Schumann's Concerto and 'Stücke im Volkston,' Molique's Concerto in D, op. 45. Mendelssohn's predilection for the Cello is well known. His orchestral works abound in melodious and effective solos for the instrument (Allegros of Italian and Scotch Symphonies, Meeresstille Overture, etc.), and in addition his Sonatas in Bb and D, and his Air with Variations in D, all for Cello and Piano, are among the finest works in the repertoire of the cellist. The obligato part to the air 'Be thou faithful unto death' (St. Paul), is a masterpiece in its kind which will probably never be surpassed. It is a pity that his intention of writing a Concerto for Cello and Orchestra was frustrated by his death, as it would undoubtedly have been a fine and effective composition, which, with all its merits, Schumann's Concerto fails to be. [See vol. ii. p. 285 a.] Onslow's Sonatas are esteemed by some amateurs of the instrument. Some effective duets for two Violoncellos have been written by Dotzauer, Gross, Kummer, Lee, Viotti, and Offenbach. The Violin and Violoncello concertante duets of the Bohrer, the Rombergs, and Léonard and Servais, are brilliant works, suitable for advanced performers: the less ambitious duets for Violin and Violoncello by Hoffmeister, Hoffmann, and Reicha should also be mentioned. [E.J.P.]

VIOLONE (i.e. Double-bass). An organ stop of 16 ft. pitch, with open pipes of smaller scale

than those of the Open Diapason. Generally in the Pedal organ. [W.Pa.]

VIOLONS DU ROY. [See VINGT-QUATRE VIOLONS, p. 266.]

VIOTTI, GIOVANNI BATTISTA, celebrated violin-player and composer for the violin, was born March 23, 1753, at Fontanetto, a village in Piedmont. His first musical instruction he got from his father, a blacksmith, and from an itinerant musician of the name of Giovannini. In 1766 a bishop, who had been struck by the cleverness of the boy's performance, sent him to Turin, where Prince Pozzo de la Cisterna placed him under Pugnani. He soon developed into a fine player and entered the Royal band. In 1780 he left Turin, and travelled with Pugnani through Germany to Poland and Russia, meeting with great success, especially at St. Petersburg, and winning the favour of the Empress Catherine, who endeavoured to attach him to her court. But Viotti did not remain long in Russia, and proceeded with Pugnani to London, where his success was so great as completely to throw every other violinist into the shade. From London he went to Paris, and there parted from Pugnani, who returned to Italy. He made his first appearance at the Concert Spirituel in 1782, and was at once acknowledged to be the greatest living violinist. He happened to be less successful on one occasion, while in the next concert a very inferior player earned a great success. This is said to have disgusted him so much that he altogether ceased to play in public. In 1783 he visited his native town and bought some property for his father. Returned to Paris, he occupied himself with teaching and composing, giving at his residence regular private performances, and playing his concertos as he finished them with the accompaniment of his pupils. After some time he accepted the leadership of the orchestra at private concerts which had been established by the Princes Conti, Soubise, and other members of the aristocracy. He also frequently played at the Royal Court, but kept to his resolve not to appear in public. In 1788 he was induced to undertake the artistic management of the Italian Opera, a licence for which had been granted to the Queen's hairdresser Léonard. He succeeded in bringing together a brilliant company of singers, and also secured Cherubini's services as composer. From 1789 to 1792 the Italian Opera gave performances in the Tuileries, but on the return of the Court from Versailles to Paris, had to be transferred to the Theatre Feydeau. On the outbreak of the revolution however the enterprise quickly collapsed, and Viotti, having lost almost everything he possessed, went to London. Here he renewed his former successes—appearing frequently at Salomon's concerts in Hanover Square Rooms and in the drawing-rooms of the aristocracy. London soon filled with refugee French noblemen. Owing probably to the circumstance that he had had some personal dealings with the Duc d'Orléans (Philippe Egalité) Viotti fell under

suspicion, and was advised to leave England. He went to Hamburg, and for some time lived in complete retirement in the neighbourhood of that town. It was there that he composed a number of his famous violin duets. Fétis and Wasielewski are both mistaken in stating that he remained in Germany until 1795, as we find his name on the London concert programmes early in 1794, and in the winter of 1794 he was acting manager of the Italian Opera at the King's Theatre.¹ At the same time he played frequently in Salomon's concerts, and acted as leader in Haydn's Benefit Concerts in 1794 and 1795. He was also director of the great Opera Concerts in 1795, for which he brought together a band containing the most eminent players in London, and declared to be unprecedented in brilliancy of effect. Financially however these and similar enterprises proved to be anything but successes, and as his old aversion to playing in public grew more and more upon him, he retired entirely from public life, and with the remnants of his fortune embarked in trade, entering as a partner in a wine merchant's firm. In 1802 he once more visited Paris. Although firmly resolved not to play in public, he could not resist the persuasion of his numerous old admirers, and after a lapse of twenty years appeared once more at the Conservatoire, showing, by the masterly performance of one of his later concertos, that his execution had lost none of its former perfection, while as a composer he had greatly advanced in maturity of ideas, style, and workmanship. After a few months he returned to his business in London. Viotti went to Paris once more in 1819, and undertook the post of director of the Opéra, at that period in a state of utter decadence. His administration did not restore prosperity, and in 1822 he was pensioned off. He returned to London, and died there March 10, 1824.

Viotti was one of the greatest violinists of all ages, and the last great representative of the classical Italian school. He retained in his style of playing and composing the dignified simplicity and noble pathos of the great masters of that school, treating his instrument above all as a singing voice, and keeping strictly within its natural resources. As a composer he was among the first to apply the extended modern sonata-form to the violin concerto, and to avail himself of the resources of the modern orchestra in his orchestral accompaniments. In both respects he was no doubt much influenced by Haydn, whose symphonies were played in Paris and London as early as 1765, and with whom, as we have already noticed, he came into frequent personal contact. His ideas, though neither of striking originality nor great force, are invariably refined and dignified. The Allegros are as a rule of pathetic character, and even in their quicker passages broad and reposeful. Some of his Adagios have great sentimental charm—they are however frequently mere outlines, which, according to the fashion of the time, the performer filled

¹ See Pohl, 'Mozart and Haydn in London.'

out and adorned by cadenzas, shakes and other ornamental passages. The Finales, with a few exceptions, strike the modern ear as somewhat antiquated. Of his 29 published Concertos, the 22nd (in A minor) is still played in public, being remarkable for its fine subjects and the symphonic treatment of the orchestra. The Adagio in E especially is a perfect gem. The exceptionally interesting and effective instrumentation of this concerto has been ascribed to Cherubini, but there is no valid evidence for this assumption. It is evident enough from Viotti's earlier works that his musical education, apart from violin-playing, was anything but complete—the form is clumsy, the harmonies poor; it is also true that it was by no means an unusual thing for a virtuoso to get assistance for the scoring of his concertos; but the steady progress to complete mastery of form observable in Viotti's later works, coupled with his long experience as leader and conductor, make it incredible that a man of his talent and musical instinct should not have acquired the necessary proficiency for writing an effective score.

His violin duets deserve special mention. They have not the richness of effect of Spohr's duets, but next to them they are the most valuable contributions to this branch of violin literature. His quartets, sonatas, trios, etc., are antiquated and entirely forgotten. He published (according to Fétis) 29 Violin Concertos, 2 Concertantes for 2 violins, 21 Quartets for stringed instruments, 21 Trios for 2 violins and a viola, 51 Violin-duets, 18 Sonatas for solo violin with bass, and a Sonata for piano and violin. Some of the duets he also arranged for piano and violin. Cherubini published an arrangement of some of the trios for piano and violin. The study of some of his concertos still forms part of the regular course of all schools of violin-playing.

The most eminent of Viotti's direct pupils were Rode and Baillot. The influence which he exercised on the style of violin-playing generally by his brilliant example was not less strong in Germany than in France.

Baillot published a memoir of Viotti (Paris, 1825). [P.D.]

VIRDUNG, SEBASTIAN, author of the oldest work describing the precursors of modern musical instruments. It is entitled '*Musica getutscht und auszgezogen durch Sebastianum Virdung Priesters von Amberg und alles gesang ausz den noten in die tabulaturen diser benannten dryer Instrumenten der Orgeln: der Lauten: und den Flöten transferieren zu lernen. Kurtzlich gemacht zu eren dem hochwirdigen hoch gebornen fürsten unnd herren: herr Wilhalmen Bischove zum Straszburg seynem gnedigen herren.*' We read in the dedication that the Bishop in 1510 had required of Virdung that he should send to him the '*Gedicht der Deutschen Musica.*' Virdung replied that on account of the great cost he had decided to postpone printing the great work, but to pacify the Bishop and his own friend Andreas Sylvanus, he sends this present extract, in which the latter appears as the

interlocutor. The place of publication is Basel; the date 1511. The work, which is written in dialogue, begins with a description of the keyboard instruments; then follow the others in use at the time. He describes the keyboard, the organ and clavichord, concluding with the tablature of those instruments and of the lute and flute. The woodcuts, taken in their order, will best briefly indicate the nature of the book. The clavicordium is the clavichord 'gebunden,' or fretted, as is obvious from the twisted keys, and he explains this peculiarity in the text. It shows its monochord origin by the strings being all of the same length. The soundboard is very narrow. The virginal is an instrument of the same oblong form, but has a triangular scale of stringing, by an error of the engraver turned the wrong way. The soundboard, psaltery-wise, covers the interior. The compass of keyboard of both these instruments is three octaves and a note from the bass clef-note *f* to *g'''*, the lowest *f* being omitted; but Virdung goes on to say that the compass had already, in 1511, been extended by repeating the lowest octave, that is, descending to *F* below the bass clef. The clavicimbalum is like the virginal, but with different compass (the organ short octave), apparently from *B* in the bass clef to *d'''*; but the *B*, we believe, sounded *G*. [See SPINET and VIRGINAL.] This is the 'clavicimbanum' of Sagudino, on which he tells us little Mary Tudor played;—the Italian *spinetta*; French *espinette*. The claviciterium is figured as an upright virginal, with the same keyboard; but the keyboards of all these instruments and the organs also are inverted in the printing. Virdung says it has jacks ('federkile') like a virginal, but cat-gut strings. It was, he says, newly invented; he had only seen one. This is the only early reference we have anywhere met with to the clavicitherium. Rimbault's early date for it in his History of Music and the chronological order of keyboard instruments, are alike without foundation and misleading; and further to confuse matters, he has been deceived by a blunder in Luscinus, the Latin translator (1536) of Virdung, by which the horizontal clavicimbalum appears as the claviciterium, and vice versa. Count Correr's interesting upright virginal, or spinetta, to be ascribed to the last years of the 15th century, and shown in the Loan Collection of the International Inventions Exhibition, 1885, has Virdung's compass, but adds the bass *E* and *F*, which we assume to represent *C* and *D* short octave. Virdung appears to know nothing about the harpsichord or later clavicembalo, yet there is a fine and authentic specimen of this two-unisons instrument, dated 1521, of Roman make, in South Kensington Museum. Virdung's lyra is the hurdy-gurdy. His lute has 11 strings, 5 pairs and chanterelle, 6 notes; his quintern, or treble lute, 10 strings, or 5 notes. The Gross Geigen is a bass viol with the bridge omitted by the draughtsman. The Harffen is the regular mediæval David's harp, such as Patrick Egan was still making in Dublin as a

revival or fancy instrument some 50 or 60 years since. The Psalterium is a triangular small harp strung across. The Hackbrett shows the common dulcimer. The 'Clein' Geigen is a small viol; the Trumscheit, or Tromba Marina, a kind of bowed monochord. The last-named instruments, being without frets, Virdung regards as useless. The wind instruments follow:—Schalmey, Bombardt (oboes), Schwegel, Zwerchpfeiff (German flute), Flöten (set of flauti dolci or recorders), Ruzzpfeiff, Krumhorn, Hemsen horn, Zincken (ancient cornets), Platerspil, Krumhörner (set of Cromornes, the origin of the 'Cromona' in the modern organ), Sackpfeiff (bagpipes), Busaun (trombone), Felttrumet (cavalry trumpet), Claretta (clarion), Thurner horn (a kind of French horn). The organs are Orgel (with 3 divisions of pipes), Positive (a chamber organ), Regale (a reed organ), and Portative (pipe regal), with, as we have said, short-octave compass like the clavicimbalum, the keyboards being reversed in the printing. The organ and portative end at *g''* instead of *d'''*. Lastly are Ampos, Zymeln und Glocken (anvil and various bells, Virdung appearing to believe in the anvil myth). He has trusted to his own or another's imagination in reproducing St. Jerome's instruments, only the drums and perhaps psalteries being feasible. His keyboards come next, and are evidently trustworthy. His diagram of the diatonic keyboard, with two *B*'s only, agreeing with Guido's hand, is the only evidence we are acquainted with for this disposition of the clavichord with twenty natural and two raised keys, which Virdung says lasted long. The latter part of the book is occupied with the Tablatures. His lute rules meet with objections from Arnold Schlick the younger, 'Tabulatur etlicher Lobgesänge' (Mentz, 1512). Mendel's Lexicon says that copies of Virdung's book are only to be found in the Berlin and Vienna Libraries. However, Mr. Alfred Littleton, of Sydenham, owns an original copy. A facsimile reproduction of 200 copies was brought out in 1882 at Berlin, edited by Robert Eitner, being the 11th volume published for the Gesellschaft für Musikforschung, who had previously published Arnold Schlick's 'Spiegel der Orgelmacher,' also of 1511, and referred to by Virdung. Mendel further says there are at Munich four 4-part German songs by Virdung in the rare collection of Peter Schoeffer (Mentz, 1513). They are numbered 48, 49, 52 and 54. [A.J.H.]

VIRGINAL or VIRGINALS (Fr. *Clavecin rectangulaire*). Virdung (Musica getuscht und ausgezogen; Basel, 1511) is the oldest authority we can cite who describes this keyboard instrument. His woodcut of it shows a rectangular or oblong spinet, which agrees in form with what we are told of the spinetta of 1503, said by Banchieri (Conclusione nel suono dell'organo; Bologna, 1608) to have been the invention of the Venetian Spinetti. Banchieri derives the name 'spinetta' from this maker; in later Italian the oblong spinet, which is the same as Virdung's virginal, is called 'spinetta tavola.' Virdung's

virginal is, in fact, of the same shape as his clavichord, and has the same arrangement of keyboard (from the bass clef note F), but the soundboard of the clavichord is narrow; the jack-action of the virginal is derived from the psaltery plectrum, while the tangent of the clavichord comes from the monochord bridge. Virdung confesses he knows nothing of the invention of either, by whom or where. If the 'proverb' quoted by Rimbault, as formerly inscribed on a wall of the Manor House of Leckington, Yorkshire, be as old as the time of Henry the Seventh (1485-1509), it contains a reference earlier than Virdung. Rimbault's 'History of the Pianoforte' is a storehouse of citations, and we borrow from them with due acknowledgment of the source and their great value. This proverb reads,

A slac stryng in a Virginal soundithe not ariht,
It doth abide no wrestinge it is so loose and light;
The sound-borde crasede, forsieth the instrumente,
Throw misgovernance, to make notes which was not
his intente.

The house is destroyed, but the inscriptions are preserved in a MS. at the British Museum. According to Prætorius, who wrote early in the 17th century, Virginal was then the name of the quadrangular spinet in England and in the Netherlands. In John Minshen's 'Ductor in Linguas,' 1617, against 'Virginals' we read, 'Instrumentum Musicum propriè Virginum . . . so called because virgins and maidens play on them. Latin, Clavicymbalum, Cymbaleum Virginæum.' Other lexicographers follow. Most to the purpose is Blount, 'Glossographia,' 1656: 'Virginal (virginalis), maidenly, virginlike, hence the name of that musical instrument called Virginals, because maids and virgins do most commonly play on them.' But another reason may be given for the name; that keyed stringed instruments were used to accompany the hymn 'Angelus ad Virginem,' as similar instruments without keys, the psaltery, for instance, had been before them. (See Chaucer's 'Miller's Tale.') From Henry the Seventh's time to nearly the close of the 17th century, 'Virginal' in England included all quilled keyboard instruments, the harpsichord and trapeze-shaped spinet, as well as the rectangular virginal of Virdung and Prætorius. For instance, in the 'Privy Purse Expenses of Henry the Eighth' (Sir N. H. Nicholas editor; London, 1827) there is an entry: '1530 (April) Item the vj daye paid to William Lewes for ii payer of Virginals in one coffer with iiij stoppes, brought to Grenwiche iii li . . . and for a little payer of Virginals brought to the More, &c.' This two pair of Virginals in one case with four stops looks very like a double harpsichord. Again, in the inventory of the same king's musical instruments, compiled by Philip Van Wilder, a Dutch lute-player in the royal service, —the manuscript is in the British Museum—'a payre of new long virginalls made harp fashion of Cipres, with keys of Ivory, etc.' Still later, in 1638, from 'Original unpublished papers illustrative of the life of Sir Peter Rubens' (London, 1859), we find a correspondence be-

tween Sir F. Windebanck, private secretary to Charles the First, and the painter Gerbier, relating to a Ruckers 'virginal' the latter had undertaken to procure: 'C'est une double queue ainsi nommée [i.e. 'virginal'] ayant quatre registres et le clavier placé au bout.' There can be no doubt about either of these, although called virginals, they were at the same time double harpsichords. Huyghens (Correspondance, Jonkbloet et Land; Leyden, 1882) shows how invariably the clavicimbal or espinette was 'virginal' in England. Henry the Eighth played well, according to contemporary authority, on the virginal, and he had a virginal player attached to the Court, one John Heywood, who died at Mechlin about 1565.¹ The same Heywood was one of Edward the Sixth's three virginal players. Mary, Elizabeth and James the First retained as many. Queen Mary is said to have equalled, if not surpassed, Queen Elizabeth in music, playing the regals and lute, as well as the virginals. One Cowts used to repair her virginals (Privy Purse expenses of the Princess Mary, Sir F. Madden. ed.; London, 1831). Queen Elizabeth's Virginal Book was in MS., and the first engraved music for this tribe of instruments, including harpsichords, was the 'PARTHENIA, the first musicke that ever was printed for the Virginals'; London, 1611. After the restoration of the Stuarts, we find in different publications for the harpsichord and virginal, the instruments clearly separated.

John Playford, in 'Musick's Handmaid,' distinguishes them, and in 1672, 'Introduction to the skill of Musick,' names Mr. Stephen Keen as a maker of 'Harpsycons and Virginals.' John Loosemore, Adam Leversidge, and Thomas White appear to have been at that time foremost English makers; they adopted the Italian coffer-shaped instrument, combining with it Flemish fashions in painting. Pepys, describing (Sept. 2, 1666) the flight of the citizens at the time of the Great Fire, says, 'I observed that hardly one lighter or boat in three that had the goods of a house in, but there was a paire of virginals in it.' The plural, or rather dual, in organs, regals, virginals, with the following 'pair,' signifies a graduation or sequence, as now-a-days 'a pair of stairs.' In spite of the interesting statement of Pepys the destruction of virginals by this terrible catastrophe must have been very great, for very few musical instruments are found in this country anterior in date to the Great Fire. In Queen Anne's reign we hear no more of the virginal; the 'spinet' is the favourite domestic instrument.

'Queen Elizabeth's Virginal,' which bears her royal arms and is the property of the Greasley family, a familiar object in the Tudor room of the Historic Loan Collection of the Inventions Exhibition, 1885, is really a pentagonal spinet, evidently of Italian make. With reference to Stephen Keene, a beautiful spinet of his make (spinetta traversa), belonging to Sir George

¹ Mr. W. H. J. Weale owns a medal struck for Michael Mercator of Venloo in 1530. Mercator was maker of Virginals to Floris d'Esmond, Cardinal Wolsey, and Henry VIII. He was born 1491, died 1544.

Grove, has been examined with respect to the soundboard barring; we reproduce the diagram showing the barring, exhibited with the instrument in the same collection. Mersenne (Har-

monie Universelle, 1636) mentions the skill of the contemporary French spinet-makers in thus preparing their soundboards. But that the

Italians were their models is conclusively shown by the Antoni Patavini Spinet of 1550, belonging to Brussels, which we have now been able to examine, and the date of which there is no reason to dispute.

Notwithstanding the statement of Prætorius, we have not found the name Virginal common in the Netherlands. The 'Clavecin Rectangulaire' is 'Vierkante Clavisimbal.' The Ruckers, as well as other Antwerp makers, made these oblong instruments and so called them. Although not bearing upon Virginals, except in the general Old English sense, we take this opportunity to describe the Ruckers instruments that have come to light since the last addition (vol. iii, p. 652) in the catalogue of them given, pp. 197-9 in the same volume.

HANS RUCKERS DE OUDE (THE ELDER).

(Continuation of Tables in vol. iii. pp. 197, 652.)

No.	Form.	Date.	Dimensions.	General Description.	Present Owner.	Source of Information.
63	Bent side.	1612	ft. in. ft. in. 7 6 by 2 11	2 keyboards (put in by Messrs. Broadwood, 1885). Rose No. 1. Case and compass as No. 47. Inscribed JOANNES RUCKERS ME FROIT ANTWERPIAN, 1612. Found at Windsor Castle, 1888. This may have been the large Harpsichord left by Handel to Smith, and given by the latter to King George III.	H. M. The Queen.	A. J. Hipkins.
64	Trapeze.	1601	5 7 by 1 11	T. J. Canneel, Director of the Académie Royale Ghent.	T. J. Canneel.
65	Bent side.	1612	7 6 by 2 0	2 keyboards; black naturals. Rose No. 1. No name of original maker, but inscribed 'Mis en ravalement par Pascal Taskin, 1774,' meaning that the compass of keys was extended. This beautiful instrument, painted inside and out with Louis XIV. subjects by Vander Meulen, is said to have belonged to Marie Antoinette. It will be remembered as having adorned the Louis Seize Room of the Historic Collection, Inventions Exhibition, London, 1883.	Lord Powerscourt.	A. J. Hipkins.

ANDRIES RUCKERS DE OUDE (THE ELDER).

66	Bent side.	1636	7 8 by 2 1	2 keyboards. Rose No. 6. Buff stop. 'Mis en ravalement par Pascal Taskin, 1782.' Case and top Lacquer with Japanese figures. Exhibited, London, 1883.	Museo Civico, Turin.	A. J. Hipkins.

Lastly, to complete the short-octave theories put forth in SPINET, which we are enabled to do by nearer examination of instruments contributed to the present Historic Loan Collection (1885), the natural keys of the Patavini Spinet mentioned above are marked with their names. The lowest E key is clearly inscribed Do-C; on the next, the F, is written F. This writing is not so early as 1550, because Do was not then used for Ut. The probable date is about one hundred years later, when the solmisation was finally giving way before the simple alphabetic notation. There are other instances. Then as to the cut sharps: ¹ the small Maidstone clavi-

chord, said to have been Handel's, has the two nearer or front divisions intended for fourths below the next higher naturals, the two further or back divisions being the usual semitones. The first explanation, as offered in vol. iii, p. 654b, may be therefore assumed to be true, and this, as well as the preceding hypothesis, established as facts. [A.J.H.]

VIRGINAL MUSIC, COLLECTIONS OF.

1. The most remarkable, and in many respects the most valuable collection of English 17th century instrumental music is that contained in the volume known for the last century by the misleading name of *Queen Elizabeth's Virginal Book*. This book, which is now preserved in the Fitzwilliam Museum at Cambridge, is a small folio volume containing 220 folios of paper

¹ The oldest spinet with cut sharps in the Historic Loan Collection is, according to the Facies, by Edward Blount; but on the first key, and less legibly on the jacks, is written 'Thomas Hitchcock his make in 1684.' A similar autographic inscription of this maker, but dated 1708, has been brought forward by Mr. Taphouse of Oxford. We are thus enabled to find Thomas Hitchcock's working time. We think John Hitchcock came after him.

² See 'De Liggeren der Antwerpsche Sint Lucasgilde,' by Bombouts and Van Lerius. Antwerp and the Hague, 1872

ruled by hand for music in 6-line staves, 209 of which are filled with music written in a small but distinct handwriting. The volume measures $33\frac{2}{5}$ centimetres in height by 22 centimetres in breadth, and the binding (a fine specimen of English 17th-century workmanship) is of crimson morocco, enriched with beautiful gold tooling, the sides being sprinkled with fleurs-de-lis. The water-mark on the paper is a crozier-case, measuring $4\frac{1}{2}$ inches in height and $2\frac{1}{2}$ inches in its widest part. It is possible that this mark indicates that the paper was manufactured at Basel, as the arms of that town are similar to it. The manuscript has in places been cut by the binder, but the binding is probably not of later date than the bulk of the book. Nothing is known of the history of the volume before the early part of the 18th century, when it was first noticed as being in the possession of Dr. Pepusch, but there is sufficient evidence to prove that it can never have belonged, as is generally supposed, to Queen Elizabeth. As has been already stated, the whole of the manuscript is in one handwriting; in many cases the compositions it contains bear the dates at which they were composed, and these dates (as will be seen from the list printed below) are in no sort of chronological order. The latest dated composition contained in the collection is an 'Ut, re, mi, fa, sol, la, a 4 voci,' by the Amsterdam organist Jehan Peterson Swellinck (1577-81-1621), which occurs on page 216, and bears the date 1612, nine years after the death of Queen Elizabeth, to whom the book is said to have belonged. But there is another piece in the volume which proves that the collection must have been written even later than this. At page 255 is a short composition by Dr. John Bull, entitled 'D. Bull's Juell' (i. e. 'Dr. Bull's Jewel'). Another copy of this occurs on folio 49b of a manuscript collection of Bull's instrumental music preserved in the British Museum (Add. MSS. 23,623), which is particularly valuable as containing the dates at which most of the compositions were written, and this copy bears the inscription 'Het Juweel van Doctor Jan Bull quod fecit anno 1621. December.' The volume must therefore have been written later than this, and in all probability it dates from the third decade of the 17th century, the character of the handwriting, as well as the absence of compositions by musicians of a later date precluding the possibility of its being of more recent origin. Mr. Chappell, at the beginning of his work on the 'Popular Music of the Olden Time'¹ (p. xv.) surmises that this collection may have been made for, or by, an English resident in the Netherlands, and that Dr. Pepusch obtained it in that country. This conjecture he founds upon the fact that the only name which occurs in an abbreviated form throughout the book is that of

¹ The edition of this work referred to in this article is that published by Chappell & Co. in two volumes, without a date. The full title-page runs as follows: 'The Ballad Literature and Popular Music of the Olden Time: a History of the Ancient Songs, Ballads, and the Dance Tunes of England, with numerous Anecdotes and entire Ballads. Also a Short Account of the Minstrels. By W. Chappell, F.S.A. The whole of the Airs harmonized by G. A. Macfarren.'

Tregian, and that a sonnet signed 'Fr. Tregian' is prefixed to Verstegan's 'Restitution of Decayed Intelligence,' which was published at Antwerp in 1605. The abbreviated name occurs as follows: at p. 111 is a composition of William Byrd's headed 'Treg. Ground'; at p. 152 is a 'Pavana Dolorosa. Treg.,' set by Peter Philips and dated 1593; at p. 196 is a short piece entitled 'Heaven and Earth,' to which no composer's name is given besides the syllable 'Fre' (probably a contraction of 'F. Tregian'); and at p. 297 in the margin, the initials 'F. Tr.' are written against the first line of a jig by William Byrd; on p. 315 'Mrs. Katherin Tregian's Pauen' is written in the margin against a Pavana Chromatica by William Tisdall. These few clues certainly point to some connection of the volume with the Tregian family, and it so happens that the history of at least two individuals of the name of F. Tregian is known with a considerable degree of certainty. The Tregians were a very rich and powerful Catholic family, whose seat was at Golden or Volveden in Cornwall, in which county their estates were said to have been worth £3000 per annum. Towards the close of the 16th century the head of the family was named Francis Tregian: his mother was named Katherine, and was the daughter of Sir John and Lady Elizabeth Arundell of Lanherne.² In the year 1577 the Tregian family seem to have become suspected, probably as much on account of their wealth as of their religion, and (according to one account) a conspiracy was planned for their ruin. On June 8 the house at Golden was entered and searched, and one Cuthbert Mayne, a priest of Douay, steward to Francis Tregian, was arrested and imprisoned, with several other of Tregian's servants, 'all gentlemen saving one,' says a contemporary account, in Launceston Gaol. At the following assizes, Mayne was convicted of high treason, and was hanged, drawn, and quartered at Launceston on Nov. 29 of the same year. Tregian himself, who had been bound over to appear at the assizes, was committed a close prisoner to the Marshalsea, where he remained for ten months. He was then suddenly arraigned at the King's Bench and sent into Cornwall to be tried. For some time the jury would deliver no verdict, but after they had been repeatedly threatened by the judges, a conviction was obtained, and Tregian was sentenced to suffer the penalty of *praemunire* and to perpetual banishment. On hearing his sentence he exclaimed, 'Pereant bona, quae si non periissent, fortassis dominum suum perdidissent!' Immediately judgment was given, Tregian was laden with irons and thrown into the foul common gaol of the county; his goods were seized, his wife and children were expelled, and his mother was deprived of her jointure, so that 'she remained oppressd with calamity untill her death.'

After being moved from prison to prison, and

² Harleian Society Publications, vol. ix., Visitation of Oremwell of 1620, p. 275, note. See also Cooke's Visitation in 1573 (Harl. MS. 1079).

suffering indignities without number, which he endured with the utmost fortitude, Tregian was finally removed to the Fleet, where his wife joined him. He remained in prison for twenty-four (or, according to some accounts, twenty-eight) years, during which time he suffered much from illness, but occupied himself by writing poetry, and about the end of Elizabeth's reign he was released on the petition of his friends, though his estates still remained forfeited. In 1606 he left England on account of his ill-health, and went to Madrid. On his way he visited Douay (July 1606), and at Madrid he was kindly received by Philip III., who granted him a pension. He retired to Lisbon, and died there Sept. 25, 1608, aged 60. He was buried in the church of St. Roch, and soon came to be regarded as a saint. His body was said to have been found uncorrupted twenty years after his death, and it was alleged that miracles had been worked at his grave. Francis Tregian had no less than eighteen children, of whom eleven were born in prison. The eldest son, who bore his father's name of Francis, on June 29, 1608, bought back the family estates for £6,500, but in the following year he was convicted of recusancy, and part of the lands were again seized. In 1611 he is said to have compounded with the Crown, to have sold the rest of his property and gone to Spain, where he was made a grandee, and became the ancestor of the St. Angelo family. He was living in 1620, and probably did not die until 1630, when an inquisition was held of his lands. Another son of Francis Tregian the elder's, Charles by name, was educated at Rheims, and entered the household of Cardinal Allen. After the Cardinal's death (1594), Charles Tregian wrote a 'Placatus de Morte Cardinalis Alani.' He is said later to have served with the Spanish army in the Netherlands, and was living in 1611.¹

It will thus be seen that the connection of the Tregian family with the Netherlands was even closer than Mr. Chappell suspected, but it was impossible that the Virginal book could have been written by the elder Francis Tregian, who (according to Oliver) was the author of the sonnet prefixed to Verstegan's work. If the account of the younger Francis Tregian's settling in Spain is accurate, it is hardly probable that he was the transcriber of the MS. But whoever the actual scribe was, the series of dated pieces by Peter Philipps (pp. 134-165), who was an English Catholic ecclesiastic settled in the Netherlands, and possibly a connexion of Morgan Philipps, one of the first Professors of the Douay College, the note (p. 284) to the Pavana of Byrd's (who was all his life a Catholic), the heading of the jig (p. 306), 'Doctor Bull's myselve' (Bull went to Holland in 1613), all point to the conclusion that the collection was formed by some

¹ Further information as to the Tregian family may be found in the following works:—Oliver's 'Catholic Religion in Cornwall'; Polwhele's 'History of Cornwall,' volumes iv. and v.; Catholic Miscellany for June, 1823; also in Add. MSS. 21,203, and in the State Papers, particularly Domestic Series, James I, 1612, volume 41, and 1620, volume 116.

one who was intimate with the Catholic refugees of the period, while the probable connection of the book with the Tregian family, the details of whose misfortunes are more interesting than the above short sketch can convey, lends to it a value beyond that of its musical contents.

The earliest account of this collection of Virginal music occurs in the Life of Dr. John Bull in Ward's Lives of the Gresham Professors (1740), in which is printed a list of Bull's compositions contained in it. Ward states that his information was derived from Dr. Pepusch, who communicated the contents of the volume to him, describing it as 'a large *folio* neatly written, bound in red Turkey leather, and gilt.' In this no mention is made of the book having belonged to Queen Elizabeth. In 1762 it was bought for 10 guineas at the sale of Dr. Pepusch's collection by R. Bremner, who gave it to Lord Fitzwilliam, in whose possession it was in 1783. It is next noticed in Hawkins's History (1776), where it is first stated to have been in Queen Elizabeth's possession. Hawkins also tells the story (repeated by Burney) of Pepusch's wife, Margherita de l'Epine, having attempted to play the music it contained, but although an excellent harpsichord player, never having been able to master the first piece, Bull's Variations on 'Walsingham.' Burney (1789) adds the well-known account of Elizabeth's playing to Sir James Melvil, with the remark that if she could execute any of the pieces in the Virginal Book, she must have been a very great player, as some are so difficult that it would be hard to find a master in Europe who would play them without a month's practice. Burney's acquaintance with the MS. must have been very slight, as he describes Peter Philipps's Fantasia on p. 158 as a regular fugue for the organ. Burney's remarks have been repeated by several writers, amongst others by Steevens, in his notes to 'Winter's Tale' (1803), but with the exception of Mr. Chappell's conjecture nothing further has been discovered with regard to the origin or history of the book. A MS. index of its contents was in the possession of Bartleman, and from this a copy was made in 1816 by Henry Smith, and inserted at the end of the original volume. In Warren's edition of Boyce's 'Cathedral Music' (1849), a list of its contents was printed in the notes to the Life of Byrd, but this is in many respects inaccurate. In framing the following list some attempt has been made to give a few references to similar collections in which other copies of the compositions indexed may be found. The compositions mostly consist of airs and variations, the different sections of which are numbered consecutively. Thus the first piece in the book consists of 29 variations on the air 'Walsingham,' but as in the MS. the air itself is numbered '1,' the number of sections is stated in the index to be thirty. The references to Mr. Chappell's work are to the edition already mentioned. The spelling of the MS. is generally retained, but in a few instances abbreviations have been omitted.

246	131	Quadran Pauen	8	Wm. Byrd. ¹⁷
248	132	Galliard to the Quadran Pauen	3	" " 18

¹ Part of p. 176, and pp. 177, 178, 179, and 180 are blank. The numeration of the pieces leaves off here.

² This piece consists of seventeen quite short sections. At the foot of p. 189 is written 'Perge.'

³ Chappell, p. 110. Occurs in Lady Nevell's Book, fol. 142b.

⁴ In Ward's List.

⁵ In Add. MSS. 30,485, a collection of Virginal Music headed 'Extracts from Lady Nevill's Music Book,' but containing much besides, is a 'Felix Namque' by Tallis, against which (in a later hand) is written '1562. In the Virginal Book,' but this is a different composition from either this or the following.

⁶ A copy of this, entitled 'Felix Numquam,' is in Forster's Virginal Book (p. 24) with no composer's name to it. Another 'Felix Namque' is in Benjamin Cozyn's Book (p. 150); this is different from any of the above, bringing up the number of Tallis's settings to four. (See vol. iv. p. 54.)

⁷ No. 4 of Giles Farnaby's 'Cansonets to Foure Voyces' (1608) is 'Daphne on the Rainbow.'

⁸ Chappell, pp. 456, 742, 794. ⁹ In Ward's List. ¹⁰ Ibid.

¹¹ Add. MSS. 31,392 (fol. 35) has 'Dowland's Lachrymae' in lute tablature. The tune is to be found in nearly every Elizabethan collection, and is frequently alluded to by writers. It occurs at fol. 71a of Add. MSS. 30,485, and a setting by Cozyn is in his Virginal Book, p. 8. See Chappell, p. 92, and *infra*.

¹² Occurs as 'Hardings (Galliard)' without Byrd's name. Forster's Book, p. 320. Two fancies by James Harding are in Add. MSS. 30,485, ff. 47 and 50.

¹³ In Ward's List.

¹⁴ Occurs at fol. 118a of Lady Nevill's Book. A copy is in Add. MSS. 31,403.

¹⁵ Chappell, p. 238. In Add. MSS. 23,623 is (fol. 13b) 'Bonni well Robin van Doct. Jan Bull,' dated Jan. 18, 1627.

¹⁶ *Vide supra*, No. 35, to which this is a different setting.

¹⁷ *Vide supra*, No. 31. A copy is in Forster's Book, p. 295.

¹⁸ A copy is in Forster's Book, p. 302.

¹ This and the following four pieces are in Ward's List.

² This occurs in Add. MSS. 23,623 (fol. 49b), where it is entitled 'Het Juweel van Doctor Jan Bull quod fecit anno 1621. December.' Ward, who prints a list of the contents of this version inserts the date '12' before the name of the month. A slightly different version occurs at p. 124 of Cozyn's Virginal Book.

³ Chappell, pp. 260, 776.

⁴ Ibid. p. 793.

⁵ In Ward's List.

⁶ At fol. 17b of Add. MS. 23,623 is a different setting of this air entitled 'Rose a solis van Joan (sic) Bull Doct.' The sections of this piece are termed 'variations.'

⁷ Chappell, p. 74.

⁸ Occurs under the name 'Lualto' at p. 20 of Forster's Virginal Book.

⁹ Chappell, p. 88. See Forster's Book (p. 70).

¹⁰ Chappell, p. 793. This tune, the Irish origin of which is denoted by its name ('Colleen oge aathore') is referred to in Shakespeare's Henry V. Another copy is at fol. 96b of Add. MSS. 30,485.

¹¹ Chappell, pp. 114 and 770. Occurs under the name 'Lord Willibies welcome home,' at fol. 46b of Lady Nevill's 'Virginal Book' and at p. 23 of Forster's Book. Against the bass line is written in the margin '300 to S. T. by Tom.'

¹² *Vide supra*, p. 401.

¹³ In the margin is written 'the first t(hat) ever bee m(ade).' The letters in brackets have been cut by the binder.

¹⁴ Chappell, pp. 123 and 771. Another copy is at p. 46 of Cozyn's Virginal Book, where it is signed with his initials.

¹⁵ Chappell, p. 793.

¹⁶ Ibid. p. 138. Occurs at p. 460 of Forster's Book.

¹⁷ Against the first line in the margin is written 'F. Tr.'

The music ends on p. 418. At the end of the volume is an index of the contents signed 'Henry Smith Richmond, scripsit, from a MS. Index in the Possession of Mr. Bartleman. 24 March, 1816.' In this piece, copies of which occur in Lady Nevell's book, are marked with an asterisk.

2. *My Ladye Nevells Booke.* This valuable collection of Byrd's Virginal music belongs to the Marquess of Abergavenny, in whose family it has remained since it was written. It is an oblong folio volume, beautifully bound in morocco enriched with gold, green, and red, and lined with blue watered silk. On the title-page is an illuminated coat of arms and the monogram 'H. N.' The music is written on a 6-line staff in square-headed notes, and was copied by John Baldwin of Windsor, a fine volume of whose transcribing is preserved in the Queen's Library at Buckingham Palace. Hawkins, who alludes to this MS. in vol. iii. (p. 288) and vol. iv. (p. 386) of his History of Music, states that the book was given by Byrd to his scholar, Lady Nevill, but there is no evidence in support of this assertion. The MS. was examined by Mr. Chappell when

¹ In Ward's List. A copy is in Cozyn's Book, p. 199.² Chappell, p. 196. Same air as No. 59 (p. 108). See Lady Nevell's Book, fol. 46.³ In Ward's List. ⁴ Chappell, p. 156. ⁵ Ibid, pp. 177, 789.⁶ Rositer published a volume of 'Consort Lessons' in 1609.⁷ In the margin is written 'Vedi Mor. 287.' This refers to a curious piece of plagiarism, section 3 of Morley's Paven, on p. 287, being nearly identical with section 3 of Farnaby's on p. 400.⁸ At p. 59 of Cozyn's Book is a setting of this air signed 'B. O.' and at fol. 95 b of Add. MSS. 30,485 is another by Bull. Vide supra, p. 279.⁹ Vide supra, p. 222.¹⁰ The air of this is the same as that of No. 19.¹¹ Chappell p. 23.

writing his work on English Music, in which volume it is frequently referred to. The following is a list of its contents:—

At the end of the volume is 'The Table for this booke,' after which is the following colophon: 'Ffinished and ended the leventh of September in the yeare of our Lorde God 1591 and in the 33 yeare of the raigne of our sofferaine ladie Elizabeth by the grace of God queene of Englande, etc. By me Jo. Baldwine of Windsore. Laudes Deo.'

3. *Will. Forster's Virginal Book.* This volume, which belongs to Her Majesty the Queen, is preserved at Buckingham Palace, and consists of 238 octavo folios ruled in 6-line staves. The water-marks are a shield surmounted by a coronet, bearing a fleur-de-lis on the escutcheon, and a pot with the initials 'E. O. R.' The book probably belonged to Sir John Hawkins, and has been bound in modern times in half red morocco and paper boards. At the beginning is a 'Table of the Lessons,' written in the same hand as the rest of the book, and signed '31 Januarie 1624. Will. Forster.' The following is a list of the contents of the volume:—

¹ Forster's Book, p. 305. A different setting in Queen Elizabeth's Book, p. 114.
² i. e. a Lavolta.
³ This composition is attributed in Queen Elizabeth's Book to Tallia, and dated 1564: the name should be 'Felix Namque.'
⁴ The first note only has been written in. In the Table of Lessons, this composition is attributed to Byrd.
⁵ In the 'Table' called 'Walsingham' only.
⁶ A mistake is made in the pagination here. Pages 118 and 119 are the same.
⁷ In the Table this is called 'Ground.' It is the well-known 'Carman's Whistle.'
⁸ 'The 6th and last of the 103 Psalme.'
⁹ 'The 1 of the 61 Psalme.'

4. *Benjamin Cosyn's Virginal Book.* This fine folio volume, like the last-mentioned collection, is the property of Her Majesty, and is preserved at Buckingham Palace. The binding is of English workmanship, and contemporary with the MS. It consists of calf with gold tooling. The letters 'B. C.' are stamped both on the front and the back, and part of the tooling has been stamped above the letters 'M. O.'—probably the initials of an earlier owner. The book has been shut by brass clasps, but these are now broken off. At the beginning is an index, divided into 'A Table of these Lessons followinge made and sett forth by Ben Cos,' 'A Table of these Lessons followinge made by Mr. Doctor Bull,' 'A Table of these Lessons following made by Mr. Or. Gibbons,' 'These lessons following are made by Tallis and Byrd,' after which comes a list of six services contained in the same volume, at the end of which is written 'These are y^e six services for the Kings Royall Chappell.' The same page also contains 'A Catch of 9 parts in one,' 'Let

1 '2 of ye 51 Psalme.'
2 'The last of the 51 Psalme.'
3 'Marothant's Dreame' (Table).
4 'Byrd' (Table).
5 A Pavan.
6 'The Galliard to It' (Table).
7 'Lachramy' (Table).

us goe pray for John Cook's soul,' and 'A Table of all these lessons generally contained in this Booke are in Number: 96. By me Benjamin Cosyn Right owner of this Booke.' Hawkins (History, vol. iii. p. 421) says that Benjamin Cosyn was 'a famous composer of lessons for the harpsichord, and probably an excellent performer on that instrument,' that he flourished about the year 1600, and that 'there are many of his lessons extant that seem in no respect inferior to those of Bull.' The last statement looks as if Hawkins had been acquainted with the Virginal Book, for many of the lessons in it against which Cosyn's name appears, are undoubtedly the compositions of Bull and of other authors: indeed it is probable that further research would show that Cosyn had very little to do with any of the compositions in the book. His name is found in no other collection, and who he was is not known. A John Cosyn is mentioned by Anthony à Wood (Bodleian Library, Wood, 19 D. (4) 106) as organist of Charterhouse.

The following is a complete list of the contents of the volume: as the old pagination is in places irregular, the pages have been numbered freshly. The titles in the index are sometimes different from those in the body of the book: when these variations occur, they have been noted in the last column:—

No.	Name.	Page.	Composer.	Title in Index.

Her Majesty the Queen has graciously allowed the writer to examine and describe the two

¹ Cosyn's name does not occur in the Index: no. 96 consists of a Te Deum, Benedictus, Kyrie, Creed, Magnificat, and Nunc Dimittis, and the whole service is attributed to Gibbons.

collections of Virginal Music at Buckingham Palace; his thanks are also due to the Marquess of Abergavenny, for permission to examine and describe Lady Nevell's Virginal Book, preserved at Eridge Castle; to Mr. E. Maunde Thompson, Dr. Charles Waldstein, Mr. W. G. Cusins, and particularly to Mr. Bertram Pollock and Mr. Birkitt, who have respectively been of great assistance in different points which have arisen with respect to this article. [W.B.S.]

VIRTUOSO. A term of Italian origin, applied, more abroad than in England, to a player who excels in the technical part of his art. Such players being naturally open to a temptation to indulge their ability unduly at the expense of the meaning of the composer, the word has acquired a somewhat depreciatory meaning, as of display for its own sake. *Virtuosità*—or virtuosity, if the word may be allowed—is the condition of playing like a virtuoso.

Mendelssohn never did, Mme. Schumann and Joachim never do, play in the style alluded to. It would be invidious to mention those who do. [G.]

VITALI, TOMASO, an eminent violinist and composer, was born at Bologna about the middle of the 17th century. He appears to have held appointments as leader of orchestras at Bologna and Modena successively, and, according to Fétis, published 5 sets of Sonatas for 1 and 2 Violins with Bass. His name has in our days again been made known to the general public by a Chaconne with variations, which was edited by F. David ('Hohe Schule') and has frequently been played in public by Mme. Neruda and others. This work, which has rightly been described as a worthy precursor of Bach's famous Chaconne, proves Vitali to have been a musician of great skill and remarkable talent. [P.D.]

VITTORIA, TOMMASO LUDOVICO DA—or, to give the name in its Latin form, **VICTORIA, THOMAS LUDOVICUS DE**—is, next to Palestrina, the greatest musician of the Roman school of the 16th century. Though Vittoria is assigned to the Roman school, that must not be understood as if he ever became a mere follower or imitator of Palestrina, as he is sometimes considered. He was Spanish by birth, and always remained Spanish in feeling; but, like Escobedo, Morales, Soto, etc., he made Rome the principal sphere of his activity. It is perhaps on this account that it is not usual to reckon a distinct Spanish school of music, as well as on account of the general affinity of style of these Spanish composers to their Roman contemporaries. We should not however forget that the Roman school itself was partly formed and largely influenced by these Spanish musicians. Palestrina, in whom the Roman school is practically summed up, must have learnt as much from his Spanish predecessors who held office in the Papal chapel, Escobedo and Morales, as from his immediate master Goudimel. If from Goudimel and older Netherlanders Palestrina learned his science, his familiarity with all the technicalities of his art,

and if from Arcadelt he caught the gift of sweet and natural expressiveness, from the Spanish masters he acquired something of that depth of feeling which is their special characteristic. Proske, speaking of the Spaniard Morales, says 'the reform of the pure church style, which was afterwards perfected by Palestrina, is happily anticipated in many parts of the works of Morales, for his style is noble and dignified, and often penetrated with such depth of feeling as is hardly to be found in any other master' (*Musica Divina*, III. xiv.). Ambros too acknowledges that already in Morales 'there is developed out of the vigorous stem of Netherland art, that pure bloom of the higher ideal style, which we are accustomed to call Roman' (Bd. iii. 588). If it were not that Palestrina has so much overshadowed his predecessors and contemporaries, it would perhaps be more correct, especially when we take Vittoria into account, to speak of the Hispano-Roman school. We shall not be far wrong in attributing to Spanish influence that particular cast of the religious spirit which breathes out of Palestrina's music, and in considering generally that to the happy commixture of Spanish seriousness and gravity with Italian grace, softness and sweetness, is due that peculiar impression of heavenliness and angelic purity which has so often been noted as characteristic of the Palestrina style in its perfection. In connexion with this, we may also note the fact that it was the Spanish bishops, at the Council of Trent, who by their resistance to the exclusion of polyphonic music from the services, obtained the appointment of that celebrated commission which gave occasion to the composition of Palestrina's *Missa Papae Marcelli*.

It might almost be considered as a symbol of the close connexion of the Spanish music of the 16th century with Spanish religion that Avila, the birthplace of Saint Teresa, the most striking embodiment of the Spanish religious spirit, was also the birthplace of Vittoria, the noblest representative of Spanish music. The mystic-ascetical spirit peculiar to Spain is common to both. It is the expression of this spirit in Vittoria's music that vindicates his claim to an independent position of his own beside Palestrina, and redeems him from being considered a servile follower or imitator. In the preface to his edition of Vittoria's *Missa pro Defunctis* a 6¹ Haberl casts doubt on the usually received opinion that Vittoria was born at Avila. Though *Abulensis* (i. e. of Avila) is found after Vittoria's name on the title-pages of all his published works, Haberl conjectures this to indicate that Vittoria was a priest of the diocese of Avila—Presbyter *Abulensis*—and that his real birthplace is Vittoria, whence he took his name, as Palestrina took his from *Præneste*. But the cases are not parallel, for Palestrina's name in all Latin titles and dedications always appears as *Prænestinus*, whereas Vittoria's name never appears as *Victoriensis*, but always *T. L. de Victoria Abulensis*. The cases are only parallel

¹ F. X. Haberl, Domkapellmeister of Ratibon.

if we interpret *Abulensis* as we interpret *Prænestinus*, as signifying the place of birth; everything rather points to the conjecture that he was ordained priest in Rome. It is better therefore to adhere to the received opinion that he was born at Avila.²

The precise date of Vittoria's birth has not been ascertained, but the known facts of his life lead us to place it about 1540. The first authentic information we have regarding him is his appointment in 1573 as *Maestro di Cappella* to the *Collegium Germanicum*, on its reorganisation under Gregory XIII. It is evident however that he must have been in Rome for some years previously. There can be little doubt that his whole musical training, as a composer at least, was received there. There is no trace of his having had to work himself free from the trammels of Netherland scholasticism, the stiffness of the earlier style, and what Baini calls the 'flamingo squalore,' as Morales and even Palestrina had to do. He appears at once to have entered into the heritage of the new style, indicated by Morales, but first completely won by Palestrina in his *Improperia* and *Marcellus mass*. A pregnant remark by Ambros (iv. 71), implying that Palestrina owed his very superiority to the fact of his having had to struggle out of the Netherland fetters, suggests that it would perhaps have benefited Vittoria also to have passed through this experience. It gave Palestrina so thorough a command over all the resources of counterpoint, canon and imitation, as enabled him to move with the most sovereign ease and boldness, and to give full rein to his imagination, in the midst of the most elaborate complexity of parts. Palestrina, starting from science, learned to make all science subservient to the expression of the religious feeling; Vittoria, starting from the religious feeling, and from the vantage-ground won by Palestrina, only used that amount of science which was necessary to give expression to his own religious earnestness. In comparison with Palestrina there is thus a certain limitation in his talent; he has not the same immense variety, boldness, and originality as Palestrina, though there is often a greater depth of individual expression. We do not know who was Vittoria's immediate master in composition; he was no pupil of Palestrina in the ordinary sense, but Palestrina was his only real master, and we know that he was bound to him in ties of close friendship and the greatest admiration. By this he must have largely profited. The artistic relation of the two might in some respects be considered parallel to that of Schubert and Beethoven. Vittoria is a sort of feminine counterpart of Palestrina, just as Schubert is of Beethoven. But the parallel does not hold good in other respects. There is nothing in Vittoria's case to correspond with the immense productivity of Schubert, unless MS. works of his should

² There is however the case of one prominent musician which would lend some support to Haberl's conjecture if there were any other evidence in support of it. It has been recently ascertained that the real name of Ludovico Viadana was Ludovico Grossi, and that he was born at Viadana, and not at Todi as hitherto assumed.

still be lying hid. Vittoria's first publication was (according to Haberl) in the year 1572, and consisted of a book of motets for 4 to 8 voices (Venice, Ant. Gardane). This is not often referred to, because its contents were afterwards reprinted with additions in 1583. Fétis does not mention it, but mentions instead a publication of 1576 to which I can find no other reference. The title as given by him is 'Liber primus, qui Missas, Psalmos, Magnificat, ad Virginem Dei Salutationes, aliaque complectitur 4, 5, 6, 8 voc. Venetiis, apud Angelum Gardanum 1576.' One would be inclined to think there is some confusion here, as two other books of Masses which appeared later, are entitled *Liber Primus* and *Liber Secundus*. It is possible that this publication may contain works afterwards republished in separate collections. Albert von Thimus, in making a score of Vittoria's 8-part motet 'Ave Regina,' for Schlesinger's 'Musica Sacra,' states that he could not find a copy of this publication in any German or French library.

To keep to chronological order, we should mention that in 1575 Vittoria was appointed choir-master of St. Apollinaris. According to Haberl however this was no new appointment (as represented in Proske and Ambros); the church being given for the use of the Collegium Germanicum. This post Vittoria appears to have held till 1589, during which time he published the following works: (1) A set of Magnificats with Antiphons B. V. M., Rome 1581; original title, 'Cantica B. V. vulgo Magnificat 4 voc. cum 4 Antiphones B. V. per annum 5 and 8 voc.' (2) A book of hymns for 4 voices to which is appended four Psalms for 8 voices, Rome 1581; original title, 'Hymni totius anni secundum S. Rom. Eccl. consuetudinem qui quatuor concinuntur vocibus, una cum quatuor Psalmis pro praecipuis festivitatibus, qui octo vocibus modulantur.' This was dedicated to Gregory XIII, and would appear to have been the first comprehensive work of the kind, preceding by several years Palestrina's book of Hymns, which was published in 1589. Proske gives five of these Hymns in the third volume of *Musica Divina*. If anything distinguishes Vittoria's Hymns from Palestrina's, it is a peculiar tenderness of expression with less elaboration. Perhaps Palestrina was stimulated to the composition of his Hymns by the example of Vittoria; the task must have been congenial to Vittoria, requiring strict subordination to the liturgical melody, with sufficient opportunity for free subjective expression. (3) A book of Motets for 4, 5, 6, 8 and 12 voices, Rome 1583. The original title would seem to show that this book contains all that was in the early publication of 1572 with much else, ('quae quidem nunc vero melius excussa, et alia quamplurima adjuncta noviter sunt impressa'). This book was reprinted several times. (4) Another book of Motets for all the feasts of the year was published at Rome in 1588. Editions of both appeared later as 'Cantiones Sacrae' at Dillinger and Frankfurt. The second volume of Proske's *Musica Divina*

contains fourteen of these Motets, with the addition of one which had remained in MS. Ambros remarks on the striking similarity ('doppelgängerische Aehnlichkeit') of many of Vittoria's Motets to those of Palestrina on the same texts, and yet with an essential difference. He notes in them, as Proske does, a certain passionate-ness of feeling, kept in check by devotion and humility. This passion is not always marked, as in the instance referred to by Ambros, by the almost immediate entrance of a counter-subject at the beginning of the piece, but its influence may be traced generally in the less strict adherence to exact imitation of parts, and a looser texture generally of part-writing. On the other hand there are none of those semi-dramatic traits and outward illustrations of words or ideas which are to be found in Palestrina. Vittoria is too much concerned with the expression of inward feeling, to care about the outward illustration of words or ideas. It may be said generally that in Vittoria there is a more complete subordination to purely liturgical considerations, while Palestrina has in view more general religious and artistic considerations, and hence in Vittoria there is nothing corresponding to Palestrina's Motets from the Song of Songs, or to that more animated style ('genus alacrior') which Palestrina professed to employ in these and other works.

To return to the enumeration of Vittoria's works: we have, (5) A First Book of Masses, published at Rome, 1583, dedicated to Philip II. of Spain, and containing nine masses—five à 4, two à 5, and two à 6. Of these, two four-part masses have been published by Proske, viz. 'O quam gloriosum' and 'Simile est regnum'; and one by Eslava, 'Ave Maris stella.' (6) 'Officium Hebdomadae Sanctae,' Rome 1585, containing settings of the Improperia, the Lamentations, and the 'Turbæ' of the Passion. From this book are taken the eighteen *Selectissimæ Modulationes* published in vol. 4 of the 'Musica Divina.' The works above mentioned were published during Vittoria's stay in Rome. Until recently it was not known for certain that he had ever left Rome or given up his appointment there. Fétis indeed conjectured, on the ground of his last work being published in Madrid, that he had actually returned there.¹ But it has since been ascertained from the Archives of the Royal Chapel at Madrid that in 1589 Vittoria was appointed Vice-Master of the Chapel (just established by Philip II.), under the Fleming Philip Rogier. Perhaps before leaving Italy, Vittoria had prepared for publication his second book of Masses, which appeared in 1592. It was dedicated to Cardinal Albert, son of the Empress Maria, and in the dedication the composer expresses his gratitude for the post of Chaplain to the Imperial Court. This book contains two masses à 4 with a 4-part 'Asperges' and 'Vidi Aquam,' two Masses à 5, one à 6, one à 8, and one Requiem Mass à 4. Of these, the

¹ Ambros attached no value to this conjecture (see note at foot of p. 72, Baud IV).

4-part 'Quarti toni,' the 5-part 'Trahe me post te,' the 6-part 'Vide Speciosam' are given by Proske, as also the two Antiphons. These Masses are on a smaller scale, and far less elaborate in technique than the more celebrated of Palestrina's. A good example for the comparison of technique is afforded by the 6-part 'Vidi Speciosam' of Vittoria and the 'Tu es Petrus' of Palestrina, the opening subjects of both, found also in the other movements, being so similar. Of Vittoria's Masses generally we may simply repeat the judgment of Proske—work and prayer, genius and humility are blended in them to perfect harmony.

The date of Vittoria's death is uncertain. He held his post in the Royal Chapel until 1602, when he was succeeded by Bernard Clavijo, a celebrated organist. He can scarcely have died in that year, since he wrote funeral music for the Empress Maria, who died in 1603. The title of this his last important work is:—'*Officium Defunctorum sex vocibus, in obitu et obsequiis Sacræ Imperatricis*,' Madrid 1605. It was dedicated to the Princess Margaret, daughter of the Empress, and consists of a 6-part 'Missa pro defunctis,' a 6-part 'Versus in luctum,' a 6-part Responsorium, 'Libera,' and a 4-part Lectio 'Tædet anima.' This work is universally described as the crown of all the works of the master, 'the greatest triumph of his genius.' [See further, *REQUIEM*, vol. iii. p. 109 b.] Though all the movements are based on the liturgical Canto Fermo, the music has a surprisingly modern character, its effect depending more on the succession of powerful and expressive harmonies than on the mere melodious movement of the parts. Technically considered, it is a marvellous blending of old independent movement of parts, with modern dissonances and progressions. Spiritually considered, it is a wonderful expression of poignant personal sorrow, chastened by religious contemplation and devotion. It is the spirit of devout mourning, holy fear, religious awe before the Divine Judge, which here comes to expression. There is no attempt to depict realistically the outward terrors of the last day, as in some modern Requiems.¹ In Vittoria's work it is simply the individual soul realising its dependence on the Divine mercy. We may suppose him to have composed it in something of the same spirit in which the Emperor Charles V. in his cloister, assisted at his own obsequies. From this profound religious realism may have come the unusual animation of style specially noticeable in the Offertorium, the Cum Sanctis, and the Trio of the Libera, 'Tremens factus sum'—the animation of the deepest religious earnestness; and it is perhaps characteristic of the difference between Palestrina and Vittoria, that in the one case it was the composition of the Song of Songs, in the other of the Requiem,

¹ We are not disparaging the more realistic tendency of modern art, for the sake of exalting the purer idealism of ancient art; for even realism may be sublimed into the highest idealism, as in the case of Beethoven's *Missa Solennis*. On the other hand, in all progress of art, there is a loss as well as a gain—a fact which is too often forgotten by the leaders of so-called progressive art.

which called forth a similar change of style in the two composers. Ambros says this sublime funeral music vindicates for Vittoria the nearest place to Palestrina, but the effect of this judgment is somewhat neutralised by his afterwards bracketing him with Anerio and Soriano, as all much on the same level below Palestrina. It is a mistake perhaps to arrange composers simply up and down, in a straight line as it were, of merit. Some composers, who come short of the universality of spirit of the very greatest composers, may yet have some conspicuous points of superiority of their own, may contribute some new elements to the spiritual side of art, if not to the technical, which warrant their being classed with the greatest. If Palestrina is superior to Vittoria, as Beethoven is to Schubert, yet as Schubert has many points of excellence which form a fitting complement to those of Beethoven, so Vittoria has certain points of excellence more characteristic and more valuable than those of Anerio and Soriano, which mark him out as the fitting complement to Palestrina. If Vittoria has not the science, the variety, the boldness, the perfect originality of Palestrina, yet in him depth of feeling comes to more direct and immediate expression. In Palestrina there may be said to be the perfect equilibrium of art and religious feeling—an equilibrium outwardly manifested in the natural flow of his melody, the pure diatonic character of his harmony, and the consummate art of his part-writing—all conveying the impression of passionless purity. In Vittoria this equilibrium is slightly disturbed in favour of religious feeling; as if in the Spaniard, feeling must manifest itself, even when it sacrifices itself to art and to religion. The result is an impression of tender earnestness, so that if, as Ambros says, the strains of Palestrina are messengers from a higher and eternal world, the like strains of Vittoria are rather the responsive utterances of saintly souls on earth. [J.R.M.]

VIVACE (VIVO, VIVACISSIMO), 'Lively, in the liveliest manner possible.' A direction used either alone, and indicating a rate of speed between *Allegro* and *Presto*, or as qualifying some other direction, as *Allegro* or *Allegretto*. *Allegro vivace* will be taken quicker than *Allegro* by itself, but not so quick as *Allegro assai*. [See ALLEGRO.] It occurs constantly in Beethoven's works in every class, and the same composer uses the less common '*Allegretto vivace*' in the scherzo of the Sonata in Eb, op. 31, no. 3. The word applies not only to speed, but to the manner of interpreting the music. The metronome marks over two movements, one labelled '*Allegro agitato*,' and the other, '*Allegro vivace*,' might be exactly of the same value; the difference between the two would be entirely one of style. The Vivace in the latter case would imply an absence of passion or excitement, an even rate of speed, and a bright and cheerful character. The direction used by itself at the beginning of a movement is time-honoured; it occurs frequently in Bach and the composers of his time.

In the 'Confiteor' of Bach's Mass in B minor

he uses the expression '*Vivace e (sic) Allegro*' at the wonderful point beginning with the words '*Et expecto resurrectionem mortuorum.*' In this passage there is a slight discrepancy in the MS. authorities, which leads to considerable differences of rendering. After the first delivery of these words, *Adagio*, the quick movement starts with three repeated notes in the first soprano part, beginning at the half-bar. In one of the two chief MSS. the direction *Vivace* occurs at the beginning of the bar in the middle of which this phrase begins, and in the other it appears over the beginning of the next bar. This latter reading has been accepted by the editors of the Peters edition, but the Bach-Gesellschaft editors are doubtless right in placing the direction over the half-bar, so that the alteration of time takes place simultaneously with the soprano lead. This reading has been followed in the performances of the Bach Choir.

Schumann used the terms *Vivo* and *Vivace* interchangeably, as is shown in his 6th and 8th Novelettes, at the head of which the two words stand, both being translated by '*Sehr lebhaft.*' Other instances of his use of the two words are found in the '*Études symphoniques*,' where also there occurs an example of Schumann's peculiar use of the direction, viz. as applied not to an entire movement, indicating its speed, but to a passage in a movement, referring to the manner of its execution. In the fourth variation the bass alone of the third bar is labelled '*sempre vivacissimo*,' and no doubt the composer's intention was that the part for the left hand should be much emphasised and its animated character brought out. The same direction, applied in much the same way, occurs more than once in the Sonata in F♯ minor, and in the Scherzo of that work a staccato passage for the left hand is marked '*Bassi vivi.*' In the Overture, Scherzo, and Finale, the same composer inscribes the second movement '*Vivo.*'

Beethoven uses the word '*Vivacissimamente*' for the finale of the Sonata in E♭, '*Les Adieux, L'Absence, et le Retour*,' op. 81 a. [J.A.F.M.]

VIVALDI, ANTONIO, surnamed '*il prete rosso*,' was the son of Giovanni Battista Vivaldi, a violinist in the ducal cappella of St. Mark's at Venice, and born some time in the latter half of the 17th century. Like Steffani and Lotti he first sought his fortune in Germany. He entered the service of the landgrave of Hesse-Darmstadt,¹ doubtless in the capacity of violinist. On his return to his native city in 1713 Vivaldi was appointed maestro de' concerti at the Ospitale della Pietà, a post which he held until his death in 1743. The institution, which was a foundling-hospital for girls, possessed a choir and a good orchestra composed entirely of females. Vivaldi's own instrument was the violin, for which he wrote very largely; he is stated also to have contributed something to the development of its

¹ The prince's name is generally given as Philipp; but Philipp was of Hesse-Philippsthal. Presumably Ernst Ludwig is meant. Fétis gives the impossible combination of '*l'abbé Philippe de Hesse-Darmstadt*': vol. viii. 303 b.

technical manipulation. [See p. 291 a.] The publications on which his fame rests are all works in which the violin takes the principal part. Fétis² enumerates the following:—

- | | |
|--|--|
| Op. 1. 12 trios for 2 violins and violoncello. Paris, 1737. | Op. 8. 'Le quattro stagioni, ovvero il Cimento dell'armonia e dell'invenzione, in 12 concerti a quattro e cinque.' |
| Op. 2. 12 sonatas for violin solo with bass. | Op. 9. 'La cetra, ossia 6 concerti' for the same. |
| Op. 5. Sonatas for the same. | Op. 10. 6 concerti for flute, violin, viola, violoncello, and organ. |
| Op. 3. 'Estro armonico, ossia 12 concerti a 4 violini, 2 viole, violoncello, e basso continuo per l'organo.' | Op. 11, 12. Each consisting of 6 concertos for the same instruments, with the addition of the violoncello. |
| Op. 4. '12 concerti a violino solo, 2 violini ripianti, viola, e basso per l'organo.' | |
| Op. 6, 7. Each consisting of 6 con- | |

Besides these works, 28 operas by Vivaldi are named, and a few cantate and even motets will be found scattered in various manuscript collections.

As a writer for the violin Vivaldi held apart from the classical Roman school lately founded by Corelli. He sought and won the popularity of a virtuoso; and a good part of his writings is vitiated by an excessive striving after display, and effects which are striking simply in so far as they are novel. His '*stravaganze*' for the violin solo, which were much played in England during the last century, are, according to Dr. Burney, nothing better than show-pieces. The '*Cimento*' (op. 8) illustrates another fault of the composer: 'The first four concertos,' says Sir John Hawkins,³ 'are a pretended paraphrase in musical notes of so many sonnets on the four seasons, wherein the author endeavours, by the force of harmony and particular modifications of air and measure, to excite ideas correspondent with the sentiments of the several poems.' Vivaldi in fact mistook the facility of an expert performer (and as such he had few rivals among contemporaries) for the creative faculty, which he possessed but in a limited degree. His real distinction lies in his mastery of form, and in his application of this mastery to the development of the concerto. It is thus that we find his violin concertos constantly studied in Germany, for instance by Benda and Quantz; and the best proof of their sterling merits is given by the attraction which they exercised upon Sebastian Bach, who arranged sixteen of them for the clavier and four for the organ, and developed one into a colossal concerto for four claviers and a quartet of strings.⁴

Bach however used his originals, it should seem, principally as a basis of study; as subjects to which to apply his ingenuity and resource, rather than as models for his own art to follow.

² Fétis, vol. viii. p. 300 a.

³ A concerto and a sinfonia in 3-5 parts for viola d'amore and lute also exists in manuscript. A transcript is in the British Museum. Add. MS. 31,305, f. 10.

⁴ History iii. 561; 1799.

⁵ History, etc., ii. 337; ed. 1878.

⁶ Burney, Present State of Music in Germany, ii. 124, 166; 2nd ed. 1778.

⁷ One of these, No. 4, is an arrangement of the same work as the clavier concerto No. 12.

⁸ This has commonly been mistaken for an original work of Bach's; see Forkel, 'Life of Bach,' p. 99, English translation, 1890. Fétis says that he possessed the manuscripts of two other arrangements by Bach, namely, of two concerti in the '*Estro armonico*,' for clavier, 2 violins, alto, and bass. These do not appear in the catalogue of the Fétis Library.

His arrangements belong to his educational apparatus; although, by the process to which he subjected them, he transformed works of a comparatively limited interest into pieces which may almost deserve a place among his own productions. The means by which he succeeded in infusing a new vitality into his arrangements vary according to the instruments for which he adapted them. In the clavier concertos he restricted himself for the most part to internal change. He strengthened and enlarged the structure of the bass, and modified the upper accompaniments with much freedom and often with the licence of an original composer. The melody in slow movements he ornamented by trills, mordents, etc.; and above all he gave solidity and sometimes an entirely new character to a movement by writing a complete melodious middle part of his own. Of this last method no more perfect example can be found than that presented by the treatment of the *largo* in the second concerto, in G major. The organ concertos display a different sort of versatility. Here Bach has not limited himself to merely internal development: he expands and lengthens his originals, maturing forms which Vivaldi had only suggested, and giving a 'roundness and symmetry'¹ to the whole. Lastly, in the concerto for four claviers, which was written perhaps mainly as an exercise in the composition of *obbligato* parts on a large scale, Bach has not only added episodes, as in the organ concertos, but also considerably augmented the contrapuntal work of the original.² [R.L.P.]

VIVE HENRI QUATRE. [See HENRI QUATRE, vol. i. p. 728.]

VIVIER, EUGÈNE LÉON, remarkable horn-player, born at Ajaccio, 1821. His father was a tax-collector, and intended him for a similar career, but his passion for music made him throw aside all restraints and go to Paris. He knew enough of the horn to gain admittance to the orchestra of the Italiens, and then of the Opéra, and after some instruction from Gallay appeared at concerts as a solo-player. His extraordinary humour and imagination soon showed themselves, and endeared him to society in the best circles of which he mixed largely. He was also master of a curious discovery or trick upon the horn, the secret of which he has never divulged, by which he can produce three, and even four, notes at once, so as to play pieces for three horns, with full, sonorous triads, and chords of the 6 and 6-4 from the one instrument. Vivier soon made his entrance at Court, and his horn in E, with which he used to play before Louis Philippe at the Château d'Eu, is still preserved at the Conservatoire. From this time forward his fame steadily increased at home and abroad. Among other artistic *tournées* he came several times to England after 1844, and was a great

¹ Spitta, 'J. S. Bach,' i. 415, English translation.

² See Professor Spitta's treatment of the whole subject, i. c., vol. i. 411-415; vol. iii. 149, which is to some extent more complete than that contained in the original German edition (Band i. 409-414; ii. 629). [See also ARRANGEMENT, vol. i. 80 &.]

favourite in London for his drollery as much as his music. As a practical joker he had no equal, and good stories might be told of him enough to fill a volume. His powers of mimicry, especially mimicry of sound, were extraordinary. He would make an English or German speech without saying a word of either English or German, yet so correct as to accent that his hearers were puzzled to know why they could not follow his argument. His published songs with pianoforte accompaniment, lead one to believe that if he had cultivated composition he might have reached a high rank. His pieces for the horn are still unprinted, and he seems to have given up the career of a virtuoso. It is now more than 15 years since we heard him play; he then had still a fine tone, made his instrument sing charmingly, and fascinated his audience, though keeping to a very restricted scale and avoiding difficulties. As one of the favourites of Napoleon III, Vivier's position since 1870-71 has been rather isolated, but he retained many friends, including the late Victor Massé and M. Philippe Gille. The latter wrote the preface for Vivier's pamphlet, 'Un peu de ce qui se dit tous les jours' (Motteroz), printed in green and black, and now extremely scarce. It was a collection of the ready-made phrases which it is so difficult to avoid, and which are the bane of ordinary conversation. Man being, according to Diderot, a mass of contradictions, Vivier, who thoroughly appreciates family life, and is an excellent son, lives alone with no companion but a pigeon! His friends, however, have still attractions for him, and this cause has induced him during the last few years to spend the winter at Nice. [G.C.]

VIVO. [See VIVACE.]

VOCAL ASSOCIATION. Established in 1856 at a meeting at Store Street Music Hall, attended by about 300 amateurs, with the view of founding in England an association answering to the German 'Gesang-verein.' Many of the original members had sung at the concerts given shortly before by Mme. Goldschmidt at Exeter Hall, under the direction of Sir Julius (then Mr.) Benedict, and he was unanimously elected conductor of the new association, Mr. William Lockyer being elected secretary, and Mr. J. Rix treasurer. Mr. Chas. E. Horsley subsequently shared the duties of conductor. In 1857 the Society gave a series of concerts at the Crystal Palace, including Mendelssohn's 'First Walpurgis Night,' and it subsequently gave performances at St. James's Hall, at one of which the conductor's opera, 'The Lily of Killarney,' was sung. The concerts included vocal and instrumental solos, and occasionally there was an orchestra, the choir usually numbering 200 voices. Among the works given by the Association for the first time were Spohr's 'Ode to St. Cecilia,' and Challoner Master's operetta, 'The Rose of Salency.' The Association has ceased to exist for some years. [C.M.]

VOCAL CONCERTS. These concerts, the first of which was given on Feb. 11, 1792, ori-

ginated in the secession of Mr. Harrison from the Ancient Concerts in 1789, after having been a member of the chorus from their commencement fourteen years before. Harrison was joined by Miss Cantelo, whom he subsequently married, and in 1791 by Bartleman, and at the close of that year they circulated proposals for the new concerts, which were commenced at Willis's Rooms under the management of Messrs. Harrison and Knyvett senior. The performances at first were on a humble scale, the accompaniments being furnished by the pianoforte, at which the elder Knyvett presided as conductor, and a quartet of two violins, viola, and cello, led by François Cramer. Mr. and Mrs. Harrison and Bartleman were the principal singers, and were assisted in the glees, which formed the principal feature of the concerts, by Mr. Knyvett, jun., Master W. Knyvett, and others. The programme of the opening concert, which may be accepted as a fair sample of the schemes of the first three seasons, included Atterbury's glee, 'Come, let us all a maying go'; Arne's glee, 'Where the bee sucks'; Callcott's 'Peace to the souls of the heroes'; Stevens's glee, 'To be gazing on those charms,' and some songs, duets, catches, and rounds. The chief vocal writers of the day—including Callcott, Crotch, Spofforth, Dr. Clarke, and Stevenson—contributed new works to the programmes, and Italian music was added. In 1793 Mme. Dussek and Miss Poole (afterwards Mrs. Dickons) joined the vocalists, and the brothers Leander, then the most celebrated horn-players in Europe, were added to the little band. The concerts, ten of which were given each season, were abandoned at the end of 1794, the subscription having fallen off, and Harrison and his wife and Bartleman returned to the Ancient Concerts, the cause of their failure being the competition of Saloman's concerts (with Haydn's music, and Mme. Mara among the singers), the Professional Concerts (with Pleyel and Billington), and the Ancient Concerts, rather than any lack of excellence either in the programmes or their execution. In 1801, when the Ancient Concerts alone remained in the field, the Vocal Concerts were revived with the additional attractions of a complete orchestra and chorus. The band was led by Cramer; Greatorox was organist and general conductor; and among the principal singers, beside the two directors, Harrison and Bartleman, were Mrs. Harrison, Mrs. Bianchi, Miss Parke, Miss Tennant, and Mr. W. Knyvett. The programmes provided a wider variety of excellent music than has ever been given in a single series of concerts, the best specimens of ancient work, English and foreign, being interspersed with the compositions of the best contemporary writers. In 1802 Mrs. Harrison retired from public engagements, and the Knyvetts withdrew from the management, although they still assisted in the concerts, and in 1803 Mrs. Billington was engaged, the attraction of her name bringing a large accession of support. On her retirement Mrs. Vaughan, Miss Stephens,

and Mrs. Salmon succeeded as principal English singers, whilst Catalani, Bellochi, Fodor, and Camporese were heard on the foreign side. Braham sang for one if not two seasons after Harrison's death in 1812, and Tramezzani, Naldi, Fischer, and Ambrogetti played in the orchestra. The death of Bartleman and the decreasing popularity of the vocal part-music of the English school, added to the increasing attractions of the Philharmonic Society's Concerts, gradually reduced the subscription to the Vocal Concerts, and after trying the effect of reducing the number of concerts and the amount of the subscription, they were finally abandoned in 1821. As an episode in their history it may be mentioned that an opposition series, under the name of 'Messrs. Knyvett and Vaughan's Vocal Subscription Concerts,' was begun in 1811 with six or seven hundred subscribers, including the Dukes of Kent, Sussex, and Cambridge; the programmes of 1812 included the first acts of 'Don Juan' and 'Figaro,' the finale to the second act of 'Don Juan' and other pieces from Mozart's operas; but in 1812 the death of Harrison led to a union of the two schemes, which was accomplished in 1813. [C.M.]

VOCAL SCORES. One of the admirable collections of the late Mr. John Hullah. It is printed in type in ordinary music size, and was published by John W. Parker in monthly numbers, one sacred and one secular, beginning on Jan. 1, 1846. Its contents are as follow:—

I. SACRED.

Crotch. Motet, Methinks I hear. 4 in 2.	McMurdie. Canon, Agno Dei. 4 in 2.
Telemann. Motet, Amen, Blessing and Glory. 2 Choirs. 4 in 2.	Wecikes. Anthem, All people, clap. 4 in 2.
McMurdie. Canon, Quis est Rex? 4 in 2.	Croft. Anthem, O give thanks. 2 Choirs.
Häser. Hymn, Oh! remember. 4 in 2.	Zingarelli. Motet, Haste Thee O God. 4 in 2.
T. F. Walmisley. Hymn, Lord of all Lords. 4 in 2.	Anon. Canon, Sing, sing aloud unto God. 3 in 1.
Palestrina. Gloria in Excelsis. 4 in 2.	McMurdie. Canon, Hallelujah. 4 in 2.
Klein. Anthem, Like as the hart. 4 in 2.	O. Gibbons. Anthem, Hosanna. 4 in 2.
Leisring. Hymn, Redeemer! now. 2 Choirs.	Nares. Anthem, Blessed is he. 4 in 2.
G. Gabrieli. Hymn, Benedictus. 3 Choirs.	Spohr. Fugue, O magnify. 4 in 2.
J. O. Bach. Chorale, O Sing unto God! 4 in 2.	De Gouy. Psalm, O God of Jacob. 4 in 2.
Anon. Anthem, O Lord grant the King. 4 in 2.	Homilius. Pater noster. 4 in 2.
Palestrina. Sacred Madrigal, Why art thou? 4 in 2.	Palestrina. Motet, Merciful Lord. 4 in 2.
Graun. Motet, Lift up your heads. 4 in 2.	Ives. Canon, Si Deus nobiscum. 3 in 1.
Callcott. Canon, Thou, Lord, hast been. 4 in 2.	Häser. Motet, Put me not to rebuke. 4 in 2.
Palestrina. Collect, O Saviour of the world. 4 in 2.	[Nares.] Anthem, O Lord grant. 4 in 2.
Lotti. Credo. 4 in 2.	Tye. Gloria in excelsis. 4 in 2.
Aldrich. Anthem, O give thanks. 4 in 2.	Graun. Chorus, Thou art the King. 4 in 2.
F. Schneider. Motet, All thy works. 4 in 2.	T. F. Walmisley. Canon, I will praise. 4 in 2.
Rolle. Motet, The Lord is King. 4 in 2.	Arne. Canon, Help me O Lord. 3 in 1.
Byrd. Anthem, Sing unto God. 4 in 2.	Foggia. Motet, I will magnify thee. 4 in 2.
Croce. Motet, O that I had wings! 4 in 2.	O. Gibbons. Anthem, O Lord increase my faith. 4 in 2.
T. A. Walmisley. Canon, Praise the Lord. 4 in 2.	John Bishop. Hymn, When brightly shines. 4 in 2.
Carissimi. Motet, O be joyful in God. 4 in 2.	Allison. Psalm, Ye children. 4 in 2.
T. A. Walmisley. Hymn, Hail gladdening Light. 4 in 2.	Tallis. Anthem, Hear the voice and prayer. 4 in 2.
Palestrina. Hymn, I will call. 4 in 2.	Farrant. Anthem, Call to remembrance. 4 in 2.
Marcello. Psalm, We have heard. 4 in 2.	W. Lawes. Psalm, Sing to the king of kings. 4 in 2.
	Williaert. Canon, Amen. 4 in 2.
	Byrd. Anthem, Sing joyfully. 4 in 2.

II. SECULAR.

Wilbye. Madrigal. Sweet honey sucking bees. ♫ 5.	Hayes. Round. May doth every. ♫ 3.
Horsley. Glee. Cold is Cadwallo's tongue. ♫ 5.	Hutchinson. Madrigal. Return my lonely maid. ♫ 4.
Weelkes. Madrigal. Three woodland nymphs. ♫ 4.	Ward. Madrigal. Die not fond man. ♫ 6.
Stevens. Glee. Sigh no more ladies. ♫ 5.	Mornington. Madrigal. As it fell. ♫ 4.
Calcott. Glee. O snatch me swift. ♫ 5.	Stevens. Glee. O Nightingale. ♫ 5.
Stevens. Glee. O mistress mine. ♫ 5.	Corfe. Part-song. The yellow-haired laddie. ♫ 4.
Mendelssohn. Part-song. For the woods. ♫ 4.	Macfarren. Part-song. There was a man. ♫ 4.
Wilbye. Madrigal. Fly Love aloft. ♫ 3.	Converso. Madrigal. When all alone. ♫ 5.

Wilbye. Madrigal. Flora gave me. ♫ 5.	Byrd. Part-song. My mind to me. ♫ 5.
Horsley. Ode. Daughter of faith. 2 Chorus.	Cobbold. Madrigal. With wreaths of rose. ♫ 5.
Battishill. Glee. Amidst the myrtles. ♫ 5.	Morley. Ballet. Sing we and chant it. ♫ 5.
O. May. Part-song. Come follow me. ♫ 4.	Anon. Ode. Daughter of heaven. ♫ 4.
Gibbons. Madrigal. The silver swan. ♫ 5.	

[G.]

VOCAL SOCIETY, THE. Established 1832 'to present the vocal music of the English school, both ancient and modern, including that of the church, the chamber, and the theatre, with the addition of foreign compositions of excellence,' the promoters of the society urging among other reasons in favour of their enterprise, not only that the compositions of native musicians were at the time nearly banished from the concerts of the metropolis, but that the regulations of the existing societies for the cultivation of glee-singing precluded the presence of ladies, and were attended with considerable expense wholly unconnected with their musical objects. In other words, the Society aimed at giving concerts of English vocal solos and part-music. Its first programme at the King's Concert Rooms, Hanover Square, on Monday, Jan. 7, 1833, included the sextetto and chorus from Webbe's 'Ode to St. Cecilia'; Benet's madrigal, 'All creatures now'; Attwood's glee, 'In this fair vale'; Cooke's glee, 'Deh dove'; Bishop's serenade, 'Sleep, gentle lady'; Webbe's catch, 'Would

you know'; solos from Haydn, Hummel, Mozart, and Purcell, and an instrumental quintet of Beethoven's. Mr. T. Cooke was leader; at the organ and pianoforte were Messrs. Turle, Goss, and Horncastle; and the vocalists included Miss Clara Novello, Mrs. Bishop, Miss George, and Messrs. Bennett, Parry, Phillips, Hobbs, and Braham. The affairs of the Society at its commencement were managed by a committee consisting of Messrs. Bellamy, T. Cooke, Horncastle, Hawkins, C. Taylor, E. Taylor, and Turle. The original intention of presenting mainly English music was departed from in the first year of the Society's existence, for we find in its programmes the names of Palestrina, Pergolesi, Bononcini, Beethoven, Mozart, and other foreign composers, and from a notice of the last concert given in 1838 we learn that, 'with the exception of three glees and a madrigal, the performance consisted entirely of the works of foreign artists.' In 1837 the Society gave the first performance in this country of Spohr's oratorio, 'The Crucifixion,' with Mrs. Bishop, Mrs. Seguin, Miss Hawes, and Mr. Balfe as principal vocalists, and Mr. Turle at the organ. On another occasion Beethoven's Choral Fantasia was performed, with Mrs. Anderson at the piano. [C.M.]

VOCALION. An 'organ' or instrument of the free-reed kind, exhibited by James Baillie Hamilton, Esq., in the International Inventions Exhibition, London, 1885. The first patent was taken out Nov. 13, 1872, by John Farmer (of Harrow), for a combination of reed with string or wire—either as a continuation of the reed or as a coil fastened to the back thereof—and was succeeded by many more, taken out in the names of Mr. Hamilton and others. The first attempts gave a beautiful and very peculiar quality of sound, but by degrees the combination of reed and string from which this proceeded has had to be given up, for practical and commercial reasons, and the instrument as now exhibited is virtually a Harmonium with broad reeds, giving great rigidity of action and therefore purity of tone, and large channels, and acted on by high pressure of wind—not suction. A main peculiarity of the Vocalion is that the reeds are placed above the pallets and below the slides, and that though the sliding 'plug' of three reeds is only of the width of the groove, the cavities are more than twice as wide. This is expressed in Mr. Hamilton's latest patent (U.S.A., March 25, 1884) as 'the combination of pallets, soundboard, and reeds with cavity-boards, one above the other, the lower one containing the nostrils and the upper one the mouths, and an intermediate controlling slide.'

The result of this is a charming variety and purity of tone, especially where the music is not in too many parts; and also great force and richness of sound. This is well expressed by Sir Arthur Sullivan in a letter dated New York, July 3, 1885, as follows:—'You have achieved an instrument which shall possess all the power and dignity of an organ, without the cumbersome and expensive aid of pipes. And in doing this,

you have obtained a totally different tone from that of Harmoniums and other reed organs. I was particularly struck with the nobility and purity of the sound, and also with the great variety in the *timbre* which the instrument displayed.'

The Vocalion exhibited is 6 ft. square, and stands on a somewhat larger pedestal, containing the bellows, wind-chest, etc. It has three Manuals, denominated Choir, Great and Swell; two stops in the pedals and three in each manual, as well as three extra ones of lighter quality, called 'complementary.' In the successive steps of the invention since 1874, it is understood that Mr. Baillie Hamilton has been much assisted by the practical knowledge and skill of Mr. Hermann Smith. [G.]

VOCALISE and VOCALIZZO are the French and Italian terms for an exercise or piece of music to be vocalised. [H.C.D.]

VOCALISE, TO; VOCALISATION. To vocalise is, as its name implies, to sing upon a vowel, whether one note or a series of notes, in contradistinction to singing to separate syllables. Vocalisation is therefore one part of the operation of pronunciation, the other being articulation. Perfect vocalisation involves purity of whatever vowel-sound is at the moment being sung, and this purity of course requires that only those parts of the organs of speech be called into action that are absolutely necessary to bring about the position of the resonance chambers proper to its formation.

This sounds like a truism too obvious to require statement, but it must be remembered that it is quite possible to bring into play or convulse parts of the mechanism that are not necessary, without altering the vowel-sound, though the quality of the voice, the production, suffers, and will be tonguey, throaty, palatal, or veiled, according to the part thus unnecessarily brought into play. In such cases, if the resonance-pitch of the vowel-sound could be ascertained, it might be found to be precisely the same under these different conditions, while the tone of voice, pure in the one case, might be very bad in the other. No special organ or mechanism should present itself to the mind of the hearer. So far as to the production of a single note. In a succession of notes, whether slow or quick, the passage from note to note should take place without the smallest change either of vowel-sound or of tone-quality, and without the slightest escape of useless breath, and consequent cessation of vocal sound between the notes, or evidence of mechanical effort. The passage must in fact be a *portamento* or *carrying* of the voice, but so quickly executed that the notes shall be perfectly distinct and the *portamento* unrecognisable, except where in slow passages it is required for special expression. Passages of agility (*floritura*, *coloratura*) executed in the manner above indicated give that gorgeous flood of musical sound which was one of the many gifts of the great soprano Jenny Lind. [H.C.D.]

VOCE DI PETTO, Chest voice (Ger. *Bruststimme*); VOCE DI TESTA, Head voice (*Kopf-*
VOL. IV. PT. 3.

stimme). Terms applied in some cases to certain registers or series of notes produced by a special mechanism or state of the voice organs; in others to a different mode of producing the same notes. Nearly the whole question of registers, and in great part of quality or timbre, is involved in uncertainty—indeed, it is scarcely too much to say, mystery. All voice is produced in the larynx. The sound thus given forth can be modified both in pitch and quality by numerous pairs of intrinsic and extrinsic laryngeal muscles, muscles acting upon the trachea or windpipe, on the pharynx, on the soft palate, on the throat, tongue, and nostrils, front and back, on the lips and cheeks. All these parts are concerned in the formation of the resonance chambers. The bare fact that the voice is produced in the larynx is ascertainable by anybody through the medium of the laryngoscope, but to arrive only thus far the throat has to be forced into a position directly antagonistic to the production of those very qualities of tone that form the subject of desired investigation. Open chest voice, there is every reason to believe, is in great part produced by the drawing down of the larynx by means of the sterno-thyroid muscles, so that it becomes part of a compact mass of bone, tissue, and cartilage all vibrating together. This arrangement of parts is aided by the elasticity and compressibility of the windpipe; and since the lowering of the larynx (carrying down with it, as it does, a considerable portion of the root of the tongue), brings about a corresponding lengthening and enlargement of the throat, the vibration of the chest, and the sonority imparted to the sound by the resonance chambers above the larynx, go to make up together what we call the open chest register. The second, or close chest register, next comes into play. This is a register common to all voices, male and female, and is called by Manuel Garcia, *Falsetto*. The third register, Head-voice, is, in the male, generally known by this term *falsetto*, the third register of the female voice being called Head-voice, and it is difficult to understand on what ground Garcia (the pioneer of close investigation of the physiology of the voice-organs) applies the term to the middle register. It is perhaps somewhat bold to combat the opinion of this eminent man, but *falsetto* (a word in general use in Italy as well as in England) seems very appropriate to that register which in the male seems to be scarcely natural, but to belong to another individual, and even to another sex.

The above-mentioned middle register corresponds to Randegger's 'upper series of chest notes,' and the 'closing' for the formation of this series of notes is a point of the highest importance with Visetti and all foremost Italian and other teachers.

Unfortunately it is not possible to point out exactly how the operation is performed. It can only be arrived at by numerous ideal explanations, and by imitation. In using this middle register, the chest is still felt to vibrate, thus justifying the use of the term *close chest notes*, but not quite in the same degree as in the

open register. This is possibly due to the fact that the vibrations are quicker, on account of higher pitch, and therefore less easily felt. But the important difference between the two is chiefly brought about by changes in and about the larynx itself, as well as by some modification of the pharynx. It is most important to observe that there is no hard and fast line to be drawn as to the exact part of the scale upon which the change (the closing, *It. chiudere*) is to take place. It is upon much the same part in all voices, male and female, but not the same under all circumstances. It is possible to produce many notes in both ways, and this is the basis of the all-important operation of blending the registers, an operation requiring in some cases an almost incredible amount of patience on the part of both instructor and instructed; and very frequently voices are ruined, either by their being in the hands of those who have not the necessary knowledge or patience, or far more frequently by the singer himself or herself working alone in the dark. It is a much greater fault to carry a lower register too high than to bring a higher register too low. The term 'Head-voice' in the male is very frequently applied to a mixed voice (*It. voce mista*); that is to say, a voice in which close chest and falsetto are blended; and if the blending is perfect (the result of much work, and much exercise of the reflective powers), it is not only a legitimate use of the voice, but very beautiful in its effect, being chiefly brought into play in piano passages upon high notes. The mixed voice, as its name implies, is, as we have said, not a register, but the union of two other registers, and the power of using it well shows vigilant training. In the mixed voice the larynx is low; in the falsetto, high. There are some few heaven-born artists who instinctively blend all the registers, so that the whole voice becomes one homogeneous wave of sound.

A new nomenclature for the various registers is proposed by an earnest investigator, Herr Behnke, but this does not help matters. There is indeed frequently much difficulty amongst experts in deciding between mixed voice and falsetto (in its ordinarily accepted sense). At a meeting which took place between an eminent throat physician and some professors of singing of good repute, for the express purpose of arriving at conclusions, the want of unanimity of opinion on this head formed the great obstacle to the satisfactory settlement of the questions at issue.

But besides the close union of sternum and larynx in the formation of open chest voice, there is of course a certain condition of the vocal cords themselves, this condition changing in each successive register. In producing open chest notes it is probable that the whole volume of the vocal cords or bands will be found to vibrate. In this state they are susceptible of a certain amount of tension, and will give therefore a certain number of notes. When the maximum of tension is reached, the vocal cords or bands, acted upon by muscles within the larynx, are

reduced in volume. The same tension as before will produce a higher series of notes, the principle being to a great extent that of adopting strings of different thickness upon stringed instruments—that is to say, bowed instruments, on which different notes have to be made upon the same string. Then in the male head-voice, or falsetto, the thin edges only of the vocal cords are set in vibration. The theory would quite well explain difference of pitch, and to some extent modifications of quality; but then how is the blending of the registers, that most important, and in many cases most difficult part of the art of managing the voice, to be explained? We know that the notes about the changes of register have to partake of both qualities. Can the vocal cords be in two conditions at the same time? We may conclude, however, that it will be only a question of time to discover what is at present so difficult to fathom. Is it to be wondered at that a set of small complex organs, in great part out of sight, which give to man one of the chief powers (if not the chief of all powers) that distinguish him from the mere animal, and which is capable of producing the infinite number of shades of sound in the numerous languages of the world, and the marvellous faculty of giving expression to the feelings in song, should for a long time baffle the researches even of the most earnest and scientific investigators? The theory formerly advanced, that the female voice is only a reproduction of the male voice an octave higher in pitch, is at once set aside by the clearly observable fact of the middle register being common to all voices, male and female. The peculiarity of the female voice is the possession of a large range of fine head-notes in the place of the male falsetto; and of the male voice the possession of a large range of open chest notes. [H.C.D.]

VOCES ARETINÆ. A name given to the syllables, Ut, Re, Mi, Fa, Sol, La; first used by Guido d'Arezzo for the purpose of Solmisation, in the early part of the 11th century. [See SOLMISATION.] [W.S.R.]

VOCES BELGICÆ. A name given to the syllables Bo, Ce, Di, Ga, Lo, Ma, Ni, proposed by the Flemish Composer, Huberto Waelrant, about the middle of the 16th century, as a substitute for the syllables used for the purpose of Solmisation by Guido d'Arezzo. As the word 'Solmisation' was incompatible with the use of the newly-invented formula, it was replaced by the terms 'Bocedisation,' or 'Bobisation'; but the system was not destined to survive the century which gave it birth. [See SOLMISATION.]

A similar attempt was made, at Stuttgart, by Daniel Hitzler, who, early in the 17th century, used the syllables La, Be, Ce, De, Me, Fe, Ge, under the name of Bebisation.

A century later, Graun, under the name of 'Damenisation,' used Da, Me, Ni, Po, Tu, La, Be. [W.S.R.]

VOCES HAMMERIANÆ. A term applied to the syllables Do, Re, Mi, Fa, Sol, La, Si—the

modern amplification of the series used, in the 11th century, by Guido d'Arezzo. The name is of German origin; and was invented in honour of Kilian Hammer, Organist of Vohenstraus, who first introduced the amplified system to German Musicians, about the middle of the 17th century. [See SOLMISATION.] [W.S.R.]

VOGL, HEINRICH, born Jan. 15, 1845, at Au, near Munich, received instruction in singing from Franz Lachner, and in acting from Jenk, stage manager of the Royal Theatre, Munich, where he made his *début* on Nov. 5, 1865, as Max, in 'Der Freischütz.' His success was immediate, and he has since been permanently engaged at the above theatre, where he is the favourite tenor, making the usual tours in Germany and Austria in company with his wife, whom he married in 1868 (see below). He excels pre-eminently in the operas of Wagner, and played Loge and Siegmund on the production respectively of 'Rheingold' (Sept. 22, 1869) and 'Walkyrie' (June 26, 1870) at Munich. On the production of the 'Trilogy' at Bayreuth in 1876 he again played the part of Loge, and made a great hit by his fine declamation and admirable acting. On May 5, 1882, he made his first appearance in England at Her Majesty's in the same part, and subsequently in Siegfried. He was unanimously praised for his admirable presentment of these characters, and on May 18 was heard with pleasure in songs by Franz, etc., at a 'Symphony Concert' at St. James's Hall. In 1871 he was tenor singer at the Beethoven Centenary Festival. His wife,

THERESE VOGL, whose maiden name was THOMA, was born Nov. 12, 1846, at Tutzing, Lake Starnberg, Bavaria, learnt singing from Hauser at the Munich Conservatorium, and in 1865 first appeared in opera at Karlsruhe. In Dec. 1866 she made her *début* at Munich as Casilda (Auber's 'Part du Diable'), and has been permanently engaged there ever since, where she is very popular as a dramatic soprano. She was the original Sieglinde at Munich. On May 6, 1882, she made her first appearance in England, at Her Majesty's, as Brunnhilde, and played the part throughout the trilogy with great success. In the second 'cycle' of performances she played with equal success her old part of Sieglinde, having resigned Brunnhilde to Mme. Reicher-Kindermann (since deceased), who had been the Fricka in the first cycle. [A.C.]

VOGL, JOHANN MICHAEL, distinguished opera-singer, and, with Baron von 'SCHÖNSTEIN, one of the principal interpreters of Schubert's songs, born Aug. 10, 1768, at Steyer in Upper Austria. A chorister in his native town at seven, he was systematically grounded in singing, theoretically and practically, and thus early acquired flexibility of voice and purity of intonation. He had his general education in the monastery of Kremsmünster, and took part there in little Singspiele by Süssmayer, giving considerable promise both as singer and actor. He next went to the

University of Vienna, and was about taking a permanent post in the magistracy of the City when Süssmayer engaged him for the Court-opera. He played with the German Opera Company formed by Süssmayer in the summer of 1794, and made his *début* as a regular member of the Court Opera in the following May. From that period till his retirement in 1822 (his last appearance was in Grétry's 'Barbe-bleue,' 1821), he was a great favourite, and held an important position as a singer and an actor in both German and Italian opera. Gifted with a baritone voice of sympathetic quality, his method was excellent, and his phrasing marked by breadth, intelligence, and great dramatic expression. Such parts as Oreste (Iphigénie en Tauride), Jakob (Schweizerfamilie), Count Almaviva (Le Nozze di Figaro), Micheli (Deux Journées), Kreon (Médée), Telasco (Ferdinand Cortes), and Jacob (Méhul's Joseph), show the range of his powers. He became acquainted with Schubert somewhere about 1816, through the latter's friend SCHÖBER,² and the two quickly learned to appreciate and esteem each other. Vogl recognised Schubert's genius, urged him to produce, and did his best to make him known by singing his songs both in public and private. The 'Erl-König' was first introduced by him to the general public at a musical entertainment at the Kärnthnerthor Theatre (March 7, 1821), though it had been sung before at a soirée of the Gesellschaft der Musikfreunde (Jan. 25) by Herr von Gymnich, an excellent amateur. Vogl in his diary calls Schubert's compositions 'truly divine inspirations, utterances of a musical 'clair-voyance,' and Schubert, writing to his brother Ferdinand, says, 'when Vogl sings and I accompany him we seem for the moment to be one, which strikes the good people here as something quite unheard of.' In the summer of 1825 the two friends met at Steyer, and made a walking tour through Upper Austria and Styria, singing Schubert's songs like a couple of wandering minstrels at all their resting-places, whether monasteries or private houses. Schubert publicly testified his esteem by dedicating to Vogl 3 Lieder (op. 6), published in 1821.

Vogl's early conventual education left its traces in his fondness for serious study, to which all his spare time was devoted, his favourite authors being Goethe and the Greek classics. In 1823 he went to Italy, and on his return in the following spring astonished his friends by announcing his marriage with the daughter of the former director of the Belvedere, whom he had long treated as a sort of pupil. One of his last appearances in public was at a soirée of the Gesellschaft der Musikfreunde in 1833, when he sang the 'Wanderer.' His last years were passed in great bodily suffering, cheered only by intellectual occupation. He died in 1840, Nov. 19, on the same day on which his friend Schubert had departed 12 years before, and was buried in the churchyard of Matzleinsdorf, where rest Gluck and his wife (1787), Salieri (1825), and the eminent singer Forti (1859), Staudigl (1861),

³ See vol. III. p. 202.

and Ander (1864). The inscription on his tombstone runs—

Here lies Joh. Michael Vogl,
the German minstrel,
born 10 Aug. 1768, died 19 Nov. 1840.
To the revered and tenderly loved
Husband and Father. [C.F.P.]

VOGLER, GEORGE JOSEPH, the Abbé, is one of the most curious and striking figures in the annals of music. He was born at Würzburg on June 15, 1749, and evinced from an early age a religious cast of mind and an aptitude for music. His attachment to the organ dated from his tenth year. Both his father and his step-father, one Wenceslaus Stautinger,¹ were violin-makers. While learning the organ his step-father let him have a pedalier attached to his harpsichord, and Vogler practised with such determination all night that no one would live on the floor below.

At the same time his independent turn of mind exhibited itself. He elaborated a new system of fingering,² and contrived to learn the violin and other instruments without a teacher; and even while a pupil at the Jesuits' College he played much in the churches, and made a name for himself in the contrapuntal preludes which were regarded as the test of an organist's skill.³ How long this sort of life lasted is not very clear, but Vogler himself declares that he was at Würzburg as late as 1769.

His departure must have taken place very shortly after this. He proceeded in the first place to Bamberg to study law. In 1771 he went from Bamberg to Mannheim, then one of the chief musical centres of Germany, and obtained permission to compose a ballet for the Court Theatre, which produced such an impression that the Elector, Karl Theodor, was led to provide him with funds to go to Bologna and study counterpoint under Padre Martini. Starting about the beginning of 1773 Vogler travelled by way of Venice. He there met Hasse, and also a pupil of Padre Valotti, from whom he first heard of the system of harmony that he subsequently advocated with such vehemence.⁴ The original object of his journey was not achieved, for, though kindly received by Martini, they speedily conceived a repugnance for each other. Vogler could not tolerate a slow and graduated course of counterpoint; and Martini complained that his pupil had neither perseverance nor aptitude. Vogler soon abandoned the trial, and repaired to Padua with a view of studying for orders, and learning composition from Valotti, who had been for nearly fifty years musical director of San Antonio. But the old organist's method of teaching was wholly distasteful to his disciple, and in five months Vogler went on to Rome, where he was ordained

¹ Of Vogler's family we only hear further that poor relatives were a drain on his purse. Christmann speaks of him as impoverished by this circumstance in 1781—2, and Günsbacher makes the same statement in 1808.

² Mozart describes this system as 'miserable.' Letter Jan. 17, 1778.

³ See also the *Graduale* (*De Profundis*) of the *Missa Pastorale*.

⁴ The account in the text follows the statements usually made with reference to Vogler's proceedings at Bologna and Padua. But in the *Musikalisches Correspondenz* of Spire for 1790, No. 18, Professor Christmann asserts that the Elector Palatine himself directly recommended Vogler to Valotti.

priest at the end of 1773.⁵ In the Papal city he was made Apostolic Protonotary and Chamberlain to the Pope, knight of the Order of the Golden Spur, and member of the Academy of the Arcadians. He also found time to gain some instruction from the Bohemian musician Mysliweczek, and armed with these ecclesiastical credentials and musical experience he returned in 1775 to Mannheim.⁶ The Elector at once appointed him Court Chaplain, and he proceeded forthwith to compose a 'Miserere' with orchestral accompaniments, and was made second Kapellmeister, a result partly owing to the influence of some ladies of the court, if Mozart may be trusted.⁷ The Mannheim orchestra was then the finest in Europe, and it was there that Vogler obtained his knowledge of orchestral effect. It was there also that he first put himself forward as a teacher, and established the first of his three schools. He maintained that most previous teachers had pursued erroneous methods, and promised to make his pupils composers by a more expeditious system. Into this task he threw himself with the greatest energy, publishing expositions of his theory (see list of works), and editing a monthly magazine which recorded the proceedings of the school. All this naturally provoked much opposition, but, to judge by its fruits, his school must have had some merits, for amongst those who were actually students or came directly under its influence were Winter, Ritter, Kraus, Danzi, and Knecht—an ardent disciple. At Mannheim Vogler made enemies as well as friends, and it is probable that when Mozart visited Mannheim in the winter of 1777 he fell into that section of the musical world there. On no other supposition can we fully explain the tone in which he speaks of Vogler in his letters, which will not concede to the Abbé a single redeeming feature. Vogler at any rate was studiously attentive to Mozart, and after having several times in vain invited Mozart to call on him, put his pride in his pocket, and went to call on the new-comer.⁸ During Mozart's visit the Elector-Palatine became Elector of Bavaria, and in the same year (1778) removed the Court to Munich. Vogler's devotion to his school kept him at Mannheim, and he did not, in all probability, go to Munich till 1780. His five years at Mannheim are marked by other achievements than the *Tonschule*. At the end of 1777 we find him opening a new organ built after his design at Frankfurt. The next year, in all likelihood, he was summoned to Darmstadt by the heir apparent—the Prince who provided him with a home in his last years—to compose the music for a melodrama called 'Lampedo' (or 'Lampredo').⁹ Another work was the overture and *entr'actes* to 'Hamlet,' brought out at Mannheim in 1779. These were succeeded by an operetta, 'Der Kaufmann von Smirna,' written about 1780 for the theatre at Mayence.

⁵ A. M. Z. vol. vi. p. 250.

⁶ According to a statement in his 'Choral System' (p. 6) it was in this year that he learnt the basis for his system from Valotti.

⁷ Letter, Nov. 18, 1777.

⁸ Mozart's Letter of Jan. 17, 1778.

⁹ For a detailed account see the A. M. Z. vol. I. nos. 23 and 24.

The next twenty years of Vogler's life present great difficulties to his biographer. Although nominally settled at Stockholm from 1786 or 87 to 1799, he was really constantly travelling, and the records of his journeys are so fragmentary and contradictory, that it is impossible to construct a complete narrative. Thus, though he undoubtedly extended his travels to Spain, Portugal, Greece, and Africa, nay even to Armenia and Greenland,¹ the authorities are by no means agreed as to when he went. One writer² gives it in 1783-1786, another³ in 1792, while the dates at which he appears in other distant spots make it difficult to understand how such an extensive tour could have been managed at all. We shall therefore only give some idea of his wanderings and proceedings by noting detached occurrences.

About 1780 Vogler followed the Electoral Court to Munich. He there employed himself in perfecting the education of the celebrated singer Madame Lange, in teaching composition to B. A. Weber, and in composing an opera in five acts entitled 'Albert III. von Baiern,' which was represented at the Court Theatre in 1781. It did not prove successful, and disgust at the want of appreciation that he found in Germany seems to have induced him to appeal to foreign musicians. With this view he submitted an exposition of his system to the Académie Royale des Sciences, probably in 1781, and to the Royal Society in 1783.⁴ In 1782 he was in Paris⁵ and the next year perhaps crossed the Channel to England.⁶ Returning from England, if indeed he really visited it at this time, he again attempted to obtain success as an opera composer. But his comic opera 'La Kermesse,' produced at the Théâtre de la Comédie Italienne on Nov. 15, 1783, proved a dead failure, and could not even be finished. Another effort in Germany was crowned with success. 'Castor and Pollux,' produced at Munich in 1784, was not only received with applause but continued a favourite for years.⁷ The close of 1784 and commencement of 1785 appear to have been occupied with the journey to Africa, Greece, and the East. At all events the next definite trace of him is on Nov. 22, 1785, at a great organ recital in Amsterdam, for which no fewer than 7000 tickets were sold.⁸ In the next year he entered the service of the King of Sweden as Kapellmeister, resigning his posts at Munich, where he had become chief Kapellmeister on the death of Holzbauer in 1783.⁹ At Stockholm

he established his second Tonschule, but neither that nor his official duties put much check on his roving propensities. He signalised his arrival with a French opera, 'Egle,' produced in 1787, but the next year he is at St. Petersburg,¹⁰ and in November 1789 at Amsterdam. He arrived in London at the beginning of 1790, and was very successful. His performances were applauded and he was entrusted with the reconstruction of the organ in the Pantheon. According to Gerber¹¹ he introduced organ pedals into this country, and their introduction by the organ-builder England certainly belongs to the year of his visit.¹² His last performance at the Pantheon took place on May 31, and the proceeds of his visit amounted to £1000 or £1200. One of his most admired performances was 'The pastoral festival interrupted by a storm,' which seems to be the piece by Knecht which was the precursor of Beethoven's Pastoral Symphony. [See KNECHT, vol. ii. p. 66 a; and PROGRAMME MUSIC, vol. iii. p. 39 a.] He went to the Handel Festival in Westminster Abbey,¹³ but was not much impressed. He complains that the chorus was too loud, that the performers were too numerous for any music but Handel's, and that no light and shade could be obtained. But he admits that the effect was sometimes great, and he did homage to the memory of Handel in a characteristic manner, by composing a fugal piece for the organ on the themes of the Hallelujah chorus. The Festival ended on June 3, and he next appears at Warsaw, writing to invite the organ-builder Rackwitz of St. Petersburg to join him. Rackwitz complied, and the two proceeded to Rotterdam to place some free-reeds in an organ there. In the early part of September he was giving concerts at Coblenz, Mayence, and Frankfort. From thence he journeyed on, through Worms, Karlsruhe, Durlach, and Pforzheim, to Esslingen, where the enthusiastic inhabitants presented him with the 'wine of honour,' usually reserved for sovereigns.¹⁴ Rackwitz remained at Frankfort, making a free-reed stop for the Carmelite church,¹⁵ but Vogler probably rejoined him in time for the coronation of Leopold II. on Oct. 9. The Abbé now began to be held in honour in his own country. At Frankfort his 'Hallelujah' fugue fairly astonished both friends and enemies.¹⁶ It was at this time he projected a return to London with the view of establishing a manufactory of free-reeds.¹⁷ This intention was not carried out: he returned to Stockholm, and was followed by B. A. Weber, who gave up his position as conductor at Hanover to obtain further instruction from his old master. The early part of 1791 was employed in the composition of

¹⁶ Christmann and Schubart, l. c., give several instances.

¹⁷ Christmann.

'Athalie' and 'Gustav Adolf,' and in September he was giving organ recitals in Hamburg. The assassination of Gustavus Adolphus III., whom he liked and respected,¹ on March 16, 1792, only a few days after the production of his opera, started him off with Weber on another long tour through Sweden, Norway, Denmark, and the Netherlands.² In the next year³ he undertook a course of lectures on Harmony, and in 1794 betook himself to Paris to hear the choruses accompanied by wind-instruments with which the new-born Republic solemnised its fêtes, and add the result of his observations to his 'Polymelos or characteristic music of divers nations.' At St. Sulpice he gave an organ performance for the poor, the receipts of which were 15,000 livres. On his return he gave a second course of lectures in 1795,⁴ and in 1796⁵ erected his orchestrion at Stockholm. About this time his ten years' engagement as Royal Music-director came to an end, and he proposed to leave Sweden. But his school was considered so successful⁶ that the Regent prevailed on him to prolong his stay till the spring of 1799.⁷ In that year he received from the Swedish Court an annual pension of 500 dollars, departed for Denmark, and made an unusually protracted stay in the Danish capital, during which he brought out an important work for the church, and another for the stage. The former was his 'Choral-System,' in which he reviewed Fux, Kirnberger, and Rameau, and professed to demonstrate that all the Protestant chorale-melodies were written in the Greek modes. Of this work the Danish government ordered 100 copies for distribution gratis to organists. The latter was the music to 'Hermann von Unna.' This, though originally written to a Swedish libretto by Spöldebrand, had not been performed in Sweden. It now proved a great success. Though the ticket office did not open till 4 in the afternoon, people began to assemble round it at 6 a.m. After these achievements Vogler proceeded, in the summer of 1800, to Berlin. There he gave 'Hermann' several times in German by way of attracting the general public, appealed to the *savants* by his 'Data zur Akustik,' and to the religious world by his proposals to reduce the cost of organ-building. He was entrusted with the reconstruction of the organ in St. Mary's,⁸ and gave a performance on it on Nov. 28, 1800. The King of Prussia commissioned him to build an organ at Neu-Ruppin. But this did not keep him in Prussia. He set

¹ Christmann. ² To this date some assign his travels in the East.

³ Fétis says 1792.

⁴ This is explicitly stated by himself. See 'Intelligenz Blatt' attached to A. M. Z. of June 25, 1800. ⁵ A. M. Z. vol. xxv. p. 168.

⁶ B. A. Weber is the only musician of note who studied under Vogler at Stockholm. The school in 1796 consisted of 17 pupils, while the orchestra of the Academy consisted of twenty-eight Swedes. Four of these Swedes, whose total ages did not exceed 36 years, executed one of Vogler's quartets in public, while mere children of the singing school performed several entire operas! Perhaps Vogler did more real service to Swedish music by giving excellent performances of Gluck's music. (A. M. Z. vol. xxiii. p. 257.)

⁷ He was at Stockholm April 28, 1799 (A. M. Z. l. p. 592). In July he was travelling between Copenhagen and Hamburg (see his attack on Müller in A. M. Z. vol. l. Intell. Blatt. xviii. p. 95), and was at Copenhagen on Nov. 1, 1799 (A. M. Z. vol. II. Intell. Blatt. vi.)

⁸ The specification of this organ may be found in the Intelligenz-Blatt attached to the A. M. Z. for Feb. 4, 1801.

off to Leipzig, gave three organ recitals in the spring of 1801, and then went on about June to Prague. At Prague he was received with great honour, and made governor of a musical school. His introductory lecture treated the question 'What is an Academy of Music?' and the interest he excited was shown in the crowded audiences that attended his course on the theory of music. The orchestrion was again erected, and after eight months' delay, and two disappointments, was heard on Easter Sunday, 1802. The Bohemians do not seem to have thought much of it, and it may have been in consequence of this failure that he left Prague for Vienna, arriving about the end of 1802.⁹ He was reported to be invited to Vienna to write an opera, and rumours of the forthcoming work were constant throughout 1803. 'Samori,' however, did not actually appear till May 17, 1804, at the Theatre an-der-Wien, after more than fifty rehearsals. It enjoyed a moderate success, but on the course of operatic history at Vienna it exercised no influence at all. Two other of Vogler's works were given there, 'Castor and Pollux' (with additions and alterations), in a concert-room on Dec. 22 and 23, 1803, and 'Athalie' at the Redoutensaal in Nov. 1804. Neither made much impression. While at Vienna, Vogler celebrated the thirtieth anniversary of his ordination. An interesting circumstance connected with his stay there is his meeting with Beethoven, and their extemporising in turn on the piano. [See vol. i. 183 a.] Another is that here Gänsbacher and, through him, C. M. von Weber,¹⁰ became his pupils. Weber made the PF. arrangement of 'Samori.' Vogler had now been more than two years in Vienna, and his wandering instincts revived. He spent the summer of 1805 at Salzburg, *en route* to Munich.¹¹ There he gave organ recitals, and at Christmas had his Pastoral Mass performed in the Court Chapel. When Napoleon, on his return from Austerlitz, paused at Munich to celebrate the marriage of Eugène Beauharnais with the Princess Augusta of Bavaria, the Abbé was the musical hero of the hour, and 'Castor and Pollux' was performed on the wedding day, Jan. 14, 1806.¹² He made some little stay in Munich, occupying himself as usual in simplifying organs and publishing theoretical works. In September 1807 he turns up at Frankfort, and shortly afterwards¹³ received an invitation from the Grand Duke of Darmstadt, Louis I., for whom he had written 'Lampedo' nearly thirty years before, to settle in that town. The Duke gave him a salary of 3000 florins, a house, with dinner and supper every day from his own kitchen, four wax candles a day and firewood *ad libitum*, the titles of Kapellmeister, and Privy Councillor for Ecclesiastical Affairs, and the order of Merit

⁹ This date is taken from A. M. Z. vol. v. p. 374. The Biographie Gänsbacher states that Vogler came to Vienna about the end of 1803.

¹⁰ Life of C. M. v. Weber, by his son. Gänsbacher (Biographie) says that he first made acquaintance with Weber at Vogler's house.

¹¹ Fétis's statement that Vogler left Vienna in consequence of the war is refuted by dates.

¹² One of the pieces in 'Polymelos' is written in commemoration of this marriage.

¹³ Vogler is found in Darmstadt in 1806. (A. M. Z. vol. xxv. p. 153.)

of the first class. In return for these honours and emoluments he was not expected to perform any duties, or to take part in the opera unless at the performance of one of his own works. The Duke thought himself well repaid by the mere presence of such a celebrity.

Here then, at last, this musical Odysseus found a resting-place. Here he opened his last and most successful Tonschule; and in the remaining six and a half years of his life became very fond of the dull old town. It contained, in fact, everything necessary to make it a haven of rest. The accusations of charlatanism that he had so often combatted down to 1802,¹ at any rate did not penetrate to Darmstadt. The musicians of the place held him in honour; he was surrounded by admiring and brilliant pupils, and his vanity rejoiced in the sunshine of Court favour. When the old love of change returned on him he could vary his routine of teaching and composing by short trips in the neighbourhood. Munich and its organs were a favourite haunt,² especially in autumn. In 1810 he visited Frankfort, Mayence, Hanau, and Offenbach, with Weber, and made another visit to Frankfort for the production of his pupil's opera 'Sylvana' on Sept. 17. Two years later he journeyed through Munich to Vienna, where it was noticed that he 'preserved his long acknowledged mastery' of the organ. He employed himself in composing for stage, concert-room, and church, and his best work, the Requiem, was the occupation of his last days. On May 4, 1814, his friend Gottfried Weber visited him on passing through Darmstadt and remained till mid-day on the 5th. The Abbé was as lively and genial as ever. The two friends analysed music together, and talked of the principles of art and especially of music. Vogler expressed his hopes of being permitted to celebrate the fiftieth anniversary of his ordination. The following day (May 6), at half past four in the morning, the old musician died of apoplexy. He was buried on the evening of the 7th, quietly, amid tokens of respect and grief from those who knew him, from his old scholar, the Grand Duchess, downwards. Wherever one of his numerous pupils was to be found, the intelligence came like a heavy blow, for it announced the loss of a musician zealous for his art and of a man devoted to his friends.³

Vogler was short in stature, and latterly became corpulent. His arms were of great length, his hands enormous, and his general aspect has been described as that of a large fat ape. His singular character was strongly tinged with vanity, and not without a touch of arrogance. He delighted to array himself in his purple stockings and gold buckles, with his black silk ecclesiastical mantle and the grand cross of the Order of Merit given him by the Grand Duke

of Hesse.⁴ He would take his prayer-book with him into society, and often kept his visitors waiting while he finished his devotions. Beneath his quaint exterior lay remarkable mental gifts, a great insight into character, and a power-

From a portrait in the Hope Collection, Oxford.

ful memory. Nor were his egotism and affection without counterbalancing excellences. He was always anxious to avoid a quarrel, ready to acknowledge the merits of brother artists,⁵ and to defend them, even if they had opposed him, provided their music was good. The civility which he showed to Mozart is in marked contrast to Mozart's behaviour towards him. Moreover, his vanity did not blind him to his own defects. He was well aware that harmony, not melody, was the department in which he excelled. 'Had I your flow of melody,' he said to Sterkel, 'and you my science, we should be both great men.'

An enthusiastic contemporary⁶ calls him 'an epoch-making man.' The expression is too strong, but as a musical iconoclast Vogler certainly did excellent service. His incessant attacks on the pedantic methods of musical instruction and systems of harmony in vogue, and on the old methods of organ-building, were often extravagant and untrue, as, for example, the statement that Bach did not know what a chorale was. But all reformers are betrayed into exaggeration, and such utterances must not make us overlook the benefits that flowed from his demolition of musical fetishes. His attacks on rooted prejudices stimulated not only his pupils Weber and Meyerbeer, but acted indirectly on a wide circle.

As a composer it was his aim to retain the simple and severe beauty of the old church music and yet enrich it with the wealth of harmony at the command of modern music. He was thus most happy in his treatment of a canto fermo. He brought to this task a facility in vocal counterpoint gained in the ecclesiastical schools of Italy,

¹ See the preface to the 'Handbuch zur Harmonie Lehre.'

² He did not confine his attention to the organs however, as we find him buying kettle-drums of an improved model in Munich. (A. M. Z. vol. xiv. Intell. Blatt. xv.)

³ See the touching letters of Gottfried and G. M. v. Weber on receiving the news of Vogler's death. In the former, by the way, Vogler's age seems wrongly given. In 1845 the Historical Society of Würzburg placed a tablet in the house in which Vogler was born, with the inscription: Geburtshaus des Tonkünstlers Georg Joseph Vogler, geboren den 15. Juni 1748, gestorben den 5. Mai 1814.

⁴ The analysis prefixed to 'Die Scala' has a sort of facsimile of Vogler's signature attached to it. The autograph is as eccentric as the man, being encircled with the most comical flourishes.

⁵ See Christmann's report of a conversation with Vogler.

⁶ Schubert, Aesthetik.

and an intimate acquaintance with the resources and effects of an orchestra acquired as Kapellmeister at Mannheim.¹ As a composer for the theatre he did not attain any great good fortune. Against the success of 'Castor and Pollux,' and 'Hermann von Unna,' must be set very many failures. 'Samori,' on which he spent the greatest pains, pleased for a while, in spite of its weak libretto and often laboured music; but Vogler's influence on opera at Vienna was in reality nil. The overture to 'Hamlet,' on the other hand, was the forerunner of the programme overture now almost too common. We are told² that in composing this work Vogler hit on an idea, then new, viz. he first studied the tragedy and then arranged his composition so as to express the principal scenes in music. His clavier music, though perhaps useful as exercises, is unimportant, and his organ music has not borne the test of time. [PROGRAMME MUSICO, vol. iii., p. 39 a.] His Symphony in C and his Requiem are his best works, and contain original and striking music. The former was played at the Gewandhaus under Mendelssohn in 1838 and 1839, and by the Euterpe in the season 1844-5. The overture to 'Samori,' whose insignificant themes and fine development make it a type of its composer, was performed later still, in 1847, and the characteristic Pastoral Mass was both popular and impressive. A striking success was achieved by the Psalm 'Ecce quam bonum' at Choron's first Sacred Concert at Paris in 1827, and though the programme included works by Scarlatti, Marcello, Handel, Haydn, and Mozart, we are told that the honours rested with Vogler.³

But it was as an organist and theorist that Vogler made most stir. It would be difficult to find an important town in Central Europe in which he had not performed on the organ. He could stretch two octaves with ease, and practice had turned this natural advantage to such good use that he was indisputably the first organist of his age. His quaint eccentricity shows itself here as elsewhere. He would travel about playing in the most *ad captandum* style such things as 'Cheu-Tew, a Chinese song,' 'a Hottentot melody in three notes,' 'The Fall of the walls of Jericho,' 'Thunder-storms,' and the like,⁴ as if with the design of concealing his complete command of the highest ranges of organ-playing. His extempore playing never failed to create an impression, and in the elevated fugal style he easily distanced all rivals. 'One was amazed at his performance in the severe style,' says Rink; and his study of the construction of the organ gave him an unerring instinct in the selection of stops. The ill-natured criticism of Mozart in his letter to his father of Jan. 17, 1778, is by no means generally endorsed by other contem-

porary writers. They declare that in transposing and accompanying, Vogler had remarkable readiness and skill, and that as a reader at sight he 'was perhaps unsurpassed and unique.'⁵

In organ building,⁶ his first practical efforts were made in 1784. Five years later he completed an instrument which he called the Orchestrion, and gave performances on it at various dates at Amsterdam, London, Stockholm, and Prague. It is described as being 9 feet square, 6 feet high on each side, and 9 in the centre. This box contained about 900 pipes, and had shutters for *crescendos* and *diminuendos*. The reed-stops were Free Reeds, and variety of power in their case was gained by three canvas screens in the windtrunk. As to the effect produced, opinions were much divided. At Amsterdam it was asserted to be the *non plus ultra* of organ-building, at Prague it was declared a failure. Vogler was also prepared to 'simplify' old organs. He claimed to work such a metamorphosis in an instrument in three weeks that its effect would be largely enhanced, though many of the old pipes were removed. The cost of an organ on his system was alleged to be a third of that of one built in the old way. Such pretensions were sure to provoke keen opposition. At Berlin he was charged with stealing the pipes removed in 'simplifying' the organ in St. Mary's Church. The falsity of the charge was demonstrated, but it shows the feeling against him.

His proposals were four-fold: viz. (1) To avoid the use of expensive large pipes; (2) To introduce Free Reeds; (3) To arrange the pipes in a different order on the windchest, and (4) To remove Mutation Stops.

(1) The means by which the cost of organs was diminished without depriving them of their resources lay in Tartini's theory that just as a note gives certain harmonics, so the harmonics of a note if combined give the fundamental note. The first harmonics of a pipe of 32 feet would be represented by pipes of 16 feet and of 10 $\frac{2}{3}$ feet. It was therefore possible by employing a pipe of 16 feet and a pipe of 10 $\frac{2}{3}$ feet together to obtain a 32-foot sound without having to use a 32-foot pipe. Time appears, on the whole, to have decided in favour of Tartini and Vogler on this point. It is true that some organ-builders and organists still hold that the 'third sound' is but a poor apology for the real pipe-produced sound, and that every organ of any pretensions still contains large pipes. On the other hand, a Quint on the Pedal Organ is undoubtedly coming into great favour as an adjunct to or substitute for the 32-foot stop. The reader will find instances of the 'Trias Harmonica' either with or without a 32-foot stop at St. Michael's, Tenbury, Cutler's Hall, Sheffield (Cavallé-Coll), Sheffield church (Brindley & Foster),

¹ Christmann mentions that in an orchestra arranged on Vogler's principles four double basses were used and tuned in four different ways, by which ingenious device an open string was obtained for every note. In 'Die Scala' two pairs of kettledrums are used to play a scale passage—probably the first instance of the employment of four drums. [Op. DRUM, vol. i. p. 464 a; TIMBALES, vol. iii. p. 116.]

² Schubert, Aesthetik.

³ A. M. Z. vol. xxix. p. 558.

⁴ Christmann mentions a performance intended to represent 'The Last Judgment according to Rubens.' Pleiorial Music has perhaps never been pushed beyond this.

⁵ Once, at least, Vogler met Beethoven, viz. at Sonnleithner's house in the winter of 1808-9. [See BEETHOVEN, vol. i. p. 185 a.] Göschenbacher, who then heard both extemporise for the first time, admired Beethoven, but was perfectly enchanted with the Adagio and Fugue thrown off by Vogler. So excited was he that he could not go to bed after it, and knocked up his friends at unreasonable hours to quiet his excitement by describing what he had heard. (Biographie.)

⁶ Data zur Akustik.

the Bow and Bromley Institute, the Temple Church (Schulze), the Free Trade Hall, Manchester (Kirtland & Jardine), and York Minster.

(2) The free-reed was derived from a Chinese organ, and was applied about 1780 to organ reed-stops by a Copenhagen organ-builder named Kirsnick, who had settled at St. Petersburg. Vogler was so impressed with Kirsnick's experiment that he induced Rackwitz, Kirsnick's assistant, to follow him to Stockholm, and make several stops on this principle. When Vogler returned to Germany in 1799 he carried the invention with him wherever he went, and it was through his advocacy that people first realised its capabilities. To this initiative must be attributed not only the free-reed stops in organs, but also the Harmonium and its varieties.

(3) Vogler arranged the pipes of an organ in semitonal order—the large pipes at the left end of the soundboard, and the small pipes at the right end. Most organ-builders adhere to the old system; but Vogler's arrangement has found adherents, amongst whom may be noted the celebrated Schulze of Paulinzelle (who built his organ for the Exhibition of 1851 on this principle), Walcker of Ludwigsburg, and Messrs. Kirtland & Jardine and Forster & Brindley in England.

(4) On the fourth point Vogler has achieved an undoubted success. The Mixtures still found in organs, are not the overwhelming ones that he assailed, and further modifications in this respect are possibly still to come. Outside the particular questions raised by Vogler, his influence on organ-building was considerable, and much of the improvement therein in the last seventy years may be ascribed to his attacks.

As a theorist Vogler developed the tenets of Valotti. His system of harmony was founded on acoustics, and its fundamental principle was that not only the triad (common chord), but also the discords of the seventh, ninth, and eleventh could be introduced on any degree of the scale without involving modulation. He went even beyond this, and allowed chromatically altered forms of these chords and inversions of them. But his system never took much root. According to Knecht, its most ardent advocate, it was full of practical advantages, placed in a clear light the formation of the scales, simplified figuring and thorough-bass, and got rid of all sorts of meaningless and confusing terms, 'dominants that do not dominate, Vorschlags, Nachschlags, etc.' Two other writers have founded their systems on that of Vogler, F. J. C. Schneider and Jelensperger; but it has passed into oblivion.

It is as a teacher that Vogler has most claims on posterity, for no musician has ever had so many remarkable pupils. As a teacher of singing he was in great request, and the celebrated Madame Lange (Aloysia Weber) owed almost everything that was admirable in her singing to his instruction.¹ It was, however, to the teaching of composition that he directed his greatest efforts; and from his Schools at Mannheim, Stockholm, and Darmstadt came forth

¹ Schubert, *Ästhetik*, p. 135.

Winter,² Ritter, Kraus, Danzi, Kornacher, B. A. Weber, Baron von Poisel, Gänsbacher, C. M. von Weber, and Meyerbeer. Starkel also received lessons from Vogler, and Knecht the organist and Gottfried Weber were very directly influenced by him. His pupils conceived the deepest regard for him. 'Mere association with him,' says Gänsbacher, 'was a kind of school.' Vogler was not only a most judicious and sagacious teacher,³ he was also the kindest and most generous of friends, and he reaped the reward of his kindness by finding that his old pupils after passing into the world were ever ready to return to his side.⁴ Few scenes of artistic life are more charming than the picture of the details of Vogler's last Tonschule at Darmstadt. After the Abbé had said Mass, at which one of his scholars played the organ, all met for a lesson in counterpoint. Then subjects for composition were given out, and finally each pupil brought up his piece to receive the criticism of his master and fellow-pupils.⁵ Every day a work of some great composer was analysed. Sometimes the Abbé would propound a theme for improvisation. Not unfrequently he would play himself, as he never played except when alone with his 'three dear boys,' in the empty church. From the mind of one of these 'boys,' the impression of these performances was never effaced, for Weber always described them as a thing not to be forgotten. Anon we get glimpses of Weber at work on 'Abu Hassan' or on 'Papa's' biography, while the 'old gentleman' looks on, and advises or composes, consuming 'enormous quantities of snuff.' By way of varying the regular routine the master would take his scholars with him to organ recitals in neighbouring towns. The pupils, in their turn, would diversify the common round by writing an ode to celebrate 'Papa's' birthday.⁶ A happier household can hardly be imagined. When the master died, his pupils felt as if they had lost a father. 'Reiner . . . announced to me yesterday,' wrote Weber to Gänsbacher (May 13, 1814), 'that on the 6th our beloved master Vogler was suddenly snatched from us by death . . . He will ever live in our hearts.'

A list of Vogler's works in various departments is appended.

OPERATIO WORKS,

arranged as far as possible in chronological order, with the places where they were first performed.

- Ino, cantata by Ramler. Darmstadt, 1779.
- Lampedo (or Lampredo), a melodrama. Darmstadt, about 1779.
- Hamlet, overture and entractes for the play of. At Mannheim, 1779.
- Der Kaufmann von Smirna, operetta. At Mannheim, 1771.
- Albert III. von Baiern, opera in 5 acts. At Munich, 1780.
- Le Kermesse, opera. At the Comédie Italienne in Paris, Nov. 15, 1783.

² Winter afterwards objected to be called a pupil of Vogler, apparently without good reason. Compositions of his appear in the 'Mannheimer Tonschule.'

³ As for instance when he made C. M. v. Weber go back to the study of the great old masters in 1803.

⁴ E. g. Kraus in 1779, B. A. Weber in 1790, C. M. von Weber in 1809, Gänsbacher in 1810.

⁵ Gänsbacher tells us that Moses Mendelssohn's Translation of the Psalms was a favourite text-book for the daily exercises at Darmstadt. 'At first,' he adds, 'we took the exercises in the afternoon, but the Abbé, who almost daily dined with the Grand Duke, used to go to sleep, pencil in hand. We therefore agreed to take our exercises to him henceforward in the morning.'

⁶ In 1810, Weber wrote the words, Gänsbacher two solos, Meyerbeer a terzet and chorus.

Le Patriotisme, opera. Versailles, 'on occasion of Siege of Gibraltar', 1783.

Orestes and Pylus, opera in 5 acts. At the Italian Opera in Munich, during the Carnival of 1784.¹

Egle, French opera. At Stockholm, 1787.

Le Patriotisme, opera. Written for the Paris Académie in 1788, but rejected or, at all events, not performed.

Athalie, choruses in Racine's play of. At Stockholm, 1791.

Gustav Adolf, Swedish opera. At Stockholm March, 1791.

Hermann von Unna, overture, choruses, dances, and one song. At Copenhagen, in the early part of 1800.

Die Hussiten vor Naumburg im Jahr 1432. 'Schluss-Ober' to Kotzebue's drama of. At Leipzig, September, 1802.

Samori, opera in 2 acts, words by F. X. Huber. At the Theatre an-der-Wien, Vienna, May 17, 1804.

Der Admiral, comic opera. Darmstadt, 1810.

Epimenides.—Erwin und Elmire.—Der gewonnene Prozess.—Les Rendezvous de Chasse.—Die Kreuzfahrer; overture.—Der Eremit auf Formentarra, ditto.—Prolog, Comédie.—Scènes de Puivie.—Jägerballet.—Schmied-ballet.

Also probably a number of similar works, particulars not now attainable. Certainly an overture for a play called 'Die Kreuzfahrer,' and either an opera called 'Agnes Bernauerin' or incidental music to a play of that name. A letter of Weber, Jan. 1811, says 'Papa is composing a little opera . . . it will be ready in a few days.'

CHURCH MUSIC.

1. MASSES.

No. 1. *Massa solennis* in D min. for 4 Voices, Orchestra, and Organ.

No. 2. *Massa pastorica* in E, for 4 Voices, Orchestra, and Organ.

Massa de Quadragesima in F, for 4 Voices and Organ *ad lib.*

Massa pro Defunctis (Requiem) in E♭ for 4 Voices and Orchestra.²

Massa Agnus Dei.

German Mass for 4 Voices and Organ (about 1778.)

German Mass for 4 Voices and Orchestra.

2. PSALMS AND MOTETS.

Psalm.—*Psalmus Miserere* decantandus a quatuor vocibus cum Organo et basia, S. D. Pio VI. Pontifici composuit (about 1777).

Miserere in E♭ for 4 Voices, Orchestra, and Organ.

Miserere, 'Pa. 4.'—In exitu, 'Pa. 5.'

Memento Domine, orch.—*Psalm*, 'Jehova's Majestät.'

David's Buss-Psalm, nach Moses Mendelssohn's Uebersetzung im Choral-Styl. For 4 real parts, one, the Tenor, *ad lib.* (about 1807).

Ecce quam bonum (133rd Psalm) for 4 Men's Voices with PF. *ad lib.*

Motets.—*Suscepit Israel* (composed for Concert Spirituel at Paris) apparently before 1780).

Borate Cœli, for 4 Voices with PF (ed. by G. Weber, with German words; with English and Latin words in Vocal Anthology.)

Ave Regina, for 4 Voices with Org. or PF. (Latin and German words.)

Cantata Domino, for 4 Voices with Org. or PF. (Ditto.)

Laudate, for Soprano solo, chorus, Organ obligato and Orchestra.

Postquam impleti (Sereniss. Puerperæ sacrum), 4 Voices and Orch.

3. HYMNS, etc.

Te Deum in D, for 4 Voices and Orchestra.

Kyrie, with Orch. (Oct. 1776).

Magnificat, with Orch. (1777).

Stabat Mater, with Orch. acc.

Ecce parvis angelorum (about 1777).

Ave Maris Stella, and *Crudelis Herodes* for 2 Choirs with Org. or PF.³

Veni Sancte Spiritus, Graduale in E♭, for 4 Voices, O.chestra, and Organ.

Beatam me dicent, Orch.

Alma Redemptoris, Orch.

Jesu Redemptor, Orch.

Regina cœli and *Laudate Dominum*, Orch.

Ave Regina, Org.

Salve Regina in F, for 4 Voices with Org. or PF. *ad lib.*

Salve Regina, *Ave Regina*, and *Alma Redemptoris*, for 4 Voices with Org. or PF. *ad lib.*

Cantus processionalis pro festo corporis Christi.

Vesperæ de Paschale (14 Apr. 1805).

Vesperæ chorales modulis musicis ornatas, with Orch. acc. [These Vespers may be identical with the work next mentioned.]

Vesperæ chorales 4 Vocum cum Organo.

4 Latin Hymns, for 4 Voices with PF. *ad lib.*

¹ This was one of Vogler's most successful works. The chorus of *Furies* was sufficiently popular in 1821 to lead an unscrupulous manager at Munich to introduce it into the finale of the second act of 'Don Giovanni'!

² The composition of this Requiem for himself occupied most of Vogler's later years. It was esteemed his finest work, and is a very striking composition. Besides the ordinary constituents of a requiem, it contains two Agnuses, a 'Libera me, Domine,' in 4 movements, and an 'Absolutio et Tumbam.'

³ In the library at Darmstadt is a 'Crudelis Herodes,' with orch., dated Jan. 1776, and also a 'Hymnus Ave Maris stella, a 4 vocibus senza instrumenti,' possibly identical with the works in the text.

6 Hymns for 4 Voices with Org. or PF. *ad lib.* (Latin and German words—ed. by Gottfr. Weber.)

12 Church Hymns for 2, 4, or 8 Voices unacc. (First Series).

6 " " " (Second Series).

6 " " " (Third Series).

6 " " " (Fourth Series).

6 " " " (Fifth Series).

3 Hymns, for 4 Voices with PF. *ad lib.*:—*Defectio tenuit* (F min.); *Deus caritas est* (A); *O Salutaris* (C)

Hellig (1809).—*Chorale* (1813).—*O God vi lofve dig*, Orch.—*Hassische Vater unser*, Orch.

4. MISCELLANEOUS.

Die Auferstehung Jesu.

Paradigma modorum ecclesiasticorum (about 1777).

Fugues a 4, on themes of Pergolesi's *Stabat Mater* (about 1777).

8. Killian's Lied (for 2 Choirs).⁴

INSTRUMENTAL MUSIC.

Op. 1. 6 Trios. PF. Violin, and Bass.—Duo for Flute and Violin.

Op. 2. 6 easy Sonatas, PF.

Op. 3. 6 easy Sonatas, PF. and Violin.

Op. 4. 6 Sonatas, in the form of Duets, Trios, and Quartets, PF. Violin, Viola, and Bass.

Op. 5. 6 Concertos, PF. (In two books, each containing 3 pieces).

Op. 6. 6 Trios, PF. Violin, and Bass.

Op. 7. 6 Trios, PF. Violin, and Bass.

Op. 8. 12 easy Divertissements of national character, PF. (two books, six in each).—Concerto, PF. (played before the Queen of France).

Op. 9. 112 easy Preludes for Organ or PF. (about 1804).

Concerto PF., printed with a Concerto by Kornacher, about 1784.—

Nocturne, PF. and Strings.⁵—Quatuor Concertante, PF. Violin, Viola, and Bass.—6 Sonatas for 2 PF.s (1794).—Sonata, PF. (4 hands).—

Sonata (Der eheliche Zwieth), PF. with Strings. C.—Pièces, PF.—Air de Marlborough, var. PF.—March with var. PF.—15 Var. (Lied aus dem Lügner) PF.—16 Var. PF. F.—Pastorella, PF. (about 1807).—

Cannonetta Veneziana varié (about 1807).—Var. (March and Swedish air) PF. (about 1812).—Polonaise favourite, PF. D. (about 1812).—

5 Var. on March from Samori, PF. Viol., and Cello. F.—6 Var. on Duo (Was brauchen wir) in Samori, PF., Violin, and Cello. D.—6 Var. on Duo in Samori, PF. Viol. and Cello. G.—6 Var. on Trio (Sanfte Hoffnung) in Samori, PF., Violin and Cello. A.—7 Var. on Theme from the Overture to Samori, PF., Violin, and Cello. O.

Polymelos, or characteristic music of different nations, PF. and Strings. (1792?)—Polymelos, a characteristic organ-concert, arranged for PF. with Violin and Cello *ad lib.* (1806?)⁶

Var. PF., with Orch. acc.—Var. on 'Ah que dirai-je Maman,' PF. with Orch. acc.—Symphony in G (1779).—Do. in D min.—Do. in C.—

Laterische Nationalsymphonie.—L'Invocation, for Guitar.⁷

Introduction to the Theory of Harmony (Swedish). Stockholm, 1786.

Method of Clavier and Thorough Bass (Swedish). Stockholm, 1797.

⁴ A. M. Z. 1820. Beilage V. June 21.

⁵ Gänsbacher says that 'Vogler's Quintet' was played at the solrée in Sonnleithner's house at which Vogler and Beethoven met. [See vol. I. p. 183 a.] This Nocturne is perhaps meant.

⁶ The march is described as 'd. l'ordre d. Seraphins,' but this appears to be only a short way of putting 'marche des Chevaliers de l'ordre des Seraphins.' The Seraphin is the oldest Swedish Order.

⁷ It is quite possible that the staple, at any rate, of the two works styled Polymelos is the same. The latter originated from, and is practically the substance of an organ recital given by Vogler at Munich on March 29 and 31, 1806. Its contents consist of sixteen numbers, viz. No. 1. Volkalled; No. 2. Swedish Air; No. 3. Bavarian Vater Unser; No. 4. Venetian Barcarolle; No. 5. Volkalled; No. 6. Swiss Ranz des Vaches; No. 7. An African Air; No. 8.—No. 9. Bavarian Volkalled; No. 10. Scotch Air; No. 11, Jan. 14—A Bridal Song; No. 12. A Cossack Air; No. 13. The Return of the Wounded Bavarian Knight; No. 14. Moorish Air; No. 15. Greenland Air; No. 16. Chinese Air. Each of these appears to have had variations appended, and the variations on Nos 2 and 16 were published separately. The 'Greenland Air' is said to have been noted down by Vogler in that country, while the seven Bavarian Volkslieder were the Abbé's own composition; No. 11 is a piece commemorative of the marriage of Eugene Beauharnais with the Princess of Bavaria on Jan. 14, 1806, and No. 13 was published separately as in 'Ode.'

⁸ The last movement in this Symphony is called 'the Scala.' The Symphony was not published till after Vogler's death. At Knyvett's concert in Willis's Rooms on Feb. 25, 1811, the Second Part opened with a 'New Symphonie' for 2 clarinets, 2 oboes, 2 flutes, 2 horns, and trumpet (obligati).—never performed in this country—by Vogler, but what this was it seems impossible to ascertain.

⁹ This may be the work of some musician of like name. Christmann also speaks of a Sonata for Harp, with accompaniment for Flutes and Cello. Bink. in his Autobiography, mentions Variations for Clavier on a Swedish March in E major.

¹⁰ This embodies the last-named work.

¹¹ This embodies the three preceding works.

¹² A magazine recording the progress of the school 1776—1779?

Organ School (Swedish). Stockholm, 1797.
 Choral System. Copenhagen, 1800.

 System für den Fugenbau. Offenbach, 1811.²
 Ueber Chorale und Kirchengesänge. Ein Beitrag zur Geschichte der Tonkunst in 19th Jahrhundert. Munich, 1814.
 To this class of works the following may also be fitly assigned:—
 Verbesserung der Forkelschen Veränderungen (of 'God save the King?'). 1793.
 32 Preludes for Organ in every key, with an analysis. Munich, 1808.
 12 Chorales of J. S. Bach (arranged by Vogler and analysed by C. M. v. Weber). Leipzig, about 1810.

Amongst Vogler's contributions to current musical literature may be noticed, besides those which were reprinted separately, and have been already mentioned:—

Several short notices in the Wetzlarischen Concertanzeigen (1779—1790).
 Von der Musik in Frankreich, in Kramer's Magazin der Musik.
 Antwort auf verschiedene sein System betreffende Fragen in Musik. Korrespondenz No. 2. 1790.
 Bemerkungen über die der Musik vortheilhafteste Bauart eines Musikchor, in Journal von und für Deutschland, No. 2. 1792.

The following treatise not improbably belongs to this class:—

Aesthetisch-kritische Zergliederung des wesentlich vierstimmigen Singesatzes des vom Knecht in Musik gesetzten ersten Psalms.

Lichtenthal also ascribes to Vogler the article 'Ueber den Choralgesang der Böhmisches Kirche zu Johann Hussens Zeiten,' in the A.M.Z. for April 6, 1803.

MISCELLANEOUS WORKS.

Die Scala oder personifizierte Stimmbildungs- und Singkunst, for Soprano Solo, Chorus, and Orchestra.³
 Der Rheinübergang der Allirten am Neujahrstag, 1814. Cantata with accompaniment for full Orchestra.
 Teutonia oder Kriegssied, 1814, with Orch. acc.
 Trichordium und Trias Harmonica oder Lob der Harmonie.⁴
 Frohe Empfindungen bei der Zurückkunft eines Vielgeliebten. Chorus, with Orch. acc.
 Wielands Grab, gedichtet von Ch. Westphalen. Chorus f r 4 voices. Empfindungen an des Hesses an 14 Juni. Chorus for 4 voices.
 Der Altarberg. For 4 voices, with PF. acc.
 Sangstucke für d. 19 Augusti. Drottningholm, 1798.
 Sangstucke.
 L'Invocazione del Sole alla mezza notte in Lapponia.⁵
 Friedenslied, (about 1807)—Der schöne Morgen; Die volle Monatsnacht. Two songs with PF. accompaniment.
 Heimlicher Kriegertraum. Song with PF. accompaniment.⁶
 'Declamatorium'—'Tuiskon ist erwacht.'⁷

As much of what is stated in this article is novel, it may be well to specify the sources from

¹ A translation from the Swedish.
² Fétis declares that this work was not published till after the author's death. The preface, however, is dated 'Darmstadt, 1811.' [For the incident in which it originated see MEYERER, vol. II. p. 381 a.]

³ The analysis prefixed to this work, after stating that it was finished at Darmstadt on August 25, 1810, declares that the author had in 1777 offered a prize of 100 Louis d'or for the discovery of a device by which 4 voices should each sing a scale up and down in only 16 chords, and that no one had been able to find out the secret. The solution given in 'Die Scala' is certainly ingenious.

⁴ A cantata for Voices and Full Orchestra to words by Professor Meissner. Rousseau's air of three notes is used as the foundation of the whole composition, which extends to eleven numbers. Vogler made use of this air as the theme of a piece of considerable dimensions at a concert in Stockholm April 28, 1799, and published it in five real parts in the A. M. Z. for June 12 in the same year.

⁵ A tersetto published in the A. M. Z. for June 12, 1799.

⁶ The publisher's advertisement gives 'Traum' for 'Trauer.'

⁷ This piece, an orchestral accompaniment to a declaimed poem, was probably one of Vogler's last works, as it was brought out at Mannheim early in 1814. The poem was by Madame Bürger.

which it has been derived. Besides the ordinary biographical notices in various Dictionaries, which in this case seem to have been written with unusual independence, use has been made of the monograph on Vogler by Th. Nisard (the Abbé Normand), and of the Life of C. M. v. Weber by his son. The vast mass of information relating to Vogler and his views contained in the 'Allgemeine Musikalische Zeitung' has been carefully sifted. Much has been gained from the articles in Nos. 15 and 16 of the 'Musikalische Correspondenz' for 1790 by Christmann and Schubart. By the kindness of Dr. Gänsbacher of Vienna the writer has been able to consult the MS. 'Biographie Gänsbacher' in his possession, from which, and from the letters of Vogler belonging to him, many interesting details have been gained. In one of Weber's letters to Gänsbacher he states that he was working hard at Vogler's biography, but the result of his work seems to have completely disappeared. Special thanks are due to Herr Becker, Librarian of the Ducal Library at Darmstadt; to Baron von Weber; to Herr Max Friedländer; to Prof. Schafhäutl of Munich; to Mr. Walter White, of the Royal Society, and, on the matter of 'the simplification-system' to the Rev. Sir F. A. G. Ouseley, Bart., to Messrs. Thorold & Smith (successors of Kirtland & Jardine), and to Messrs. Brindley & Foster; also to the organist of All Saints', Northampton, for a careful minute on the Schulze organ in that town.

Amongst the curiosities of Vogler literature must be placed Browning's poem on 'Abt Vogler,' and its Greek version in 'Translations into Greek and Latin Verse, by R. C. Jebb, M.A.' [J.H.M.]

VOGT, GUSTAVE, French oboe-player, born at Strassburg, March 18, 1781, studied at the Paris Conservatoire under Sallantin, and took the first oboe-prize in 1799. While in Rey's class, he began to play in public, and was appointed oboe-solo at the Opéra Italien in 1801, and co-professor at the Conservatoire in 1802. In 1805 he entered the band of the Imperial Guard, was present at Austerlitz, and during the occupation of Vienna made the acquaintance of Haydn and Beethoven. After the peace of Tilsit he returned to Paris, and never left it again for any distance. After some time at the Théâtre Feydeau, he succeeded his friend and master Sallantin as first oboe at the Opéra (1814), and professor at the Conservatoire, where he taught with marked success from Apr. 1, 1816, to Nov. 1, 1853. His fame spread, and in 1825 the Philharmonic Society invited him to London, and he played in their concerts. His tone was thought to be thin, harsh, and forced, but his execution was astonishing,¹ and he was engaged again in 1828. He was an original member of the Société des Concerts du Conservatoire, and played there regularly till his resignation in 1844, often producing with success compositions of his own. As first oboe in the Chapelle du Roi from 1815 to 1830 he received the Legion of Honour in 1829. He formed many talented

¹ 'Harmonicon,' 1825.

pupils, including Brod,¹ Vinit, Verroust, Barré, Lavigne, Delabarre, Cras, Colin, Berthélemy, and Bruyant, some of whom still speak of him with respect and gratitude. He lived to be 98, and died in Paris May 30, 1879. Vogt left a considerable number of pieces for the oboe. His best works are his concertos, solos (written for the examinations at the Conservatoires), 'Mélodie Anglaise' ('Home, sweet home'), and his duet for two oboes, all with orchestra. The library of the Conservatoire has the MS. of his 'Method for the Oboe,' and the Museum contains his oboe, cor anglais, and baryton. [G.C.]

VOICE—i.e. SINGING VOICE (*Voce*; *Singstimme*; *La Voix*). Sound produced by the passage of air through the glottis, or chink formed by the apposition, without contact, of the vocal cords, bands, or ligaments, the air impelled by the lungs causing them to vibrate. The precise amount of approximation of the vocal cords is only to be secured after considerable patient practice, as much mental as physical, as indeed all true practice must be; in other words, patient *study*. With too close a chink the tone will be harsh and thin; if too wide, it will be flaccid and woolly. With a well-arranged glottis all the other parts of the voice-organs must be so placed as to favour the utmost amount of reverberation. The respiration has a great deal to do, immediately, with this important part of voice-production, as the bones and tissue of a well-inflated chest vibrate in sympathy with the vocal cords; and the various resonance chambers, the pharynx, soft palate, hard palate, cheeks and lips, head, even the nasal passages (closed, however, by the internal muscles, except during the formation of nasal consonants), all lending their aid and forming a series of complicated sounding-boards. Birds, and nearly all animals, with the exception perhaps of fish, have their voice-registers, not all so musical as the human voice, but subject to the same laws. When a bull bellows, the 'break,' or change from chest-voice to falsetto, is distinctly heard. In the neighing of a horse the change is usually from falsetto to chest. In the crowing of a cock the two registers are plainly perceivable, as also in the barking of dogs. With close attention even the notes in the musical scale which are touched can be recognised, whilst among birds there are some whose notes are quite distinct. Of course to produce a note the voice must remain stationary long enough for the ear to appreciate its place in the scale. [See SINGING.] To find a hard and fast line where voice ceases and noise (howling or shrieking, grunting or growling) begins, is scarcely necessary. The distinction will be more or less clear according to the sensitiveness of the ear and mind. But almost every one will have a sufficiently clear idea, without technicalities, of the difference between the one and the other.

¹ Henri Brod, a great French oboe player, born 1798, died 1888. 'Maitre, Brod est mort,' said a pupil to Cherubini. 'Ah,' replied the stern old Italian, 'petit son, petit son.'

The known extent of the human singing voice—that is, of all the different classes of voice put together—is very great.

From the lowest note of a Russian Cathedral bass-singer (a) to the highest note of a soprano Agujari (b) [see vol. i. p. 45b], there is a range of five octaves and three notes. The average, however, of the larger number of great singers put together is about four octaves. Many individuals are able to sound three octaves, but a compass of two really good octaves is a very bountiful gift of Providence.

It is usual to divide the voice into six classes—three female, Soprano, Mezzo-Soprano, and Contralto; and three male, Tenor, Baritone, and Bass. [See the articles under these heads.] There are, however, distinctly two classes of Mezzo-Soprano, the one tending to soprano, and singing moderately high soprano music at times, and the other decidedly tending to contralto both in quality and compass, and able to sing moderate contralto music very creditably. It would be but reasonable to call the latter Mezzo-Contralto.

There is also considerable difference between Tenore leggiero and Tenore robusto, but this exists less in actual character and compass than in volume and force. There are various characters of tenor voice besides those named. [See TENOR.] The French term, Basse-taille, or low-tenor, applied to baritone is not correct, as the baritone is undoubtedly a high bass.

In the interests of the voice the apparent decline of the Italian Opera is much to be deplored. The modern instrumentalist, and unfortunately in many cases the modern composer, avows his contempt for singing. But as surely as singing—that is, the Italian School of singing—is allowed to die out, its decease will react upon instrumental music. Instrumental music gets its *legato* and the more subtle parts of its art of phrasing from the singer; while the singer owes his precision and more musicianly qualities to the instrumentalist. The two branches help one another, and while the vocalist acknowledges his obligation to the instrumentalist it is rank ingratitude on the part of the instrumentalist not to be equally candid. If persisted in, his ingratitude will be suicidal. The conductor of an opera or a choral class is too often unaware of the danger of an arduous rehearsal of two, three, or four hours' duration to so delicate an instrument as the human throat. By such an amount of practice the voice becomes utterly fatigued. If the muscles of the larynx are strong, the fatigue shows itself in hoarseness, or a difficulty in making the voice speak readily, the delicate white membrane which lines the vocal cords becoming slightly abraded. Then the voice must be forced to make it sound. If this membrane is capable of supporting a good deal of 'leathering,' then the muscles will first show the fatigue, and the voice will not be

able to keep in tune. If both muscles and membrane are strong, the chest will feel the fatigue, even the ribs getting tired, and headache will set in. If these local signs of distress are absent, general fatigue of the whole physique will come on. Every organism has its allotted amount of energy, and no more. If the abrasion of the white membrane is frequently renewed, cicatrization will be the consequence, and then good-bye to all sweetness. We may get loudness, much more than we want—that is, if extinction of the voice has not taken place—but no management, no control; and we shall have a tone that nobody wishes to hear a second time. This statement is not in the least degree overdrawn.

The difficult question of the mode of forming the different registers is occupying investigators, and will continue to occupy them for some time to come. For the essential differences between the speaking and singing voice, as also for details of registers and other important matters, see SINGING, ALTO, MEZZO-SOPRANO, SOPRANO, COUNTER-TENOR, TENOR, BARYTONE, BASS VOICE, and VOCE DI PETTO. [H.C.D.]

VOICES. Though the human voice, in so far as its tone and capabilities are concerned, is naturally independent of changes like those through which every Orchestral Instrument must necessarily pass before it arrives at its perfect condition, it has none the less witnessed changes of treatment at least as noticeable as those of the Instrumental Orchestra itself.

The Madrigalists and Ecclesiastical Composers of the 16th century wrote for a far greater variety of voices than those now generally recognised;¹ and distributed them on principles which experience has proved to be incompatible with the essential characteristics of modern Music. Their system was based upon the division of all Voices into two great classes—the Acute, and the Grave. The Acute class comprised the Voices of Boys, in their unbroken condition—that is to say, before the change of *timbre* and compass which has already been described in the article **MUTATION**; the rare high natural Voices of adult male singers, which are still occasionally heard in Italy and Spain; and the almost innumerable varieties of Soprano and Contralto Voices producible by artificial means. The Grave class represented the adult male Voice, in all its natural varieties:—Tenors, of every species, Basses, and even Contra-Bassi, of immense profundity, like those still cultivated in Russia, and some other European countries. Female Voices were not admitted into the Church Choir, and therefore found no place in the system adopted by Ecclesiastical Composers.

For Voices of the Acute class, five Clefs were used; the G Clef, on the first and second lines; and the C Clef, on the first, second, and third. For Grave Voices, the C Clef on the third, fourth, and fifth lines, and F Clef, in the same three positions; the F Clef on the fifth line

¹ For a description of the peculiarities of each individual Voice, the reader will consult the articles SOPRANO, ALTO, CONTRALTO, TENOR, BARYTONE, and BASS.

being appropriated to the Contra-Basso, and the C Clef on the fifth line, to the Contra-Tenore—a very low Tenor Voice bearing no resemblance whatever to the 'Counter-Tenor' of our English Composers.

This formidable array of Clefs was, however, accompanied by a very simple form of nomenclature; the terms Cantus, Altus, Tenor, and Bassus, being used to designate Voices of every possible variety. When Acute Voices only were employed, they were described as Cantus I and II, and Altus I and II; and the Composition was then said to be written for Acute Equal Voices. In this case, the lowest Voice permissible was an Alto, sung by a Boy, or by an adult singer, or an artificial Voice. In Compositions for Grave Equal Voices, the highest part was sung by the natural Voice of an adult Alto—an organ now very rarely heard—or by a high Tenor; the lower parts by ordinary Tenors and Basses. When Acute and Grave Voices were employed together, the Composition was said to be for Mixed Voices. In Compositions of this kind, the lowest part was described as the Bassus, even when written in the Tenor Clef. In like manner, a middle part was frequently labelled Tenor, though written in the Alto, or even in the Mezzo-Soprano Clef; while Baritone parts, written with the F Clef on the third line, were invariably labelled Bassus. Parts written with the C Clef on the first line were labelled Cantus, or Altus, according to their position with regard to the other Voices; the term Cantus being usually applied to them when they occupied the highest position in the harmony, and Altus, when the G Clef was used for a still higher part, written above them. Parts written with the C Clef on the second line—the Mezzo-Soprano of modern Music—were almost always labelled Altus.

The selection of Clefs was governed, partly by the compass of the Voices, and partly by the nature of the Mode in which the Composition was written. The number of Clefs employed arose from the repugnance of Composers to ledger-lines, with which they were not altogether unacquainted, though they avoided them, as much as possible, by selecting Clefs which enabled them to write the whole of a vocal part within the limits of the Stave—an easy matter, with Polyphonic Composers of the best period, who frequently confined whole parts within the range of an Octave, as in the 'Missa Papae Marcelli,' in which, by writing the Cantus part in the Treble (G) Clef, the Altus in the Mezzo-Soprano, the two Tenors in the Alto, and the two Basses in the Tenor, Palestrina has avoided the use of a single ledger-line, from beginning to end.

The connection of the Clefs with the Mode was a more complicated matter. Certain combinations were used for the Modes, at their natural pitch (the *Chiavi naturali*); and certain others for the transposed Modes (*Chiavi trasportate*, or *Chiavette*).² These however were

² Examples of some of these combinations may be seen in vol. III. p. 429 a.

chiefly used for Mixed Voices. In Compositions for Equal Voices, whether Acute, or Grave, the arrangement of the Clefs was more frequently dictated by the compass of the Voices, than by the transposition, or nontransposition of the Modes.

The terms Cantus, Altus, Tenor, and Bassus, sufficed for Compositions written for any number of Voices. In the 'Missa Papae Marcelli,' and innumerable like Compositions, we find parts for Tenor I and II, and Bassus I and II. In these cases, the second Voice is always of exactly the same compass as the first; and, instead of singing constantly below it—as it certainly would now—sustains an equally important part, continually repeating the same passages, and crossing above, or below, its fellow-part, without reserve.

Another common arrangement, in Compositions for more than four Voices, was to label the fifth Voice, Quintus, or Pars Quinta, and the sixth, Sextus, or Pars Sexta; and this, without reference to the nature of the Voice: consequently, in old Part-Books, we constantly find, in the volume labelled Quintus, parts for Cantus, Altus, Tenor, and Bassus, all indiscriminately mingled together. But here, again, the arrangement was governed by a law as strict as that which regulated the conduct of Tenor or Bassus I and II. The Quintus and Sextus were exact duplicates of two other parts, with which they corresponded, throughout, both in compass and importance; so that, in fact, it was a matter of absolute indifference whether parts then associated were labelled Altus and Quintus, or, Altus I and Altus II. And the constant crossing of the parts, to which this arrangement gave rise, was used as a means of producing the most varied and beautiful effects. They used the device with unlimited freedom; frequently making one Voice cross over two—as in Palestrina's 'Missa brevis,' where the Altus crosses below the Tenor and Bassus, and sings the lowest part of the harmony. The following example will show the immense advantage derivable from the distribution of certain passages between two Voices of strongly contrasted timbre.

CANTUS.
In ex-cel-sis, in ex-cel-sis.

ALTUS.
In ex-cel-sis, in ex-cel-sis.

TENOR.
In ex-cel-sis, in ex-cel-sis.

BASSUS.
In ex-cel-sis, in ex-cel-sis.

Crossing their Voices thus, the Polyphonic Composers frequently wrote passages, which, had the parts been arranged in the ordinary manner, would have exhibited glaring cases of

Consecutive Fifths and Octaves, but which, thanks to this device, enriched their harmonies with indescribable beauty. The practice however died out with the School of Palestrina; and in modern Music the parts rarely cross, to any serious extent.

The opening of the 17th century witnessed a radical change in the distribution of Voices, as well as in all other matters connected with the Art of Composition. Except in Italy, artificial Soprani and Contralti were heard only at the Theatre. The beauty of the female Voice was universally recognised, both in its Soprano and Contralto registers; and cultivated with assiduity. In Germany, Boys were taught, as now, to sing both Soprano and Contralto parts, with equal success. In England, a different plan was adopted. After the Great Rebellion, the difficulty of obtaining Choir-Boys was so great, that Treble parts were either summarily dispensed with, or played, as a *pis aller*, upon Cornets. Adult Voices were, however, more easily attainable; and adult singers learned to execute Alto, and even low Treble parts, in Falsetto. And thus arose the cultivation of the peculiar form of Voice now called the Counter-Tenor; an unnatural register which still holds its ground in English Cathedrals, with a pertinacity which leads to the lamentable neglect, if not the absolute exclusion, of one of the most beautiful Voices in existence—the true Boy Contralto. This sweeping change in the constitution of our Cathedral Choirs naturally led to a change of corresponding magnitude in the character of the Music written for them. In the Verse-Anthems of Humfrey, Wise, Blow, Purcell, and other Masters of the School of the Restoration, the Falsetto part, under its title of Counter-Tenor, holds a very important position indeed; and still more prominent is the rôle accorded to it by Croft, Boyce, and other writers of a later generation. In truth, the new Voice, at first an unavoidable necessity, soon became the prevailing fashion; and Music was written for it, even at the time when the Chapel Royal at Whitehall was graced with the most talented and accomplished staff of Choir-Boys on record. So general was the custom of confiding the Alto part to Counter-Tenor singers, that it was adopted, even at the 'Oratorio Concerts' of the 18th century. The Alto parts in Handel's Choruses were sung chiefly, if not wholly, in Falsetto. It was not until 1773 that Dr. Arne first had the hardihood to employ female Voices in the Choruses of his Oratorio, 'Judith'; and it is doubtful whether, even then, they were entrusted with the Alto parts. Happily for Art, the value of the female Contralto is now no less freely recognised in England than in other countries; and it is only in Cathedral Choirs, and Choral Societies connected with them, that the Falsetto Counter-Tenor safely holds its ground.

In Germany, the Falsetto Voice has always been held in very low estimation indeed; while the true Boy-Contralto has been almost as extensively cultivated as the rich low tones of the deeper female register.¹ We have heard the

¹ Spohr, on his first visit to this country, expressed the greatest

most excellent effect produced, at the Thomas-Schule, in Leipzig, and at the Cathedrals of Cologne, Mayence, and Regensburg, by unaccompanied Choirs, in which the Alto parts were entrusted entirely to the fresh young Voices of a well-trained body of Boy-Choristers, whose lower registers were cultivated, with success, for some considerable time after they were prevented, by the approach of the inevitable mutation, from singing Treble.¹ Such Voices cannot be effectively used in combination with the Falsetto Counter-Tenor; but they combine perfectly with the rich female Contralto, with which they may be profitably associated, in Choral Music of all kinds.

This extensive modification in materials was followed by a corresponding modification of treatment. Acute Equal Voices are now understood to mean the Voices of Women and Children; and Grave Equal Voices, those of Men. When the two classes are employed together, each maintains its own accustomed level, in the distribution of the general harmony, more strictly, by far, than was the case under the older system. The contrast between the timbre of a Tenor, and that of a Contralto, is too great to allow the two to work together in the intimate association which formed so marked a feature in the Polyphonic Schools; and even when two Voices of the same class are employed, they seldom correspond exactly in compass. The Second Soprano really sings a second part, and only rises above the first in very exceptional cases; while the Second Bass is always understood to be responsible for the lowest sounds in the harmony. This disposition of the parts accords perfectly with the timbre of the Voices employed; and has been proved, by long experience, to be more perfectly adapted than any other to the requirements of modern Music, which, during its progress towards perfection, has demanded, from time to time, changes in the arrangement of the Vocal Orchestra little less revolutionary than those effected in the Instrumental Band. [W.S.R.]

VOICING. A term used in organ-building to express the method of obtaining a particular quality of tone, in an organ pipe, and of regulating a series of pipes so that their tone shall be uniform throughout. The quality of the tone of Flue-pipes is mainly dependent on (1) their general shape, (2) their scale; but, after the pipe-maker has turned out a set of pipes of true proportion, the 'voicer' can produce a great variety of qualities by regulating (1) the quantity of wind admitted to the pipe, (2) the thickness of the 'sheet of wind,' (3) the angle at which it impinges on the upper lip, (4) by imparting a special surface to the edge of the lip itself or by cutting it higher; and in other ways. The voicing of Reed pipes is dependent chiefly on (1) the quantity of air admitted, (2) the shape

distike to our English Counter-Tenors; and it may possibly have been a similar experience which induced Mendelssohn to inaugurate, in his 'St. Paul,' the practice of writing Oratorio Choruses for Soprano I and II, instead of Soprano and Alto.

¹ The great Lablache sang, as a boy, with an exquisitely beautiful voice of this kind.

and thickness of the tongue, (3) its position, (4) the relation between the length of tube and the pitch of the note produced.

Voicing thus requires both a delicate ear and skilful hand; it is, in fact, the most artistic part of an organ-builder's work. But few are equally good voicers both of reed and flue-pipes, and better voicing is obtained from a specialist than from a 'general' hand. In testing the voicing of an organ-stop, an opinion should first be formed as to the merit of the particular quality selected by the voicer; next, the pipes should be consecutively sounded in order to trace whether the quality of tone is uniform. This applies both to flue and reedpipes. [J.S.]

VOIGT (pronounced VOGT), HENRIETTE, *née* Kunze, born in 1809, a distinguished German amateur musician, and prominent figure in the musical life of Leipzig.

She was the pupil of L. Berger, and became a remarkable performer, and the warm friend of her teacher.¹ Schumann was introduced to her by Ludwig Schunke, who almost lived in the Voigts' house before his early death, and their intimacy became very close. A characteristic story illustrating this is told in the article on Schumann in this Dictionary, vol. iii. p. 389 and we may here quote Schumann's own expression—'Ich dichte, wenn ich an Sie denke,' which may be rendered 'The thought of you inspires me.' He alludes to her occasionally in his 'Davidsbündler' articles under the name of 'Eleonore'; and his entry in her album was very characteristic, consisting only of a huge crescendo mark  reaching across the whole page, with his name below it. This, on enquiry, he explained to predict the continual increase of their friendship. Mendelssohn's contribution to her album was the first sketch of the Gondellied in F# minor (op. 30, no. 6); and though there is no mention of her either in his collected Letters or in the 'Familie Mendelssohn,' there is ample testimony to his esteem for her talents and her person in his 'Eight Letters' to her, published in 1871.² Hauptmann³ and C. Löwe have also left the most appreciative references to her ability and taste: indeed she was, with Madame Frege, at the head of the amateurs of Leipzig in that most brilliant time.

Her husband, Carl Voigt, to whom she was married in Nov. 1830, was a Leipzig merchant, and as great an enthusiast for music as herself. He died June 15, 1881, in his 76th year, leaving 300*l.* to the Gewandhaus Concerts for a performance of Beethoven's Ninth Symphony every year, or at the least every two years. A few words about that Symphony, attributed to him, will be found in Schumann's 'Ges. Schriften,' 1st ed. i. 27.

Madame Voigt died on Oct. 15, 1839, in her 31st year. Schumann gave a sketch of her in the 'Neue Zeitschrift für Musik' for the 15th of the following November, under the title of

¹ See his letter of 1838, given by Schumann, N. Z. M. xi. 159.

² Acht Briefe und ein Facsimile, &c. Leipzig, Grunow, 1871. Translated by M. E. von G. in Macmillan's Magazine, No. 140.

³ Letters to Hauser, No. 48.

'Erinnerung an eine Freundin,' which is reprinted in his 'Ges. Schriften,' and contains some charming extracts from her journal, giving a high idea of the range of her knowledge and the depth of her sensibility.

See Jansen's 'Davidsbündler'—a very interesting book (Breitkopf & Härtel, 1883). [G.]

VOIX CÉLESTES, VOX CŒLESTIS, VOX ANGELICA, UNDA MARIS. An organ stop with two ranks of pipes, one tuned about three beats a second sharper than the other. The pipes are sometimes of the Dulciana type; sometimes (generally in the case of French organ-builders) two small Gambas, and occasionally the ranks are dissimilar, one a Keraulophon, and one a Dulciana. The custom is to tune one rank with the organ and one sharper, but this has the effect of making the organ sound disagreeably flat after using the stop, and the plan advocated by Mr. Sedley Taylor of tuning one rank slightly above and one below the general pitch of the organ is no doubt preferable, though it precludes the use of either alone, or in combination with the other stops. The Voix Célestes has its proper place in the swell organ, and in large buildings its wavy floating effect is not unpleasing. Like other 'fancy' stops it should be used with reserve. The name Vox Angelica is ambiguous, some builders make it a synonym for Voix Célestes, and others for the rank of pipes which is tuned to the rest of the organ. [W.Pa.]

VOLKMANN, FRIEDRICH ROBERT, born April 6, 1815, at Lommatsch in Saxony. His father, cantor and schoolmaster of the town, taught the boy music, with such effect that by the time he was twelve he took the services in church. He then had instruction from Friebe, the 'Town musician,' in violin and cello, and from Anacker, music-director of the Seminary at Freyberg. In 1836 he went to Leipzig, to study systematically, and made the acquaintance of C. F. Becker, and also of Schumann, who exercised great influence on him; in 1839 he published his first work, 'Phantasiebilder in Leipzig.' His next step was to visit Prague and enter on the career of teacher and composer. From 1854 to 1858 he resided at Vienna, but ended by taking up his permanent quarters in Pesth, where his principal works have been composed. These comprise 2 Symphonies, in D minor (op. 44), and Bb (op. 53), a Festival overture in F¹ (op. 50), 2 Serenades for Strings, ops. 62, 63; Concertos for Cello in A minor (op. 33), and PF. in C (op. 42); 2 PF. trios in F (op. 3), and Bb minor (op. 5); String Quartets in A minor and G minor (op. 9), in G major (op. 14), in E minor (op. 34), in C minor (op. 35), and in Eb (op. 37), and many works for piano, both 4 hands and solo. His vocal compositions are also numerous:—2 Masses for male voices (op. 28, 29); 3 sacred songs for mixed choir (op. 38); old German hymn for 2 choirs of male voices (op. 64); 'Sappho,' dramatic scene for soprano solo

and orchestra (op. 49); 'An die Nacht,' for alto solo and orchestra; songs for solo voice and piano, etc. The overture to his 'Music to Shakespeare's Richard the Third' (op. 73), was performed at the Crystal Palace Oct. 30, 1875—the Scotch air 'The Campbells are coming' being introduced as 'an old English war-song.' A later composition is a 'Schlummerlied' for harp, clarinet and horn, which is mentioned as op. 76 in Hofmeister's List for 1883.

As a pianoforte composer Volkmann belongs to the romantic school. His compositions often bear fanciful titles, but they are poetical, and moreover so strongly marked with Hungarian characteristics that he may truly be said to have borrowed colour, rhythm, and embellishments from his adopted home. His two Symphonies, his Quartets in G minor and A minor, his PF. Trio in Bb minor, have been acknowledged in high terms by critics in Germany. His Cello Concerto is also a favourite and excellent work. In England he is little known, though his G minor Quartet has been given at the Monday Popular Concerts, and his two Overtures at the Crystal Palace, and sundry of his PF. pieces by different artists in their recitals. [G.]

VOLKSLIED, or the early Song of the German people, has already been treated, with regard both to its development and its influence on the history of music, under the head of **SONG**. [See vol. iii. p. 617.] It remains, however, to mention the principal existing collections of Volkslieder, whether in manuscript or print, in public or private libraries; and a list of them is here appended. Some collections of Minnesingers' and Meistersingers' melodies, and likewise some collections of chorales must be included in the list; because, as the article referred to shows, these different forms of the Song are borrowed from one another and have melodies in common. Collections bearing the names of particular composers must also be mentioned, because many apparently original melodies of composers of the 16th and 17th centuries are in reality well-known Volkslieder, merely harmonised or treated with contrapuntal devices. The list cannot therefore be limited to collections of Volkslieder proper, but care has been taken to enumerate only such as offer examples of the pure Volkslied, melody or verse.

For convenience of reference, the best works on the subject will be included in the last section of the list, viz. Modern Collections of Volkslieder.

COLLECTIONS OF VOLKSLIEDER.

A. MSS. from the 10th to the 17th century.

1. The Wolfenbüttel MSS. (10th century); preserved in the Ducal Library of Wolfenbüttel, and containing some of the oldest secular songs in Germany.
2. The S. Gall Cod. Lat., No. 393 (11th century).
3. Nithart's Song-MSS. with melodies (13th century); in the possession of Prof. von der Hagen, and printed by him in his work on the Minnesingers.
4. The Limburg Chronicle (1347 to 1390); preserved in the Limburg Library. This MS. (which has been reprinted in 1617, 1720, 1826 and 1880) contains few real Volkslieder, but many knights' and monks' songs.

¹ Played at Crystal Palace, Oct. 2, 1875.

5. The Jena Minnesinger Codex, with melodies (14th century); preserved in the University Library at Jena.

6. Spörl's Song-book (latter part of 14th and beginning of 15th cent.); Imperial Library, Vienna.

7. The Prague MS. (early in the 15th century); in the University Library, Prague; entitled 'Ein musikalischer Lehrcompendium des H. de Zeelandia.' Contains many fine Volkslieder of the 14th cent.

8. The Lochheim Song-book (1452-60); in the Ducal Library, Wernigerode. Has been edited by Arnold and Bellerman, with a most interesting preface.

9. The Dresden Minnesinger MS. (15th century); in the Royal Public Library at Dresden. A miscellaneous volume, of which the more interesting portions are some mystical hymns to the Virgin by Michael Behaim.

10. The Vienna Song-book (1533); in the Imperial Library, Vienna. Consists of five part-books, with both sacred and secular words and music.

11. Werlin's Song-book of 1646; Royal State Library, Munich. Contains many thousand melodies to sacred and secular words; some are genuine Volkslieder of 15th and 16th cent., others later and more artificial.

B. Printed Collections.

I. Secular Song-books of the 16th and 17th centuries.

1. Johann Ott, 121 Songs, in 5 parts; Nuremberg, 1534. A perfect copy of this valuable song-book in the Libraries at Munich and Zwickau.

2. Heinrich Finck's Songs, in 4 parts; Nuremberg, 1538. Contains 55 sacred and secular songs, not all composed by Finck. Perfect copies in Munich and Zwickau Libraries; an imperfect one in British Museum.

3. Forster's Song-books; Nuremberg, 1539 to 1556. Five numbers, containing altogether about 380 songs in several parts. Many scattered copies in the Munich, Zwickau, Berlin, Leipzig, and Göttingen Libraries. In the B. M. an imperfect one, 1549.

4. G. Rhaw's 3-part Song Collection; Wittenberg, 1542. A copy at Göttingen.

5. G. Rhaw's 2-part Songs; Wittenberg, 1545. Copies in the Berlin and Vienna Libraries, and B. M.

6. Joh. Ott, 115 Songs, in 4, 5, and 6 parts; Nuremberg, 1544. Of this valuable collection only two copies known, one in the Berlin Library, and one in the B. M.

7. Orlando Lasso. Several collections of songs (dating respectively 1567, 1572, 1583, and 1590), in 4, 5, and 6 parts, in the Royal Library, Munich.

8. Jac Reynart's Villanelle; Nuremberg, 1574. 67 songs for three voices in Sonnet form, which were very popular and widely sung during Reynart's lifetime. Copies in Berlin and Munich Libraries.

9. Joh. Eccard. Two collections in 4 and 5 parts; Mülhausen and Königsberg, 1578 and 1589; an imperfect copy of the latter is in the B. M.

10. Hans Leo Hassler. Two collections of songs in 4, 5, 6, and 8 parts after Italian models, Nuremberg 1600, and Augsburg 1596. A copy 1596 is in the B. M.

11. Melchior Franck's Song-collections. 16 in number, printed either at Nuremberg or Coburg between 1602 and 1623. Each collection contains a variety of songs for 4 or more voices. A copy in the Berlin Library. Another (Coburg, 1623) in the B. M.

II. Sacred Song-books of the 16th and 17th centuries.

(1) Lutheran.

1. Walther's Hymn-book, 1524. The first hymn-book written in parts. Contains 32 German and 5 Latin hymns. Copies in Vienna, Berlin, Munich, and Zwickau Libraries.

2. Southerledkens; Antwerp, 1540. Free metrical versions of the Psalms, set to secular melodies, chiefly North German and Flemish Volkslieder, and French Chansons. A copy in the Royal Library, Dresden.

3. Luc. Lossius Psalmodia; Wittenberg, 1552. Several later editions of this work have appeared, and a copy of the 1569 edition is in the Library at Wernigerode. It contains 429 Latin and 9 German hymns in 4 and 5 parts. Copies of 1553, 1561, 1569, and 1571 in B. M.

4. Triller's Song-book; Breslau, 1560. Contains many Volkslieder in their earliest form, but arranged for several voices. Copies in the Berlin and Wernigerode Libraries.

5. Kenchenthal's Hymn-book; Wittenberg, 1573. The richest collection of the 16th century in melodies. Copy in Berlin Library.

VOL. IV. PT. 3.

6. Mich. Prætorius, 'Musæ Sionis; for 4 to 8 voices in 9 numbers, 1605 to 1610. A perfect copy in Royal Library, Berlin. Nos. from 1605 to 1609 in B. M.

(2) Roman Catholic.

1. Beuttner's Hymn-book; Gratz, 1602 and 1660. 154 hymns and 89 tunes. A copy in University Library, Breslau.

2. Corner's Hymn-book of 1631; Nuremberg. Melodies partly collected from previous song-books and partly taken down from the mouths of the Austrian peasants. Copies in the Würzburg and Vienna Libraries.

C. Modern Collections of Volkslieder and Chorales, and Works relating to them, alphabetically arranged.

1. W. Arnold: 'Deutsche Volkslieder.' Elberfeld. (In ten numbers with a well-arranged PF. part.)

2. C. F. Becker: 'Lieder und Weisen vergangener Jahrhunderte.' Leipzig, 1843-58. (A small collection of early Volkslieder; words and melodies taken from the original, but the melodies in modern notation.)

3. C. F. Becker: 'Die Tonwerke des 16ten und 17ten Jahrhundert.' Leipzig, 1854.

4. Franz M. Böhme: 'Altd deutsches Liederbuch aus dem 12ten bis zum 17ten Jahrhundert.' Leipzig, 1876. The best work existing on the Volkslied. Has an invaluable preface on the form and the history of the Volkslied, and a very large collection of old melodies, with words, and trustworthy history of each.

5. Franz M. Böhme: 'Volkslieder f. Männerstimmen.'

6. E. de Coussemaker: 'Chants populaires de Flandre de France.' Ghent, 1856. (Many N. German and Flemish Volkslieder being identical, this collection is named.)

7. F. W. Dittfurth: 'Volks- und Gesellschaftslieder des 16ten, 17ten und 18ten Jahrhundert.' Stuttgart, 1874. (Many songs in this collection contain no music.)

8. R. Eitner: 'Das deutsche Lied des 15ten und 16ten Jahrhundert in Wort, Melodie, und mehrstimmigen Tonsatz.' Berlin, 1876. (A trustworthy collection.)

9. Ludwig Erk: 'Die deutschen Volkslieder mit ihren Singweisen.' Berlin, 1838-45.

10. L. Erk: 'Deutsches Liederhort.' Berlin, 1856.

11. L. Erk: 'Deutschen Volksgesangbuch: 1 Germania.' Berlin, 1863. (Erk's collections are not always genuine.)

12. G. W. Fink: 'Musikalischer Hausschatz der Deutschen.' Leipzig, 1843, 1862, and 1878. (Contains more 'Volksthümliche' Lieder than real Volkslieder.)

13. Prof. von der Hagen: 'Die Minnesinger.' (In 4 volumes, the last containing the melodies in old and modern notation. A standard work.)

14. Hoffmann von Fallersleben and Ernst Richter: 'Schlesische Volkslieder mit Melodien aus dem Munde des Volkes gesammelt.' Leipzig, 1842.

15. W. Irmer: 'Die deutschen Volkslieder mit ihren Singweisen.' Berlin, 1842.

16. 'Leipziger Commers-Buch.' Leipzig, 1860. (This volume contains a large number of Students' songs.)

17. R. von Liliencron and W. Stade: 'Lieder und Sprüche aus der letzten Zeit des Minnesanges.' Weimar, 1854. (Melodies arranged for 4 voices.)

18. R. von Liliencron: 'Die historischen Volkslieder der Deutschen vom 13ten bis 16ten Jahrhundert, gesammelt und erläutert.' Leipzig, 1865-69. (An admirable work. The melodies are given in an appendix.)

19. Severin Meister: 'Das katholische deutsche Kirchenlied in seinen Singweisen von frühester Zeit bis gegen Ende des 17ten Jahrhundert.' Freiburg, 1852. (A useful collection.)

20. F. L. Mittler: 'Deutsche Volkslieder.' Frankfurt-on-the-Main, 1865.

21. Aug. Reissmann: 'Das deutsche Lied in seiner historischen Entwicklung.' Also:

22. 'Geschichte des deutschen Liedes.' Berlin, 1874. (See especially the early chapters in both works.)

23. Aug. Saran: 'Robert Franz und das deutsche Volkslied.' Leipzig. (Contains interesting information on the formal structure of the Volkslied.)

24. K. Schneider: 'Das musikalische Lied in geschichtlicher Entwicklung.' Leipzig, 1863. (See especially vols. 1 and 2.)

25. F. L. Schubert: 'Concordia; Anthologie Klas-

1 See Songs, vol. III. p. 671, note.

sischer Volkslieder mit Clavierbegleitung.' Leipzig, 1863-67. (A very large but untrustworthy collection.)

26. F. Silcher: 'Deutsche Volkslieder.' Tübingen 1827-40. (Many of these Silcher composed himself; but they are now considered regular Volkslieder.)

27. A. Vilmar: 'Handbüchlein für Freunde des deutschen Volkslieder.' Marburg, 1867-68. (Useful.)

28. Philipp Wackernagel: 'Das deutsche Kirchenlied von Luther bis auf Nic. Hermann.' Stuttgart, 1841.

29. Philipp Wackernagel: 'Das deutsche Kirchenlied von ältester Zeit bis zu Anfange des 17ten Jahrhunderts.' Leipzig, 1868-76. (An important work.)

30. C. von Winterfeld: 'Dr. Martin Luther's deutsche geistliche Lieder, nebst den während seines Lebens dazu gebräuchlichen Tonsätzen über dieselben von Meistern des 16ten Jahrhunderts.' Leipzig, 1840.

31. C. von Winterfeld: 'Der evangelische Kirchengesang und sein Verhältniss zur Kunst des Tonsetzens.' Leipzig, 1842-47. (A standard work.) [A.H.W.]

VOLKSTHÜMLICHES LIED. For the explanation of this term see SONG, pp. 621-5. To the examples there cited another very good one may be added, taken from a sketch-book¹ of Beethoven's of 1815 and 1816, and remarkable for freshness, melody, and fitness to the words.

The words of the song are by J. M. Miller. It is entitled 'Die Zufriedenheit,' and has been set also by Mozart and C. G. Neefe.

The term *Im Volkston*, applied by Schumann as a title to his five pieces for Violoncello and Piano, op. 102, signifies that these pieces are of a popular or *volkstümliches* cast. [A.H.W.]

VOLLWEILER, G. J., born 1770, an esteemed professor of music in Frankfort, where he died Nov. 17, 1847. He was the author of two instruction-books, one in PF-playing, and one in singing for schools; both published by Schotts. Vollweiler was the teacher of two renowned musicians, Aloys Schmitt and Ferdinand Hiller. His son CARL was born 1813, and died at Heidelberg, Jan. 27, 1848, after a long and varied musical career in Germany, Austria, and Russia. [G.]

VOLTA, PRIMA, SECONDA—First, or second time; more commonly seen in the abbreviated forms, '1ma,' '2da,' or with the numerals alone—an indication that the portion of an instrumental movement which is to be repeated, is to undergo certain modifications at the close of its second repetition, instead of being repeated exactly. In the earlier development of the sonata-form it was soon found that when the first part of the movement closed on the dominant,

¹ Nottebohm, in 'Mus. Wochenblatt,' Nov. 3, 1876.

or—in the case of a movement in a minor key—on the relative major, it was convenient to make the transition back to the tonic, or to the opening subject, by means of some short and obvious figure, which without disturbing the rhythm of the music should prepare for the return to the beginning. In cases where the second half of the movement began, like the first, in the tonic, the transitional figure could of course be retained without alteration, but where the second half began in the dominant or any other key, the transitional figure had, so to speak, to change its direction, so as to lead into such other key; or it might be omitted in cases where the close of the first half and the beginning of the second were in the same key. The transitional figure occupied generally not more than part of a bar; and where it had to be altered, both versions were written side by side, one immediately before the repetition mark, and the other immediately after it. A line was drawn above both, and the words 'Prima volta,' or the figure 1, placed over the first version, and 'Seconda volta,' or simply 2, over the second. At first the player goes straight on to the repeat, but at the second repetition he passes from the beginning of the line where 'Prima volta' stands, to the double bar, so that the portion after the double bar is played instead of that before it. Two very good instances of this simplest form of transition are the Gavotte in Bach's 3rd (G minor) English Suite, and the first movement of his son Emanuel's beautiful Sonata in F minor. In the Scherzo of Beethoven's 7th Symphony, the only difference between the *prima* and *seconda volta* is one of force; both consist simply of a long-held A, but the first time it is held out fortissimo, and at the second, there is a diminuendo to the *piano* with which the trio begins. But as the development of the form went on, the transitional figure followed the example of all the other parts and became longer and more elaborate, often occupying so many bars that the rhythm is no longer strictly adhered to, but is held in abeyance till the transition has been made. [J.A.F.M.]

VOLTE, a kind of ancient dance, in three-time, so called from the figure containing many turns (*volti*). Thoinot Arbeau, in his 'Orchésographie' gives the following air of a Volte.

[G.]

VOLTI, VOLTI SUBITO—'Turn over,' 'Turn over quickly.' This direction, or the initials V.S.—an exact musical equivalent to 'P.T.O.'—is used in manuscript and old printed music, at the bottom of a page where, without it, it might be supposed, for one cause or another, that the piece had come to an end. For instance, where a double bar closes the bottom line,

and the music is continued overleaf, the direction serves to remind the performer that it is not the end. It was not an uncommon practice, in writing out instrumental music, if a convenient pause, in which the player could turn over, happened to come not far from the end of a page, to leave the rest of the page blank and put the direction or the initials after the pause. This practice is still retained in orchestral parts, where the copyists always take advantage of a few bars' rest to give the player the opportunity of turning over for himself. In more recently printed music for pianoforte the direction is hardly ever found, as it is supposed that if the player cannot manage to turn over, help will be found. In such things as string parts of chamber music, the engraver generally manages that the end of a movement, or else a few bars' rest, shall come at the end of a page. In the appendix to vol. i. of C. H. Bitter's *Life of J. S. Bach*, part of a song, 'Bist du bei mir,' from the music-book of Anna Magdalena, Bach's second wife, is given in facsimile of the composer's writing. A double bar closes the page, but evidently the song does not end there; the composer, to prevent any mistake, has added the words 'Volti cito,' the meaning of which is precisely the same as the more usual version of the direction. [J.A.F.M.]

VOLUME, when applied to the sound of an instrument or voice, is the quantity, amount, or fullness thereof. The word has acquired this meaning since the time of Johnson. In Rousseau's *Dictionary*, *Volume* is explained to mean Compass—the extent or interval between the highest and lowest sounds. [G.]

VOLUMIER,¹ JEAN BAPTISTE, a Belgian musician, chiefly remembered for his accidental connexion with John Sebastian Bach, said to have been born in 1677, in Spain, and brought up at the French Court.² He entered the Electoral Chapel of Prussia Nov. 22, 1692, and soon became *Maître de Concert* and Director of the dance music at the Berlin Court, and was renowned for his Ballets. On June 28, 1709, he was appointed Concertmeister to the Court of Dresden. Here he kept up his former reputation for dance music and divertissements, but was also celebrated as a violin-player, especially of French compositions, and a performer on an instrument of the Hackbrett kind, of his own invention. He was on friendly terms with Bach and an enthusiastic admirer of his genius, and it was during his residence at Dresden, and also at his instigation, that the famous match was arranged between Bach and Marchand the French player, which resulted in the flight of the latter. Volumier died at Dresden Oct. 7, 1728. (See Fürstenau, 'Zur Geschichte Musik . . . am Hofe Dresdens'; Matheson, 'Ehrenpforte'; Forkel, 'J. S. Bach.') [G.]

VOLUNTARY. The name given to the pieces of organ-music played before, during, and after

Divine Service; and possibly derived from the fact that from their not forming a part of the regular service, it was optional with the organist to play them or not. These took the form of highly embellished versions of Hymn-tunes, Diapason piece, Trumpet voluntary, Introduction and fugue, Cornet voluntary, with half-comic 'echoes' on the 'Swelling Organ.' The voluntary proper flourished chiefly between 1720 and 1830. Croft, Greene, Boyce, Keeble, Battis-hill, Kelway, Beekwith, Bennet, S. Wesley, Russell, and T. Adams were all writers of voluntaries. Many of their compositions have a tranquil grace which is not unpleasing, but they are too small in plan and too artless in execution to make themselves heard against 19th century bustle. Those by Russell ought not so to die. They are almost in suite-form and generally contain a melodious fugue with clever modulation and climax. Handel's airs and choruses (not always sacred by the way—'Wretched Lovers' being a great favourite), scraps of symphonies and quartets, even songs without words, gradually crowded out this gentle music, not always to the advantage of art. Now again better taste seems to have brought in real organ works. Not to mention the greatest composers, Wesley, Smart, Hopkins, Best, and a large number of good German writers, have been encouraged to write suitable music. Some day we may hope to hear the best of all—John Sebastian Bach's wonderful settings of the Chorale. [W.Pa.]

VORSCHLAG (Ger.), an ornament made at the commencement of a note, and therefore the opposite of the **NAOHSCHLAG**, which is placed at the end. It usually consists of a note one degree above or below the principal note, as the note which it embellishes is called (Ex. 1), though it may be more distant from it (Ex. 2), and it may also consist of more than one note (Ex. 3), in which case it has a special name. [SLIDE, DOUBLE APPOGGIATURA].

The Vorschlag is written as a small note or notes, and is not accounted for in the time of the bar. In order to make room for it, the principal note is slightly curtailed and its entrance delayed, as is shown in the above examples. This

¹ The name is said to have been originally Woulmyer.

² Mendel.

is in accordance with a rule which is insisted upon by all the best authorities, at least so far as regards the works of great masters, namely, that all graces must fall within the value of their principal note. Türk (*Clavierschule*) mentions with disapproval the custom of playing it *before* the beat, and therefore within the time of the preceding note, which method of rendering he describes as 'in the French style,' though it does not appear to have been universal among French musicians, for Boyvin, an eminent French organist, in his 'Premier Livre d'Orgue' (1700), explicitly directs that the *Vorschlag* shall be struck exactly with the bass.

The *Vorschlag* in its ordinary form, consisting of a single note one degree above or below the principal note, is of two kinds, long and short. The long *Vorschlag*, generally known by its Italian name of *Appoggiatura*, has a definite proportional value, which varies with the length of the principal note, being one-half of a simple note (Ex. 4), two-thirds of a dotted note (Ex. 5), or the whole value of the principal note whenever the latter is tied to another of the same name (Ex. 6). The written length of the *Vorschlag*, as may be seen from the examples, bears no exact relation to its actual length in performance, though it is customary in the case of the *Vorschlag* to a simple note to write it of its precise value, as in Ex. 4.

4. *Written.* 5.

Played.

6.

The short *Vorschlag*, also called *unveränderlich* (unchangeable) because its value does not vary with that of the principal note, is made as short as possible, and the accent is thrown on the principal note. Like the *Appoggiatura*, it is written as a small note, usually a quaver (a difference which produces no corresponding diversity in the rendering), and in order to distinguish it from the long *Vorschlag* it became customary about the middle of the last century to draw a small stroke obliquely across the hook of the note, thus *f* *℄*. This sign, though highly practical and valuable, has unfortunately been so irregularly and unsystematically employed by composers, and so frequently abused by engravers and printers, that it is at present unsafe to trust to the appearance of the *Vorschlag* as a guide to its length, which has rather to be governed by considerations of musical effect. This is especially the case with modern editions of classical

compositions, both instrumental and vocal, in which it is quite usual to meet with the cross stroke in cases where the long *Appoggiatura* is imperatively demanded by good taste. For a fuller description of both long and short *Vorschlag* see *APPOGGIATURA*. [F.T.]

VORSPIEL. (Germ.), a Prelude—a piece played before something else, as a piece played after is called a *Nachspiel* or Postlude. In the sense of an introduction or first movement to a fugue the terms *PRÉLUDE* and *Vorspiel* have been already examined. [See vol. iii. p. 28.] Bach's Choral-Vorspiele have not however been touched upon. There are organ pieces apparently intended as an introduction to the singing of the hymn—in which the chorale is taken as the basis of the piece, the treatment being either by florid and imitative accompaniments to the air in the treble, or in some inner part, in canon or otherwise, or in the bass, or as a fughetta, or in any other way which occurred to the genius and knowledge of this mighty master. Peters's Thematic Catalogue of Bach's works contains 126 of such *Vorspiele*, besides 32 'Choral-variationen' on 4 Chorales. [G.]

VOX HUMANA, VOIX HUMAINE. An organ stop of 8-feet tone and of the reed family, but with very short capped pipes, which therefore reinforce only the overtones of the fundamental. The pipe for the CC note, which would in the case of an ordinary reed-stop be nearly 8 feet in length, is here often only 13 inches. The pipes vary little in length, and there are perceptible breaks in the timbre. As its name implies, the stop is supposed to resemble the human voice. Burney (*Tour through Germany*, vol. ii. p. 303), speaking of the specimen in the Haarlem organ, says, 'It does not at all resemble a human voice, though a very good stop of the kind: but the world is very apt to be imposed upon by names; the instant a common hearer is told that an organist is playing upon a stop which resembles the human voice, he supposes it to be very fine, and never enquires into the propriety of the name or the exactness of the imitation. However, I must confess, that of all the stops I have yet heard which have been honoured by the appellation of *Vox humana*, no one, in the treble part, has ever yet reminded me of anything human, so much as of the cracked voice of an old woman of ninety, or, in the lower parts, of Punch singing through a comb.' This more than century-old description is by no means out of date. In acoustically favourable buildings, and when only just audible, the stop has sometimes a weird effect which is not unimpressive, but distinctness is quite fatal. The *Vox humana* should be placed in a box of its own inside the swell box. It is nearly always used with the tremulant. Opinions differ as to its capacity for combining pleasantly with other registers, and this depends upon the kind of stop. There are instances where it gives a piquant quality to other light stops. Its voicing is very delicate and soon gets out of order. [W.Pa.]

VROYE, THÉODORE JOSEPH DE, Belgian writer on music, born Aug. 19, 1804, at Villers-la-Ville, between Ottignies and Fleurus (Belgium), was ordained priest in 1828, and has devoted all his spare time to the study of plain-song and the liturgical singing of the church. In 1835 he was appointed Canon and Precentor of the Cathedral of Liège, and conducted the services with a care and taste which produced remarkable results. He published a 'Vespéral' (1829), a 'Graduel' (1831), and a 'Processionale' (1849), which have passed through many editions in Belgium; also, a 'Traité du Plain-Chant' (1839), and a 'Manuale Cantorum' (1849). His last work, 'De la Musique Religieuse' (1866), written in conjunction with the Chevalier Van Elewyck, is a collection of documents and observations relating to the Congresses of Paris (1860) and Mechlin (1863-64) on service music. De Vroye died at Liège, July 29, 1873.

He must not be confounded with A. DE VROYE, a clever flute-player, who has played in Paris every winter for the last dozen years, but of whose history nothing can be discovered. [G.C.]

VUILLAUME, a family of French musical instrument makers, originally from Mirecourt. As far back as the first half of last century there was a Jean Vuillaume established in this small town among the Vosges mountains, but it is doubtful whether he was any relation of CLAUDE VUILLAUME, born 1771, died 1834, maker of cheap violins, and head of the family afterwards so well known. Claude had four sons, who all followed in the same line of business. The eldest,

JEAN BAPTISTE, was born at Mirecourt, Oct. 7, 1798, and apprenticed to his father, but finding nothing further to learn in his native town, went to Paris in 1818. His first master was his fellow-townsmen François Chanut, who with his guitar-shaped violin expected to revolutionise the art of violin-making. [CHANOT, vol. i. p. 355 a.] In this he was mistaken, but he was of great service to Vuillaume by leading him to more scientific methods of working than the old-fashioned rule of thumb. In 1821 he left Chanut for Lété, an organ-builder at Payonne. Lété was son-in-law to Pique, an excellent workman, who saw at once the value of the new partner, who for his part learnt much from Pique, and retained through life a grateful recollection of him, and of the experiments they made together. In 1825 Lété set up with Vuillaume at No. 30, Rue Croix des Petits Champs. Vuillaume's marriage in 1826 brought him into the society of several influential people, including, amongst others, Félix Savart, the professor of acoustics, intercourse with whom gave a fresh turn to his studies. Henceforth his chief aim was to discover the secret of the old Italian masters, and the cause of the superiority of their violins. Becoming his own master in 1827, he removed to 46, Rue Croix des Petits Champs, where he lived till 1860, and turned out many instruments now of great value. The style of his workmanship was speedily

recognised, and he gained silver medals at the Paris Exhibitions of 1827 and 1834, and gold medals at those of 1839 and 1844. He sent his 'Octobasse,' and his splendid imitations of old Italian instruments to the Paris Exhibition of 1849, but his name does not appear in the report of the jury. At the London Exhibition of 1851 he had a glass case containing two quartets of stringed instruments, and his perfected 'Octobasse,' for which he was awarded the Grand Council medal, a distinction acknowledged at home by the Legion of Honour. At Paris in 1855 he obtained the Médaille d'honneur, and since then has been considered entirely above competition. To reach this high position he spared neither pains nor expenditure, making long journeys after special qualities of wood, and going frequently to Italy, where he discovered documents relating to Stradivari hitherto unknown. In January, 1855, he spent 80,000 francs (£3,200) on the purchase of 250 instruments, collected by Tarisio, including the splendid Strad violin, called 'Le Messie,' because it was never allowed to be seen, though always talked about. Having made his fortune, Vuillaume might have retired to his fine house at Les Ternes, and his family, but work was to him a prime necessity, and the successes of his son-in-law, Delphin Alard, only stimulated him to further exertions. Several specimens of his inventions may be seen in the Museum of the Paris Conservatoire, one being a violin of a new and shortened form made for Jullien, a rebec of his own design, an alto, an *octobasse*, a bow with fixed head, others in hollow steel, etc., all showing considerable ingenuity and great manipulative skill. He was an ardent devotee of Antonio Stradivari, and virtually dictated Fétis's biography of him. For the last ten years of his life he occupied himself especially with studying effects of sonority, and means of acquiring perfection of tone. He invented a new mute, which he called the *sourdine instantanée*, and fancied he had discovered a way of making strings perfectly cylindrical, so that they were never out of tune. He died in his Paris house, No. 3, Rue Demours, Feb. 19,² 1875. He left nearly 3,000 instruments, a certain number of which he had made entirely with his own hands. His price was 300 francs (£12) for a violin, and 500 francs (£16) for a cello. Each is now worth double, but his instruments vary considerably and care is necessary in distinguishing between the different kinds. He was fond of trying different ways of drying wood, and imparting to it the qualities of age, experiments which often failed, and impaired the durability of his instruments. He cannot be said to have turned out nothing but *chefs-d'œuvre*, but nevertheless he stands with Luptot at the head of French musical instrument makers of the 19th century. The second son of his brother, Claude Vuillaume,

NICOLAS born 1800, died 1871, passed his life at Mirecourt, excepting the period between

¹ Altered in 1948 to 42.

² Vidal, Pougin, and others, give the date March 19, but this is wrong.

1832 and 1842, when he was working with Jean Baptiste. He made cheap violins only, and took a bronze medal at the Paris Exhibition of 1855 for a pattern which he called the 'Stentor.' The next brother,

NICOLAS FRANÇOIS, born at Mirecourt May 13, 1812, apprenticed to his father, and afterwards a pupil of Jean Baptiste, settled at Brussels in 1828. The instruments he sent to the Exhibitions at Brussels in 1835 and 1841 received silver medals. Having been appointed maker to the Conservatoire, and become intimate with Fétis, he exhibited at London, Paris, and Dublin, and was awarded medals of the first class. Maintaining a constant intercourse with his brother, the writer met him frequently, and found him to have a special knowledge of the old Italian instruments, which he repaired with great skill. In 1873 he showed at the Vienna Exhibition a double quartet which gained a

medal of the first class, a success rewarded by the King of the Belgians with the Order of Leopold. He died at Brussels of apoplexy Jan. 14, 1876. Another brother,

CLAUDE FRANÇOIS, born 1807, and also apprenticed to his father, took to organ-building, and ended a chequered existence as a maker of violin cases. His son,

SEBASTIAN, born 1835, died 1875, a pupil of his uncle Jean Baptiste, turned out some good work, and took a bronze medal at Paris in 1867, and a silver one at the Havre Exhibition of 1868. He is however best known as a maker of bows.

Thus the family of Vuillaume is now extinct. Its principal member too died without having carried into effect his favourite project of founding with his brothers a museum at Mirecourt, wherein should be deposited the best types produced by all native artificers of this cradle of French musical instrument makers. [G.C.]

VIARD-LOUIS, JENNY, *née* MARTIN, born September 29, 1831, at Carcassonne. She learned the piano first at the Conservatoire, Paris, where she obtained the first prize, and afterwards from Madame Pleyel. In 1853 she married Nicolas Louis, composer, and after his death in 1857 devoted herself to a complete study of the great masters. In 1859 she married M. Viard, a merchant of Paris, and in 1864-65 undertook a tour through Austria and Germany, where her performance of Beethoven's works obtained the approval of various good judges, contemporaries of the great composer. On returning to Paris she gave concerts, at which the chamber music of Brahms and Raff was first introduced to French audiences. In 1874 a reverse of fortune

obliged her to come to London for the purpose of teaching, and on March 4, 1876, she made her first appearance, at the Alexandra Palace, in Beethoven's Choral Fantasia. In the spring of 1878 she gave orchestral concerts at St. James's Hall, in which she played various pieces, classical and modern, including for the first time in public a MS. Fantasia of Cherubini's. She was compelled to abandon this enterprise, and devote herself solely to teaching; but since 1883 she has given various concerts devoted to the chamber music of Beethoven for piano solo, or piano and other instruments. These are still in progress. Mme. Viard-Louis has recently published a work entitled 'Music and the Piano' (London, Griffith and Farran, 1884). [A.C.]

W.

WACHT AM RHEIN, DIE (The guard of the Rhine.) A modern German *Volkslied*, which during the Franco-Prussian war of 1870-71 was so popular as to become a national song.

Allegro marcato.

Es braust ein Ruf wie Don - ner - hall, wie
Schwertge - klirr und Wo - - gen - prall; sum
Rhein, sum Rhein, sum deut - schen Rhein! Wer
will des Stro - mes Hü - ter sein? Lieb'

Va - ter-land, magst ru - hig sein, Lieb' Va - ter-land, magst
ru - hig sein; fest steht und treu die Wacht, die
Wacht am Rhein! fest steht und treu die Wacht, die
Wacht am Rhein!

The poem is by Max Schneckenburger, a manufacturer, born Feb. 17, 1819, at Thalheim in Württemberg, and died May 3, 1849, at Burgdorf near Berne. It had its birth in 1840, when

the left bank of the Rhine was threatened by France, and was soon seized on by composers:—F. Mendel of Berne (1840); Leopold Schröter of Wörlitz (1852); and F. W. Sering of Strassburg, and lastly by Carl Wilhelm, the author of the melody given above, born at Schmalkalden in 1815, pupil of Aloys Schmidt, Anton André, and Spohr, and from 1840 to 1865 conductor of the Liedertafel in Crefeld. The song was composed by him as a part-song for men's voices, March 14, 1854, was first sung on the 11th of the following June, and quickly found its way into print. In 1871 Wilhelm received a pension of £150 a-year from the Emperor, but did not long survive his good fortune, as he died Aug. 16, 1873, in his native town, where a monument has been erected to him.

The 'Wacht am Rhein' is the subject of the famous 'National Denkmal' near Bingen, by Johannes Schilling, the sculptor, which was unveiled by the Emperor in 1883. It must not be confounded with another Rhine-song (poem by N. Becker) of equal popularity in its time—

Sie sollen ihn nicht haben,
Den freien deutschen Rhein,

which was set to music by Kreutzer and many more, and sung everywhere in 1840 and 41. The song is sharply criticised by Mendelssohn in his letters of Nov. 18 and 20, 1840, and Feb. 27, 1841, and was answered by Alfred de Musset in the well-known 'Nous l'avons eu, votre Rhin allemand.' [M.F.]

WACHTEL, THEODOR, born March 10, 1823 or 1824, at Hamburg, the son of a stable-keeper, began life by driving his father's cabs. He learnt to sing from Mme. Grandjean, and obtained operatic engagements at Schwerin, Dresden, Hanover (1854), Berlin, Darmstadt, Vienna, etc. On June 7, 1862, he made his *début* in England at the Royal Italian Opera as Edgardo in 'Lucia,' and failed completely. He sang there again in the seasons of 1864 and 1865 with better results; and indeed obtained a certain popularity, more on account of his fine and powerful voice than from any artistic use he made of it. His principal attraction was the way he produced a C in alt direct from the chest instead of by the customary falsetto; he brought out the note with Stentorian vigour and great success, especially when he played Manrico or Arnold. Of his other parts may be named Stradella on the production of Flotow's opera of that name at the Royal Italian Opera, June 4, 1864, and Vasco de Gama on the production of 'L'Africaine' in England, July 22, 1865. He re-appeared in 1870 and again in 1877 at Her Majesty's. In 1869 he sang in Paris with very indifferent results, but has been successful in America both in German and Italian opera. Two of his most popular characters in Germany are George Brown ('Dame Blanche') and Chapelon ('Postillon'), especially the latter, in which he affords great delight to his audiences by the dexterous manner in which he cracks a coachman's whip in the Postillon's song. His son, THEODOR,

began life as a clockmaker; and at one period of his life was a tenor singer of the same calibre as his father. He died of consumption in Jan. 1871, aged 30. [A.C.]

WADE, JOSEPH AUGUSTINE, born in Dublin at the close of the last or beginning of the present century. Not only is the date of Wade's birth doubtful, but his parentage also. According to surviving members of his own family, he was of gentle blood, but Dr. Richard R. Madden (his schoolfellow), the generally trustworthy biographer of the 'United Irishmen,' tells us that his origin was humble, his father being a dairyman near Thomas Street, Dublin. A similar uncertainty surrounds the place of his maturer education. The tales of his presenting himself at the gate of the University of Dublin, and addressing the porter in Latin are wild fictions, for the books of the University (called Trinity College, Dublin) reveal the fact that Wade was never a member of the place. He is said to have entered the 'Irish Record Office' as a junior clerk, when little more than 16, but no record remains of the fact in the books of the office. Wade soon quitted Dublin, and married a lady of fortune, Miss Kelly of Garnavilla, near Athlone. The first recorded essay of his muse is the words and music of a song, 'Lovely Kate of Garnavilla.' His bliss was however but short-lived, for he grew weary of the young lady, returned to the Irish metropolis, and is said to have acquired considerable skill as an anatomist and surgeon, but the books of the Irish College of Surgeons contain no mention of his name. About this time he published, through Thomas Cooke & Co. in Dublin, a ballad, of which both words and music were his own, 'I have culled ev'ry flowret that blows'; and made the acquaintance of Sir J. Stevenson, who finding in him literary and melodical gifts, and—what was then extremely rare amongst amateurs—an extended knowledge of harmony and the theory of music, strongly advised Wade to apply for the University chair of music, dormant since 1774, when the Earl of Mornington, appointed in 1764, had resigned the office. It was necessary however to matriculate and become a member of the University, and the matter fell to the ground. After this, surgery was abandoned, and Wade became a poet-musician. At this time he was of mild and gentlemanlike manners, and appeared about 25 years of age: it is possible that it was now, and not during his boyhood, that he and WILLIAM ROOKE found employment in the Record Office in Dublin. However, his restless disposition induced him to migrate to London, where his talents soon brought him into notice. From intercourse with orchestral performers, he acquired sufficient confidence to undertake to conduct the Opera during Mr. Monck Mason's régime, a position he did not long retain. In fact, he made but a poor professor, the poverty of his orchestration being not more remarkable than the antiquated style of his melody. He had been engaged by the firm of Chappell to make himself generally useful;

but he made no use of his gifts as poet, musician, and scholar, and the house reaped little advantage from him. He frequented taverns, drank to excess, and has been known to drink all his companions under the table and finish the night with the landlord. His Irish wife having died childless, he seems to have formed some fresh matrimonial connexion, judging by an appeal made after his death for aid to his wife and destitute children. His downward progress was rapid, and for the last few years of his life he was unknown. He only once returned to his native city—in Dec. 1840, travelling with Lavenue's touring party. It included Liszt, Richardson the flautist, the Misses Steele and Bassano, John Parry, and J. P. Knight; two or three of Wade's concerted pieces were included in the concerts, at which however he did not appear, even as accompanist. He wandered about for some weeks, visited one or two relatives, and returned to London, where he died, July 15, 1845, at his lodgings in the Strand.

There is little doubt that Wade was a man of remarkable gifts and acquirements. His personal appearance was much in his favour; he was witty and quick in perception, and had acquired some knowledge of the Latin classics, as well as of one or two modern languages, and also had a smattering of anatomy. His memory was retentive in the extreme. Above all, he possessed a gift for creating melody: add to this fair skill as a violinist, and a trifle of orchestral knowledge, and what might not Wade have accomplished but for incredible indolence and folly! It remains but to add a list of his works, with their approximate dates:—'The Prophecy,' an oratorio (Drury Lane 1824); 'The two Houses of Granada' (ib. 1826); 'The pupil of Da Vinci' (operetta by Mark Lemon); 'Polish Melodies' (words and music) 1831; 'Convent Belles' (with Hawes) 1833; 'A woodland life' (polacca interpolated in 'Der Freischütz' and sung by Braham); 'Meet me by moonlight alone' (sung by Vestris); the duet 'I've wandered in dreams,' and other vocal pieces. This last obtained a popularity equalling the preceding ballad, which had the good fortune to be further immortalised in the pages of Frazer's Magazine for October 1834, by the witty Father Prout, in French attire.

It should be said that Wade was associated with Mr. G. A. Macfarren as pianoforte arranger of the earlier issues of Mr. Wm. Chappell's National English Airs. [R.P.S.]

WAE LRANT, HUBERT, one of the most distinguished of the second generation of the great Flemish masters, was born about 1518 at Tongerlo,¹ in the district of Kempenland (North

Brabant). An old tradition relates that he went in his youth to Venice, and there studied under the guidance of his great fellow-countryman, Adrian Willaert; but this lacks confirmation, and may very possibly be as apocryphal as the similar story usually told with reference to Sweelinck's sojourn at Venice, and the lessons he had from Zarlino later on in the century. [See SWEELINCK.] Be this as it may, Waelrant is found in the year 1544 established in Antwerp, as a singer in the choir of the chapel of the Virgin at Notre Dame. Three years later he had a school of music there, where he introduced a new method of solmisation, that known as *bocedisation* or the *voces Belgicae*.² [See SOLMISATION; VOCES BELGICAE.] He is said now to have entered partnership with J. de Laet as a publisher of music; but this was more probably not until 1554.³ The association lasted until 1567, when de Laet retired or died. Waelrant was twice married, first in 1551, and again before 1568; by his first wife he had six children. He died at Antwerp in his seventy-eighth year,⁴ Nov. 19, 1595.

Among contemporaries Waelrant was held in very high repute, not only as a teacher of music, but more especially as a composer, chiefly of madrigals and motets. Guicciardini, in his 'Descrittione di tutti i Paesi bassi' includes him in a list of the greatest living musicians of his time. His first musical works were 'Chansons' published by Phalesius at Louvain, 1553-1554, and 'Il primo Libro de Madrigali e Canzoni francesi a cinque voci; Anversa, Huberto Waelrant e J. Latio, 1558.' It is remarkable however that of the numerous volumes of music which he published—Psalms, 'Cantiones Sacrae,' 'Jardin musical,' etc.—only two (of the 'Jardin') include compositions by himself. He seems in fact to have preferred to publish either by Tylman Susato or Phalesius. Seven of the collections of the latter contain works by Waelrant. One of these was also edited by him under the following title, 'Symphonia angelica di diversi eccellentissimi Musici, a quattro, cinque, e sei voci: Nuovamente raccolta per Uberto Waelrant, 1565.'⁶ [R.L.P.]

WAERT, DE. [See WERT, DE.]

WAGENSEIL, GEORG CHRISTOPH, born Jan. 15, 1715, in Vienna, where he died March 1, 1777.⁷ He studied the clavier and organ with Wöger, and the science of composition with Fux and Palotta, the former of whom recommended him for a Court scholarship in 1736, and

¹ The discovery of Waelrant's birthplace is due to the researches of M. A. Goovaerts, *Histoire et Bibliographie de la Typographie musicale dans les Pays-bas*, pp. 39-40, Antwerp 1880. A confusion with a namesake had led to the opinion previously universally accepted, that the musician was a native of Antwerp: see Fétis, *o.c.*; Mendel and Reissmann, *Musikalisches Conversations-Lexikon*, xi. 233, 2nd ed. 1880; and also E. vander Straeten, *La Musique aux Pays-bas*, iii. 201-204, 1875.

² See F. Sweertius, *Athenae Belgicae* p. 380, Antwerp 1628, folio; vander Straeten, i. 62, 1867; Mendel and Reissmann, xi. 234.

³ Goovaerts, p. 42.

⁴ Sweertius, *l.c.*

⁵ Page 42, ed. Antwerp, 1588 folio.

⁶ For the complete bibliography see the Goovaerts, p. 206-277.

⁷ He was thus in his 63rd year at the time of his death, and not 92 as Gerber states (vol. i.), and after him Fétis. Neither was he 65, as Burney supposed when he visited him in 1772.

as Court composer in 1739, a post which he retained till his death. He was also organist to the Dowager Empress Elizabeth Christine from 1741 to her death in 1750, and music-master to the Empress Maria Theresa and the Imperial Princesses, with a life-salary of 1500 florins. Among his pupils were Steffan, then Court Capellmeister, and Leopold Hoffmann, afterwards Capellmeister of the Cathedral. When Mozart, a little boy of 6, was playing before the Court in 1762, he enquired 'Is not Herr Wagenseil here? he knows all about it,' and when the latter came forward, he said, 'I am playing a concerto of yours; you must turn over for me.' In old age Wagenseil suffered from sciatica, which confined him to his room, and nearly lost the use of his left hand from gout. Nevertheless when Burney visited him he managed to play several of his compositions 'in a masterly manner, and with great fire.'¹ In his day he was a favourite composer for the clavier with both amateurs and artists. He modelled his church music after Hasse and Scarlatti, his dramatic music after Leo, and his instrumental after Rameau. Of the latter many pieces were engraved in Paris, London, Amsterdam, and Vienna. There are several MS. works of his in the Court Library, and in the Archives of the Gesellschaft der Musikfreunde in Vienna, both vocal (cantatas, Italian arias, etc.) and instrumental (trios, quartets, divertimenti, symphonies, etc.). Operas by him are also mentioned. Of permanent value are 'Suavis artificiose elaboratus, etc.' in 6 parts (Bamberg, 1740); 'Tre Divertimenti per Cembalo' (Vienna, 1761); 'Divertissement musical,' 6 sonatas for clavier, op. 1 (Nuremberg, Haffner); and 4 nos., each containing 'VI Divertimenti da Cembalo,' dedicated to his pupils the Archduchesses Mariana, Marie Cristina, Elizabeth, and Amalia (all 1760), finely engraved on copper by Giorgio Nicolai for Agostino Bernardi the Viennese publisher. The theme of Handel's 'Harmonious Blacksmith' is often said to be taken from one of Wagenseil's pieces, but it has not yet been identified. [C.F.P.]

WAGNER, JOHANNA, niece of Richard Wagner, was born at Hanover, October 13, 1828, daughter of Albert Wagner, a dramatic tenor. He married Elise Gollmann, with a voice of the abnormal compass of three octaves and two notes, who in her very short career is said to have sung the parts of Tancredi and of the Queen of Night, with equal fulness of tone.

Richard Wagner and his brother Albert lived together in Würzburg during the whole of 1833. Johanna, then only five, sang everything she heard; and her uncle, in after years, would often quote her childish version of the words of operas. She appeared at six as Salome in the 'Donauweibchen.' In 1843 her uncle heard her sing the part of Myrrha in Winter's 'Unterbrochene Opferfest,' and in May 1844 obtained a temporary engagement for her at the Royal Opera at Dresden, where he was preparing the first performance

of his 'Rienzi.' Though but sixteen she had such success as Irma in 'Maurer und Schlosser,' and Agathe in the 'Freischütz,' that she was not only engaged for three years, but the management paid the fine necessary to release her from her contract at the Ducal Theatre at Bernburg. She spent the summer with her uncle near Dresden, studying his Tannhäuser, scene by scene, as he composed it, and had the honour of creating the part of Elizabeth when only seventeen. Her uncle had intended the first performance to take place on her seventeenth birthday, but the illness of a singer postponed it until Oct. 21, 1845. However, when his friends assembled at his house for supper that night, Johanna found, hidden under her napkin, a little gold bracelet engraved with her name and the date, a proof of his satisfaction with her performance which will always be her greatest treasure. Such hopes were founded upon the talents of the young singer that the King of Saxony sent her to Paris to study under Garcia. She left Dresden Feb. 1, 1847, accompanied by her father, who until then had been her instructor. Returning in six months she appeared as Norma, singing in Italian, her uncle conducting. She now added to her repertoire Fidelio, Valentine, Adriano, Susanna, Reiza, Favorita, Donna Anna, Recha, Euryanthe, Ernani, Sextus, Weisses Dame, etc. Her uncle's part in the revolutionary troubles of 1849, and consequent exile, making it unpleasant for her to remain in Dresden, she accepted an engagement at Hamburg; there she created the first German Fides in the 'Prophète,' and sang it fifty times in succession. In 1850 she was permanently engaged at the Royal Opera House in Berlin, with an exceptional contract giving her six months leave each year. King Frederick William IV. and his Queen thoroughly appreciated her talent, and she frequently sang for them in private, accompanied by Meyerbeer, whose faithful friendship she enjoyed from the day he first heard her sing.

In 1852 she came to England, but owing to a lawsuit concerning her contract, she was precluded from singing at either of the opera-houses. In 1856 she appeared at Her Majesty's Theatre, as Tancredi, Lucrezia Borgia, and Romeo. Of the latter, Mr. Lumley, in his 'Reminiscences,' writes:—'Was it possible to listen and not feel every hostile feeling crushed? Gifted with a voice combining the resources of soprano and contralto in one—or rather with two voices (wrote one able critic); a well-accentuated style of declamation; endowed with a grace which made every attitude a pictorial study, no wonder that Mlle. Johanna Wagner took the house by storm.'

In 1859 she married Herr Landrath Jachmann, and two years later had the misfortune to lose her voice suddenly and completely. She then bravely entered upon a second artistic career, as an actress, her very exceptional gifts enabling her to do so with brilliant success. This lasted for eleven years, at the same Theatre at Berlin. Her new repertoire included Marie Stuart, Queen Elizabeth, Lady Macbeth, Antigone,

¹ Present 'State of Music in Germany,' p. 220.

Phœdra, Isabella (Bride of Messina), Maid of Orleans, Hermione, Medea, Sappho, etc. In 1870-71, at the request of Gräfinn von Roon, wife of the Minister for War, she joined the Red Cross Society, and spent nine months in tending the wounded in the State Hospitals at Berlin. In 1872 she took leave of the stage as Iphigenia, amidst many honours; the Emperor in person presenting her with the Gold Medal for Arts and Sciences. Meantime her voice had returned to a great extent, and on May 22, 1872, at her uncle's request, she went to Bayreuth, to take part in the performance of Beethoven's Ninth Symphony, which he gave to celebrate the laying of the first stone to his theatre there. She sang the solo alto part, as she had done on Palm Sunday twenty-six years before, at his performance of the same Symphony at Dresden. In 1876, at the opening at the Wagner Theatre at Bayreuth, she took the minor parts of Walküre and Norn, only regretting she was not able to serve her uncle in a greater part.

However, in 1882 a new sphere of artistic usefulness was opened to her. Baron von Perfall, Intendant of the Royal Opera at Munich, offered her the Professorship of Dramatic Singing, in the Royal School of Music there. This appointment she accepted (to quote her own words) 'in the hope of training young artists in the spirit and traditions of her uncle, to be worthy interpreters of his works.' [M.B.]

WAGNER, WILHELM RICHARD, born May 22, 1813, at Leipzig; died Feb. 13, 1883, at Venice; interred Feb. 18, 1883, at Bayreuth.

The materials of the following article have been thus arranged: I. Biographical, personal. II. Literary. III. Musical. IV. Chronological Lists.

I. Wagner's ancestors were natives of Saxony, fairly well educated and fairly well to do. The grandfather, Gottlob Friedrich Wagner, who died in 1795, was *Accisassistent*, and later on *Kurfürstlich Sächsischer Generalacciseinnehmer* (Receiver-general of excise), in plain words *Thorschreiber* (clerk at the town-gates of Leipzig); he married in 1769 Johanna Sophia Eichel, daughter of Gottlob Friedrich Eichel, *Schulhalter* (keeper of a school). Of their children, two sons and a daughter, the eldest son, Carl Friedrich Wilhelm Wagner, born 1770 at Leipzig, was the father of the poet-composer. He is described as *Actuarius bei den Städtgerichten* (clerk to the city police-courts); a ready linguist, whose command of French stood him in good stead during the occupation of Leipzig, when Davoust made him chief of police; fond of poetry, and of theatricals, in which he occasionally took an active part—as, for instance, in the private performance of Goethe's 'Die Mitschuldigen,' given by Leipzig dilettanti in Thomé's house, near the famous Auerbach's Keller, facing the Marktplatz. He married in 1798 Johanna Rosina Berts (born at Weissenfels, died Feb. 1848), by whom between 1799 and 1811 he had nine children.

1. Albert Wagner, 1799-1874, studied medicine at the University of Leipzig; actor and singer at Würzburg and Dresden; finally stage manager at Berlin; father of Johanna Jachmann-Wagner the well-known singer.
2. Carl Gustav Wagner, 1801, died early.
3. Johanna Rosalie Wagner, distinguished actress (Frau Dr. Gotthard Oswald Marbach), 1803-1837.
4. Carl Julius Wagner, 1804, became a goldsmith, died at Dresden.
5. Luise Constanze Wagner (Frau Friedrich Brookhaus), 1805-1870.
6. Clara Wilhelmine Wagner (Frau Wolfram), a singer, 1807-1876.
7. Maria Theresia Wagner 1809, died 1814.
8. Wilhelmine Ottilie Wagner (Frau Professor Hermann Brookhaus¹), 1811-1883.
9. WILHELM RICHARD WAGNER, May 22, 1813.

The last of these dates² is inscribed on a white marble slab between the first and second stories of a quaint old house, *Der weisse und rothe Löwe*, in the Brühl at Leipzig, now No. 88, where the poet-composer was born. After the battle of Leipzig, October 16, 18, and 19, 1813, an epidemic fever, attributed to the carnage, fell upon the town, and just five months after Richard's birth, on November 22, the 'Herr Actuarius' died of it. His widow was left in sad straits. The eldest son was but 14; she had no private means, and her pension was small. In 1815 she became the wife of Ludwig Geyer (born January 21, 1780, at Eisleben), actor, playwright, and amateur portrait-painter. He had formerly been a member of 'Seconda's troupe,' which used to give theatrical performances alternately at Dresden and Leipzig. At the time of the marriage he was a member of the Königl.-Sächs.-Hoftheater, and accordingly the family removed to Dresden.³ Richard Wagner frequently spoke of him with affectionate reverence, treasured his portrait by the side of that of his mother, and was delighted at the surprise performance of one of Geyer's little plays, 'Der Bethlehemitische Kindermord,' which was privately got up at Bayreuth in celebration of his 60th birthday, 1873. 'My schoolbooks at the Dresden Kreuzschule,' Wagner said to the writer, 'were marked Richard Geyer, and I was entered under that name.'

Geyer 'wanted to make a painter of me, but I was very unhandy at drawing; I had learnt to play 'Ueb immer Treu und Redlichkeit' and the 'Jungfernkranz' (Freysehtitz) which was then quite new. The day before his death (30th Sept., 1821) I had to play these to him in an adjoining room, and I heard him faintly saying to my mother, 'Do you think he might have a gift for music?'

In Dec. 1822 (æt. 9) Richard had begun to attend the Kreuzschule, a 'classical school.' He did well there, and became the favourite of Herr Sillig, the professor of Greek, to whose delight (æt. 13) he translated the first twelve books of the *Odyssey* out of school hours. His progress in Latin

¹ Hermann Brookhaus, the well-known orientalist and translator of *Soma-deva*, etc.

² At Wagner's birth Beethoven was 42 years old, Späth 29, Weber 27, Marschner 17, Spontini 34, Rossini 21, Auber 29, Meyerbeer 22, Bellini 11, Berlioz 10, Mendelssohn and Chopin 4, Schumann 3, Liszt 2.

³ There was also a child of the second marriage, Casselle Geyer, who appears as Frau Avenarius in Wagner's correspondence.

⁴ Autobiographische Skizze, 1842.

seems to have been comparatively slow, still his gifts attracted attention. 'I was considered good in *litteris*.' At German verses he was unusually quick. The boys were asked to write commemorative verses on the death of a schoolfellow, and after the removal of much bombast Richard's were printed (wt. 11). 'I was now bent upon becoming a poet; I sketched tragedies in Greek form in imitation of Apollonius's *'Polyidos*,' *'Die Astolion*,' etc. I attempted a metrical translation of Romeo's monologue, by way of learning English, etc.' German versions of Shakespeare were then, as now, much read. The boy's fancy was excited, and he secretly began a grand tragedy (wt. 14). It was made up of Hamlet and Lear, forty-two men died in the course of it, and some of them had to return as ghosts as to keep the fifth act going. Weber's music also took hold of him. He knew the airs from *Der Freyschütz* by heart, and played the overture 'with atrocious finger-ing.'—'When Weber passed our house on his way to the theatre, I used to watch him with something akin to religious awe.'

It appears that Weber now and then stopped in to have a chat with the delicate-featured and intelligent Frau Geyer. 'Her sweet ways and lively disposition had a special charm for artists.' But the pleasant life at Dresden was not to last long. Geyer's salary had been a small one, and soon after his decease pecuniary troubles arose. Three of the grown-up children took to the theatre, and when the elder sister Rosalie got a good engagement as *'erste Liebhaberin*' at Leipzig, the mother followed with the younger members of the family. Richard attended the Kreuzschule till the autumn of 1817, and entered the Nicolaishule at Leipzig early in the following year (wt. 15). The change proved unfortunate. He had sat in *'Secunda*' at Dresden, and was now put back to *'Tertia*'; his feelings were hurt, and he came to dislike the school and the masters. 'I grew negligent, and scamped the work; nothing interested me except my big tragedy.' At the Gewandhaus Concerts he first heard Beethoven's symphonies, and the impression upon him 'was overwhelming.' Music such as that to Egmont appeared to be the very thing needful for the tragedy. He found a copy of Logier's *'Thorough-bass*' at a circulating library, and studied it assiduously; but somehow the *'System*' could not be turned to account. At length a master was engaged, Gottlieb Müller, subsequently organist at Altenburg; Richard composed a quartet, a sonata, and an aria, under his guidance; but it does not appear how far Müller was really responsible for these pieces. The lessons did not last long. Müller thought his pupil wilful and eccentric, and in return was accounted a stupid pedant. The ferment in Richard's mind now took a literary direction. The writings of E. T. A. Hoffmann engrossed his attention, and it is curious to note that so early as in his 16th year he became acquainted with some of the subjects which he treated later on. Thus, Hoffmann's *'Serapions Bräder*,' in vol. ii., contains a story

about the legendary contest of *'Meister-singer*' (Hoffmann's misnomer for *'Minnesinger*') at Wartburg (2nd Act of *Tannhäuser*); and sundry germs of Wagner's *'Meistersinger*' are to be found in Hoffmann's *'Meister Martin der Kister von Nürberg*.'—Ludwig Tieck's narrative poem *'Tannhäuser*' was read at the same time.—A performance of Beethoven's Pastoral Symphony led to an attempt at a musical pastoral, the dramatic aspect of which was suggested by Goethe's *'Laune des Verliebten*.'—In 1820-30 Richard attended the *'Thomasschule*' with results little more satisfactory than at the *'Nicola'*. Practically his philological studies went no further, 'I chose to write overtures for grand orchestra, and to bluster about politics with young litterati like Heinrich Laube.' An overture (in Bb, 6-8) was performed under H. Dorn at the theatre between the acts of a play (1830, wt. 17). 'This was the culminating point of my absurdities. The public was fairly puzzled by the persistence of the drum-player, who had to give a tap *fortissimo* every four bars from beginning to end; people grew impatient, and finally thought the thing a joke.'

When he matriculated at the University of Leipzig (1830), Wagner had the good luck to find a proper master, Theodor Weinlig, Cantor at the Thomasschule, an admirable musician and a kindly intelligent man, who at once gained his pupil's confidence and led him in the right direction. Wagner felt deeply indebted to Weinlig, and held his memory in great esteem. In 1877 he spoke at length about the lessons:—

Weinlig had no special method, but he was clear-headed and practical. Indeed you cannot teach composition, you may show how music gradually came to be what it is, and thus guide a young man's judgment, but this is historical criticism, and cannot directly result in practice. All you can do is, to point to some working example, some particular piece, set a task in that direction, and correct the pupil's work. This is what Weinlig did with me. He chose a piece, generally something of Mozart's, drew attention to its construction, relative length and balance of sections, principal modulations, number and quality of themes, and general character of the movement. Then he set the many bars, divide into one to correspond so and 7, and of such and such did not contrapuntal analysed an example indicated how I was to go consisted in his patient had been written. With put his finger on some why and wherefore of the his. I readily saw what managed to please him. have learnt to stand on on of young musicians think that music should be a simple plan. With singing, playing, composing, take it at whatever stage you like, there is nothing so good as a proper example, and careful correction of the pupil's attempts to follow that example. I made this the basis of my plan for the reorganization of the Music-school at Munich, etc.¹

The course with Weinlig lasted barely six

¹ Autobiographische Skizzen.

² These and other words of Wagner's, printed in small type, and not otherwise authenticated, were uttered in conversation with the writer in the spring and summer of 1877, and are here first made public.

months. A Sonata in 4 movements Bb, op. 1, and a Polonaise for 4 hands in D, op. 2, were printed at Breitkopf & Härtel's—straightforward music, solid schoolwork, without a trace of Wagner. A Fantasia in F# minor, where Weinlig's controlling hand is less visible, remains in MS.

Whilst this musical work was going on, philology and æsthetics, for which his name was set down at the University, were neglected. He plunged into the gulf of German students' dissipations (curious details are given in the privately printed 'Lebenserinnerungen'), but soon felt disgusted, and worked all the more steadily at music. In the course of 1830 he made a pianoforte transcription of Beethoven's Ninth Symphony, which was offered to Messrs. Schott in a letter dated Oct. 6. In 1831, feeling sure of his competency to do such work, he addressed a letter in very modest terms to the Bureau de Musique (Peters) offering his services as 'corrector for the press and arranger.'¹ Dorn (in a contribution to Schumann's 'Neue Zeitschrift,' 1838, No. 7) gives a pleasant account of his enthusiasm for Beethoven in those early days. 'I doubt whether there ever was a young musician who knew Beethoven's works more thoroughly than Wagner in his 18th year. The master's overtures and larger instrumental compositions he had copied for himself in score. He went to sleep with the quartets, he sang the songs and whistled the concertos (for his pianoforte-playing was never of the best); in short he was possessed with a *furor teutonicus*, which, added to a good education and a rare mental activity, promised to bring forth rich fruit.' A 'Concert-overture mit Fuge' in C (MS.) was written in 1831; and another MS. Overture in D minor (Sept. 26, amended Nov. 4) was performed Dec. 25, 1831.
